THE CONGO,

AND THE

FOUNDING OF ITS FREE STATE:

A Story of WORK and EXPLORATION.

Public Library

By HENRY M. STANLEY,

AUTHOR OF 'THROUGH THE DARK CONTINENT,' 'COOMASSIE AND MAGDALA,' ETC.

Dedicated by Special Permission to H. M. the KING of the BELGIANS.

In Two Volumes, pp. 1130, 8vo, Ornamental Cloth, with over a hundred Illustrations and Maps, $10.00.

"In 1879 Mr. Stanley was sent to the Congo as Commander-in-Chief of the International Association Expedition, and for nearly six years he has been wholly employed upon the great River, and in explorations of the country surrounding it. Of his doings during those six years we have only the imperfect information given by Mr. Stanley in an occasional lecture since his return to Europe. *The Congo* having now become a great State, recognized by all European nations, the time has arrived for the publication of his adventures, of which these two volumes are a full record."

SOME PRESS NOTICES.

"A record of extraordinary achievements. . . . The facts speak for themselves; and that Mr. Stanley should have succeeded in establishing, without bloodshed, a series of stations along the Congo, extending to a distance of fifteen hundred miles from its mouth, is a feat of courage, endurance, and management combined, the like of which has rarely been heard of."—*St. James's Gazette, London.*

"The story of the exploration will at once command the attention of the civilized world. . . . It is written with great spirit and simplicity, bringing every scene and circumstance graphically before the reader."—*N. Y. Herald.*

"An important contribution to the world's history, all the more valuable as being written by the man who has himself made that portion of history."—*Graphic, London.*

"The great book of the season. , . . The story of stories, the romantic narrative of the discovery and founding of the Congo State."—*Joseph Hatton in the Boston Herald.*

"Quite as much as the most thrilling romance, the book claims attention from the first page to the last."—*Literary World, London.*

"Mr. Stanley's work on the Congo may justly be regarded as the book of the season. No other volumes which have appeared within the past year comprise the history of so many, so important, or such varied achievements."—*London Standard.*

"Proves to be full as vivid, as graphic, as interesting as anything we have had from the pen of the most daring and intrepid explorer. The reader will turn over its pages with delight."—*Pall Mall Gazette, London.*

"The book is at once a romance and a masterly history of the most romantic undertaking our generation has known."—*London Daily Telegraph.*

"Sufficient in itself to have founded a great reputation.'—*London Daily News.*

"Mr. Stanley may fairly boast of having given to the world two of the most remarkable books of travel and adventure."—*Athenæum, London.*

"Thoughtful and ably-written volumes, which combine with the fascination of stories of travel among strange people humanitarian lessons fraught with good for the scattered tribes of Africa."—*London Daily Chronicle.*

Published by HARPER & BROTHERS, New York.

The above work sent, carriage paid, to any part of the United States or Canada, on receipt of the price.

BOOKS OF THE WEEK 19

TERMS OF SUBSCRIPTION.

Three Dollars per year, in advance, postpaid to any part of the United States or Canada; to foreign countries comprised in Postal Union, Four Dollars.

The date when the subscription expires is on the Address-Label of each paper, the change of which to a subsequent date becomes a receipt for remittance. No other receipt is sent unless requested.

The paper is stopped at expiration of the subscription, unless previously renewed.

Remittances at the risk of the subscriber, unless made by registered letter or by check or postal order payable to Publisher of the NATION.

When a change of address is desired, both the old and new addresses should be given.

Address THE NATION, Box 794, New York.
Publication Office, 210 Broadway.

TERMS OF ADVERTISING.

[No deviation.]

On any page not specified, 15 cents per line each insertion; with choice of page, 20 cents.

A column (140 lines), $20 each insertion; with choice of page, $27.

A page (3 columns), $60 each insertion; with choice of position, $80.

Twenty per cent. advance for top of column or other preferred position, when specified; where positions are not specified, advertisements are classified as far as possible and arranged in order of size, the largest at the top.

Twenty per cent. advance for cuts, fancy or other letters not comprised in THE NATION fonts, and all other special typography. (Subject to approval.) Cuts are inserted only on inside pages of cover or fly-leaves, not on outside of cover, nor on pages numbered for binding.

Marriage and Death Notices, 50 cents each.

DISCOUNT on yearly accounts amounting to $250, 10 per cent.; $500, 15 per cent.; $750, 20 per cent.; $1,000, 25 per cent. Credits are made December 31. On a yearly account amounting to 52 pages the discount is one-third.

Advertisements must be acceptable in every respect. Copy received until Tuesday, 5 P. M.

THE NATION is sent free to those who advertise in it, as long as advertisement continues.

The regular EDITION of THE NATION this week is 8,500 copies; extra edition, 16,500; total, 25,000. The Subscription List is always open to inspection.

*** Copies of THE NATION may be procured in London of B. F. Stevens, 4 Trafalgar Square; George Street, 30 Cornhill, E. C.; H. F. Gillig & Co., 449 Strand; and American News Reading Room, 8 Haymarket.

Sole Manufacturers, Boston, Mass.

Scribner & Welford's

NEW BOOKS.

Memoirs of Count Grammont.

By ANTHONY HAMILTON.

Edited, with Notes, by Sir WALTER SCOTT.

With sixty-four copper-plate portraits engraved by EDWARD SCRIVEN.

NEW EDITION.

Two vols. 8vo, Roxburghe binding, gilt top, $10 50.

"'The Memoirs of Grammont,' by Anthony Hamilton, scarcely challenge a place as historical; but we are now looking more at the style than the intrinsic importance of books. Every one is aware of the peculiar felicity and fascinating gayety which they display."—*Hallam.*

"The artist to whom we owe the most highly finished and vividly colored picture of the English Court in the days when the English Court was gayest."—*T. B. Macaulay.*

Old Times:

A Picture of Social Life at the End of the Eighteenth Century. Collected and Illustrated from the Satirical and other Sketches of the Day. By John Ashton, Author of 'Social Life in the Reign of Queen Anne.' One volume, fine paper, medium 8vo, handsome binding, eighty-eight illustrations, price $6.00.

This book is a compendium of the Social Life in England at the end of the last century, corresponding with Mr. Ashton's 'Social Life in the Reign of Queen Anne.' Avoiding history, except in so far as to make the work intelligible, it deals purely with the daily life of our great-grandfathers. Nothing is taken from diaries or lives of the upper classes; it aims solely to give a fair account of the life of a majority of people then living, or, as we may term it, of the middle class. This could best be done by taking the daily notices in the press, which would naturally be a perfect record of each passing folly of fashion, or even of the markets; so that by this means we get a glimpse of the inner life of that time, unattainable by any other method.

Profusely illustrated from the satirical and other sketches of the day, it forms a volume of reliable authority, such as up to the present time has been looked for in vain.

Madame de Maintenon.

AN ETUDE.

BY J. COTTER MORISON.

Square 16mo, parchment, 50 cts.

NEARLY READY:

Memoirs of the Life of Colonel Hutchinson.

By his Widow, Lucy. Revised and Edited by Charles H. Firth, M.A. With Ten Etched Portraits. In two volumes, fine paper, medium 8vo, and handsome binding.

To understand the history of any period, it must be studied not only in the records of public events, but also in the daily lives of individuals.

Of the many Memoirs and Autobiographies which illustrate the Civil Wars of the seventeenth century, none is more popular or entertaining than the 'Life of Colonel Hutchinson.' But though these Memoirs have passed through many editions, and their value is universally admitted, they have not yet been edited with the care and labor they deserve. In the earlier editions, the irregular and unfamiliar spelling of the original renders the book difficult for the general reader to enjoy. In the later ones the text has been modernized with more freedom than fidelity. In the present edition the spelling alone will be modernized, while the phraseology and grammatical peculiarities of the original will be carefully preserved. The most valuable of the annotations of the Rev. Julius Hutchinson will be retained, and a large number of new explanatory and illustrative notes will be added. Letters written by Colonel Hutchinson during his government of Nottingham, and other documents of interest, will be for the first time collected. A full and accurate Index to the Memoirs will complete the work.

Ten newly-etched portraits of persons of whom mention is made in the text will help to render this a worthy edition of an English classic.

Bohn's Libraries.

A Series Standard Works of European Literature in the English Language. Full Catalogue sent, post-free, to all parts of the world on application.

RECENT ADDITIONS TO THE LIBRARIES.

WALTON'S LIVES OF DONNE, HOOKER, etc. New Edition. Revised by A. H. Bullen. With numerous Illustrations. $2.

GRIMM'S GERMAN TALES. With the Notes of the Original. A New Translation, by Mrs. A. Hunt. With Introduction by Andrew Lang, M.A. 2 vols. $2.80.

BURNEY'S NOVELS. EVELINA. 1 Vol., Cecilia, 2 vols. By Frances Burney (Mme. D'Arblay). With Introductions and Notes by A. R. Ellis, author of 'Sylvestra,' 'Marie,' etc. Price per volume, $1.40.

CENTENARY EDITION.

BOSWELL'S LIFE OF JOHNSON, with the Tour in the Hebrides and Johnsoniana. New Edition, with Notes and Appendices by the Rev. A. Napier, M.A., Trinity College, Cambridge. With Frontispiece to each vol. 6 vols., $8.40.

COLERIDGE'S AIDS TO REFLECTION. Confessions of an Inquiring Spirit, and Essays on Faith and the Common Prayer Book. New Edition. $1.40.

COLERIDGE'S LECTURES AND NOTES ON Shakespeare and other English Poets, including Mr. Collier's transcript of the Lectures of 1811, and the Bristol Lectures of 1813, now first collected. By T. Ashe, B.A. $1.40.

COLERIDGE'S TABLE-TALK and OMNIANA. Edited by T. Ashe, B.A. $1.40.

GOLDSMITH'S WORKS. A New Edition, containing pieces hitherto uncollected, a Life of the Author, and Notes from various sources. By J. W. M. Gibbs. In five volumes. Vol. III., containing The Citizen of the World, Polite Learning in Europe. *Now ready.* $1.40.

GILBART'S THE HISTORY, PRINCIPLES, and Practice of Banking. Revised to the Year 1881 by A. S. Michie, Deputy Manager of the Royal Bank of Scotland, London. With Portrait of Gilbart. 2 vols. $4.

SPINOZA'S CHIEF WORKS. Translated, with Introduction, by R. H. M. Elwes. 2 vols. Vol. I.—Tractatus Theologico-Politicus, Political Treatise. II.—Improvement of the Understanding, Ethics, Letters. $4.00.

DANTE.—IL PURGATORIO: a Literal Prose Translation. By W. E. Dugdale. With the Text of the Original and Explanatory Notes. $2.00.

DANTE.—THE INFERNO: a Literal Prose Translation, with the Text of the Original collated with the best editions, printed on the same page, and Explanatory Notes. By John A. Carlyle, M.D. $2.00.

VASARI'S LIVES OF THE PAINTERS. (In 6 vols.) Vol. VI., just published, being a Commentary, containing Notes and Emendations from the Italian Edition of Milanesi and other sources. By J. P. Richter, Ph.D., author of 'The Literary Works of Leonardo da Vinci,' &c. $1.40.

PLUTARCH'S LIVES. Newly Translated, with Notes and a Life, by A. Stewart, M.A., late Fellow of Trinity College, Cambridge, and the late George Long, M.A. 4 vols. $5.60.

PLUTARCH'S MORALS: Theosophical Essays, Translated by C. W. King, M.A., author of 'The Gnostics and their Remains.' $2.00.

GOETHE'S EARLY AND MISCELLANEOUS Letters, including Letters to his Mother, with Notes and a Short Biography by Edw. Bell, editor of 'Wilhelm Meister's Travels,' &c. $1.40.

GOETHE'S MISCELLANEOUS TRAVELS, including Letters from Switzerland, Campaign in France, Siege of Mainz, and Rhine Tour. Translated by L. Dora Schmitz and others. $1.40.

LESSING'S WORKS. Translated from the Ger- man. Vol. I.—Tragedies and 'Nathan the Wise.' Vol. II.—Comedies. Vol. III.—Laokoon, Hamburg Dramatic Notes, &c. 3 vols., $4.80. With portrait, &c.

*KANT'S PROLEGOMENA AND METAPHYSI-*cal Foundations of Natural Science. Translated, with Memoir and Introduction, by E. Belfort Bax, author of 'Jean Paul Marat.' With portrait of Kant. $2.00.

MOLIERE'S DRAMATIC WORKS. A new Translation in English Prose, by C. H. Wall. With a short Life and a Portrait. 3 vols. $4.20.

The Index Guide to Travel and Art Study in Europe.

By LAFAYETTE C. LOOMIS, A.M.

With Plans and Catalogues of the Chief Art Galleries, Maps, Tables of Routes, and 160 Illustrations.

One Volume, 16mo, 600 Pages, $3.50.

"*Only words of praise can be spoken of this work.*"
"*The best and completest.*"
"*By all odds the best Guide I have ever seen.*"
"*And something better than a guide book.*"
"*Almost a triumph of genius in bookmaking.*"

PART I.—*Scenery, Art, History, Legends, and Myths,* including descriptions of places, buildings, monuments, works of art, and the historical facts, legends, and myths connected with these.

PART II.—*Plans and Catalogues of the Art Galleries of Europe.*

PART III.—*Maps, Tables, and Directions for all leading Routes of Travel.*

The Sailor's Handy Book and Yachtsman's Manual.

By E. F. QUALTROUGH, Master U. S. Navy.

With colored plates and many illustrations. 1 vol., square 16mo, 620 pages. Blue roan, red edges, price $3.50.

A book absolutely indispensable to all yacht owners. The most complete and thoroughly accurate work on this subject. Send for illustrated circular.

How to Camp Out.

By JOHN M. GOULD.

1 vol., illustrated 12mo. *New edition.* 75 cents.

A practical little book, containing precise and valuable information concerning the cost of outfits, position of camps, hygienic notes, and much general advice.

*** These books will be sent, postpaid, on receipt of price, by the Publishers, or they may be ordered through booksellers.*

Charles Scribner's Sons,

NEW YORK.

*** The above books will be sent upon receipt of advertised price. Catalogues of our regular stock, also one devoted to Music and Musical Literature, will be mailed, if desired, to those interested. NEW CATALOGUE OF SPORTING BOOKS, ALSO OF CHOICE, RARE, AND SECOND-HAND BOOKS READY.*

SCRIBNER & WELFORD, 743–745 Broadway, N. Y.

The Nation.

NEW YORK, THURSDAY, JULY 2, 1885.

The Week.

THE President's selection for Collector of New York to succeed Mr. Robertson is not the best possible, but we are confident that he has had good reasons for making it. At present the objections to Mr. Hedden are lifted into greater prominence than his merits, simply because the latter remain to be demonstrated by his official conduct. The warm approval of Hubert O. Thompson is a serious objection, and we are disposed to give it its full weight, but the approval of many eminent merchants must be taken for its full weight also; and moreover, while Mr. Thompson is claiming the choice as his "victory," and is naturally taking as much credit for it as he can gain, it is by no means improbable that he is exaggerating the power of his personal influence in securing the appointment, and that he rather than the public may be disappointed in the new Collector's methods. The President and his advisers have taken hold of the abuses in the Custom-house with a firm and intelligent purpose to correct them, and we are confident that the new Collector has been appointed with a view to expediting and not hindering that work. He is an unknown man, but there are thousands of good men in New York who are no better known who are capable of making first-rate Collectors. We do not say he will make that kind of an officer. We simply will not condemn him or the President until a basis for judgment has been furnished.

The outburst of hostile criticism which the appointment has provoked is very instructive as showing the level to which the President has lifted all kinds of appointments. The public expectation is higher than it has been for years. Take, for example, the men who have been chosen for Collectors within recent years and compare them with Mr. Hedden. There was "Tom" Murphy, Grant's choice; what were his qualifications? After him came Chester A. Arthur, who was put in office solely because of his shrewdness as a politician. Then came General Merritt, who was not even a resident of the city, was not even a business man, but a professional politician from the interior of the State. He was removed by Blaine and Garfield to make room for Judge Robertson, who was also a professional politician, and who had earned the place by his services in splitting the New York delegation to the Chicago Convention, thus defeating the third-term scheme, and making Garfield's nomination possible. There was no pretence of reform in any of these appointments, and there was no especial fitness in any of the candidates. President Cleveland's choice is better and more fit than any of them, and it would have been at once accepted as such had not he taught the public to expect from him the best possible. Sharp critics will do well to recall their harsh judgment of Mr. Manning at the time of his selection for the Treasury portfolio, and compare it with their present opinions of his course.

The restoration of Mr. Burt to the position of Naval Officer in the Custom-house was one of those acts of poetic justice, as well as of public duty, which in our Government, owing to the tyranny of party, few Presidents have ever been able to perform. No Republican President certainly has ever done anything of the kind so creditable. Mr. Burt was a Republican from the beginning. He had fifteen years of faithful and efficient service in the Custom-house to show, and had been in part rewarded for it by promotion. He had been identified with civil-service reform in the Custom-house from its first introduction. Moreover, he was an old friend, from their college days, of President Arthur. Nevertheless, with all these titles to reward and to consideration, and with all this suitableness and efficiency, when Mr. Burt's term expired President Arthur kicked him out of office without the slightest ceremony, and as if in mockery, or to make a joke for "the boys," offered him the place of Chief Examiner of the United States Civil-Service Commission, at a salary of $8,000 a year, in place of the Naval Office, at $8,000. One does not envy the feelings of the man to-day who did this thing. He had to be a dog to do it. But one does envy the feelings of the Democratic President who, without any solicitation from Mr. Burt or his friends, undid it, and put back this faithful Republican into the office from which he ought never to have been removed.

There were employed in the New York Custom-house, at the last published summary of the force, 1,480 persons, from Collector down to scrubber. Of these the Collector, Naval Officer, Surveyor, and Appraiser have the absolute appointment of barely 200 of all sorts, and more than half of these are messengers, porters, janitors, watchmen, etc. All others can enter the service only by the door of competitive examinations.

Two cases of important officials in the Treasury Department now under discussion illustrate in a concrete way the abstract principles which should govern the retention or dismissal of men found by a new Administration in high positions in the service. Secretary Manning has requested the resignation of Mr. Burchard, Director of the Mint, and a current rumor represents Mr. Fiedler, ex-Congressman of New Jersey, as seeking the place of Mr. Kimball, Superintendent of the Life-Saving Service. Here are two men who have been long in office, one of whom ought to be dismissed in the interest of good government, while every consideration of efficient administration demands the retention of the other. Mr. Burchard's original appointment by a Republican President was discreditable, his only "claims" being that he had failed of reëlection to Congress and needed to be "taken care of," and that he had been an ardent silver man. He has never manifested any executive talent, and a new Administration conducted upon business principles must necessarily be hampered by his continuance in office. On the other hand, Mr. Kimball is as near the ideal sort of a head for the Life-Saving Bureau as the country could ever expect to get. He has grown up with the bureau, so to speak, reached his present position legitimately, enforced the principles of non-partisan administration for years before there was any civil-service act, and in short has made his branch of the Government a model. His removal would be an act of the grossest injustice, which there is not the slightest reason to suppose has ever been contemplated by his superiors. If Mr. Burchard had been an official of the Kimball school, he might expect popular sympathy in his efforts to retain his place; as it is, he deserves none.

The position of inspector in the Post-office Department is one which demands special business qualifications. The idea that a man should be appointed to such an office because he had been a "good worker" in ward politics, or because he had "strong political backing," or because he had not been able to earn his living in any other way, is simply ridiculous. Yet the custom has always been to make these appointments on such grounds, and as the Civil-Service Act does not cover inspectorships, Republican Postmasters-General continued to regard the places as part of the patronage. It was left for a Democrat, exercising the discretionary power allowed the heads of departments, to apply the principles of careful investigation as to the business (not the political) qualifications of applicants, and to subject them to an examination which should fairly test their ability to perform the duties required. By applying these common-sense principles, Mr. Vilas has reached a sound basis for making appointments, and it is entirely safe to predict that the twenty-two new inspectors whom he named last week will make a much better record than any other twenty-two in the body. The Administration could not give a more convincing proof of its sincerity than by thus voluntarily extending the scope of the civil-service system.

We have been watching with some interest to see what view the President's enemies would take of the appointment of Judge Stallo, of Cincinnati, as Minister to Italy, and are gratified to find that in the main it is very favorable. No newspaper of any party has been able to question the entire fitness of the Judge for the position, or to say a word in disparagement of his eminent ability, high accomplishments, and admirable personal character. The only objection which we have seen is the profound one of the *Tribune*, that "possibly the Judge will not be particularly welcome at the Vatican, as well-nigh the most conspicuous Free-thinker in this country," and this does not strike the country as insuperable. Mr. Keiley was the kind of man who was "particularly welcome at the Vatican," and we should have supposed that the controversy over him would have revealed to the *Tribune* the fact that the American Minister to Italy is sent to the Italian Court,

rather than to the Vatican. There are a good many expressions of surprise at the *Tribune's* ignorance on this point, but there need not be. The daily task of keeping the bloody-shirt floating in the wind, with no help from any quarter, is so onerous that little else can be attended to.

The memorial which the most eminent dry-goods merchants of the country have sent to the President in regard to the efforts of the Administration to have the revenues honestly collected, is likely to put an end to further discussion about the "oppressive Treasury regulations." The document is signed by names of firms which will be recognized in all parts of the country as standing first in America in reputation, character, and commercial ability. When such men as these put their names to a declaration that the importers who had an interview with the President on Wednesday week, "do not represent the class of merchants who suffer most by the system of undervaluations, but on the contrary are representatives here of foreign manufacturers, and act as consignees of foreign firms, and not as owners of the merchandise they import," all doubt about the real motives of those complaining importers is ended. They were begging for a continuation of the old system, by which foreign manufacturers have been enriched at the expense of American merchants. Their protests are the best possible evidence that the new Treasury regulations are as effective as they are legal and wise; and if further evidence were needed on this point, it is found in the closing portion of the memorial of the American merchants: "We earnestly advocate the present system of reappraisements and reforms so recently adopted by the Government, and we most heartily approve the efforts of the Government in its attempt to protect honest importers in their legitimate business."

It appears that ex-Secretary Chandler's letter about the *Dolphin*, published last week, does not agree with his statements made in his report to Congress in 1883 about the same vessel and what she would be in speed and in other respects. He as completely contradicts himself in the two documents as Mr. Roach did in his two statements. The trouble with both men is the same. They have been, during their peculiar partnership in ship-building, in the habit of talking very plausibly to the public, and then making contracts which were very bad for the Government, but very good things for themselves. Now they are attempting the impossible task of making their work and their talk harmonize. If they were not so nervous about what has already come out, and still more nervous about what is yet to come, they would see that their best course is to keep very quiet and say nothing. This ought to be much easier for Mr. Chandler than for Mr. Roach. The latter has his reputation as a shipbuilder at stake, but the former has no reputation of any kind that we can think of which will be seriously damaged by any such exposure. He was simply a machine politician of the ordinary type when he was put at the head of the Navy Department, and it will be a surprise to no careful observer of his career that he administered the ship-building branch of the Department in the same way as he did the other branches of it—like a machine politician.

Senator Logan appears to have taken in dead earnest all the jubilant talk which his admirers have been indulging in lately about his position as the foremost "leader" of his party. His speech in Boston on Monday night was pitched in the vein of a leader, and is, considering Logan's record as a friend of civil-service reform, very amusing reading. He has a very low opinion of the kind of reform which is going on at Washington, and says with perfect truth that it is not of the Republican kind, and that the only way to restore true civil-service reform will be to put the Republicans in power again. And that the Republican party will presently return to power, he has no doubt whatever, because "its principles, knocking at the door of the conscience of the people, will regain admission." What these "principles" are he thus explains:

> 'It is the party of the people. Protection to our home free labor demands it; the restoration of true civil-service reform demands it; adequate appropriations to aid the system of free schools wherever needed demand it; the promoting of our home industrial interests in all proper ways demands it. The necessity for the enforcement of the right of every voter within our national boundaries to cast his ballot and have the same fairly counted at the national elections, and to give to each man that equal and adequate protection before the law to which he is entitled, requires the return of the Republicans to power, both in Congress and in the Executive branch of the Government, in order that the financial system established by the Republican party may be preserved, that the revenues of the country may be protected against unwarranted claims upon the Treasury."

It will be seen that this is the "keynote" of the late campaign, without a single new variation. What Logan means by the "financial system established by the Republican party" includes, of course, unlimited silver coinage, of which he was always an advocate. What he means by true civil-service reform everybody, including all the members of the Logan family who were quartered on the Government in one position or another, knows. What he means by "protection," the Custom-house revelations show. What he means by "unwarranted claims upon the Treasury" may mean the old rebel-claims bugaboo, or it may mean John Roach's bills for the *Dolphin*.

Everybody expects talk of this kind from Logan, because he is that kind of a man. He has been a working politician all his life and has succeeded in getting a very comfortable living by his exertions. He has never taken a "theoretical" view of anything in politics, and for that reason his disgust with the Cleveland kind of civil-service reform is natural and to be expected. But what shall be said in explanation of Senator Hoar, who spoke after Logan, and went far beyond him in the partisanship of his censure of the national Administration? Mr. Hoar criticised the foreign appointments with great bitterness; said that Mr. Pendleton was only "a little bit of a civil-service reformer," who lent his name to a bill which Dorman B. Eaton had matured; and apparently had not a good word to say for anything which has been done at Washington since the fourth of March, for he declared that for his part "he was prepared to serve God in the minority rather than serve Baal with the Democrats and Mugwumps, even though they were in the majority." Henry Cabot Lodge, we are told in the telegraphic accounts of this remarkable occasion, "also condemned the Democratic civil-service policy." What hope is there for the Republican party if its "leaders" have nothing better to say for it than this?

We referred the other day to the evidence of growing harmony between the two races in Mississippi afforded by the fact that whites and blacks are working together in the temperance movement, and that many colored men have been chosen as delegates to the approaching State Convention of the Prohibitionists. An even more important proof of the same tendency is shown by the action of a prominent Democratic club in Warren County, Miss., of which Vicksburg is the capital, with reference to the coming election in that county. The club a few days ago adopted a resolution declaring that many reforms in administration are needed, "and in order to accomplish these ends, all persons, *regardless of color*, are cordially invited to unite and coöperate with us." There is not the slightest doubt that the Democrats in the South will speedily win over a large proportion of the black voters to their side. The chief reason why they have hitherto voted the Republican ticket was because they had been taught that a Democratic victory meant their re-enslavement. Now that all such apprehensions have been allayed, as that leading colored Republican, ex-Congressman Lynch, of Mississippi, admits to be the case, they will not be afraid to vote the same way as their white neighbors. In the North, too, the effect of the change of Administration is already seen in a growing disposition among the colored men to divide their votes. This is strikingly illustrated by the strong opposition among them to the election of the Republican candidate for Governor in Ohio, because of his attitude as a lawyer on the mixed-school question some years ago. As there are some 22,000 colored males in the State, the great majority of whom have hitherto voted the Republican ticket, a serious defection in their ranks may prove an important and even decisive element in a close contest.

The colored people of Texas observe the 19th of June as "Emancipation Day." Last week was the first time they ever celebrated the anniversary under a Democratic President, and in view of the Blaine prophecies of last fall that a change of Administration would mean the virtual re-enslavement of the blacks, Northern people will be interested to learn how the day passed off in the State which gives the largest Democratic majority of any in the Union. Reports to the Galveston *News* from a score of different points agree in representing that the celebration was on a more general scale than ever before. A most significant and encouraging feature of the observance was the coöperation of the whites in many places. Thus we read that at Wharton "quite a number of whites were in attendance, and were loud in their praise

of the splendid barbecue and of the pleasant and harmonious manner in which the celebration was conducted." At Hillsboro the colored people were addressed by two prominent white citizens, as well as by several speakers of their own race. At Corsicana fully 5,000 people were present at the fair grounds, "where speeches were made by prominent citizens of both colors." At Burton the colored people "spread a sumptuous banquet, and cordially extended an invitation to their pale-face friends to partake of the feast, offering separate accommodations to them." To appreciate how much this state of things means and what great progress in harmony between the races it shows, one must remember that only a few years ago it would have been impossible to get a white man in Texas to address a colored audience on Emancipation Day, while a proposition to accept "a sumptuous banquet" at a "nigger celebration" would have been spurned with contempt. Like many other recent developments in the South, this news from Texas shows that the race problem is working itself out satisfactorily, and that it is no longer necessary for the North to elect "war horses" to office in order to make sure that the negroes shall be protected from oppression.

The recent exposition in the *Evening Post* of the contribution made to the Union army from the slave States, especially those on the border line, renders peculiarly timely a discussion between two South Carolina papers as to the composition of the Confederate army. The Charleston *News and Courier* a fortnight ago remarked that "not more than one Southern soldier in ten or fifteen was a slaveholder, or had any interest in slave property." The Laurensville *Herald* disputed the statement, and declared that "the Southern army was really an army of slaveholders and the sons of slaveholders." The Charleston paper stands by its original position, and cites figures which are conclusive. The military population of the eleven States which seceded, according to the census of 1860, was 1,064,193. The entire number of slaveholders in the country at the same time was 383,637, but of these 77,335 lived in the border States, so that the number in the seceding States was only 306,302. Most of the small slaveholders, however, were not slave-owners, but slave-hirers, and Mr. De Bow, the statistician who supervised the census of 1850, estimated that but little over half the holders were actually owners. The proportion of owners diminished between 1850 and 1860, and the *News and Courier* thinks that there were not more than 150,000 slave-owners in the Confederate States when the war broke out. This would be one owner to every seven white males beween eighteen and forty-five; but as many of the owners were women, and many of the men were relieved from military service, the Charleston paper is confirmed in its original opinion that there were ten men in the Southern army who were not slave-owners for every soldier who had slaves of his own. The truth is that the slave-owners carried through the secession movement, while the brunt of the fighting fell upon the "poor whites," who had nothing in the world to gain if the great planters won.

Hitherto the advocates of prohibition in the South have conducted their campaign on a non-partisan basis, Democrats and Republicans working together harmoniously. But there has been of late in several States an evident drift toward carrying the question into politics and organizing a separate party on this issue. The first important movement in this direction has just been made in West Virginia. The advocates of the prohibition policy met at Grafton last week, and, after an animated discussion, decided in favor of a third party by a vote of about two to one. The opponents of separate action immediately withdrew, and will seek to continue the fight on the old lines, but the majority are earnest in their new departure, and strong enough to make an important diversion. There seems no doubt that the Democrats will profit by the third-party movement. While both of the old parties have contributed to the ranks of the prohibitionists, they have drawn most largely from the Republicans, and, as has always happened in the North, the Democratic prohibitionists are most likely to fall back into their old party relations when election comes. For some time past the Republicans have apparently stood a good chance of carrying West Virginia, but a vigorous prohibition party, chiefly recruited from their ranks, would put an end to such hopes.

The recent decision of Attorney-General Garland regarding the eligibility of Indians for the position of postmaster reinforces arguments that were strong enough already, for Congressional action to put an end to the present anomalous relations of the red man to the country. Among the seventy-five postmasters in Indian Territory are a number of Indians, who for all that appears have discharged their duties to the satisfaction of the people and the Government. The question seems never before to have been raised whether Indians might not properly hold such offices, but Mr. Garland was recently called upon for an opinion, and he decided against the practice. He bases his ruling upon the grounds that an Indian who is a member of a tribe cannot take the prescribed oath of allegiance to the Government so long as this relation continues, and that the fact that an Indian cannot be held upon his bond further disqualifies him. Accepting this as good law, it shows the necessity of legislation which shall place the red man as nearly as possible on the same plane as the white and the black man. Mr. Cleveland's remark in his inaugural address that the education and civilization of the Indians should be promoted "with a view to their ultimate citizenship" shows that the advocates of a sound policy may count upon the support of the Executive in this matter.

An incidental effect of the change in the postal unit of weight which took effect yesterday, illustrates the curious complexity of business relations, and the unsuspected consequences which may follow a new step in legislation. The half-ounce limit has rendered it impossible to use heavy paper in writing a letter of any considerable length without its requiring double postage, and this fact has made the mass of people use the lighter grades of paper in correspondence. Now that heavy paper and a thicker envelope may be employed without coming anywhere near the single-rate limit, there will be a strong tendency toward their more general use, modified, of course, by the greater cost. The manufacturers of heavy writing paper are already congratulating themselves upon a "boom" in their business at the expense of the makers of lighter grades; and while they may be disappointed in its extent, the effect will probably be marked enough to be perceptible in the trade. With the adoption of the 2-cent stamp and the ounce limit, postal rates are placed on the same basis in the United States as in England. But two more changes in the matter of rates remain to be made. One is the reduction of the charge for "drop" letters from 2 cents to 1, in favor of which without further delay much may be said. The other is more remote, and should be postponed until the country is more thoroughly settled and the present system of carrying and delivering the mails has been perfected; but it is safe to predict that the youth of to-day will live to see the time when a letter will be transported across the continent for a single cent.

James D. Fish has been sentenced to an imprisonment of ten years, the full penalty of the law, and there is no respectable person in the city who will say that the decree is too severe. Judge Benedict's plain words in denying the motion for a new trial, concerning the nature of loans as distinguished from fraud, set forth Fish's offence in its true light. He was a robber and a swindler of the boldest and most calculating type. His pretence that he was deceived by Ward was absurd on its face, and was proved to be false by all his dealings with him. They were a pair of thieves who were working harmoniously together to cheat everybody who could be induced to trust them.

We believe there is now no doubt that Mr. Gladstone does not mean to retire at present from public life, and does mean to lead the Liberals in the coming campaign. Moreover, his health is not only good but very good, and his intellectual keenness as great as ever; so that the contest in the fall will probably be fully as lively as that in 1879. There seem at present to be strong signs of a competition between the two parties in the matter of concessions to the Irish. It now appears very certain that Mr. Gladstone on this subject sympathized with the Radical wing of the Cabinet; but his loyalty to Lord Spencer, who is one of his warmest admirers, compelled him to stand by him in asking for more coercion. Lord Hartington stood with Spencer, and indeed he differs from Chamberlain and Dilke in so many points that there are grave doubts as to whether he will ever be able to work with them again in a Cabinet. Chamberlain has written an article suggesting a remedy for the growing incapacity of Parliament to deal with local questions, in the shape of elected local assemblies sitting in Dublin, Edinburgh, and some place in Wales, for the transaction of local business, which shows how rapidly public opinion has been tending toward some process of decentralization.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, June 24, to TUESDAY, June 30, 1885, inclusive.]

DOMESTIC.

H. C. BURCHARD, Director of the Mint, who somewhat doubted whether he would make a contest with the Administration on the subject of his resignation, has refused to resign, relying upon the special law which created his office to retain him; for he does not believe that the Senate, where he has many friends, will approve of the charges which may be presented as a cause for his removal. It is believed that the main charge upon which Secretary Manning will rely is that Director Burchard, in the exercise of his discretion as to the monthly purchases of bullion for the coinage of the standard silver dollar, might have bought it cheaper. As to that there will naturally be great differences of opinion.

President Cleveland on Saturday suspended Mr. Burchard and appointed James B. Kimball, of Pennsylvania, in his stead. The change will take effect July 1. Dr. Kimball is a Professor of Economic Geology in the Lehigh University, a mining engineer and metallurgist by profession.

The President made the following important appointments on Saturday: Edward L. Hedden to be Collector of Customs for the District of New York; Hans S. Beattie to be Surveyor of Customs, New York; Silas W. Burt to be Naval Officer of Customs, New York. The term of Naval Officer Graham would not expire until 1887, but he is suspended in mid-term because the President believes that sound public policy requires a reorganization of the whole customs service at New York.

Edward L. Hedden was born in New York city in 1828. From 1859 until last year he was a partner in the shipping-house of Wetmore, Cryder & Co., and for thirty-five years conducted the Custom-house business of the firm. He is Vice-President of the North River Bank and a director in several insurance companies. He has always been a Democrat in politics. He was recommended to the President for the appointment by Edward Cooper, Gen. John B. Woodward, John E. Develin, Daniel Drake Smith, J. Pierrepont Morgan, Charles S. Smith, E. T. Tefft, of Tefft, Weller & Co.; John S. Crane; Bates, Reed & Cooley; J. T. Low, R. T. Woodward, John P. Paulison, President of the Sun Mutual Insurance Company; Hubert O. Thompson, H. B. Claflin & Co., and others.

Col. Silas W. Burt is fifty-five years of age, a graduate of Union College, and was appointed Deputy Naval Officer at this port in 1869. His appointment as Naval Officer by President Hayes in 1878, to succeed A. B. Cornell, was the first important promotion in the Federal service under the rules of civil-service reform. His management of the Naval Office was upon strictly business principles, without the slightest regard to political considerations. When Colonel Burt's term as Naval Officer expired in March, 1883, President Arthur nominated him as Chief Examiner of the United States Civil-Service Commission, but the appointment was declined. In the same year he was appointed Chief Examiner of the Civil-Service Commission of this State, and accepted the office, which he has since filled with much credit. Originally a Republican, Colonel Burt, it is understood, supported Cleveland for Governor in 1882, while in the last campaign he was a strong supporter of the Democratic national ticket.

H. S. Beattie is the Secretary of the County Democracy organization and is also Secretary of the Amsterdam Club. He is about thirty-five years of age, and is a lawyer by profession. He is said to be a man of good executive ability.

An executive notice was issued from the State Department at Washington on Thursday, announcing that a temporary diplomatic agreement had been entered into between the Government of the United States and the Government of Great Britain in relation to the fishing privileges which were granted by the fishery clauses of the Treaty of Washington. These privileges, which would otherwise have terminated with the treaty clauses on July 1, may continue to be enjoyed by the citizens and subjects of the two countries throughout the season of 1885.

Secretary Whitney is engaged in a searching inquiry into every bureau of the Navy Department. He is proceeding slowly, and has called to his assistance the most expert accountants and engineers.

The statement telegraphed from London, on the authority of the Vienna correspondent of the *Times*, that the appointment of Mr. Keiley to be Minister to Austria had been withdrawn, was officially denied in Washington on Monday.

United States Minister Francis has been instructed to postpone his departure from Vienna for America. This is taken as indicating that Mr. Keiley will be withdrawn from the Austrian mission.

Mr. S. L. Phelps, United States Minister to Peru, died at Lima on Wednesday.

The fiscal Government year closed on Tuesday. The Treasury statement has not yet been issued, but the following are approximate figures: The total receipts for the fiscal year will be about $9,000,000 below the estimates. The customs receipts have been $181,000,000, instead of $185,000,000; the internal revenue receipts $112,000,000 instead of $115,000,000; and the miscellaneous receipts, $28,000,000 instead of $30,000,000, which were the estimates of the Secretary of the Treasury in his annual report. The total receipts are thus $321,000,000 instead of $330,000,000. The expenditures of the Government, which were estimated at $290,000,000 for the year, will in round numbers be $310,000,000. The reduction of the public debt for the month will be about $10,000,000, which will make a total debt reduction for the fiscal year of $63,000,000, as against $101,000,000 for the last fiscal year.

S. W. Talmadge has prepared his monthly crop report and second estimate on the probable wheat yield of the United States for 1885. The estimate shows the probable yield of spring wheat 121,000,000 bushels, winter wheat 210,000,000 bushels; total spring and winter 331,000,000 bushels. From these figures it appears that the crop of 1885 compared with 1884 shows a shortage in winter wheat of 160,000,000 bushels, spring wheat 22,000,000 bushels; total shortage, spring and winter, 182,000,000 bushels.

Mr. Stephen B. Elkins has sent a letter to the Land Office denying that he is now or ever was an owner in the Maxwell grant.

Trouble is threatened at the Cheyenne and Arapahoe Indian reservations, Indian Territory. Ten troops of cavalry and six companies of infantry have been massed at Reno.

Reports come in from the Delaware Bend of Indian Territory that five more horse-thieves have been lynched. The hanging of twelve others was recently reported.

General Crook has started on an Indian campaign in the Sierra Madre. It is unofficially stated that the campaign will be conducted as follows: General Crook, with scouts and infantry, will enter the Sierra Madre Mountains and endeavor to kill or capture Geronimo and his followers. Should they escape him and attempt to return to the reservation in Arizona or New Mexico, they will be intercepted by cavalry, which will be stationed along the line. Troops will camp at different water-holes along the line between Fort Huachuca and Silver Creek, so that the entire line will be guarded.

A courier who has arrived at Fort Bowie, Ariz., from the troops in the field in Mexican territory, brings despatches from Captain Crawford, in the mountains southeast of Apulo. The courier says that on June 23 the scouts and troops struck the camp of the Chiricahuas and killed one buck and captured fifteen women and children, five horses, and a quantity of supplies.

In an interview Congressman N. D. Hill, of Ohio, is quoted as saying that the Democrats of Ohio are opposed to the Civil-Service Law almost to a man; that they regard it as a fraud on the public; that they believe in the right of the people to change every officer in the Government at the time prescribed by the Constitution; that he has heard many Democratic members of Congress say they would not vote a dollar to pay the expenses of the Commission, and that he felt that way himself.

Bids amounting to $2,000,000 were received for the $1,000,000 2½ per cent. Niagara Park bonds, proposals for which were opened by the Comptroller at Albany on Thursday. There being no bids above par, the Comptroller awarded $40,000 of the bonds to the United States Deposit Fund, $60,000 to the Common-School Fund, and $900,000 to the Canal-Debt Sinking Fund. In order to provide sinking-fund moneys to purchase the Niagara bonds the Comptroller has sold large amounts of United States 4½ per cent. bonds, which, at the price paid, netted the State only 2¼ per cent.

Reviewing the two weeks which General Grant has spent at Mt. McGregor, Dr. Douglas said on Tuesday: "His life has been prolonged by the invigorating air here instead of the great heat of New York. The disease has progressed in the natural way, which is one of increasing debility. Now, if you ask me when the end will probably be, I cannot tell; none can tell. He grows weaker and weaker, and at last the point of exhaustion will be reached."

John McCullough, the tragedian, has been placed in Bloomingdale Asylum.

At the trial in the Court of General Sessions of this city of Yseult Dudley for shooting Jeremiah O'Donovan Rossa, the jury on Tuesday rendered a verdict of not guilty on the ground of insanity.

The Harvard Freshmen defeated the Columbia Freshmen in an eight-oared boat race at New London, Conn., on Thursday, by ten lengths. Time, 12:22; distance, two miles straightaway.

The Yale-Harvard University boat race at New London, Conn., on Friday, was won by Harvard by fifteen lengths. Time, 25:15½, four miles straightaway.

FOREIGN.

The members of the Gladstone Ministry went to Windsor Castle on Wednesday and delivered up the seals of office. Soon after they had retired, the members of the new Ministry arrived, and went through the ceremony of accepting office from the Queen and receiving the seals.

The official announcement of the installation of the new Ministry was made in the *Gazette* on Friday. The first formal Cabinet meeting was held on that day.

Writs for the reëlection of the new British Ministers were issued on Wednesday. The Duke of Marlborough is organizing opposition to the reëlection of his brother, Lord Randolph Churchill, for Woodstock.

In the House of Commons on Wednesday afternoon Mr. Gladstone read the correspondence between himself and the Marquis of Salisbury relating to the recent deadlock in the Cabinet, which was conducted through the medium of the Queen. The letters of Mr. Gladstone convey to the new Government the assurances of a general support on the part of the Liberals. The ex-Premier, however, throughout the whole correspondence, declined to make any specific pledges.

In the House of Lords on Thursday afternoon the new Lord High Chancellor, Sir

Hardinge Giffard, took his seat upon the woolsack. It was announced that the bill providing an annuity of £6,000 for the Princess Beatrice upon her marriage with Prince Henry of Battenberg had received the royal assent. The Redistribution of Seats Bill and several other bills have also received the royal assent. The House of Commons on Thursday adjourned until the 6th of July.

The following additional appointments have been made under the Salisbury Government: Sir Matthew White Ridley, member of Parliament, Under Foreign Secretary; William L. Jackson, member of Parliament, Secretary to the Board of Trade; Baron Macdonald, Lord Advocate. Queen's Household—Viscount Lewisham, Vice-Chamberlain; Lord Arthur Hill, Comptroller; Viscount Folkestone, Treasurer; the Earl of Dunraven, Under Secretary for the Colonies; the Earl of Kintore and the Earl of Hopetoun, Lords-in-Waiting.

Queen Victoria has conferred a peerage upon Mr. Rowland Winn, the Parliamentary Secretary to the Treasury in the new Ministry. His title is Baron Stoswald of Nostell. Sir Nathaniel de Rothschild has been raised to the peerage under the title of Lord Rothschild. He is the first Jew to receive this honor. The Queen has also conferred Knighthoods of the Garter upon the Marquis of Northampton and the Earl of Sefton; Baronies upon Viscount Powerscourt, Lord Henley, Sir Robert Collier, and Sir Arthur Hobhouse; and Baronetcies upon John Everett Millais, R.A., George F. Watts, R.A., Charles Tennant, M.P., and Thomas Thornhill, M.P. Mr. Watts has declined the honor.

Queen Victoria has bestowed the Order of St. Michael and St. George upon Sir Edward Malet, the British Ambassador at Berlin, and upon Lionel Sackville West, the British Minister at Washington. Messrs. John Morley and Villiers, members of Parliament, have declined to accept peerages. Professor Huxley will retire from his Government post in October on a yearly pension of £1,200.

Earl Spencer gave a farewell reception at Dublin Castle on Saturday. Crowds were present, and he was fairly well received on his road to the railway station through the streets.

A mass-meeting was held in Hyde Park, London, on Sunday afternoon, to protest against the amendment to the Reform Bill adopted by the House of Lords, which proposes to disqualify every voter who has received pauper medical relief for himself or family within a year of any election. There were seven stands for speakers, and fully 30,000 persons were present. Michael Davitt spoke against the proposition on behalf of Ireland.

M. Waddington, the French Ambassador to England, at a conference with Lord Salisbury on Saturday, renewed the demand that an early date be fixed for the withdrawal of the British troops from Egypt, and suggested the reconstruction of the Egyptian army of mixed Egyptian and Turkish mercenaries. He also suggested a change in the administration from the Khedive downward. Lord Salisbury merely said that Egyptian affairs were under consideration.

Lord Salisbury is negotiating with the Porte for the occupation of Egypt by Turkish troops, the cost to be paid by the Egyptian Treasury. It is believed that England wants to retain full control of the civil administration of the country.

The orders to the camel corps at Cairo to embark have been rescinded. It was reported on Monday that the British Government meditated reoccupying Dongola.

The Berlin *Post*, in an article supposed to have been inspired by Prince Bismarck, hints at a desire on the part of Germany for an alliance with England.

The *Journal de St. Pétersbourg*, in an editorial article, expresses respect and sympathy for Mr. Gladstone. Referring to the new British Cabinet, the *Journal* says: "Russia, with respect to her own interests, and in view of her conciliatory policy, regards with calmness the accession of a new ministry."

Mr. Gladstone, in a recent letter to the Midlothian Liberal Association, says he did not think he should again ask to be returned to Parliament, but that events had occurred which rendered it necessary that he should not imperil the unity and efficiency of the party. This is tantamount to a declaration that he will remain the leader of the Liberals. This letter was the political feature in London on Tuesday. The Liberals are jubilant over Mr. Gladstone's decision.

Mr. Joseph Chamberlain contributes an unsigned article to the *Fortnightly Review* on Irish reforms. He proposes that national councils be established, to sit at Dublin, Edinburgh, and, if the Welsh desire a council, at Cardiff, the members of the councils to be chosen directly by the ratepayers or elected by the county boards. The councils, he proposes, shall legislate and administer educational works, the poor law, and all measures not of an imperial character. The article is creating much discussion in London.

The 'Diaries of Gordon at Khartum' were published in London, on Wednesday. They cover the period from September 10 to December 14, and fill 395 pages. The diaries are a strange medley, varying in style, manner, and subject from page to page. One page will be an abstruse statistical discussion of the social and political aspect of the Egyptian problem. Then follows, perhaps, a page reading like a Biblical commentary, with many Scriptural quotations giving Gordon's peculiar views. Then suddenly will come a bit of reminiscence of life in England or elsewhere, or a story about some Arab child. One of his most characteristic utterances is: "I own to having been very insubordinate to her Majesty's Government; but it is my nature. I cannot help it. I know if I was chief I would never employ myself, for I am an incorrigible. I am not going down to history as the cause of this expedition. I decline the imputation. I came to deliver the garrison."

General Gordon's private Chinese diary is announced for August.

The chairman of the Cobden Club has issued an announcement concerning the British policy of free trade, with reference to the possibility of its disturbance by the Conservatives. He declares that, as the club has been warned that the principles of Cobden are threatened, it has taken measures to resist firmly any and all attacks upon them by the fair-traders and protectionists. Continuing, the chairman says: "We are not surprised at the attempts of the landed interests to retax food. The whole feudal land system of England is tumbling to pieces. A great number of the Salisbury Ministry have already advocated interference with the present fiscal system of England. The whole world is certain to eventually adopt Cobden's principles, which are now scoffed at by many. The tariffs of protectionist countries benefit the few to the detriment of the many, and by God's providence they will not be generally adopted."

Charles Warren Adams and Mildred Coleridge, daughter of the Lord Chief Justice of England, were married in London on Wednesday. A maternal uncle was the officiating clergyman. The marriage was private. Lord Coleridge was asked by his daughter to attend her wedding. He refused.

It was officially announced in Rome on Wednesday that Rev. Dr. Walsh, President of Maynooth College, had been appointed by the Pope Archbishop of Dublin, to succeed Cardinal Archbishop McCabe.

The Pope has issued an order directing that the Ultramontane newspapers published in Rome maintain a friendly attitude toward the Italian Government. This action of the Pope implies an important change of policy on the part of the Vatican.

Signor Depretis has completed the formation of a new Italian Cabinet. It is believed that he will follow the line of foreign policy marked out by Signor Mancini.

A despatch from Teheran received in London on Monday stated that the rebel leader, Isa Khan, one of the sympathizers of the deposed Amir, Ayub Khan, at the head of a large number of followers crossed the border from Turkestan into Afghanistan, and marched on the city of Khanabad, which he captured after a desperate struggle, putting its defenders to flight. The rebels then looted the place, and among the plunder was £1,000,000 belonging to the Amir. This raid has caused intense excitement throughout Afghanistan. The Afghans openly accuse the Russians of having conspired at and planned it. This news caused great excitement throughout London. The Foreign Office telegraphed Lord Dufferin for the fullest information with regard to the affair, and should it be proved that the Russian officials are in any way implicated, a vigorous remonstrance will, it is said, at once be made through the British representative at St. Petersburg. The reports have not been confirmed.

A despatch from Teheran states that 1,000 Persians are at work constructing the Trans-Caspian Railway. Warlike preparations are still being continued by Russia. Rumors are in circulation in the bazaars of Teheran that war will probably occur after the Trans-Caspian Railway is completed to Merv in Turkomania, and about 200 miles north of Herat, in Afghanistan. The Russians are bridging the River Murghab, on the confines of Afghanistan. Eight hundred Russian infantry soldiers are at Old Sarakhs.

Advices from Tashkend, in Asiatic Russia, show that the rebellion against Chinese rule in Chinese Turkestan is spreading. In Kashgar the laborers have risen.

The Spanish Government organ, *Estandarte*, says: "It is believed that the Cuban treaty negotiated by Minister Foster has proved completely unacceptable. The new American Government has from the first shown an improper spirit in the matter. It is well. Let it be annulled."

The Government of Mexico, being financially embarrassed, has announced that all taxes shall be paid in cash or notes of the National Bank of Mexico; that for the purpose of retiring from circulation notes and bills constituting the floating debt, and to cover pending obligations, the Federal Treasury shall issue Treasury bonds of the value of $25,000,000 at 6 per cent. interest, payable in twenty-five years, and that all salaries of public officers shall be reduced from 10 to 50 per cent. It is also regarded probable that railway subsidies will be suspended.

The issue of bonds by the Mexican Government has made the money market tighter than ever. The National Bank and many brokers have stopped all discount business. The commercial outlook is very ominous, and a number of houses heretofore in good standing are reported to be on the verge of bankruptcy. The official estimates of the Mexican Government for 1885–'86 reach $39,900,000. The receipts will not be sufficient to cover this expenditure. Only extreme measures of economy will enable it to meet current expenses. Great interest is felt in the promised plan for the adjustment of the English debt. It has leaked out that the Government will soon publish the report of the special commission on adjustment, advocating a recognition of the debt.

The revolutionary troops of General Caceres in Peru have completely disbanded.

A report was recently received by General Wolseley that Ollivier Pain died of fever while in the camp of El Mahdi, where he is said to have been held as a prisoner. Another report is, that he was murdered by Arabs paid by Colonel Schmidt, of the Egyptian service, to secure compromising papers which Pain was bringing from Khartum to Cairo.

SOME STARTLING ANNOUNCEMENTS.

We said a good deal during the late Presidential canvass about the theory put forward, and indeed acted on, by a large number of Mr. Blaine's supporters, that there was only one party in the United States fit to be trusted with the administration of the Government; the other, though comprising half the voting population, being composed of "traitors and rebels." This, as we pointed out at the time, was a confession to all the world that the Republican experiment on this continent was a failure. Any government to which half the people, or indeed any considerable portion of the people, living under it, is hostile, must of course, on the theory which Americans have always applied to all other countries, be held to have missed its mark. The American theory is, and has always been, that the only true tests of the goodness of a government are the loyalty and devotion of those who live under it. A government which, after a fair trial, has not secured these things, has always been held by American publicists to be in some sort a tyranny or usurpation. Consequently, the reason given by the bulk of the Blainites for not letting the Democrats into power was really a more shocking charge against American institutions than any of their foreign enemies have ever ventured to make.

This was not the whole of it, however. In saying that the Democrats were unfit to be trusted with power, not simply because they were dishonest or incapable, but because they hated the Government and would like to overturn it, the Blainites also promulgated the doctrine that you can carry on a party Government with one party only, contrary to the generally received idea that a party Government requires two parties, one in power, and the other in opposition, but fit and eager to take power when called on by the voters. A party Government carried on by one party only, however, has never before been seen or tried, and it puzzled plain people to say in what respect it differed from a despotism or an oligarchy, or in what way it could be punished for corruption or malfeasance in office. An irremovable ruler, whether a king, or a clique, or a cabal, has hitherto been supposed by Republicans to be one of the worst forms of government—that under which most irremediable evils are apt to arise. It was, therefore, startling to be told that it had already, in the very first century of the Republic, been set up in Washington; that no matter how much we might be displeased with the doings of the Republican party, we were bound to continue the same set or nearly the same set of men in power, from one year to another, for an indefinite period; and that we were to trust to their inherent virtue to correct their own wrong doing.

What reason there was for expecting this system to succeed in the United States any more than anywhere else; or why American politicians, when intrusted with places and salaries with the assurance that no faults of their own would suffice to expel them from them, were expected to behave better than any other politicians had ever done under similar circumstances—was never explained.

Recently another announcement has been made, by politicians of both parties, which is for patriotic Americans hardly less startling than the two already mentioned. It is that the interest of American voters in politics is kept up altogether, or almost altogether, by the prospect of a "clean sweep" after the election—that is, the transfer of all the offices, high or low, to a new set of persons. We are given to understand, in fact, by persons calling themselves careful observers of the American character and manners, both in society and politics, that the bulk of Americans really care nothing, or next to nothing, about questions of government popularly so called—that is, about changes in legislation or in administration, about war or peace, about taxation or education; that they have no longer, if they ever had, an ideal state in their mind's eye to which they would like to see their own country approximate; that their main motive in going to the polls is to keep certain persons out of or put others in possession of a number of small places, without any reference to the manner in which the duties of these places are discharged. If elections cause no changes in these places, we are told, or if the changes are made without reference to services rendered on the stump or at the polls during the canvass, the American people will rapidly lose their interest in politics, and, in fact, gradually cease to vote altogether, and, if we may so speak, let their Government go by default into the hands of any one who likes to clutch it.

The melancholy contrast which this prospect presents to the state of things which has for so many years been witnessed in monarchical England, is enough to fill every lover of republican institutions with dismay. In England there are no offices but Cabinet offices and about a dozen others, all high, to be contended for at an election. No matter how it goes, it creates no vacancies in the Post-office, but in the Postmaster-Generalship. It places no Custom-house offices at the disposal of the Ministry, nor consulships, nor foreign missions. In fact, nobody but about twenty or thirty politicians of high rank expects to get or use either office or salary by the result of the popular vote, and candidates for Parliament are so tied up by law as to their expenditures and promises at elections, that the smallest or most indirect bribe or unlawful outlay insures the unseating and possibly the imprisonment of the person guilty of it; and the case is not triable by a partisan committee of the House, but by the judges of the higher courts. Nevertheless, the whole vote is invariably thrown at an English general election, and is cast amid the fiercest excitement, stimulated to fever heat by hundreds of the best speakers in the country. Money, too, is forthcoming in abundance for lawful expenses, and not from men who expect foreign missions in return for it if the party is successful, but from men who want to see their ideas triumph in legislation and administration. Now what does all this mean? Is it really true, as the Life-long Democrats, and the Anti-Humbugs, and the Veteran Observers, and the Prominent Politicians, and the Workers say, that republican institutions have, in one century, killed popular interest in politics; and that all the people seek in voting is the excitement of a fresh distribution of small places—or, in other words, that their electoral contests are like a boy's game of jackstones, in which a little dexterity, mixed with a little chance, decides the disposition of trumpery little stakes?

THE ENGLISH RADICALS AND THE IRISH NATIONALISTS.

The abuse of Sir Charles Dilke and Mr. Chamberlain by the extreme Nationalist organs, such as the *United Irishman*, for planning a trip into Ireland for the purpose of studying home rule on the spot, is an excellent sign of the times. Irish statesmen of the calibre of the editor of the *United Irishman*, and, in fact, of most of those who serve under Parnell, are well aware that anything in the shape of home rule would throw a considerable body, if not the whole of them, out of work. Nothing in the Nationalist agitation in the House of Commons has been more remarkable than its failure to develop talent among the Parnellites. Parnell himself, though not a great orator, has shown political capacity of a very high order, and, indeed, has proved himself a genuine leader of men. He understands well the needs and peculiarities of the two races with which he is connected—the English, which he has to combat, and to which he belongs, and the Irish, of which he has constituted himself the champion. His oratory is of exactly the kind which Englishmen cannot bear to hear from an Irish agitator—cold, cutting, incisive, and businesslike; and then he has acquired in a remarkable degree the art of exasperating them by his silence. There never was a speech delivered in the House of Commons so effective, as an answer, as Parnell's refusal to take any notice of Forster's furious and labored attempt to convict him of complicity with the Dublin assassinations. A few words of studied contempt was all the notice he bestowed on it, and it made poor Mr. Forster seem somewhat ridiculous, while the English public got very angry on finding that it made no difference to Parnell whether they thought him a murderer or not.

But there is little to be said for the talents of his followers in the House. One of them, Mr. Justin McCarthy, is an excellent writer both of history and fiction, but he can hardly be said to have made his mark in the House of Commons. Another, Mr. Sexton, is an orator of no mean powers, but his is not the kind of oratory which compels hostile audiences to listen, and it ordinarily empties the House very rapidly. Another, Mr. Healy, is a man whose bodily presence is so weak, and his manners so bad, that when he came into the House he was greatly underrated. He soon showed, however, that he was a very skilful Parliamentarian, and a very keen debater of bills in the Committee of the Whole. But he acts in the House like a savage, and seems to take delight in committing outrages on what all civilized men regard as the decencies of legislative bodies.

Of the others there is little to be said, except that they have generally obtained entrance to public life through their violence of language and willingness to pay Mr. Parnell implicit obedience. They would probably hardly hold their own if concessions were made to the

Irish touching local self-government, which would call for other talents than howling and denunciation. In fact, there could not possibly be a better illustration of the complete divorce of Irish politics from anything which can be called business or affairs, than the kind of men whom the Nationalist constituencies send to the House of Commons. Men who have too much self-respect to play the part either of mere disturbers, or blind followers of a despotic leader, not only will not go, but are not needed. There is no business, properly so called, in the House of Commons for Irishmen to do. They have no control of Irish affairs, and on English affairs their opinions count for nothing. At home there is just as little field for political capacity as in London. The police is in the hands of officers appointed by the Crown, generally Englishmen. The municipal affairs the Irish have control of, but Irish cities are mostly impoverished boroughs, from which energy and enterprise have long fled. The county government covers the great bulk of Irish local affairs, including the greater portion of the local taxes, but about this the taxpayers have no more to say than about the taxation of India. The counties are governed —that is, the local taxes are voted, collected, and expended—by a grand jury selected from among leading landholders by the High Sheriff, who is appointed by the Crown. Consequently there is in Ireland for the bulk of the people no school of politics, and there never has been one. If the concession of home rule should set one up, however, it is very certain that the present Irish Parliamentary party would undergo great modifications. A demand for men with some constructive talent would rapidly arise, and the roaring editors and platform vituperators who now fight the Irish battle, would hardly satisfy it.

This battle now seems nearly over. The inability of Parliament to deal adequately with local affairs is acknowledged by everybody, and its failure is more flagrant in Ireland than elsewhere, because Englishmen and Scotchmen know and care so little about Irish local affairs. The only difficulty to be overcome is the difficulty of satisfying English Radicals that any representative governing bodies in Ireland, armed with any power, however restricted, would not immediately go to work to provide the machinery of National independence and enter into alliances with foreign Powers. The ease with which this problem has been solved here has as yet made comparatively little impression on them, owing to the fact that they ascribe it to our having a written Constitution, and a Supreme Court to interpret it.

THE SANITARY CONDITION OF THE CITY OF MEXICO.

"O Anahuac! cloudless are thy skies; thy soil is carpeted with flowers, thy lakes mirror the blue of heaven, thine air is loaded with the perfume of the jasmine." So declare the patriotic dithyrambs of Mexican poetry. Looking only to the natural advantages of the great central table-land, one might think the poets within the truth. But, unfortunately, vile man has placed himself in juxtaposition with the pleasing prospect, with the result of producing on this favored site a city whose death-rate is probably higher than that of any city of its size in the world. The Board of Health of the Mexican capital makes weekly contributions to literature in the shape of returns of deaths, which let one down in a very depressing manner from the heights to which he has been carried by the poems; for instance, taking the last two weeks of April and the first two of May, of this year, the number of deaths reported to the Board is respectively 293, 300, 300, 273. Now, the exact population of the city is unknown, the census being notoriously untrustworthy. Estimates vary by 75,000, yet taking the highest, 300,000, the figures given leave the death-rate of Mexico during the season of greatest mortality at about twice that of New York in August. It is, besides, to be remembered that according to the belief of prominent Mexican physicians, the deaths reported to the authorities are below the actual fact, owing to the lax enforcement of the laws governing such matters. It is not strange that the Mexican newspapers are beginning to call the city "The Great Necropolis." In an article under that heading the *Correo del Lúnes* recently said: "Undisguised terror is caused by these processions of the dead which daily defile through the streets of Mexico. To be alive here is getting to be a startling phenomenon. It may be a very short time, unless energetic remedial measures are adopted, before the capital will have to be moved to another location." Making due allowance for Spanish exaggeration, a sufficiently startling residuum of truth must remain.

It strikes one as surprising to find so prominent a place assigned to lung diseases among the causes of death. This seems inconsistent with the climate of perpetual summer which Mexico enjoys. Yet 20 per cent. of the deaths in the weeks referred to were due to consumption and pneumonia. All authorities agree, however, that almost the whole number of the victims of these diseases is found among the abjectly poor. Their homes are damp and dark basements and hovels. They never have fires for heating purposes, and are cut off from the sunshine which is indispensable to health in Mexico. Of course, the cold is never severe, but there are chilly nights and damp days, just fitted to cause colds, which only need the aggravating conditions of the homes and habits of the poor to develop them fatally. There are months in Mexico when colds are more universal than at the worst seasons of the year in New England. Opera singers complain of the constant coughing in their Mexican audiences, often so great as entirely to drown their finer notes.

Still more unexpected is it to find malarial diseases so fatal in a city at an elevation above the sea level of 7,500 feet. Of the deaths for the period cited 33 per cent., however, were caused by typhoid and other forms of gastric fever. This puts us on the track of the principal cause of the high death-rate of Mexico. It is a city without drainage. Its site is a bowl of the mountains. There is really no outlet to the shallow, marshy lakes whose surface is nearly on a level with the streets of the city. Yet, with true Mexican inconsequence, the capital has a system of sewers as if there were fall enough to drain them. But their contents scarcely move—during a large part of the year they do not move at all; hence they are in effect only a system of cesspools, ingeniously devised to make the disposal of the sewage the worst possible. The little that is washed out by the heavy rains is simply added to the filth of Tezcoco, the so-called lake whose diminishing area and close proximity to the city cause the gases of decomposition, which are so rapidly generated under a vertical sun, to be a prime source of infection to the inhabitants of the capital. The only thing which prevents a plague is the extreme rarefaction of the air, which seems to hinder the propagation of the germs of disease. As it is, typhoid prevails the year round, being especially virulent at the end of the dry season, when the heat is the greatest.

It is not due to Mexican want of enterprise alone that the chief city of Spanish America should thus be left to be the lurking-place of disease. The difficulties in the way of applying an efficacious remedy are tremendous. Such is the nature of the plain upon which Mexico is built, such the conformation of the land and the contour of the mountains about it, that a vast system of tunnelling and canalization would be necessary to create a fall sufficient to drain the valley; and before the city can be drained, the valley must be. A few years ago, at the request of the city authorities, an association of American engineers and contractors prepared and submitted plans for the work. The city fathers read with interest until they came to the estimated cost—$9,000,000. Thereupon they reflected that this sum was about a third of the entire revenue of the general Government, and wisely concluded that it would be rash to pledge the credit of the city for such an amount; so the matter was dropped. Meanwhile, the Academy of Medicine has offered a prize for the best explanation of "the insupportably fetid condition of the atmosphere," and the Common Council, not to be outdone, has also offered a prize for the same thing, promising, in addition, to the successful contestant, the freedom of the city. This is a fair indication of what may be expected from the Mexicans themselves. Yet it also suggests the strength of the conviction that a remedy of some sort must be devised. San Luis Potosi, or some other city, may wrest the commercial supremacy from the capital, unless life there is made more safe and tolerable.

Two rival plans are advocated among engineers. One of them is argued for by an American engineer, Mr. E. H. Spaulding, in the columns of the *Mexican Financier*. He would utilize the old Spanish cut of Nochistongo, which, he thinks, by deepening and extension, might be made adequate to the drainage of the valley. This cut, worked upon at different times for 180 years, is an excavation 168 feet deep and thirteen miles long. It was undertaken originally to furnish an outlet for the overflow of the lakes, which used to flood the city disastrously. In this it was but partially successful. It has already been put to use by American capital, as it is along the side of this work of the Spanish viceroys that the Central Railroad finds its way into the valley of Mexico. Mr. Spaulding proposes to push a great canal through this existing excavation, to the

River Tula, flowing off to the Pacific, and in this way secure a fall for the drainage of the valley and city. The only objection which he can see to the plan is the immense first cost of the work. But Mr. H. Rudston Read, of the Institute of Civil Engineers of England, declares that this remedy would be worse than the disease. He maintains that the excavations necessary for the construction of the main canal and the readjustment of the sewers would cause a pestilence in the city at the very outset, and that, on the best showing, all that would be accomplished would be some relief to the city at the expense of the contiguous towns, which would be poisoned, he asserts, by the sewage poured into their water supply. The plan he prefers is that first proposed by the late General Scott, of the Royal Academy, viz., the dry-sewage system. He would provide separate drains for disposing of the rainfall, and then disinfect and deodorize the sewage at various points near the outskirts of the city, to which the contents of the sewers could be brought through pneumatic tubes. This plan, Mr. Read argues, would be at once the cheapest and most effective. Still, that there would be need of an enormous outlay, he admits. It seems doubtful if anything thorough will be done till the American interests in the city become so large as to insist upon better sanitary conditions. It may be that American capital will yet do the work.

It ought not to be inferred that there is especial danger to the health of tourists passing through Mexico City or spending some time there. With a moderate amount of caution in diet, and with daily exercise in the sunshine, the pervasive malaria may be defied. Its victims are found mainly among the dissipated, or those who are compelled to lead a closely confined life. Very much depends also upon the season of the year. The winter months are usually chosen for a visit to the South. All things considered, those months are the best and safest for seeing Mexico. Yet if one has to pass much time in-doors in the damp, cheerless, unwarmed, and unwarmable rooms of the hotels, he will be tempted to resolve with Hawthorne in Rome that, wherever he may hereafter spend his summers, he will always pass his winters at the North so as not to suffer from the cold.

JOHN HARVARD.

It has been reserved for a Harvard alumnus to remove the mystery surrounding the origin of John Harvard, from whom the University takes its name and dates its virtual beginning. Thirty years ago Mr. Henry Fitz-Gilbert Waters graduated at Cambridge, a simple A.B. At the commencement just passed, his Alma Mater conferred upon him the degree of A.M., in recognition of the gratifying discovery of the facts about to be related. Master of the art of genealogical research Mr. Waters has certainly shown himself to be. But before giving our readers a glimpse of the difficulties he had to encounter, let us briefly state the result of his inquiries.

A thin pamphlet lies before us, denoting itself a reprint from the *New England Historical and Genealogical Register* for July: 'John Harvard and his Ancestry, by Henry F. Waters, A.B.' It contains ten wills and some other documents, and demonstrates beyond question that the Rev. John Harvard was baptized November 29, 1607, in the parish of St. Savior's, Southwark, London. His father was Robert Harvard, who was buried in the Church of St. Savior's, August 24, 1625—a victim of the plague of that summer; his mother, Katherine Rogers, who died Katherine Yearwood, and was buried July 9, 1635. Their children were nine in number, and John Harvard was the fourth. On the list of baptisms his name was written 'John Harvye s. of Robt. a Butcher'; and it is characteristic of the orthographic confusion which the searcher must penetrate if at all by a sort of instinct, that the other children are set down as Harverde, Harverd, or Harvye, indifferently—Harverde, however, leading off. These alternative spellings appear to have been common, for Mr. Waters cites the will of a vintner with sundry bequests to "Mrs. Herverd als Harvey, wife of Mr. Thomas Harverd als Harvey," and to "Richard Harverd als Harvey," both men being butchers, by the way; and another will making mention of "Robert Harvy als Harverde." "Harwar," "Harward," and "Harvard" stand for Mrs. Margaret Harvard, widow of Thomas (apparently an uncle of John Harvard), whose will is given by Mr. Waters.

This same Margaret appears to have been a Wallbank by first marriage, and the amount of remarrying in this little circle is another cause of the genealogist's perplexities, albeit sometimes the source of the surest inductions. Take Rose Reason, for example. This charming woman (if we may judge her person by her name) is named in the will of John Harvard's mother as her sister. More than a year ago Mr. Waters had made note of the will of William Ward, goldsmith, of the parish of St. Savior's (1624), for its reference to "my brother Mr. Robert Harverd." "My said loving wife Roase Ward" is also mentioned in that instrument; but Mr. Waters had forgotten her when he stumbled upon the marriage of William Ward and Rose Rogers (1621) in the parish registers. From other indications he felt sure that the mother of John Harvard would turn out to be a Rogers, and he mentally associated Rose Rogers with Rose Reason. They prove to be one and the same, by virtue of a second marriage.

Katherine Rogers must likewise have been an attractive sort of person. Her first husband, Robert Harvard, seems to have been aware of it, for he "ordaynes" in his last testament "that my saide wife shall, with sufficient Suerties, within three moneths next after my decease, *or at least before shee shalbe espoused or married agayne to any other*, enter and become bound in the somme of one Thousand pounds," etc. This was toward the end of July, 1625, and on June 15, 1626, we have the will of John Elletson, cooper, who leaves a "loving wife Katherine Elletsonne." The cooper having in turn followed the way of the butcher and of all flesh, we come next upon the will of Richard Yearwood, of Southwark, grocer, who restores to his "well beloved wife" Katherine "all such household stuff and so much value in plate as she brought with her when I married her"—thus clearly implying a previous wedded condition. Moreover, to her he gives "her dwelling in all that part of my dwelling house wherein I do now live, *so long time as she shall continue a widow* and dwell in the same herself." We cannot record a fourth marriage on Katherine's part, for she survived her last husband barely three years, and on July 2, 1635, prepared her own will, of which she makes "my eldest sonne John Harvard Clarke" an heir and executor, and in which she speaks of property devised by the late John Elletson—thus furnishing the link between her three marriages. But Mr. Waters, who leaves nothing to inference, sought for and found the entry of the marriage of "John Ellison and Katherine Harvie."

In the following year, 1636, death claims the brother Thomas, a cloth worker and joint executor with John of their parent's will. His own, dated July 15, 1636, names John Harvard and the Rev. Nicholas Morton, pastor of St. Savior's, as executors, and the latter qualifies on May 5, 1637, with a reservation in favor of John Harvard's obtaining his commission whenever he seeks it—"cum venerit eam petitur." He was, then, absent for some reason, and at this point our cisatlantic knowledge of the gentle scholar begins. He had entered Magdalen College, Cambridge, England, as a Pensioner in 1627, and graduated A.B. in 1631 and A.M. in 1635, and had married Anne, daughter of the Rev. John Sadler, vicar of Patcham in Sussex, who describes her in his will of February 6, 1637, as the wife of "John Harvard Clarke." The son-in-law possibly awaited this event before emigrating to America, and now he desired to dispose of his property in England as a preliminary to his long journey. Perhaps the most brilliant stroke in Mr. Waters's investigations relates to this transaction, the existence of which was for him a pure piece of genealogical imagination. By the cordial aid of an English antiquarian friend, he was directed to "the Feet of Fines of the Hillary Term, 12th Charles I., County Surrey," in the Public Record Office, and here he found a transfer "de uno mesuagio et tribus Cotagijs cum p'tin in Parochia Sci Olavi in Southwarke," to John and Johanna Man by John and Anna Harvard; though in the Concord of Fines he failed to discover the customary signatures of the parties. Mr. Waters also presents us with the will of this John Man, referring to the "four houses or Tenements with thappurtenances ["p'tin," as above] thereunto belonging, scituate in Bermondsey streete in the parish of St. Olave in Southwarke and County aforesaid which I purchased of one ——— Harbert"—the last indignity to this noble name which we shall exhibit.

This transaction bears date of February, 1636-37, and by May 5, as we have seen, on occasion of the probate of his brother's will, John Harvard was missing from England. In the interval he must have taken ship for the Bay Colony. In 1637 our non-conforming clergyman turns up at Charlestown, Mass., and, having been admitted a freeman in November, in 1638 he follows the fashion of his short-lived family and passes away at the early age of thirty-one, bequeathing to the college decreed by the General Court in 1636 half of his whole property and his entire library of 300 volumes—altogether equal in value to twice the amount originally voted by the Court. This determined the immediate opening of the college, and the choice of a designation for it.

Such is the interesting revelation which we owe to the masterly inquest conducted by Mr. Waters.

THE APACHE OUTBREAK.

NEW MEXICO, June 15.

THE recent outbreak of the Apaches from their reservation at San Cárlos in Arizona, though a fatal surprise to many, was still not unlooked for. The censure inflicted upon General Crook after his very remarkable and successful campaign in the Sierra Madre—however unwise and unjust at that time—was based upon the possibility of such an occurrence, and actuated by a very legitimate dread of its results. The inhabitants of Northeastern Sonora, upon whom the Apaches have preyed so long, predicted the return of their mortal foes, well fed, well armed, and consequently in the best possible condition for murder and rapine, by the spring of 1885, and, sad to think, they missed the time only by one month!

It cannot be denied that the intentions of General Crook were excellent, and their execution a

masterpiece of daring, prudence, and knowledge of Indian nature. In engineering back to the reservation the most independent, most lawless and desperate fraction of the Apache tribe, without bloodshed, and without yielding to them one iota beyond what he originally designed to yield, he performed a feat unparalleled in the annals of Anglo-American Indian intercourse. The question, however, was whether, in thus acting, the distinguished commander of the Department of Arizona did not perhaps underestimate the fickleness of the Chiricahuas, or overestimate his ability to restrain them. For it is certain that in transplanting them to Arizona again, contrary to the wishes of a part of its inhabitants (including many of the peaceable Apaches themselves), General Crook assumed, or his action at least morally implied, the responsibility of *keeping* them on the reservation thereafter, and thus protecting the settlers from any subsequent damage from Indian lawlessness.

The Chiricahuas are a mongrel lot. As early as the beginning of the eighteenth century, the "Turkey Mountains" ("Chihuicahui," an Ópata word, latterly corrupted into Chiricahui) of Southeastern Arizona became the favorite lair of the Apaches while ravaging Chihuahua, Sonora, the Sobaypuri (Pima) villages on the San Pedro, and around Tucson and even parts of the "Papagueria." Their stay there became so permanent that a distinct band was evolved to which, from their habitual place of abode, the title of "Apaches-Chiricahuas" was given. But what with the introduction of female captives, and with straggling accessions from other groups of their tribe, who joined them for purposes of predation, the breed became sadly mixed. Nevertheless, the most distinguished man the Apaches ever produced, the celebrated "Chis" (erroneously called "Cachise"), was a legitimate Chiricahua.

Being constantly on the war-path, while the more northern Apaches slowly yielded to the pressure of increasing colonization by whites and of military surveillance—thus confining them to the reservation—the number of Chiricahuas began to decrease. By the death of Chis, they lost their talented leader, and the Southwest became rid of a terrible scourge. Reinforcements from the Gila and the Mimbres grew less and less; from being difficult to escape observation, it became dangerous, and finally ceased even to be legitimate in the eyes of Apaches themselves. The result was that only desperate men ventured to join the Chiricahuas—outlaws from the quieter groups, men who had every reason to hide away from their surroundings, and whom their surroundings both hated and feared. This hatred, as well as fear, occasioned conflicts on the reservation itself, whenever the Chiricahuas condescended to recuperate there for a while, and finally developed into bitter enmity toward all of them for their extra-savage character, and mortal dread on account of their desperate violence.

When, in 1882, Gerónimo moved into Mexico with the Chiricahuas, reaching the Sierra del Carcay in spite of the vigorous pursuit of Lieutenant-Colonel Forsythe, and of the murderous conflict with the Mexican troops under Colonel García at "Los Alisos," he joined forces with the most southerly band the Apaches ever formed—the so-called "Janeros" under Juh. The Janeros slowly arose after 1684, and are an olla-podrida of Lipanes, Mescaleros, stragglers of other Apache fragments, of the original Indians living in Northwestern Chihuahua and Northeastern Sonora (the "Janos" and "Jocomes"), of renegade "Sumas" from El Paso del Norte, of scattering "Tobosos," of "Tarahumara," "Ópata," and Spanish captives. To this neat little conglomerate the Chiricahuas were added, and the marriage of Juh's daughter with Gerónimo cemented a union which, however, soon resulted in a quarrel; Juh being left alone with very few followers. After his death, these followers joined Gerónimo also, and the latter, himself a half-breed (son of a legitimate Chiricahua and a Mexican captive), repaired to San Cárlos at the head of one of the worst miscegenated and therefore most dangerous hordes an Indian community ever beheld.

General Crook was certainly correct in believing that the reintegration of such a desperate crowd among their cognates would be looked upon by the latter with sufficient distrust and fear to make them useful as watchers and spies upon the former. He certainly could rely upon the peaceable Apaches "telling on" the Chiricahuas. Still, the latter have broken out again.

It is said that this outbreak was not premeditated. Color is given to this statement by the fact that Chiato, Gerónimo's aid and adjunct in previous raids, is not with him, whereas one or more of General Crook's former scouts have joined the renegades. Still, while it is of course impossible to disprove this assertion, and while the assumption that they ran away after a "jolly old drunk" and hid themselves, through fear of punishment, like naughty boys, is not altogether inconsistent with Indian nature, yet there are signs which rather point toward premeditation and the execution of a matured and well-organized plot. The making and wholesale imbibing of "Tisuin" is not a mere purposeless carousal; it originally was, and still largely is, a religious practice, an act of superstition, initiating or terminating some important enterprise. It may, therefore, have been only a blind. Again, Gerónimo started with 133 persons, of whom only 32 are men, 8 are boys nearly grown, and the remaining 93 are women and children. He started fully equipped and armed, as if on one of the "summer-trips" of old. However it may be, they had set out before it was known, and were beyond the reservation ere an effective pursuit could be commenced.

The direction in which they went was easily guessed, for only the east and southeast are available for escape. Their ultimate destination was absolutely certain: it was the Sierra Madre, with the Apache flesh-pots of Egypt, to wit, a wide, uninhabited, inaccessible range, plenty of game, wood, and water, occasional American prospectors, well armed and stocked with cartridges, to kill and rob, and defenceless Mexican settlements along the principal chains, made to order, so to say, for easy slaughter and pillage. Thither, to the old haunts of many of his followers, Gerónimo could not fail to wend his way.

The cry "Stop thief" was at once, and very legitimately too, raised everywhere. But with equal propriety the plaintive objection could be opposed: "Hunt for a needle in a haystack!" Western New Mexico, between the Arizona line and the Sierra Magdalena, north of the Gila, and south of the Rito Quemado, is a bad country through which to hunt Indians. Sparsely settled, and even then only in places tolerably far apart, it is an intricate mountain labyrinth, covering almost 12,000 square miles. To protect such settlers as were living close to the Apaches was utterly impossible: the outburst was too sudden, too unexpected, the unfortunate settlements too remote from all garrisons. If any criticism may be indulged in on this score, it cannot apply to the present, but to the past. Why was not a military post established near the eastern boundary of the reserve, so as to obstruct the well-known *débouché* toward the San Francisco River? All that the military could do was to hem in the murderous fugitives so as to either drive them back into Arizona or capture them in New Mexico.

It is certain that both General Crook and Colonel Bradley have acted in the emergency with commendable alacrity and judgment. While troops from Fort Thomas pushed along the Gila, detachments from Fort Bayard scouted the wild ranges on its headwaters, the garrisons of Fort Selden, Fort Craig, along the Rio Grande, even of distant Fort Stanton, were put in motion toward the Mimbres Mountains in the West; volunteers from Socorro penetrated beyond the Magdalena; Major Fountain and his Rangers moved up from Las Cruces, the Pueblo Indians of Laguna took the field in the north, directed by able and courageous frontiersmen. General Crook himself appeared at Deming to take command. But to scour and protect the vast territory, he had only about thirteen companies and perhaps two hundred to three hundred militia!

To the energetic *converging* movements of these forces, Gerónimo with consummate skill opposed an amazingly rapid *dispersion* of his own people. In little more than a week after he left Arizona, hostile Indians had already threatened remote points on the inner periphery of the huge quadrilateral above described, and had conveyed the impression of an Indian outbreak of much greater magnitude. Such astounding velocity of march, unnoticed, unfelt, is attainable only by Indians, who travel day and night if the country is without inhabitants, who sleep or (in case it can be done with impunity) strike in the day-time and move at night, regardless of supplies, utterly devoid of feeling for their stock. They know the country thoroughly, and if they did not, they know *where they start from* and *where they are going*: more is not required for their guidance. This lightning-like scattering over an extensive, difficult region bewilders and baffles the most experienced commander, frightens the most courageous, civilized, and peaceable settlements. Gerónimo has, in this instance, acted with the brilliancy of Chis, the ferocity of Nané, and the cruel obstinacy of Juh. After he had conveyed the impression that his designs were to penetrate south along the Sierra Mimbres, his men turned westward again, and led their pursuers to believe that he was making his way for the Sierra del Dátil in the northwest. Then he quietly drew in the skirmishers, and, slipping past the troops on the Gila, ran the band, with booty and stock, through the narrow funnel at Stein's Pass into Southeastern Arizona and to the Mexican frontier. There he is now, with troops of the United States in close pursuit yet.

It will depend upon the coöperation of the Mexican forces whether Gerónimo can reach the fastnesses of the Sierra Madre or not. If the former are numerous enough and timely enough advised so as to force a decisive engagement (such as at "Tres Castillos" in 1880), then there is no hope left for the Apaches. At the hands of Mexican troops *their* doom is sealed. Should our soldiers, following them into Mexico as per treaty "on a hot trail," overtake them, then it is also to be hoped that they will not be suffered to capitulate. The present outbreak was utterly unprovoked; neither soldiers, nor officials, nor settlers have given any cause for it. The atrocities which were afterward perpetrated are unjustifiable crimes, for which not even the explanation of Indian warfare can be properly suggested.

LONDON WATER-COLORS.

LONDON, June 15.

THAT a decided decadence in the art of England is taking place, is made clear even by the water-color work in which has always lain the great strength of English art. It is not merely that there are no men now to be classed with Turner, Dewint,

Cox, Fielding, and many others not prominent in the presence of those giants, but that in the men who at present most succeed, with few exceptions, there is a distinct lowering of purpose, and a satisfaction in matter-of-fact and in mere technical successes which inevitably bring paralysis on the art that achieves them. The old English school was a poetic school, and reflected all the healthful and delightful sentiment with which nature inspires a sound and energetic race. It was not classical or artificial, hardly, as a general thing, highly artistic; but whatever charm it had was that of purity and simplicity, a style entirely unsophisticated, even in the case of Turner, who attained the highest point of pure art ever known in it, and growing out of the subject-matter as simply and directly as that of Burns.

Of this class of painters there is not one among the men now active in their profession. In the Old Water Color Society, Boyce comes nearest to the old vein, and the charming sentiment that runs through all his work is closely allied to the vein of Copley Fielding and some others of the past generation, but with less sense of freedom from the constraint of facts and more evidence of painting before nature. Always charming, subtle in style, and with a certain refinement which verges on monotony, but which never fails to wear and grow on the mind that has learned to appreciate it, Boyce's drawings are perhaps the best examples of the art which lies between the old school of idealists and the new school of actualists. They are in a plaintive key of color, and generally of subjects quiet in the extreme—old architecture, domestic by preference, with sketches of the gentler English landscape, or the similar portions of French.

T. M. Richardson, another of the veterans whose work I remember, I think, thirty years ago, still retains the influence of Turner and the idealists, but translates art into artifice, and while his technical ability remains, without question, great, its devices are too patent and weary the eye. A large view of Etna, from Taormina, is perhaps the best example of the scenic landscape to be found in the two exhibitions, but is a poor substitute for Turner, or even Leitch. S. P. Jackson, also a veteran of the "Society," still shows in his pure, transparent color and refined method of working—quiet, dignified, and in many respects like that of our W. T. Richards—a recognition of the value of sentiment apart from that of facts.

In the Institute, as the new society is called for distinction's sake, there is one remarkable drawing of an evening scene (illustrating, in the catalogue, a passage from Judges, but which is simply a street in an Eastern city with a brilliant evening sky and a well-rendered twilight dreaminess) that pertains clearly to the ideal and is a remembered effect. Arthur Severn has also some poetic studies of sea effects and of Venice, and Walter Crane has a noble drawing, "Pan-pipes," in a purely ideal vein, the landscape and all the accessories being rendered with a grace and classic feeling quite alone in the exhibition. Two shepherdesses dancing to the piping of a shepherd lad seated on an old sarcophagus turned into a drinking trough, on which is a relief of Pan and a Bacchante, make the picture.

These are all I could find of work which is in the finer vein of sentiment of nature. In the figure department there are not many memorable things, but a few are very fine in their way. Chief among them in the Institute is a drawing by C. Green, "Nell and her Grandfather at the Races," which is, so far as I am capable of feeling, the best picture of the year in the purely realistic, story-telling kind. It is only an English crowd at the races, with all the varied types of the English world, ruffians, clowns, gentlefolk—much as in the artist's well-known drawing in Mr. Walters's collection; but Nell and her grandfather crouching behind the box of Punch and Judy form the centre of the composition — charming conceptions, and rendered, like all the other characters, with great individuality and delicacy as well as masterly power; excellent in drawing, tender in color, and of extreme simplicity and directness in execution. I do not think that in the realistic vein water-color can go further. An artist whose name is new to me, and who has yet to acquire the mastery of the higher qualities of pictorial effect, H. R. Steer, has a remarkable drawing of great pathos and dramatic power, "Evicted," giving a street scene in smoky and dingy London, with a little lad keeping guard for an evicted family on the pile of furniture which is gathered in a heap on the sidewalk; the boy, a sad-faced, frightened child, but resolute to keep his guard, forming the centre of the picture. It lacks but little in the treatment—a little more concentration and emphasis of light and shade—to make this a picture which should rank with the best of the year as to the technique, while as to pathos and silent protest against the social inequalities which make London what it is, it is a noble picture—a painted sermon. With the exception of the drawings of J. D. Linton, the President, there are no figure subjects of great power in that vein of color which we recognize as ideal—that in which Watts, Burne-Jones, and Rossetti gave the lead; but those of Mr. Linton are noble, though in a lesser way than theirs.

In the "Society," Albert Moore gives his usual decorative figure drawings, in the classical vein and subtle color which I have done justice to in my Academy letter. It is simple decorative art, but very complete in its chord of tints, pale and opalescent.

In the more common vein of realistic figure painting the finest, *me judice*, is Napier Hemy's "Pilchard Fishers," a powerful piece of sunlight effect on some fishermen who have gathered up a shoal of pilchards in their nets and are scooping them out into their boats. For solid, large-handed realism and brilliancy of general effect, it would be difficult to surpass it in oil or water; and as an example of what water-color can do, it stands alone in vigor among the pictures of the season. Another of the same general vein, almost painfully realistic, is Walter Langley's "Waiting for the Boats"—a row of fisherwomen, half length and on a large scale, possibly half life-size, looking out to sea and out of the picture; the various types of fisherwoman well noted, and the whole painted with great solidity and masterliness, yet not an agreeable picture to have in one's room. There is a way of treating this rude peasant life that renders all its character with none of the repulsive details—as Millet did it, for instance, or Israels—which is at once masterly and true and yet not painful; but this intense realism, which strikes one as more real than the thing itself, thrusts into our faces the mere surface coarseness, with such energy that there is no chance to become interested in the hidden qualities of the subject. The dirt, the raggedness, and the degradation of poverty and of the low estate which borders on poverty, are too easily rendered to make them the subject of a triumph; but the painter who can find, as Millet and Israels did, the pathos and spiritual vitality which lie behind those, without insisting on the accident or misfortune of the peasant so strongly as to make us lose sight of the deeper qualities, will not be willing to deal in such a realistic and over-painstaking way with subjects of this class.

The intense realism, in general, which seems to be the dominant form of artistic vitality in England, is in fact impossible to men of great poetic or artistic gifts. Men of high imaginative power may be capable of rendering with the greatest minuteness the facts of which they make use, but it will not be in the way of realism, but because the imaginative vision is intense and minute, and the facts are needed; whereas the vision which is superficially minute is naturalistic and essentially commonplace, and this is the quality of most of the English naturalistic painting. Burne-Jones does in some of his pictures deal with the most elaborate refinement of detail, but always in the way of imaginative completeness, not from any intention to emulate naturalistic realism.

Of this naturalism, pure and simple, there is enough, if not always of the best, in both the water-color exhibitions, of a large and frank kind in the work of Mr. Earle—a study from the Villa d'Este, Tivoli; in that of Mr. George Marks, who has a curiously and largely truthful study of "A Chalk Pit"—a bit, apparently, of Surrey landscape; with more of human sympathy in "A Fen Farm," by R. W. Macbeth, and in "The Sisters," by Miss Gow, all of the Institute. Of the same class in the Society are "A Summer Paradise," by A. W. Hunt; a delicate study of spring vegetation by Mr. Charles Gregory, possessing very admirable qualities of realistic color; a landscape background to a scene from the "Tempest," inappropriate to the subject, but very fine as landscape; "The Delectable Mountains," by Albert Goodwin, which is simply a study of a hillside, purple with heather, and flecked with wild flowers; an architectural subject from Jerusalem, by Carl Haag; a brilliant seaside bit by Ernest A. Waterlow, and many studies of still life, notable for nothing but minuteness. A noble drawing of horses on a towing path by Mr. Beavis is realistic in a way, as such things can be realized; and in a certain vein of realism the backgrounds of Mrs. Allingham's exquisite pictures of child-life and domestic incident are thorough without being at all labored, and these little pictures are on the whole perhaps the most entirely satisfactory of this class in the whole range of my present letter.

There is a great deal of technical ability in the two exhibitions, but the dominant impression thus far, if one compares the old art with the new, is the singular want of purpose behind the painting power. As in the Academy, the hand is better than the head. The frivolity and sometimes inanity of the subject-matter, even when the picture is avowedly an incident picture; the intellectual insignificance of the work which is professedly undertaken with a literary meaning, strikes one with singular force. Such silly inventions are made the object of the labor of months that one can hardly form a favorable opinion of the general intellectual development of the English artist. Of course, men like Leighton, Watts, Burne-Jones, Richmond, Alma-Tadema, and some others would be distinguished in any school by the marked intellectual quality of their work; but, taken as a whole, the English school compares badly with any of the Continental schools in respect of the evidence of general and especially intellectual culture, rather than of technical weakness; and by a deficiency in style rather than in executive cleverness as compared especially with the French school. The rarest thing to see is, not a picture which shows that the artist knows how to paint, but one which shows a serious purpose in the painting; and "self-taught" may be inscribed on most of the work even of the better class. While a great genius may be better for being self-taught, the

average work of ordinary man is ill taught when self-taught. Watts, individual and strong as he is, shows everywhere in his work his keen appreciation of Greek and Venetian art; and Burne-Jones, with all the originality which at times he shows himself capable of, is at other times most strongly influenced by the mediæval Italian art and the color of Venice. To insist on forming one's own style or line of art is mainly to insist on poverty of thought and a narrow and transitory success; for what, in art as in thought, lasts longest is that which claims widest affinities and is least provincial, while most English art is provincial to the last degree. W. J. S.

A FRENCH NIBELUNG OPERA.

PARIS, June 15.

THE Paris press has often declared its dissatisfaction with the management of the Grand Opéra, which receives from the Government an annual subvention of 800,000 francs, charges high admission prices, and in return for all this does not give the public one-tenth the variety of entertainment that may be enjoyed in a German city of even the second rank. The principal cause of complaint, however, is that living composers do not receive sufficient encouragement. Some of the most successful operas of recent years had to be first exported and approved by a foreign public before a Parisian manager was found willing to try his luck with them. This was the case with Reyer's "Sigurd," which has just been brought out with success at the Grand Opéra. For ten years the composer had in vain endeavored to convince the successive directors of the suitability of his work for their stage; and at last he was obliged to take it to Brussels and produce it there. The leading Paris papers had their critics on the spot, and their favorable comments, combined with the satisfaction of the local audience, seem to have overcome the scruples of the Paris manager, and so M. Reyer, who is a member of the Institute, a well-known critic and author of several operas, at last found himself the hero of the day. To prevent, however, any injurious elation on his part, the managers took care to delay the first performance till two days before the Grand Prix, which marks the end of the Paris season, after which most of the regular patrons of the opera leave the city for their country villas and the watering-places.

In its outlines, the subject of "Sigurd" is almost identical with the last part of Wagner's Tetralogy—"Die Götterdämmerung." *Brünnhilde* appears as *Brunehild*, *Siegfried* as *Sigurd*, *Grimmhilde* as *Hilda*, while *Hagen* and *Gunther* preserve their names and characteristics. As in Wagner's drama, *Brunehild* is the Valkyrie who, for disobeying *Odin* or *Wotan*, has been put into a magnetic sleep, from which no one can awake her and claim her as his own except a hero with sufficient courage to brave the fire and other terrors with which she is surrounded, *King Gunther* and *Sigurd* are the two warriors whose aim is to win this bride. *Sigurd* visits *Gunther* to challenge him to combat. *Gunther*, however, offers him his friendship instead, for he recognizes him as the hero who once delivered his sister *Hilda* from the hands of the enemy. *Hilda* has fallen deeply in love with *Sigurd*, and seeks some means to make him return her love and forget the Valkyrie. Her nurse *Uta*, being versed in the magic arts, prepares a love potion which *Hilda* hands to *Sigurd* when he swears the oath of brotherhood with *Gunther*, and which has the desired effect. *Sigurd*, on condition of being rewarded with the hand of *Hilda*, agrees to assist *Gunther* to win the Valkyrie; and the two set out on the perilous journey, accompanied by *Hagen*. These are the contents of the first act, which is much too long, and includes none of the best musical numbers of the opera.

A scene in a sacred forest, bordering on a lake, with an altar of Freya on one side, and a chorus of priests and people celebrating a sacrifice, opens the second act. From a musical point of view this is the gem of the opera. Not only is the music here original and individual, but it admirably reflects the moods and color of the situation. When *Sigurd*, *Gunther*, and *Hagen* appear on the scene, they are warned by the priests of the extreme dangers of the journey. A consultation is held, and *Sigurd* offers to proceed alone from this point, after receiving from the priests the sacred horn which will aid him in getting access to *Brunehild's* castle. As soon as he finds himself alone he blows his horn. Immediately twilight overcasts the lake and the forest, thunder is heard, the wind howls, and from the lake arise the beautiful forms of the three Norns, holding in the water a white sheet (shroud?), indicating by gestures that it is intended for him. Undaunted by this gloomy prophecy, he prepares to blow his horn again, when he is suddenly surrounded by Kobolds and by Valkyries, against whom he has to defend himself with his sword. He blows the horn again, the phantoms disappear, and their place is taken by charming nixies and elfs, who dance around him voluptuously and endeavor to caress him. Like *Parsifal*, however, he remains unmoved, and again blows his horn. In storm and thunder the lake disappears, and the castle of the Valkyrie rises in its place. He enters and finds the sleeping *Brunehild* in a large hall guarded by Valkyries. He invokes the spirits; her couch changes into a vessel, which is immediately seen moving along the lake, drawn by two swans, *à la* "Lohengrin."

In the third act, which is somewhat abbreviated, the action is as scant as the music is uninteresting. As *Sigurd* had, on meeting *Brunehild*, carefully kept his features concealed beneath his helmet, she is persuaded, though with some misgivings, that *Gunther* is the hero who released her and is to be her spouse. Festivities follow; but as *Brunehild* seizes *Sigurd's* hand to place it in *Hilda's*, the sound of thunder is heard, awakening gloomy forebodings. In the last act, the dramatic interest again rises, but after three hours of often monotonous music in a hot theatre it is quite impossible to maintain one's interest in the proceedings on the stage. As *Brunehild* cannot conceal her misgivings and her admiration of *Sigurd*, *Hilda*, in a fit of jealousy, reveals her having learned from *Sigurd* that he and not *Gunther* had liberated her from her sleep. *Brunehild* divines the plot, and accuses *Hilda* to her face of having used magic arts to win *Sigurd's* love. *Hilda* confesses to *Hagen* her fatal folly in betraying the secret to the Valkyrie; and *Hagen* resolves that *Sigurd* must die. To save his life, *Brunehild*, on the entreaty of *Hilda*, agrees to renounce her claims; but it is too late—the treacherous *Hagen* has already done his work.

In this last part, more than elsewhere, the poetic genius, the grandeur, the exquisite subtilty of details, that are found in Wagner's version of this plot, present themselves so inevitably for comparison as to make Reyer's work seem infinitely less meritorious than it would perhaps seem if judged on its own merits. It is all the difference between "Hail, Macbeth!" and "Comment vous portez-vous, Monsieur Macbeth?" as the French translator puts it. However, it would be unjust to blame M. Reyer for trying to compete on common ground with the greatest dramatic composer of all time. His score was completed a decade ago, before Wagner's "Ring of the Nibelung" was produced at Bayreuth; and though Wagner began work on the Tetralogy twenty-five years before it was completed, and at an early date published the poem, which Reyer may have seen, yet it is also possible that he took the hint from Schumann or Mendelssohn, each of whom had cast an eye on this subject—without any results, however. As it is not at all probable that "Sigurd" will long remain on the repertory, or ever be heard in New York, it would hardly be worth while to point out the details in which it differs from "Die Götterdämmerung." But it is of some interest to know that in his general method M. Reyer shows everywhere the influence of Wagner. His opera is not made up of a series of unconnected, isolated arias, duos, etc., but the melody is more or less "continuous." The vocal parts are entirely free from silly ornaments, and are often characterized by dramatic vigor and realism. The orchestral score betrays in its workmanship the hand of a conscientious musician, but he has not learned from Wagner the art of magic coloring. There are few passages in which the instrumentation enchants the hearer by itself, or even attracts his attention specially, nor are M. Reyer's powers of modulation always commensurate with the demands for thrilling dramatic expression. As a whole the opera is little more than *Kapellmeister-musik*; but it has redeeming features, and the overture, which is suppressed at the Opéra in order to save time, is said to be a favorite number on local concert programmes.

The Paris Opéra has always been famous for its *mise-en-scène*, on which fabulous sums are expended whenever a new opera is produced. With the exception of Vienna and Bayreuth, no city approaches the scenic marvels beheld here every day, and in all my operatic experience I have never witnessed anything more smooth, rapid, and natural than the sudden changes in Act II. from scene to scene, each more picturesque than its predecessor. And the point to which I wish to call particular attention is that the Paris Grand Opéra has paid Wagner the compliment of liberally borrowing from the rich stock of his innovations. The scenic plagiarisms, indeed, are the only striking evidences of the "Wagnerism" which some of the local critics have discovered in "Sigurd." The similarity of effect produced by the historical costumes is, of course, a natural coincidence. Not so, however, the swan-boat, which is a discreditable attempt to steal Wagner's thunder. Among the other plagiarisms the most conspicuous is the transformation scene, when *Sigurd* rushes through the flames (*i. e.*, colored steam) to find *Brunehild*. However, Wagner's operas are so full of beauties of all sorts that Reyer's "anticipations" of some of them will do them no harm when once they are produced in Paris. On the contrary, it may be an advantage to familiarize the public beforehand with the names of the principal personages in the Tetralogy.

Good singers are often as rare in Paris as elsewhere; but the performance of "Sigurd" is very praiseworthy, the leading artists being Mme. Caron—a French Materna—Sellier, Lassalle, Bérardi. The chorus is generally excellent, but has its weak moments, when it sings out of tune, or in an apathetic manner. The famous orchestra needs no commendation, nor does the ballet. M. Reyer abolished so many of the old-fashioned operatic nuisances in his work that it was somewhat interesting to observe how he would proceed to circumvent the rule that there *must* be a ballet in the second act—a rule to the neglect of which, it is well known, "Tannhäuser" owed its historic fiasco in Paris. Reyer did not dare to

omit the ballet, but introduced it in a mitigated form in the scene where the nixies and elfs seek to enchant the hero. Something similar was done by Wagner in the Paris version of "Tannhäuser"; but he absolutely refused to introduce it into the second act—the time when the *bons vivants* enter the Opéra after dinner. So much for having "ideals." F.

Correspondence.

A CORRECTION.

To the Editor of The Nation:

Sir: I understand that in your issue of May 21 there is the following paragraph:

"A correspondent writes us from Arizona: 'Permit me to call your attention to an instance of literary piracy. The story entitled "The Knight of the Black Forest," recently concluded in the *Century*, contains an incident—the purchase of pictures by the courier—which has been stolen bodily from a work extensively read some twenty years ago, "Roba di Roma," by the sculptor Story.'"

As the author of the unpretending little book, 'The Knight of the Black Forest,' and therefore as the natural guardian of its fair fame, I desire to state that your correspondent has unwittingly made some mistake, as there is no such incident whatever, nor anything at all resembling it, in my story.

Will you very kindly insert this note in your next number, and oblige yours truly,

Grace Denio Litchfield.

Aix-les-Bains, June 7, 1885.

[In 'Roba di Roma' (page 391 of the sixth edition) Story tells how a courier bought a picture and in the transaction defrauded his patron. From an incident in 'The Knight of the Black Forest' (pages 40-43) and from occasional paragraphs, it may be inferred that the business methods of the two couriers were similar; but we cannot think our correspondent was justified in asserting that Miss Litchfield's incident was "stolen bodily," or even in assuming that she ever read 'Roba di Roma.' —Ed. Nation.]

SECRET SOCIETIES AND COLLEGE GOVERNMENT.

To the Editor of The Nation:

Sir: I wish to thank "MS." for his letter relative to "Secret Societies and College Government." When I learned, June 18, that the society with which I connected myself while in college had issued (June 15) a circular urging my name as trustee, I was greatly annoyed, and at once wrote President Seelye expressing indignation that society politics should be mixed up with the election of trustees, and expressing a desire to resign. His reply, June 19, is as follows:

"Do not decline. It is now too late, even if it were ever proper. Let the matter take its course, and, whatever be the result, we will all join you in trying to eliminate society politics from such elections. I understand how you must be vexed by the circular to which you refer, and which was surely most ill-judged; but you had better, in my judgment, not take any public action about it at this stage."

It is but just to myself, however, to set forth these facts. Geo. A. Plimpton.

New York, June 26, 1885.

To the Editor of The Nation:

Sir: I sent you, upon the 22d inst., a copy of a circular letter, issued by one of the secret societies at Amherst, in which the alumni of the college are urged to vote for Mr. George A. Plimpton for trustee; and I made that letter the text of some remarks upon the impropriety of introducing society politics into trustee elections. I did not suppose that any one would infer or suspect, on the face of the facts presented, that Mr. Plimpton had evoked, sanctioned, or even been cognizant of the action of his imprudent friends; and it did not occur to me that any disclaimer of such an inference or suspicion on my part was called for.

To those who know Mr. Plimpton, the supposition that he had any hand in or fore-knowledge of the act of his society, or that he took any step to secure his nomination or election as trustee, is simply absurd. To avoid any misapprehension of his position on the part of those who do not know him, it is proper to state that from the beginning of the present contest he has been one of the most ardent and active supporters of another candidate—Professor John W. Burgess.

MS.

New York, June 26, 1885.

MR. KEILEY'S ACCOMPLISHMENTS.

To the Editor of The Nation:

Sir: Several times I have thought of writing you a line to disabuse your mind of the very false impression you have gotten of my fellow-townsman, Mr. Keiley—an impression which shows how impossible it is for those at a distance to form a correct estimate of a man from a single circumstance. But your last declaration concerning him is so palpably, tangibly wrong, and stated with so much confidence, that I can no longer forbear. One of the very first Greek scholars of this country, who is now one of the intellectual ornaments of your city, speaking to me of Mr. Keiley's eminent fitness for the post originally assigned him, characterized him as a "beautiful classical scholar," adding that he possessed a thorough knowledge of Italian, as well as of those modern languages more usually acquired. Add to this the most delicate humor, the most polished wit, courtly manners, intellectual gifts of a high order, and a thorough knowledge of men and affairs, and it must strike every one that, were there no counterbalancing consideration, Mr. Bayard could hardly have chosen better in selecting a representative to Rome.

That one counterbalancing consideration was known to few. There never was a Romanist known more liberal in his views nor more cordial in his relations to Protestants. Had any one spoken of him to a Richmonder as a rabid Ultramontane, the only answer would have been a laugh. That unfortunate speech which caused all his woes, was a mistake of the kind to which men in public life are so liable. He was put up to voice the sentiment of those of like faith with himself, who were indignant at what they considered an outrage, and, like most orators, he wanted to do it well. The sentiments of that speech doubtless sat very lightly on him, and probably were almost forgotten by himself, as they were by his friends, when they so suddenly rose up to plague him. His conduct since has been that of a dignified gentleman placed in a most delicate and difficult position.—Yours respectfully, A Protestant Minister.

Locust Dale, Va., June 29, 1885.

[We do not understand how a man possessing a "thorough knowledge of Italian," and also a "thorough knowledge of men and affairs," can have supposed that an Ultramontane Catholic would be an acceptable representative of a foreign Power at the Italian court. On the contrary, such a view would seem to indicate extraordinary ignorance of recent Italian history and politics. Moreover, our correspondent must remember that the explanation which Mr. Keiley offered of the speech he made about the temporal power, was generally considered a much greater blunder than the speech itself, as it described the process by which the Government he was to represent at Rome obtained possession of his own State, as "a gross and bloody violation of public rights." It is really absurd to advocate the claims of any man capable of "putting his foot in it" in this way twice, to any diplomatic position of responsibility.—Ed. Nation.]

RHODE ISLAND SLIGHTED.

To the Editor of The Nation:

Sir: On the publication of the first volume of McMaster's 'History of the People of the United States,' the *Book Notes* made serious objection to the introduction into the history of statements which, had they been historically true, would have exhibited Rhode Island in a very bad light. These things were introduced and discussed upon as if they had been facts. Now the *Book Notes* complains of the second volume, just issued, that certain facts of very great interest and a great credit to Rhode Island have been suppressed. The *Book Notes* refers to the seizure of the captain and chief officer of the British ship *Nautilus*, at Newport, in 1794, and holding them until certain impressed American seamen were released from the ship. The details of this very important affair appear in a message to Congress by President Washington dated June 4, 1794.

The history of Rhode Island is unfortunate in the hands of Mr. McMaster.—With respect, yours,

The Editor of the Book Notes.

Providence, R. I., June 29, 1885.

THE DRINKING OF ALCOHOL.

To the Editor of The Nation:

Sir: There is an interesting point from which the alcohol question discussed in your last issue may be examined, and it seems to me an important one, viz.: What are the relative amounts of actual alcohol now and formerly consumed? This may be pretty accurately determined by a calculation based on your table of gallons per capita.

If we take the amount of pure alcohol in the distilled spirits to be 50 per cent., in the wine 10 per cent., and in the beer 6 per cent., the number of gallons consumed per capita will be as follows:

GALLONS ALCOHOL CONSUMED PER CAPITA.

	Distilled Spirits at 50 per cent.	Wine at 10 per cent.	Beer at 6 per cent.	Total Alcohol.
1840.....	1.260	.029	.082	1.371
1850.....	1.115	.027	.095	1.237
1860.....	1.430	.035	.194	1.659
1870.....	1.035	.032	.319	1.386
1880.....	.620	.056	.496	1.172
1881-2-3-4..	.730	.046	.609	1.385

If we take the amounts of alcohol in spirits, wine, and beer to be respectively 50, 8, and 5, instead of as above, then the figures will stand thus:

GALLONS ALCOHOL CONSUMED PER CAPITA.

	Distilled Spirits at 50 per cent.	Wine at 8 per cent.	Beer at 5 per cent.	Total Alcohol.
1840.....	1.260	.023	.069	1.352
1850.....	1.115	.022	.079	1.216
1860.....	1.430	.028	.162	1.620
1870.....	1.035	.026	.266	1.327
1880.....	.620	.045	.413	1.078
1881-2-3-4..	.730	.037	.508	1.275

And, finally, we may compare the total amount in 1840 according to the first table (1.371 gal.) with the same in 1881-84 as given in the second

table (1.275 gal.), for doubtless the wines and beers now drunk are both weaker than those used in 1840, the vast increase in the manufacture of lager beer leaving hardly any doubt as to the latter.—Very truly yours,

SAM. G. CHILD.

BOSTON, June 25, 1885.

CABINET RESPONSIBILITY.

TO THE EDITOR OF THE NATION:

SIR: There is hardly a number of the *Nation* that does not contain an illustration of the doctrine which, through your great liberality, I have striven to enforce upon your readers.

It seems that in our mediæval customs system, there are certain regulations so oppressive as to be intolerable, and the remedy has been sought, as is our wont in the case of bad and sometimes of good laws, in laxity of administration. This laxity, however, has nourished frauds which have gone far to destroy honest importing. Secretary Manning, upon a primitive and somewhat ingenuous theory that laws, good or bad, should be enforced while they exist, has directed that these regulations should be strictly carried out, whereupon certain importers have protested and appealed to the Secretary against such action. You say that they are taking a wrong course; that it is the duty of the Secretary to enforce the laws which are enacted by Congress, and which he has no power to modify, and therefore that importers should carry their complaints to Congress, where the real power and responsibility lie. As an abstract proposition this is unquestionably true, but let us see what it leads to in practice. Everybody knows that the guidance, and, at least so far as negative action goes, the absolute control of the tariff, lie with the Committee of Ways and Means; but, what everybody does not know, though the knowledge is spreading pretty fast, is, that the tariff question is never discussed or treated upon the merits of the case, but in dependence upon the largest amount of party or private interest which can be brought to bear upon the Committee. Importing is almost all done in a few large centres. The interests dependent upon what is euphemistically called protection are scattered all over the country, and are therefore much more powerful with members of Congress. Every one of these interests, individually or in combination, keeps an agent in Washington during the session bound to insure, by every device known to intrigue, that its particular article is not touched. As they know well the danger of pulling a single brick from the fabric, they combine to resist any change at all. The importers have learned by long experience the utter futility of all efforts with the Committee, and have, I imagine, pretty much given up trying. Tariff commissions are such a transparent sham, such an obvious throwing of a tub to the whale, that intelligent and self-respecting merchants will not appear before them. The manipulated Committee, by manipulating the rules of the House, has staved off all action for many years, and to all appearance will do so, if the system is continued, for many years longer. The only chance of change seems to be in a violent popular impulse, with a horizontal reduction, involving much disaster, with doubtful permanent gain, while the uncertainty of its occurrence from year to year keeps the whole business of the country paralyzed.

It seems very strange that the Secretary of the Treasury, the chief financial officer of the Government, the leading counsellor and appointee of the President, himself the only representative of the whole country, should have little if any more legal influence upon the tariff than any custom-house appraiser or clerk. Yet such is the fact. He can make recommendations in his report, but they are stifled, like all other importunate suggestions, in the quicksand of the committee. He may appear before the committee, though it is quite beneath the dignity of his position; but while his evidence may be paraded on the same principle as a tariff commission, it receives no more real attention than that of an importer of pig-iron. Being at the head of the whole revenue administration, he is the natural point of resort for the importing interest. Imagine his saying to a delegation of them, "Gentlemen, what you say is perfectly true, but I am as powerless in the matter as you are." What a different state of things it would be if the Secretary, standing up in the House, and in reply to the questions of individual members—and thus, as it were, speaking to the whole country—should state in detail his view of the present tariff. We need not go into any fine-spun discussion whether, under our system, the Cabinet could resign if defeated, or if the power of dissolution, which is impossible under that system, is a necessary complement of ministerial responsibility. What is wanted is light upon the tariff—not on its defects, which are quite palpable enough, but as to what changes are needed and practicable, and how they are to be brought about. Suppose that next winter, while the Committee of Ways and Means is in incubation and Congress is squabbling for the want of something to do, it were known that a public debate was to take place in the House between the Secretary and the members, say from New York and elsewhere; what intense interest would be felt throughout the nation! And if in that debate any practicable plan was evolved which Congress ought to adopt and would not, how the thunder of the country would begin to ring about their ears! Would it not be worth while for the writers on economics to intermit for a short time their twenty-years' discussion of the merits and demerits of the tariff, and give their attention to the means of getting it changed?

The report of the Senate committee to which I referred in a former letter said that the advantages of the course were too obvious to need discussion, and they would therefore only discuss its constitutionality. They would have done still better if they had explained that the chief obstacle is in the hostility of Congress, with the causes of that hostility and the means of overcoming it. It is, no doubt, the fear of that hostility which prevents so many executive officials who thoroughly believe in the change from saying so publicly. But that hostility has got to be met. The conflict between legislative and executive power is as old as the world. In this conflict, if the legislature secures the power of the purse, it may win in the beginning, but its rule leads to anarchy, and in the long run the executive gains the battle in irresponsible despotism. The immediate question may be the tariff, but the real and underlying one is the existence of the republic. Not only in the general Government, but in the States and cities, this conflict is coming as certainly and as portentously as that with slavery. Shall we make executive power strong enough to hold its own against the legislature, and yet be held to responsibility, or shall we go on unheeding till legislative anarchy leads the people to demand the strong rule of a despot?

G. B.

BOSTON, June 29, 1885.

Notes.

ESTES & LAURIAT have brought out a new edition of Rambaud's 'History of Russia' in three volumes, of which this Anglo-American version first appeared in 1879. A summary chapter has been added to that which treats of the Turco-Russian war, for the sake of rounding out the work with the assassination of Alexander II. and the accession of the present Emperor.

W. S. Gottsberger has just published in 2 vols. 'Matilda, Princess of England: a Romance of the Crusades,' by Mme. Sophie Cottin, translated from the French by Jennie W. Raum. This is the second translation of Mme. Cottin's 'Mathilde' which has been published in this country. The first appeared in 1837, in "Waldie's Select Circulating Library," vol. ix, and was entitled 'The Saracen; or, Matilda and Malek Adhel.'

Another instance of the reprehensible practice of publishing the same book under two different titles is afforded by Julian Hawthorne's recent novel, published last December by the Appletons, under the title 'Noble Blood,' and issued a few months later in London, by Chatto & Windus, as 'Miss Cadogna.' It would be interesting to know whether the transformation is due to the author or to the English publishers.

The characteristic feature of the thirty-fifth volume of *Lippincott's Magazine*, now lying bound before us, is that it has so few serial articles; the fiction (in two cases) and the New Orleans Exposition furnishing the only exception to the rule that each monthly number has been complete in itself. The frontispiece and the full-page engraving facing p. 425 go far to reconcile us to the gradual disappearance of illustrations from this magazine.

English history naturally overshadows every and all other departments of the 'Annual Register' (London, Rivingtons), and gives its chief value to this standard yearly summary. It will be long before the United States, by virtue of its large affairs or of the federative Anglo-Saxon idea, takes a second place in the political chronicle of the 'Register'; but we remark that in the volume for 1884, now before us, our country fills as large a space as Germany, and of good right, if only the Presidential election were recorded—by all odds the most important occurrence of 1884. The 'Register,' we need hardly say, takes the Mugwump view of Mr. Blaine's defeat. The customary daily list of events of the past year, the world over; reviews of literature, science, and art; and obituary, fill out the measure of about 600 pages of handsome print.

The new edition of 'Voltaire's Romances' published by Peter Eckler includes translations of 'Le Blanc et le Noir,' 'L'Homme aux Quarante Écus,' 'L'Ingénu,' 'Le Monde comme il va,' 'Micromégas,' 'Zadig,' et ., with some fragments like that from 'Candide,' here called "Pleasure in having no Pleasure." The publisher had a philanthropic aim in issuing this collection, being evidently an enemy of the superstition with which Voltaire contended. His notes and his illustrations are curious for the choice displayed in them.

Mr. Edmund Gosse has made a popular selection of Gray's Poems, following his own text in the four-volume edition published by Macmillan, and using his 'Life of Gray' in the "English Men of Letters" series as the basis of an introductory discourse on the career and productions of this author. The little volume is cheaply but handsomely brought out by the Clarendon Press, Oxford.

The name of the author of 'Obiter Dicta' (reviewed in No. 1043 of the *Nation*) is no longer a secret. *Good Words* for June contains a short article on Emerson by "Augustine Birrell, author of 'Obiter Dicta.'"

The novel features of the Harvard Quinquennial Catalogue, beyond the necessary addition of the graduates of the term, are an extension of the lists of fellows and tutors of the college, going backward from the year 1707, and a summary

view of the historical development of the Board of Overseers. Mr. William H. Tillinghast succeeds Mr. Sibley as the editor of this laborious work.

A year ago (June 19) was celebrated at Cambridge, England, the three hundredth anniversary of Emmanuel College, Cambridge, England. A thin volume recording the highly interesting proceedings has been issued "n. p., n. d.," as bibliographers are wont to say of dateless and unlocalized title-pages. An albertype print from the full-length portrait of Sir Walter Mildmay, the founder, serves as a frontispiece, the face bearing a certain resemblance to the late C. F. Briggs ("Harry Franco") in his last years. Professor C. E. Norton, it will be remembered, represented Harvard College, in recognition of John Harvard's having been a graduate of Emmanuel. His remarks, as reported, appear not to have been revised by him. There is much valuable information collected in the appendix. The note on John Harvard (in ignorance, of course, of Mr. Waters's recent discoveries) has a facsimile of his autograph signature for the M. A. degree.

The considerable number of persons interested in the French spoliation claims, recalled to memory by Act of Congress last January, will find a list of all the works relating to this subject in the Boston Public Library in the current Bulletin of that institution.

Still another class is served by the "List of some of the official publications of the Society of the Cincinnati" appended to the July Bulletin of the Library Co. of Philadelphia.

Our countrymen fill a significant space in *L'Art* Nos. 504, 505 (Macmillan). Mr. C.C. Perkins treats at length of the third bronze gate of the Florence Baptistery, while a memorandum sketch after Mr. Chas. Sprague Pearce's "Heartache" in the Salon is given on p. 216, and another after Mr. Walter Gay's "The Spinners" on the page opposite. In these numbers the Salon generally is taken in hand, as also, minus the illustrations, in the *Courrier de l'Art* for March 8, whose praise is bestowed in very scanty measure. Those of our readers who recall our Paris correspondent's account of the restoration of the Château de Chantilly, will be interested in the first of two articles on this subject by M. Charles Yriarte. A number of curious old views of the castle are reproduced in facsimile.

Mr. William L. Hughes, who has translated other American books into French, has recently put forth a new version of the best of Poe's tales (Paris: L. Hennuyer), with a biographical sketch of the poet. We infer that the translator is an Englishman, inasmuch as he thinks that the *Atlantic Monthly* is an English magazine. His selection is well made, and the translation seems at least sufficient.

The latest American additions to the Tauchnitz series are Mr. Crawford's 'Zoroaster,' Mr. James's 'Little Tour in France,' and Mr. Hawthorne's 'Fortune's Fool.' Mr. Bret Harte's new volume, 'By Shore and Sedge,' is announced. 'Foreign Parts' is the name given in this edition to Mr. James's 'Transatlantic Sketches.'

An English edition of Mr. Laurence Hutton's 'Literary Landmarks of London' has been issued by Mr. T. Fisher Unwin, and is already nearly exhausted.

It is certain that we shall see a sudden cloud of books and pamphlets bearing more or less directly on the departed leader of the Romanticist revolution. Among the first to appear is the volume of 'Souvenirs d'un Hugolatre—La Génération de 1830' (Paris: Jules Lévy; New York: F. W. Christern), but its contents are not of any real importance. The author, M. Augustin Challamel, took part in the good fight, but his place was modest like his talent, and his reminiscences are at best but very gentle gossip. Almost the only new fact to be gleaned by any one at all familiar with the literature of the time is, that Victor Hugo sometimes used the pseudonym of "Victor d'Auverney." But to one not well read in the memoirs of 1830, M. Challamel conveys a good idea of the times.

When the microscopic edition of Dante ('Il Dantino') saw the light at Padua in 1878, it was thought to be the smallest book in existence. But its nose was put out of joint by the discovery at Florence, in 1881, of an 'Officiolum' (Venice, Giunti, 1649) only 31 mm. wide and 50 mm. high. But this had evidently been much cut down in rebinding, and is therefore considered to be larger than an 'Officiolum' just discovered, also from the Giunti press, which has never been under the binder's knife, and in the original cover measures 33 by 48 mm. Thus bibliography, like microscopy, penetrates further and further into the Lilliputian world.

The University of Pennsylvania has just established a limited number of post-graduate fellowships in history and political science, open to the graduates of any American college. These fellowships entitle to free tuition in the department of political science, in which more than twenty lectures per week, during the whole college year, on political science and history, will be open to the students. Applicants should address Prof. E. J. James, University of Pennsylvania, West Philadelphia, Penn.

—A volume of letters has just appeared addressed to various persons in the course of twenty years by Jules de Goncourt, the youngest of the two brothers who were one author, whom Victor Hugo described as "charming writers, in unison a powerful writer, two minds from which springs a single jet of talent, supple, varied, fine, delicate." These letters will interest few people outside those belonging to the writer's own generation and nationality, and even to his very set; they have little general charm. The style is artificial in its carelessness, it is the "style compliqué" and "l'écriture à frémissements" invented by the Goncourts; and even the simplest pages remind one that M. Edmond de Goncourt wrote to a friend: "In my belief my brother's death was due to labor; painstaking especially about the elaboration of the form, the chiselling of the phrase, labor on style." The topics of which he treats are extremely limited; the people spoken of are, with a few exceptions (Gavarni, Sainte-Beuve, Flaubert), not very noteworthy; politics are discussed only in the earlier letters, and then superficially. There is no setting forth of theories or principles of art; scarcely a book is mentioned, save their own works or those of their friends, unless in such casual reference as, "For a fortnight we have thought of nothing resembling an idea; if you add the reading occasionally a page of Pascal or of the 'Liaisons' of Laclos, you will have the whole story." The letters from the East and from Italy are very inadequate. Among many other trivialities are not a few notes which are mere requests or thanks for "notices" or "announcements" or articles; or which are absurdly enthusiastic praises of "presentation copies," sounding terribly like a literary investment or bank deposit. But there is unmistakable cleverness and plenty of it, and one cannot but be amused by the account of the "deux Anglaises aux deux maris effarés, idiotisés par sept ans de voyage," or of M. Thiers at Trouville, who "se promène ici tous les jours, habillé tout en blanc; on dirait Polichinelle voué à la Vierge." In another vein he says: "Si on savait ce que coûtent les bonheurs de la vie, personne ne voudrait les acheter," or again, "Il n'y a que le travail pour guérir de vivre." Of the constant, characteristic *grossièretés* about women there is here no occasion to speak.

—The Paris *Temps* of June 14 prints a three-column letter, by a specialist, on the experiments in cholera-vaccination that have been going on for several months in Spain. The principal operators are Doctor Ferran, who initiated the method, and two colleagues, M. Pauli and Doctor Jimeno. At Valencia the professors of the Institute of Medicine have daily meetings, at which Doctor Ferran's method is discussed, the majority being, it is stated, in favor of it. Among the populace it seems to have aroused a *furore* of confidence and expectations. Doctor Pauli states that in one town near Valencia he has vaccinated a thousand persons in a single day. As fear is known to predispose to an attack of cholera, one of the best results of Doctor Ferran's vaccinations is the utter elimination of fear among those who have been operated upon. If they are attacked by cholera, they do not think it worth while to tell any one of it. One man having told the doctor casually that he had had some choleraic symptoms some days previously, the doctor asked him why he did not come to see him. The answer was, "Bah! señor, I had been vaccinated." If any one falls ill who is known not to have been vaccinated, the neighbors at once give him up as lost; and this attitude seems to be justified by the extreme virulence of the epidemic. Last summer in Italy and France the rate of mortality was about 50 per cent.; but this year, at Alcira, it was during the first month 67 per cent. In this same town the proportion of inhabitants not vaccinated who were attacked was 1.63 per cent., while among those vaccinated the percentage of attacks was only .15. Three important conclusions have already been drawn from the vaccinations made up to date. The first relates to the absolute harmlessness of the vaccinating material. Among more than 10,000 cases of vaccination not a single serious accident has been reported. The second point is that vaccination does not protect against attacks of cholera: it simply makes them milder and harmless. The third point is that whereas a single vaccination greatly reduces the rate of mortality, a second vaccination, with a stronger "dose" of microbes, proves an absolute safeguard. The solution used for the first operation is so mild that it would prove harmless if made on infants only a few months old. M. Pauli, it seems, has vaccinated himself so often with solutions of ever-increasing virulence—both subcutaneously and *via* the stomach—that he is now able, it is seriously stated, to take a dose of pure cholera microbes, and it will have no more effect on him than an ordinary cathartic; and the writer in the *Temps* anticipates the time when centimetre cubes of cholera microbes will be prescribed by the doctors. The present epidemic in Spain shows again the absolute uselessness, in most cases, of a "cordon." It began at Jativa, followed the course of the river Jucar, which passes through it, and infected the towns on its banks, as well as a few others connected with it by canals. When a commission was sent to investigate the advisability of establishing a cordon, Doctor Ferran quietly told them such a proceeding would be useless, because the Jucar was infected. The *Temps* winds up its article by a tremendous blast into the patriotic trombone: Doctor Ferran admits that it was Pasteur's discoveries and experiments which inspired him to pursue his present course. He told the correspondent that "the two greatest men humanity has possessed are Christ, who has given them moral redemption, and Pasteur, who has found out for us the laws which must lead us to our physical redemption." Jenner is nowhere mentioned.

—A paper by M. G. Humbert, read at two successive meetings of the Académie des Sciences Morales et Politiques, gives a very full account of the finance of the Roman Empire and the system of keeping the public accounts. The sum of it is that there was the same evolution of the imperial power as in the case of the Consilium Principis of which we spoke not long since. Beginning with Augustus, all the revenues came gradually into the hands of the Emperors. The first step was to divide the *Ærarium Populi Romani* by creating a special treasury for the army, with a capital of 170 million sesterces, and a revenue derived from a new tax of five per cent. on inheritances, and the old tax of one per cent. on sales. This imposition of new taxes was too fruitful a source of revenue to be neglected, and the Emperors fell into the way of not consulting the Senate in regard to their imposition. By the side of the *Ærarium militare* grew up the *Fiscus*, or privy purse of the Prince. Originally his private property, it absorbed little by little all the old sources of revenues, so that the *Ærarium Populi Romani* was, in the third century, little more than the Treasury of the City of Rome, as the Senate had become in fact only a Municipal Council. All the receipts and expenditures of army, navy, and provinces were in the hands of the Prince. Augustus and Tiberius made annual reports of them to the Senate, but their successors found the practice inconvenient, and even this slight safeguard against disordered finances disappeared. The disorder, it must be said, was not so much in collecting or guarding the taxes, as in spending lavishly more than was produced. As for the mere administrative details of collection and payment, they were probably conducted with the same accuracy as under the Republic. The clerks were slaves, and could be tortured if their accounts came out wrong; the higher officers were knights, and could be degraded, or banished, or, on occasion, put to death, if caught in any defalcation.

—An interesting literary ceremony took place not long ago at Amsterdam. In the presence of the élite of the literary and artistic world, the three hundredth anniversary of the most original comic dramatic poet in Dutch literature, Bredero, was celebrated by a representation of his principal comedy and by recitations of fragments of his other works. Great pains had been taken to carry back the audience to the times in which the poet wrote, not only by a correct reproduction of the costumes of the period, but also by making the music played by the orchestra consist exclusively of compositions of the seventeenth century. What is principally noticeable is the fact that the works of Bredero had been banished from the stage for a century; it was a revival in the strictest sense. As the orator of the day, Prof. van den Brink, remarked: "Even thirty years ago, the thought that a cultivated audience would find pleasure in such a representation would have been met by shouts of derision." Bredero was not a refined poet; his works breathe the same spirit of roistering gayety, of rough and boisterous animal spirits, which we find in some of the Dutch painters, like Jan Steen and Ostade. Though he took the general idea of his plots from classical models, especially from Plautus and Terence, the scene of action is always laid in Amsterdam, and his comedies are reproductions of the manners and customs of his age. He wrote at a time when Holland, after struggling for more than forty years against Spain, had closed an armistice for twelve years (1609-1621). Flushed with victory and enjoying unexampled prosperity, the Hollanders of that time were very different from the respectable, slow-going community they became in the eighteenth century; their Protestantism was like that of Luther, perfectly compatible with a love of wine, woman, and song. The same spirit pervaded the whole community, and works like those of Bredero were enjoyed and appreciated by all classes.

—The oldest and most revered of Belgian statesmen, Charles Rogier, died in Brussels at the close of May. He lacked only a few months of eighty-five years of age. A Frenchman by birth, a Walloon by education and sentiment, he early became a passionate opponent of the rule of the House of Orange over the Belgian Netherlands. When the hostility to the Dutch, which he had fanned in Liège, broke out in a revolutionary flame in Brussels in August, 1830, he hastened thither with three hundred Liégeois volunteers, and their patriotic steadfastness did excellent service in defending the capital both against the troops of the King and from the ravages of the mob. With two other popular leaders he formed the revolutionary Administrative Commission, and soon after became a member of the Provisional Government, as well as of the National Congress. He restramed the republican ardor of some of his colleagues, supported the candidacy of the Duc de Nemours, Louis Philippe's son, for the throne of the new kingdom, and subsequently that of Prince Leopold of Coburg, who, on his election, appointed him Governor of Antwerp, and in 1832, Minister of the Interior. He was zealous in promoting the construction of railways—the first on the Continent—and, after the fall of the Cabinet in 1835, in opposing the Catholic tendencies of its successor. In 1840-41 he was Minister of Public Works, in the following six years chief of the Opposition, in 1847-52 the leading member of the new Liberal Cabinet—saving the throne of Belgium by his energy and decision during the stormy days which followed the French Revolution of February, 1848—and again at the head of affairs, mainly at the Foreign Department, from November, 1857, to January, 1868. In 1879 he had himself carried into the Chamber to give his vote for the anti-clerical Education Bill. In 1880, on occasion of the semi-centennial celebration of Belgian independence, he was the recipient of ardent popular ovations. More tangible rewards for his eminent services, offered to him both by the Crown and the nation, he had previously declined, excepting the national gift of a modest mansion in the Boulevard Botanique, in which he spent the last years of his life.

—The *Rundschau* for June has an article, by Paul Bailleu, which gives a full history of the arrest, trial, and prison-life of Fritz Reuter. Bailleu's essay is based upon an examination of the secret archive of Prussia; it contains a good deal of matter not before made public, and is interesting for the light it throws not only upon the life of the German humorist, but also upon Prussian administration during the latter days of Friedrich Wilhelm III. Reuter, born in 1810, began his university career at Rostock in 1831. The following year he went to Jena. Here he found friends immediately among the bibulous and roistering class of students, and was soon a member of the secret order (*Burschenschaft*) Germania. These *Burschenschaften*, so prominent during the war of liberation, then suppressed in 1819, had been secretly revived as early as 1827, and Jena became a stronghold of the institution. Here, as the result of a split that occurred in 1830, Reuter found two orders, the Germania and the Arminia. The Germanians were the fewer and the more radical; they insisted upon taking an active part in politics while at the university, and their programme was the "*creation* of a free and united Germany." The Arminians were less political; they avouched as their aim "*preparation*, by means of moral and scientific culture," etc., for a German unity to be achieved somewhere in the indefinite future. It was only through an accident of friendship that Reuter happened to cast his lot with the radical Germanians. Once in the organization, Reuter wore its colors, the black, red, and gold, and drank beer with its members; he paid no attention, however, to its political doings, never read its constitution, or held office, often stayed away from its meetings, and when present never spoke but once, and that on a non-political matter. He had none of the fibre of a revolutionist. Herr Bailleu makes it clear, although he refrains from saying so, that a more harmless enemy of kings than this same Fritz Reuter could not well have been found between the Baltic and the Alps.

—In December, 1832, a general convention of the *Burschenschaften* was held at Stuttgart. Here the radicals carried the day, and it was voted that the orders must proceed at once to revolutionary measures. There resulted from this in Jena that several beadles were whipped, professors had their windows broken, and street-lamps were demolished. As Reuter saw these proceedings, he, with several friends, withdrew from the order and afterward fought a "duel" with one of the faithful. In February, 1833, he went home. Then, after due family council, it was decided that Fritz should continue his "studies" in Berlin. Arrived there, he learned that the Prussian Government had arrested two of his former comrades in the Germania, and that one of these, a theological student, had turned state's evidence. Reuter escaped to Leipzig, but Leipzig shut its doors upon him, and then he decided to return home. On his way thither, October 31, 1833, he was arrested by the police at Berlin. The hearing of his case before the police lasted one month. Then he was turned over to the Prussian Chamber of Justice, which, during the year 1834, tried 204 students for the crime of belonging to a *Burschenschaft*. Of these 192, Reuter among them, were condemned to be beheaded. Herr Bailleu notes that the decree of the court in these cases makes eleven thick folio volumes of manuscript. His sentence was made known to Reuter in August, 1836, he having meanwhile lain in prison at Silberberg. On December 11 of the same year the sentence was commuted to imprisonment for thirty years. On January 28, 1837, he was informed of this commutation, and in May there followed at his request an official statement of the grounds of the decree. Meanwhile, the foul and damp air of his prison had undermined his health, and he was threatened with blindness. He decided to forego further legal remedy and to petition the King for mercy. His father had already in most pathetic language made the same appeal. These petitions the King handed over to a ministerial commission, which in August made a report that animadverted bitterly upon Reuter's character, but recommended that his sentence be further commuted to imprisonment for eight years. Of this Reuter got news in October at Magdeburg, where he was living in quarters already officially condemned as foul and unhealthy. Here, however, he continued to live until March, 1838. Then the Grand Duke of Mecklenburg asked for the custody of his subject, and in 1839 this prayer was granted. The arrest lasted another year at Dömitz before Reuter was liberated in consequence of the decree of amnesty promulgated by the new King, August 10, 1840.

THE CATTLE BUSINESS.

Report in Regard to the Range and Ranch Cattle Business in the United States. By Joseph Nimmo, jr., Chief of the Bureau of Statistics. Washington. 1885.

THIS pamphlet of 200 pages, with accompanying

maps, is an answer to a resolution of Congress calling on the Secretary of the Treasury for information with regard to this business and its bearing upon internal and foreign commerce. The subject is one upon which accurate figures are difficult to obtain, and it is not therefore surprising to find that it consists mainly of letters, tables, and answers to circulars from various editors of live-stock journals and presidents of cattle associations. Some doubt, however, is cast upon the care with which the first pages (which are supposed to be a summary of the information thus obtained and of that already at hand), were compiled, by the very first verification one makes of figures given there. On page 54 a table is given of the number of cattle in the United States, in the census years since 1850 from census figures, and in 1884 from estimates. An examination of the Tenth Census, vol. iii, p. 1,104 (Meat production, p. 150), shows the figures 35,925,511 given here to be simply those of cattle on farms, and that, including range and ranch cattle, the total number in the United States at that time was 39,210,563. The business of raising cattle on the Western plains is scarcely fifteen years old, and, according to Mr. Nimmo's figures, represents a capitalized value of some 340 millions of dollars. It finds itself to-day in an extremely uncertain condition, owing to the absence of any legal right to the lands which it uses. The scientific studies of the Western portion of our continent, which have been more systematically conducted, owing to the liberality of Government appropriations, than those of the rest of the country, show that a large area, extending roughly from the 100th meridian west to the valleys of California and Oregon (according to Mr. Nimmo, 44 per cent. of the total area of the United States, exclusive of Alaska), is practically unfitted for agriculture, owing to the dryness of its climate. In a small portion of this area, in the neighborhood of the larger and more rapid streams, cultivation of the earth by irrigation is possible, and comparatively large returns are obtained from the virgin soil; but this portion is very small (according to Mr. Nimmo, 5 per cent. of the whole), and would probably never have been occupied by agriculturists had not exceptional inducements for them to venture into the wilderness been offered.

The first of these inducements was the driving out of the Mormons from Illinois and Missouri, and their consequent desire to seek an isolated spot, where they could support life and at the same time exercise their peculiar religious tenets undisturbed by civilized neighbors. The second was the discovery of rich metallic deposits in the region, which led to its occupation by mining communities, and thus furnished a good local market for agricultural products. The third was the discovery that the dried grasses of these apparently desert plains and valleys furnished a most admirable food for cattle, and that the dryness of the climate enabled them to winter without shelter, and their consequent occupation by herds and rancheros, thus offering to the granger either a market for his product or an opportunity of selling his claim, which the paternal Government had donated to him, if it chanced to be so situated that the neighboring herdsman had the alternative of buying it or moving his herds to some region as yet unoccupied by grangers.

Since the occupation of eastern Kansas and Nebraska by a farming population, it has been found that, in a series of years, the limit of land which it is possible to cultivate without irrigation has moved somewhat to the westward. The farmers judge this to be due to their turning up of the ground and their planting a few trees, with the effect of inducing precipitation. Some otherwise intelligent legislators, with the natural tendency that is inborn in many to prefer the opinion of a practical man to that of a scientific one, have hence come to the conclusion that it will be but a short time before precipitation will have increased over the whole of this arid area, so that it will bloom like the valley of the Mississippi. It would take too much space here to show, as might be done, that the farmer has generalized on insufficient premises, and that the change expected by the legislator can only come about by a climatic oscillation, which may take hundreds and even thousands of years, and that the possible change during the present generation is not such as can sensibly affect the present conditions of precipitation in the area as a whole.

Of the natural resources of the United States, none is certainly more remarkable than the peculiar adaptation of this great area for pasturing purposes. Here is land which at present costs nothing, since the Government has been unwilling to put it into the market at a price at which it can be bought, and which of necessity will be always very cheap, upon which cattle can be raised until they are ready to send to the cornfields of the Valley States to fatten for market, thus giving the farmer a use for his unsalable grain, and relieving him of the burden of raising young cattle on land which is more valuable for other purposes. We have long produced more cereals than we can consume, and now a limit seems nearly reached to the portion of our surplus which we can sell to other nations; but, judging from the fact that, in spite of this overproduction of cereals, the price of beef has been steadily going up, the increase of our cattle has not kept pace with that of our population. It would seem, therefore, to be the part of wise statesmanship rather to encourage the cattle industry than to put obstruction in its way and to persecute it. As yet, in this respect, as formerly in regard to its mineral wealth, the Government has pursued a *laissez-faire* policy. The present condition of mining titles is a striking illustration of the value of that policy. Seventeen years after the discovery of gold in California, and when the whole Rocky Mountain system had been proved to be full of valuable minerals, Congress awoke to the advisability of granting to its already large mining population a right to the land which, with the enterprise characteristic of the American people, they had already taken possession of and developed. The law which they framed for this purpose was founded, not on the experience gained in mining communities in other civilized regions of the world, but upon local laws adopted by rude miners to govern their limited districts. This law, slightly modified and amplified in 1872, governs to-day all title to mineral lands upon the public domain, and, while it has enriched mining lawyers, has been a most serious drawback to the development of mining industry, from the fact that it contemplated only one form of deposit. Thousands of mines now idle would be working to-day if the men who framed this law had been broad-minded enough to consult the experience of European nations which had been mining for hundreds of years, and to look forward to the possible development of a different kind of deposit from that which was then being worked.

In the winter of 1878-9 the attention of Congress was called by a few far-sighted men to the fact that the existing land laws, admirably adapted as they had proved in governing the measurements, classification, and sale of the prairie lands of the Mississippi Valley, were neither practicable nor advisable in their application to the mountainous region to the West, now that these prairie lands were practically disposed of. A commission of six men, remarkably well-fitted by education and experience for the purpose, was appointed to investigate the present applicability of the land laws during the summer, and to report at the next session with suggestions as to their modification. It was a gigantic undertaking for so short a time, but was accomplished, and an admirable report was made, which was promptly pigeonholed, and has not been heard from since. Among other things, this report recommended that to the existing classes of public lands, mineral and agricultural, a third class, "pasture lands," should be added, to include these grazing lands, which cannot be sold or made of any profit to the Government under existing laws. It also recommended that the classification of the lands should be intrusted to competent trained persons, and not left, as now, in the hands of entirely irresponsible and often ignorant surveyors.

It is evident that cattle men cannot afford to buy these lands at the present minimum price of $1.25 per acre, since, as shown by the Census report above quoted, it requires from 10 to 70 acres, according to varying conditions of locality, to support a single head of stock. At present they practically get the use of the land for nothing, and it is impossible for the Government to obtain any remuneration for this use, except indirectly in the increase of the wealth of the country. Yet they are ready to pay a fair price in order to secure a legal tenure of the land they use, as evidenced by the fact that, wherever it is possible, they buy up water fronts which naturally control considerable tributary areas of pasture lands. The Land Commission of 1879 recommended that the pasture lands be sold under the same general system as agricultural lands, but that the unit should be correspondingly large as compared with their relative value, viz., 1,200 acres, instead of 160 acres, considering that this system would fulfil the intention of the original law of giving to each preëmptor or homesteader enough land on which to support a family by his own labor. They did not, however, commit themselves as to the price which should be paid for these lands, but recommended the adoption of a sliding scale, under which the lands should be offered during a certain number of years at a maximum price, this price to be gradually reduced from time to time, and the relative value of the lands to be determined by the price which those who knew them were willing to pay. The Canadian Government has adopted for corresponding lands within the Dominion line the system which prevails with regard to similar pasture lands in Australia, and leases them to the stockmen for a term of years at a small price per acre.

The National Cattlemen's Convention held at St. Louis last November adopted resolutions in favor of the adoption of a similar system by our Government, which are given in full on page 46 of Mr. Nimmo's pamphlet. The reasons there urged in its favor are, 1st, that under a secure tenure cattlemen would improve the country by sinking artesian wells; 2d, that at reasonable rates the rental would yield an annual income of ten to fifty millions to the Government. The latter reason Mr. Nimmo disposes of very briefly by saying we have no need of an increase of revenues, and gives, as an important consideration against the advisability of the adoption of this policy, the possibility that small settlers might be forced to sell their present holdings to large herdsmen. It is difficult to see why, if the law were properly framed, the small settler should be in any worse condition than he is now, and, even could it be demonstrated that he would be, why the people in general should pay from ten to fifty millions per annum to secure to the holders of one-twentieth of this area privileges over those of the other nineteen-twentieths. An equally suggestive objection brought forward by

Mr. Nimmo is that leasing at the present time would prevent other owners of herds from entering into the business in the future, and thus shut out competition. It is not to be supposed that the Government would deed away all this area at one fell swoop; and although in time it might happen that all the pasture lands would be leased, as all the Mississippi farming lands have been sold, it does not appear that competition would be shut out more in the one case than in the other, or that it is the duty of the Government to reserve the one class of lands from lease, any more than to reserve the other from sale, in order to prevent this. The clinching argument seems to be the danger lest the "unnaturalized foreigner" obtain a more permanent foothold in this country than he has already done. What he has done is apparently set forth in the tables on page 45, taken from speeches of two members of Congress, according to which the amount held by individuals and companies representing foreign capital exceeds twenty millions of acres. There is no means of verifying the correctness of these figures, since the sources from which they were obtained were not given. In the only case coming within the actual knowledge of the writer one item, which appears identically in each table, is only ten times greater than the truth. Supposing them, however, to be in the main correct, why should we be more afraid of using foreign capital to develop our lands than to build our railroads? The money paid for them (and it has generally been more than the American capitalist would have paid) has been so much added to the wealth of the country, and the fact that many "Britishers" have embarked in the cattle business is building up a strong party in England in favor of doing away with the unfair restrictions on the importation of American cattle by the Lords in Council. Were these restrictions removed, our present export of seventeen millions' worth of cattle would be rapidly doubled or even quadrupled, and go far to offset the falling off in the export of cereals.

The pith of the objection to the Britisher may be found in the following sentence of Mr. Nimmo's: "Certain of these foreigners are titled noblemen of countries in Europe. Some of them have brought over from Europe, in considerable numbers, herdsmen and other employees who sustain to them the dependent relationship which characterizes the condition of the peasantry on the large landed estates of Europe." Could anything be more ingeniously worded to appeal to the prejudices of demagogues? To those who have been in personal contact with these "titled foreigners" and their employees, it would seem supremely ridiculous to magnify an occasional valet or groom accompanying his master into a national danger, and a cowboy of the West would ask no better amusement than to see some of the "imported herdsmen" enter into competition with him on his broncho.

The general tendency of a certain class of public sentiment of late seems to have been as follows: those who have been interested in the range-cattle business have made such certain and large profits that capital is beginning to seek investment in it on a large scale. The investment of capital on a large scale means large corporations; large corporations mean large monopolies; large monopolies are popular things to war against; therefore, let us war against the range-cattle business. The outgoing Administration ordered the destruction of the wire fences which many large cattle men had put up on land to which they had no title. This action, if carried out fairly and without favoritism, would have the sympathy of a very large class among cattlemen themselves. But it seems rather pitiful to see the cry raised that it is the foreigner who is to blame for this illegal fencing, since in the majority of cases he was persuaded to pay a large price for a herd of cattle by the inducement offered by his shrewd American seller, that so many thousands or millions of acres were under fence, and that title to these lands had been tacitly conceded by the Government.

It remains to be seen what will be the policy of the new Administration in regard to this important question, and it may be hoped that broader and less demagogic views will characterize its action. So far, it must be confessed, it does not promise very well. Land Commissioner Sparks, under date of April 3, 1885, has suspended final action on all claims for land in the West dependent on acts of settlement and cultivation. It may be assumed that this action is mainly directed against cattle companies, from the frequent remarks in the public press of late in regard to their supposed acquisition of large tracts of land by fraudulent entries. The action of Mr. Sparks takes the ground that Western men as a class are less honest than Southern, for his order does not apply to the Southern States. It allows the settler to do whatever is required by law for the proof of his claim, and to furnish the same proofs of his honesty and good faith that are required elsewhere. Having furnished this proof to the satisfaction of a law expressly framed to guard against fraud, his entry is then suspended and resubmitted to an ex-parte examination by a detective in the field. No form of procedure is indicated by which he may meet these ex-parte charges, if any are made. It seems to be assumed that, if he lives west of a certain line, he is necessarily dishonest, and his sworn statements cannot be believed. This action differs from that of the previous Administration in that it promises to work more injustice to the small settler than to the companies.

RECENT NOVELS.

Great Porter Square. By B. L. Farjeon. Harper's Franklin Square Library.

Lazarus in London. By F. W. Robinson. Harper's Franklin Square Library.

Wyllard's Weird. By Miss Braddon. Harper's Franklin Square Library.

Lester's Secret. By Mary Cecil Hay. Harper's Franklin Square Library.

The Shadow of a Crime. By Hall Caine. Harper's Franklin Square Library.

Diana of the Crossways. By George Meredith. Harper's Franklin Square Library.

Jan Vedder's Wife. By Amelia E. Barr. Dodd, Mead & Co.

Across the Chasm. Charles Scribner's Sons.

The Knight of the Black Forest. By Grace Denio Litchfield. G. P. Putnam's Sons.

A Superior Woman. No Name Series. Boston: Roberts Brothers.

In the recent numbers of the Franklin Square Library five well-known authors appear ministering to the revived taste for crime and mystery. The outlines of three of these novels are much alike. Murder is committed by a person unknown: innocent men are suspected and arrested by too zealous detectives, professional or amateur; people prowl about under any name but their legitimate one, and, finally, the opportune death of the criminal relieves the author from making the gallows a feature of his dénouement. In 'Great Porter Square' Mr. Farjeon uses these materials admirably, heightening interest in the events by giving a share in them to several irresistibly comical characters. Mrs. James Preedy, who took lone gentlemen in at No. 118, and "generally did for them," is a most amusing creature, and the sympathetic reporter of the *Evening Moon* is not far behind. The plot is ingenious, but to effect the necessary rupture between Mr. Holdfast and his son a stronger situation might have been devised. No man would have rested under Mrs. Holdfast's odious slander, with the means of disproving it and proving her infamy so easily within his reach. As a portion of Dickens's mantle has fallen upon Farjeon, so too he must share the reproach of inability to draw a lady or gentleman in the conventional sense. The fascinations of Lydia are of the *bouffe* order, and how are we to reconcile the high honor and chivalrous instincts of Mr. Sydney Campbell with his conversion of his fiancée's apartments into a common gambling house, the lady being reigning and only goddess?

The scene of 'Lazarus in London' is in the class which Mr. Robinson has succeeded in investing with interest, though of a painful kind. There is little of swift, stunning tragedy, or of picturesqueness, in the history of the millions to whom the struggle for existence is made doubly hard by self-compelled reference to standards of respectability. Their lives are on the whole barren of event, with a limited and simple range of emotions. Nothing but a keenness in getting at all the pathos, dignity, and humor there may be in common things can make such people even endurable in fiction. Mr. Robinson, contriving to ferret out these qualities, excites sympathy for his three young women stitching surplices from morning till night, tackling the problem of how to sell stockings at a profit with the young man on the next corner always advertising "great clearance sale of extra fine hosiery below cost." Indeed, curiosity about their little, incessant worries drives quite out of mind the question, Who murdered Mr. Mackness? And the answer to this question is so weak as to confirm the wisdom of indifference.

Atrocious crime is, so to speak, Miss Braddon's native heath; and though she cannot be said to have the "fleet foot on the corrie" of twenty years ago, she neither lags nor stumbles. In 'Wyllard's Weird' the victim is a young girl, fallen or flung from a railway carriage, found dead in a ravine, with nothing by which to trace her identity. As the name gives the clue to the murderer, all the complications go for naught, excepting that they exhibit the author's nicety in articulating her skeleton. If Miss Braddon would kindly append to her novels the skeleton innocent of padding, she would confer a favor on readers at once inquiring and impatient.

Miss Hay might advantageously employ a similar device. Perhaps her appendix would be more useful in the form of a receipt setting forth the exact proportion of lost will to Scotch marriage, and referring generally to handfuls of silly, irrational motive thrown in. These ingredients are used lavishly in 'Lester's Secret,' where the only novelty is yet another queer variety of the gentleman—one who permits his fondly-loved wife to impose on the public as a British maiden of the most immaculate type.

'The Shadow of a Crime' has a strong theme, with several scenes displaying power and intensity of purpose. The time, the early years of the Restoration, and the scene, among the Cumberland dalesmen, probably foredoom the book to more limited appreciation than is granted to its inferior kindred. The plot, unfortunately, lacks concentration, and the introduction of a number of people with no distinct individuality obscures the fine portrait of the Puritan Captain, Ralph Ray. There is difficulty in grasping Ray's reason for his voluntary exposure to death by the *peine forte et dure*, while the multitude of circumstances connecting him with the murder of the King's agent are confusing and tiresome rather than provocative of interest. But with patience, which is amply repaid, the chain of incident firmly linked may be followed, and there is

no uncertainty in the illustration of the inspiring idea—

"Whom God's hand rests on has God
'At his right hand."

Mr. Meredith's 'Diana of the Crossways' has no secrets excepting those hopelessly buried in his metaphors and his strangely distorted sentences. His opening chapter—which readers craving story only are advised to skip—presents Diana as an historical wit and beauty, and incorporates an essay on the Art of Fiction. From the essay we gather that the Art is in a bad way, and that unless authors shall make haste to vivify it with blood, brains, and philosophy (which Mr. Meredith does and gets no thanks), it must presently die. There are many who so frankly regard Mr. Meredith's novels as "told by an idiot, full of sound and fury, signifying nothing," that total extinction of fiction would seem to them preferable to a reconstruction in harmony with his theories. On the other hand, there are some who love him, laud him as "one of the breed of Shakespere and Molière," and in whose breasts the brutal insensibility of the larger faction rouses the angriest passions. It is a case where the security of the middle way tempts one to brave its imputed ignominy. Dispassionate judgment suggests that few authors have Mr. Meredith's store of wise, far-reaching ideas, and that for expressing them obscurely he is beyond compare. Then his work cannot be separated from an obtrusive personality. By a wanton interpolation of venom in the narrative, there is ever present a sour, malicious being who blights delicate fancy and poisons the tip of the shaft flying straight to the core of existence. A perpetual display of ill-temper is not excused even by his honest, scathing contempt for sham virtue, sham decency, and for all the shuffling hypocrisies which the world heaps into a rampart of defence against the shock to self-love consequent on looking fairly at the facts of life and the mainsprings of action.

Mrs. Caroline Norton is spoken of as the prototype of Diana. Both incident and what Mr. Meredith calls internal history lend plausibility to the rumor. Diana is of Irish descent, a beauty, an author, the favorite of a member of the Cabinet, and the defendant in a divorce suit. She is clever, vivacious, loving, and, if it were not for her "infinite gab," altogether charming. But she is made to pose as a wit who never nods, and she and her "Emmy" are unconsciously a fine pair of *précieuses*. In the delineation of the lady, however, at her best as at her worst, but one incongruity is noticeable. To sell a lover's intimate gossip for money is a queer business for an honest woman; to plead ignorance of the confidential nature of her talk with Dacier, a weak excuse for a clever woman. We suppose that race proclivities must bear the burden of this bit of inconsistency, and that Diana, being an Irish woman, hard up, possessing marketable secrets, involuntarily became an informer.

No effort is needed to understand the heart tragedy in 'Jan Vedder's Wife.' It is a story of the Shetland Norsemen, homely and simple, but full of picturesqueness and vigor. The situation is a common one—a cold, righteous wife, quite the pattern saint, yet full of the narrow pride and vanity of a small, self-centred nature, driving a sweet-tempered, unstable husband to the inn, to the fishing, anywhere away from home and her conscious correctness. Whether or not the habits of life and thought among an isolated people be truthfully described, the reader gets the impression of truth, which is the essential. For the hour, one lives in Lerwick, hates Margaret Vedder and her father, Peter Fae, delights in Suneva Torr, with her fluttering yellow hair, blue ribbons, and sharp tongue, and is reprehensibly in love with the sinner Jan. All this, till the turning-point of Jan's career, when the illusion fades and the interest flags. The handsome ne'er-do-weel's phenomenal rise in the British navy recalls the legends of the Reformed Pirate, while the final measure of bliss is improbably full, and divided with a too careful impartiality. But, for the sake of little Jan's welcome home to his heroic father, splendid in gold lace and buttons, what is feeble and tame may be overlooked; and, indeed, it is somewhat captious to refer to defects in a book so unpretentious and attractive.

'Across the Chasm' is chiefly devoted to a comparison between the social customs of the Northern and Southern States. The comparisons are made by a Virginian girl, wintering in Washington, and, though neither very valuable nor searching, have an air of judicial gravity and impartiality. Her observations were largely restricted to a family exceptional in at least one respect. We are confident that, as a rule, Northern people, boasting honorable, historical lineage, wealthy and unimpeachable, do not lose their heads on receipt of an invitation from any general, even if the invitation be for what the author describes as a "recherché stag-party." There is no sort of objection to the incident from which the author is inclined to generalize; on the contrary, it is amusing, and by way of contrast with the unaccountable elation of the Gastons, the old Southern soldier's indifference is very funny. Miss Trevennon, by her marriage with the Northern Gaston, probably laid all her troublesome ghosts temporarily, but Gaston would be a rash man to assume that they would not rise again and become the permanent skeletons of the family closets.

'The Knight of the Black Forest' is a shallow stream of talk, running not with the pleasant murmur of 'Across the Chasm,' but with jarring noise. The principal characters of the sketch are two American girls, one the pert, flirtatious chit of whose innocence Europeans are incredulous—small blame to them for the incredulity; the other is a moon-struck damsel employed as a foil to her voluble companion. To carry on the slight action, there are a German Count, who, except for slight external dissimilarity, might as well be the courier, and a dull, worthy specimen of America's "bone and sinew." The tone of the sketch is irritatingly trivial and flippant, and the irritation is not lessened by the author's qualified disapproval of her heroines, and her effort to draw a sentimental moral from their ridiculous behavior.

If a good novel could be constructed out of a set of fixed, narrow notions about duty, sentiment, and religion, then 'A Superior Woman' would be a remarkable one. It is hard to decide whether the failure here is due to the uniform expression of such notions by the truly admirable people, or the ineffectual struggles of the unworthy to depart from them. To demand a many-sided mind as an essential in a novelist is perhaps unreasonable, but to rebel against the rigidly one-sided is lawful. The plot of this novel eludes dissection by its feeble inconsequence, but about one or two minor points a lively inquisitiveness is excited. Why are we so often explicitly told that "the ladies took their habits with them"? Do not ladies generally take their habits where they are likely to need them as surely as they take their shoes? And why should an American Episcopalian, a layman with no specially devout tendencies, permit "Holy Week" to sit so heavy on his soul, or rise in wrath because his relations suggest visiting him on "Holy Thursday"? And, finally, why do such eminently well-bred people never let slip an opportunity to make a blundering, tactless remark or scene? But the last question is obviously idle, given no indication that the author has found the test of people-of-the-world to be not so much what they do say as what they don't.

The Structure of English Prose: a Manual of Composition and Rhetoric. By John G. R. McElroy, A.M., Professor of Rhetoric and the English Language in the University of Pennsylvania. A. C. Armstrong & Son. 1885.

This is a sort of work to the consideration of which the reviewer, however unsympathetic by nature, comes with a heavy heart. It is the result of well-intentioned, honest, and laborious effort; but it is not often that so much effort of this kind has so little that is satisfactory to show for result. The author has read many books on the subject which he has treated here, but some of them he has read to little purpose, and others of them were not worth reading at all. Unfortunately, too, these last are the ones to which he acknowledges himself to be under the greatest obligations. There is, indeed, a guilelessness which disarms criticism in the simplicity with which he expresses his admiration for certain works which he is the first to speak of in the light of authorities. From one of these he has acquired what constitutes one of the most vicious characteristics of his own book—the habit of dividing and subdividing topics, ticketing each division and subdivision with a big word, and then burdening it, and the reader also, with an elaborate definition. It is rather late in the day to import into modern practice the methods of the schoolmen.

It would be difficult, for illustration, to discover the particular benefit that the student will derive from painfully committing to memory the statement that the subjective qualities of style are (1) *Significance*, (2) *Continuousness*, (3) *Naturalness;* and that Significance implies two things: (*a*) that the speaker have some thought to communicate; (*b*) that the words employed actually express some meaning, etc., etc. This is no isolated or extreme specimen of the contempt in which the author holds the human intellect, and his unwillingness to admit that certain things can be assumed as known to a college student of average capacity or even incapacity. The constant recurrence of these distinctions, with the elaborate explanations of what does not need explanation, reminds the reader of nothing so much as of that riotous banquet on board Pompey's galley, in which Shakspere represents Antony as informing the inquisitive and drunken Lepidus that the crocodile is shaped like itself; that it is as broad as it has breadth; that it moves by its own organs; that it lives by that which nourisheth it; and that, finally, the tears of it are wet. Worse, however, than explanations which give no information, is the process of dividing and subdividing. It has in the past brought the whole subject of rhetoric into disrepute, and it is unfortunate to find it elaborated and extended as in this work. Its results to the student are harmful, because it cheats him with the belief that in acquiring names he is acquiring knowledge. If he received a stone for the intellectual bread he was asking for, he would reject it; but he swallows with no hesitation a series of pebbles in the shape of distinctions and definitions.

The work is divided into two parts. The first treats of Style, the second of Invention. This is in accordance with the views laid down in the opening sentences of the author's preface, that the teacher of rhetoric has the double office imposed upon him of making writers, and of exhibiting the laws of his art so as to promote mental discipline. As the former is much the more important for him to do, much the larger portion of the work is devoted to it. There are certainly many good hints and suggestions on usage and style to be found here; but there are so many erroneous assertions also that it is asking too much to expect the mere learner to separate the one from the other. No small share of this part

is given up to the discussion of the correct or incorrect employment of words and phrases. We are not disposed to wax enthusiastic over the utility of treatises of this kind even when well done. The most they can do in that case is to save the student from errors of detail: "to make writers," as the author expresses it—that is, to impart clearness, beauty, and strength of style—they are almost utterly powerless. They have about the same relation to the production of good writing that books of etiquette have to the production of good manners. When treatises of this kind are ill done they work more harm than good; nor can we say of this part of the work that it is anything more than imperfectly done. It does not rise much above the level of those ephemeral publications with which the press abounds, wherein men, knowing nothing of good usage, set out to correct the great masters of English speech, or, knowing nothing of the history of our tongue, seek zealously to make the public the sharers in their own ignorance.

Out of scores of cases that might be given we shall content ourselves with one. On page 106 a rule is laid down for the use of the relatives *who* and *which*, on the one hand, and of *that* on the other. It is a rule that has never been followed by any one who has the slightest claim to being regarded as an authority. It is not followed now, and it may safely be predicted that it never will be followed. The author tells us himself that "unfortunately the distinction is not observed by modern writers," though of course it ought to be. He goes on, in defiance of his own belief, to give a list of exceptions for cases in which he admits that conformity to his rule "would be intolerable." The last of these exceptions is the pretty comprehensive one, "for variety's sake," and by the time it is reached there has been very little left of the original canon by which correct usage was in this matter to be tested. He asserts, moreover, that the distinction he lays down existed in Elizabethan English and was "generally" followed; but that by the eighteenth century *that* had nearly usurped the relative function. Surely, an instructor in English ought to know that if there has been any usurpation of the relative function, it has been on the part of *who* and *which;* that after the break-up of Anglo-Saxon *that* was for centuries the universal relative, and that it was not till Elizabethan English that the nominative of the original interrogative *who* had effectually established itself in the speech as a relative.

It shows, in truth, an entire misapprehension of the subject to fancy that any teacher of rhetoric is able "to make writers," and especially to make them through the agency of text-book instruction. The utmost such instruction can do is, as we said before, to correct errors of detail, nor even in that particular can great importance be attached to it. Writing, like speech, is an imitative art, and no one gains from the study of rhetoric the ability to express himself clearly and forcibly on paper any more than he gains from the study of grammar the ability to express himself correctly in conversation. The author, however, seems confident of the success of his own system, and it is simple justice to him to add that he informs us in the preface that the course has never yet failed to yield in large measure the fruit expected of it. Whether the world will be as partial to the result of his work, is something that the future alone can determine.

Our Birds in Their Haunts: A Popular Treatise on the Birds of Eastern North America. By Rev. J. H. Langille, M.A. Boston: S. E. Cassino & Co. 1884. 8vo, pp. 624; woodcuts in the text.

As a "popular treatise," 'Our Birds in Their Haunts' is entitled to favorable mention; it does not aspire to higher recognition. It aims to be attractive to the general reader, and the author's method of grouping his bird-narratives in accordance with the order of the seasons, or the peculiar localities the birds frequent, happily tends to this end. In the first chapter, suggestively entitled "Hoar-frost," he treats of such cold-weather birds as the horned lark, the red-polls, the pine grosbeak, chickadees, and woodpeckers. In "Snowed In" we are introduced to snow buntings, longspurs, waxwings, various kinds of owls and finches, and the ruffed grouse—a truly motley assemblage, whose bond of union is the fact that they are all more or less characteristic forms of winter bird-life. "Below Zero" brings us face to face with another set of hardy winter birds, while under "Voices of Spring" what else should we expect than the bluebird, the robin, and other "early birds" of springtime? Under other suggestive headings are treated the birds of later spring and summer. Again, locality is the thread on which the author's bird stories are strung, as in the chapters entitled "Bird-life in Nova Scotia," "Georgian Bay," "Tenting on the Niagara," "New Jersey Coast and the Osprey," in which birds naturally associating in certain haunts are treated together.

The author is a good observer, and his sketches and observation are thoroughly trustworthy so far as they relate to species with which he is personally familiar. He is enthusiastic, and has considerable skill in placing on paper what he has seen and heard, and is often particularly happy in his delineations of bird-songs. Although his birds are so informally introduced, and his matter relates so exclusively to the field and forest, to the marshes, the lakes, and the seashore, he has aimed to give his volume the value of a handbook, and therefore incorporates in his account of each species a description of its characters, at the same time carefully avoiding technicalities. While in most cases the characters given are ample for the recognition of the bird, there is at times a rather serious lack of explicitness, and a failure to hit the distinctive points. As already intimated, the author's general knowledge of his subject is obviously limited, and when he departs from an account of his own experiences, or attempts to treat of birds he has never himself met with, he betrays distinctly the faltering steps of an amateur, as when he here and there attempts to generalize, or makes reference to Western forms of bird-life allied to those of his own region. While he has succeeded, on the whole, in making a creditable book about the bird-life of Eastern North America, he has failed in his intention to give "the sum total" of the subject.

A strong but not obtrusive clerical flavor will make this treatise welcome to a certain class of readers. The illustrations, says the author, "have been nearly all furnished by Dr. Coues," and, while thus shorn of any feature of novelty, are none the less appropriate and instructive. There is an index to the English names of the birds, but no table of contents.

BOOKS OF THE WEEK.

Vasili, Count Paul. The World of London. Harper's Handy Series. 25 cents.
Ventura, L. D. Peppino. W. R. Jenkins. 25 cents.
"Where Men Only Dare to Go!" or, the Story of a Boy Company (C. S. A.) Richmond: Whittet & Shepperson.

HAVE JUST PUBLISHED:

I.

Life and Letters of Emory Upton,

Colonel of the Fourth Regiment of Artillery, and Brevet Major-General U. S. Army. By PETER S. MICHIE, Professor U. S. Military Academy. With an Introduction by JAMES HARRISON WILSON, late U. S. Army. With Portraits. 12mo cloth. Price, $2.00.

"The subject of the following memoir was widely known by reputation in the military profession, and the story of his life would, at least to military men, have been a matter of passing interest. The tragic circumstances of his death seemed to demand some explanation in harmony with his established reputation and character. At the earnest solicitation of his nearest relatives, the author, although conscious of his own deficiencies, undertook the task of compiling a brief record of General Upton's life for his family and immediate personal friends."—*From Preface.*

II.

The Tinted Venus.

A FARCICAL ROMANCE. By F. ANSTEY, author of 'Vice Versâ,' 'The Giant's Robe,' etc. 12mo, paper. Price, 25 cents. Authorized edition.

'The Tinted Venus,' by the author of 'Vice Versâ,' is designated by the author "a farcical romance" rightly enough, for in strange and grotesque invention it equals, if it does not outdo, his 'Vice Versâ.'

III.

Appletons' General Guide to the United States and Canada.

With numerous Maps and Illustrations. Revised for the Season of 1885. In three separate forms:

ONE VOLUME COMPLETE, pocket-book form, roan. Price, $2.50.

NEW ENGLAND AND MIDDLE STATES AND CANADA, one volume, cloth. Price, $1.25.

SOUTHERN AND WESTERN STATES, one volume, cloth. Price, $1.25.

IV.

Appletons' Hand-book of Summer Resorts.

Revised for the Season of 1885. With Maps and numerous Illustrations. Large 12mo, paper cover. Price, 50 cents.

For sale by all booksellers; or any work will be sent by mail, postpaid, on receipt of price.

READY JUNE 27.

Standard Classic Atlas

WITH INDEX,

Containing complete and authoritative maps of Classic and Bible Lands, engraved on steel, with tinted boundaries. The Index gives the latitude and longitude of places mentioned in the maps, with both their ancient and modern names.

In issuing this Atlas it has been the purpose of the publishers to present what should be recognized by scholars everywhere as the highest obtainable authority in its department.

Price by Mail, $2.50.

Webster's Condensed Dictionary.

800 Pages. 1,500 Illustrations.

An entirely new compilation on a novel and original plan, which allows more matter in the same space and with the same type than any other. It treats about 60,000 words, and in its etymologies and definitions is more thorough and accurate than any other abridged dictionary. A Pronouncing Vocabulary of 24,000 Proper Names is given in the Appendix. *For sale by booksellers.*

Price by Mail, $1.80.

Handy Atlas of the World

Contains, among many other valuable features, Maps showing Standard Time, Railway Maps of all the States, Commercial Map of the United States, Maps of the Principal Cities of the Union, Recent Polar Explorations, Central Africa, Egypt and the Soudan, Alaska, etc., etc.—in all, 38 maps and valuable statistics. It is bound in flexible cloth, and is the most beautiful work of its class ever issued from the American press. *For sale by all booksellers.*

Price by Mail, 50 Cents.

Ivison, Blakeman, Taylor & Company,
753-755 Broadway, New York.

Will be Ready on 4th July.

A Catalogue of First Edi-

TIONS OF AMERICAN AUTHORS, Poets, Philosophers, Historians, Dramatists, Novelists, Travellers, Humorists, etc. It will be issued in a limited number, will contain over 300 names of Authors, with a complete list of works of some of more prominence, about 2,000 titles, with price, date and place of publication—about 60 pages on heavy paper and original etching on cover. It will be sent, post-paid, on receipt of $1.00 (by money order or registered letter).

NEARLY READY:

Memoirs of the Life of Colonel Hutchinson.

By his Widow, Lucy. Revised and Edited by Charles H. Firth, M.A. With Ten Etched Portraits. In two volumes, fine paper, medium 8vo, and handsome binding.

To understand the history of any period, it must be studied not only in the records of public events, but also in the daily lives of individuals.

Of the many Memoirs and Autobiographies which illustrate the Civil Wars of the seventeenth century, none is more popular or entertaining than the 'Life of Colonel Hutchinson.' But though these Memoirs have passed through many editions, and their value is universally admitted, they have not yet been edited with the care and labor they deserve. In the earlier editions, the irregular and unfamiliar spelling of the original renders the book difficult for the general reader to enjoy. In the later ones the text has been modernized with more freedom than fidelity. In the present edition the spelling alone will be modernized, while the phraseology and grammatical peculiarities of the original will be carefully preserved. The most valuable of the annotations of the Rev. Julius Hutchinson will be retained, and a large number of new explanatory and illustrative notes will be added. Letters written by Colonel Hutchinson during his government of Nottingham, and other documents of interest, will be for the first time collected. A full and accurate index to the Memoirs will complete the work.

Ten newly-etched portraits of persons of whom mention is made in the text will help to render this a worthy edition of an English classic.

Bohn's Libraries.

A Series Standard Works of European Literature in the English Language. Full Catalogue sent, post-free, to all parts of the world on application.

Three Notable Books.

ALASKA: Its Southern Coast and the Sitkan Archipelago. By Eliza Ruhama Scidmore. Fully illustrated. 12mo, cloth, $1.50.

No book yet published bears any comparison with this volume in respect of valuable and authentic information relating to the history, geography, topography, climate, natural scenery, inhabitants, and rich resources of this wonderful *terra incognita*. This book has all the interest of a delightfully written story of adventures in a comparatively unknown region, and with the additional value which it possesses as the only approach thus far made to a trustworthy treatise upon the history and resources of Alaska, it will command itself to all persons interested in that country, either as students or *voyageurs*.

BOY LIFE IN THE UNITED STATES Navy. By H. H. Clark. 12mo, illustrated, $1.50.

In this graphically written and wonderfully entertaining volume, boy life in the navy of the United States is described by a navy officer in a manner which cannot fail to satisfy the boys.

HOW WE ARE GOVERNED. By Anna Laurens Dawes. 12mo, $1.50.

The task undertaken in this work by the accomplished daughter of Senator Dawes has been to present an explanation of the constitution and government of the United States, both national, State, and local, in so simple and clear a way as to offer to the masses everywhere such an opportunity for their study as is not afforded by the numerous volumes in which such information is chiefly to be sought. She has accomplished her aim with remarkable success, and her book will have a hearty welcome from the thousands who appreciate the need of it.

MACMILLAN & CO.,
112 Fourth Avenue.

D. Appleton & Co.

PUBLISH THIS DAY:

I.

The Adventures of Harry Marline;

or Notes from an American Midshipman's Lucky Bag. By Admiral Porter, author of 'Allan Dare and Robert le Diable,' etc. With Illustrations. 8vo, 378 pages, paper, price $1.

These life-like and stirring adventures were written by the Admiral for the amusement of his boys; and, thinking it better for people to laugh than to cry, the author has put them into book-form. The picture of the midshipmen in the olden times will delight our middies of the present day.

II.

A Nemesis; or, Tinted Vapors.

A Novel. By J. Maclaren Cobban, author of 'The Cure of Souls.' 12mo, paper, price 25 cents.

A graphic story of some tragic events that led to a poor curate's marriage with a beautiful, refined, and delicate Frenchwoman in the wilds of Lancashire, of all conceivable places.

III.

NEW CHEAP EDITION.

Mrs. Lorimer:

A Sketch in Black and White. By Lucas Malet, author of 'Colonel Enderby's Wife.' 16mo, paper, price 50 cents.

"'Mrs. Lorimer' is not only brimful of cleverness—profuse and careless cleverness, as of one rich in intelligence—and of genuine, softly reflective humor, such as critics love, but of power of a kind so separate that it is hard to characterize without quoting in justification the whole book. It is as a story of rare promise, alike of humor and of pathos, that we recommend 'Mrs. Lorimer.'"—*London Spectator.*

IV.

NEW CHEAP EDITION.

James Gordon's Wife:

A Novel. 8vo, paper, price 25 cents.

V.

NEW, REVISED, AND ENLARGED EDITION OF

Scientific Culture,

and Other Essays. By Josiah Parsons Cooke, LL.D., Professor of Chemistry and Mineralogy in Harvard College. 12mo, cloth, price $1.

"These lectures possess more than a special interest. . . . Though they are general in their character, and present no new theory nor any new development of an old theory, yet they have the snap and vigor of an original thinker, the bloom of an unimpaired enthusiasm, at once, and the reserve of a trained scholar, who tells only what has been tested in the crucible of thought."—*The Critic.*

The Nation.

NEW YORK, THURSDAY, JULY 9, 1885.

The Week.

WHO would have imagined, ten years ago, that in the summer of 1885 the Republican party would be so short of great men that it would be unanimously and fervidly chanting praises to John A. Logan? Yet that is what it is doing. The whole party press is expressing its delight with the speeches at the recent Boston banquet, and is holding up Logan's views of the principles of the party as the true and only ones. In fact, there is a genuine Logan boom abroad in the party, and he himself has probably little doubt that it will give him the Republican nomination for the Presidency in 1888. And why shouldn't he have it? If the sort of principles which he proclaims are just the sort which the Republican party likes—if they are, as an admiring Blaine editor in Boston calls them, "true Republican ozone"—then he is the man to lead the party when, "with visor down and lance in rest," it enters the field again in 1888, with the dear old bloody shirt as its ensign.

But how queer it all is! It is only a little more than a year since Blaine was nominated for the Presidency as the greatest leader not only in his party but in the history of all parties everywhere, and Logan's nomination for the second place was looked upon, not as a gain to the ticket, but as something to be explained and apologized for. Logan's name was, in fact, regarded then as standing for principles with which the Republican party had very little sympathy. Now Blaine's name passes entirely without mention at a great Logan banquet in Boston. Not one of all the orators even mentions him. "Are we so soon forgotten when we are gone?"—Mr. Blaine may be asking himself this question. At any rate, his friends are asking it for him. One of the most devoted of his followers, Congressman Boutelle, has asked the Executive Committee of the Grand Army of the Republic why Mr. Blaine was not invited to attend the recent reunion in Portland, and has been told that it was because such an invitation would not have been in a line with the traditions and practices of the Grand Army, since such invitations are never extended to civilians other than those who hold high official positions. Mr. Boutelle's manner of "demanding" an explanation is very amusing. Why does he not address a similar demand to the organizers of the Boston banquet, and also ask the speakers at that festival what they meant by ignoring the existence of the party's leader in the last campaign? The reasons for the sudden descent from Blaine to Logan are easily discernible, but what we should like to see would be the explanations of it which Senator Hoar, ex-Governor Long, Henry Cabot Lodge, and others of the new Logan disciples would be able to give.

We do not believe the custom of discussing the public utterances of Senator George F. Hoar, to which the Boston papers still adhere with curious tenacity, will be long kept up. In a recent speech he laid down the startling doctrine that President Cleveland was bound either to keep in office Meade, the Copiah County murderer, in Mississippi, or "to step out of the Presidential chair himself." This simply showed that this unfortunate jurist was in need of a physician; but the Boston *Advertiser* breaches it by regular logical approaches, reducing the Senator, of course, to absurdity very quickly; but is it worth while? It shows that he maintained in 1876 that President Hayes had nothing whatever to do with the means by which he was elected, as long as his title was technically good. But what of it? What connection is there in Mr. Hoar's mind between what he says this year and what he said last year? He said in 1877 that "he had little respect for weak and gushing platitudes," but why should this prevent his producing them himself in half-pound packages in 1885? He also said this in 1877:

"The President has also acted wisely in inviting the coöperation in his Administration of a distinguished Democrat of the South, honored by his own party and section, who accepts and supports in good faith all the results of the war. In not deeming a share in the rebellion reason for perpetual exclusion from public office of those who accepted honestly and heartily these results, President Hayes but follows the example set by General Grant in the cases of Attorney-General Akerman and General Longstreet. The great victory of the Union arms was achieved, not to make the men of the South dependents, but only equals; not to bring them to your feet, but only to your side. You conquered only to achieve a fuller and more perfect Union; not that you might have vassal States or subject citizens. It was asked the other day, in this hall, if it is to be tolerated that a Union and a rebel general should be seen standing together on the same platform. I answer yes, if that platform be made up of the unity of the republic and the three amendments to the Constitution."

Now, however, eight years later, he is reviling President Cleveland for acting on his own doctrine. But why not? The only thing which keeps a public man from these follies is the possession of a sound mind and a good stock of settled convictions. These, apparently, Senator Hoar has not now, if he ever had. Consequently his speeches are simply noises, which, like the cries of the lower animals, express pain or pleasure, but do not contain propositions worth refutation.

The Bourbons among the Republicans—and they seem to number a large proportion of the party—cannot conceal their disappointment and disgust at the refusal of the Administration to make the "clean sweep" which they have at last tired of predicting. Some, even of those who still hold Federal offices, are such devoted believers in the spoils doctrine of politics that they would rather be removed immediately than have any doubt thrown upon the application by their party, when it recovers power, of the Jacksonian doctrine about the rights of the victors. For example, Mr. Hendee, of Vermont, formerly a member of Congress, and now Bank Examiner for the State, is quoted as saying that he thinks his office fairly belongs to the Democrats, and that he believes that "if the Republicans come into power in 1888, they will not leave a single Democrat in a Federal place." Mr. Hendee's position will be heartily endorsed by the Democrats who believe that the election of Cleveland is sufficient reason for straightway turning out every Republican office-holder in the land. It is interesting to observe the steady drift toward union on the spoils platform of the Bourbons of both the old parties, while at the same time liberal-minded Republicans are coming every month more heartily to endorse the efforts of a Democratic Administration to enforce business principles in the conduct of the Government.

President Cleveland has performed another act of poetic justice, as well as of public duty, in recalling Mr. B. Platt Carpenter from the Governorship of Montana and appointing in his place a resident of the Territory. What makes it poetic justice is, that in doing this he is carrying out in practice the eighteenth plank of the last Republican national platform, which said:

"That the appointments by the President to offices in the Territories should be made from the bona-fide citizens and residents of the Territories wherein they are to serve."

President Arthur then furnished the world with a startling illustration both of the value of Republican platforms and of his own notions of public duty, by appointing Platt Carpenter to the Governorship of Montana, Carpenter being at the time not only a resident, but a very worthless politician, of New York. He turned his delegation over to Folger in the Convention of 1882, and was rewarded by nomination for the Lieutenant-Governorship, but was more badly beaten than even Folger himself, so something else had to be done for him, and he got the Governorship of Montana. The incident is well worth study as an example of the value of the Republican party in its later days as a reformatory agency, and as an explanation of the fondness of the leaders for "the bloody shirt."

Four months have justified our belief that the President knew what he was about when he picked out his Secretary of the Treasury. Whatever may have been Mr. Manning's notions about civil-service reform as a theory, a very little experience as head of the Department was enough to make him a civil-service reformer in practice. The simple truth is, that no man can go to Washington, as Mr. Manning did, with a sincere ambition to make a reputation as an executive officer, and not find himself compelled, by the very nature of his position, to adopt business principles as the basis of his action. Mr. Manning gave convincing proof of his conversion when he took in hand that "special preserve of patronage and political influence" under Republican Secretaries, the Bureau of Engraving and Printing, with its 1,200 employees not subject to the Civil-Service Law, and placed over it that eminent exemplar of reform methods, Mr. E. O. Graves. In the same line has been his course in refusing to make changes in important offices in the Department unless there were good reasons for change, as illustrated by the fact that out of more than seventy chiefs of division whom he

found in office only fifteen have been dismissed, and these for inefficiency or even grosser offences. The last straw for the Republican organs in Mr. Manning's case was his prompt action in the Kellar matter the other day, and his unmistakable declaration, "I intendth at this department shall strictly observe the Civil-Service Law." On the eve of a campaign in which the sham character of the Administration's civil-service reform is to be the chief plank, there is a heartlessness about Mr. Manning's course which must make the Republican managers lose their confidence in human nature.

Secretary Manning's letter to the Collector, authorizing him to allow the Cunard and French steamship companies to resume the old practice of landing passengers from Europe at their docks, means the ultimate downfall of the whole Barge Office system, since the other transatlantic lines will have to follow suit sooner or later. No more successful means of causing delay, discomfort, and unnecessary expense could well have been devised than this scheme of transferring passengers and baggage at quarantine and passing them through an examining office on shore. There was nothing to be said in favor of it by anybody, except—and it is a very important exception—the men who got the contract for the transfer and the monopoly of handling the baggage after it reached the office. This latter industry has been conducted by that well-known philanthropist, Mr. "Barney" Biglin, in the unselfish spirit which has always characterized his efforts in behalf of the public; and the calumnies heaped upon his head by forced patrons of his baggage wagons produced no effect so long as a Republican Administration was in power. The refusal of a Democratic Secretary of the Treasury to turn over all incoming passengers to his tender mercies justifies the worst fears which "Barney" and his fellows have entertained as to the disastrous effects of a change at Washington upon the "business interests" of the country.

There is a flavor of humor rarely found in official documents about Secretary Whitney's explanation of his reasons for revoking his predecessor's famous order, forbidding naval officers attached to cruising vessels from having their families near them when they are on foreign stations. So far as we are aware, this was the first time that the United States Government ever assumed to dictate that a woman should have a "fixed place of abode," and to order that she should not go to "more convenient points" for visiting a vessel on which her husband chanced to be employed. The grim absurdity of such a rule has evidently impressed Mr. Whitney. He says that it was found impossible to enforce the order, and that it was a difficult matter to determine the degree of punishment proper for an officer by reason of his wife's violation of the regulation, since "the degree of control, and hence the degree of responsibility, is found to vary greatly in different families." The idea that a Secretary of the Navy could keep a woman from going to the other side of the world if she had made up her mind to go, would hardly have occurred to anybody but "Bill" Chandler or Sir Joseph Porter.

A fortnight ago a ship arrived in this port from Calcutta, and moored on the Brooklyn side of the East River. Among her crew were two Chinamen, who had shipped for the voyage at Calcutta. The captain knew about the existence of an anti-Chinese law in this country, but was not clear as to its scope. He therefore immediately communicated with the United States District Attorney for Brooklyn, and the Chinamen were sent to jail, pending a decision of the question whether they had a right to be at large in this "land of the free." The United States Commissioner rendered his decision on Friday. He holds that, since the men did not come to this country as "laborers," but as seamen intending to continue following the sea, they may lawfully have a reasonable period of liberty to select the vessel on which they will next ship, but that if they should try to change their vocation and remain in the United States as laborers, they would immediately become amenable to the exclusion act. This is good law, for aught that we can see, but one cannot help wondering what must be the notions about Western civilization which these Eastern "heathen" must imbibe.

There is something very nearly approaching the comic in the report of the United States South American Commission, of its conference with the President of Chili. They asked him for "a treaty of amity, commerce, and navigation with the United States," but he answered, with the "horse-sense" which we are in the habit of regarding as a peculiarly North American attribute, that "amity" toward the United States already existed in Chili and could not be increased by a treaty; and as to commerce and navigation, the Chilians carried on both commerce and navigation wherever they paid best, and could not be induced to surrender this privilege by any special agreement. The notion that when we trade with a foreign nation it must be under a treaty, and that we cannot trade profitably with any nation smaller than ourselves without a treaty, is one which is worthier of the old ladies of Cranford than American dealers. President Santa Maria, however, fell in with the idea of a common silver dollar. When asked what he thought was the best means of increasing trade between Chili and the United States, he, of course, fell back on the well-known maxim of common life, that trade always increases when both parties find they make money by it. No power on earth can increase trade in any other way. In other words, the agencies which would increase trade between Chili and the United States are those, and no others, which increase it between New York and Massachusetts.

After all the commonplaces regarding the rights of labor and capital are exhausted upon the Chicago car-drivers' and conductors' strike, the question will come home to the people of that great commercial centre: "What are we doing—what are we thinking about?" The strike began more than a week ago. The company had discharged half-a-dozen of its employees on charges of inefficiency. The Car-Drivers' Union decided off-hand that those persons were not inefficient, and that they had been discharged because they were leaders of the Union and had made themselves prominent in presenting grievances to the company. They insisted that the men should be reinstated, and when the company refused they struck. So far, so good. They had the same right to abandon their work that the company had to dispense with the services of any of their number. But they resorted to violence in order to prevent other laboring men from taking the places which they had voluntarily abandoned. The Mayor of the city was appealed to by both sides—by the company to afford protection to life and property and by the strikers to "keep hands off and see fair play." The Mayor's action was not very energetic, as is proved by the fact that more than a week has passed without the restoration of order. The law has been suspended for that period as to the Chicago West Division Railway Company. Theoretically, the Mayor is liable to grave censure; but in fact he has moved quite as rapidly as public opinion enabled him to do. When the strike began, people regarded it as a pretty good joke. Immediately the streets upon which the horse-cars ran were filled with every species of vehicle which could carry passengers, to take up the suspended traffic at ten cents per head. Express wagons, trucks, old discarded omnibuses, grocers' carts, dry-goods delivery wagons, and everything that would go on wheels crowded these thoroughfares, decorated with all sorts of signs and chalk marks in the utmost liberty of grammar and spelling. Men and women crowded these vehicles, some standing up, some sitting on chairs and camp-stools, some with their legs hanging over the rear boards, and others clutching at the cart's tail in the crowded street to climb on board. These scenes added to the general hilarity, in which the discommoded passengers joined. It seemed like a suddenly improvised carnival, in which everybody was allowed to be as ridiculous as he pleased. The weather was fine, and there was a general disposition to cheer the strikers. The press was singularly lenient in its dealing with the affair. If the Mayor had exercised his full powers by reading the riot act, giving the rioters five minutes to disperse, and then firing with ball cartridges at all who disobeyed, he would have been condemned by four-fifths of the population of all classes.

There is something really remarkable about the stupidity which characterizes the management of the Ohio campaign on the part of the Republicans. They began by constructing a bloody-shirt platform, the underpinning of which is steadily falling away as month after month shows the condition of the blacks in the South improving and the relations of the two races growing more harmonious. Their candidate for Governor next administered a slap in the face to all independent-minded men—and even in Ohio there are now men who do a little thinking in politics for themselves—by ranting about "the idiocy of Mugwumpery," and ridiculing "men of the George William Curtis school, who part their hair in the middle." Now their chief organ is attacking the Prohibitionists with hammer and tongs, pitching into the newspaper which they publish in the most violent way, and declaring that its language is "just such as might be expected from

a professional Prohibitory politician who had hired himself to the Democratic party for a summer's dirty work, and had started in to earn an advance of salary." All this, too, at a time when voters are less amenable to discipline than ever before during the present generation. In short, if the Republican managers in Ohio had deliberately set out to drive away support from their ticket this year, it is difficult to see how they could have devised more efficacious means of reaching this end than those which they have actually adopted.

Jeremiah O'Donovan Rossa, as he appeared on the witness stand in the trial of Mrs. Dudley, did not produce the impression of being the able and devilish machinator the English editors and authorities picture him. He is simply a thick-headed Celt, with an evident sense of humor and an appreciation of the good things of this world which can be purchased with the earnings of servant girls. Of all the grotesque incidents connected with the Irish agitation, the elevation of Rossa by newspaper notoriety to the position of the leading spirit of the dynamiters, is the most extraordinary. The two things upon which Rossa, and the band of comedians who frequent the office of his newspaper, probably spend least of the money which they collect, are the cause of Ireland and soap and water.

There was evidently some method in Mrs. Dudley's madness, for she put some puzzling questions to the prosecuting officer in her examination in her trial for shooting O'Donovan Rossa—particularly when she asked Mr. Nicoll "why he didn't try him (O'Donovan) and save her the trouble." To Mr. Nicoll's answer, "Well, we have tried to get a complaint within the law against him," her reply was excellent: "Pardon me, but I don't think there has been any great effort. His paper is in itself sufficient evidence against him. Why, sir, it's a standing incentive to murder." This is strictly and literally true. The man makes a living in a great city by advising people every week to commit murder, and by pretending to collect money to pay the cost of it, although the Penal Code makes a person concerned in the commission of a crime, "whether he directly commits the act constituting the offence, or aids and abets in its commission, and whether present or absent, and who directly or indirectly counsels, commands, or induces, or procures another to commit a crime"—a principal party to such crime. O'Donovan has publicly during the past four or five years boasted of having counselled, commanded, induced, or procured at least a dozen crimes. The District-Attorney has time enough to carry the case of Munsell the juror to the Court of Appeals, but he has not time, apparently, to break up O'Donovan's den.

Sir John Macdonald has won in his long contest over the Franchise Bill in the Dominion Parliament. The Opposition made a strong fight against the measure from the first, but the Government had a large and trustworthy majority, and it was all along evidently only a question of time when it would carry its point. The bill gives the right to vote to Indians in all the provinces, except British Columbia and the Northwest Territories, and, as most of them live on reserves, makes them merely the tools of agents appointed by the Government. Still more objectionable is the creation of a class of "revising barristers" to prepare the voters' lists, who are given almost tyrannical powers, which they may be trusted to use for the benefit of the authorities by whom they are appointed. The property qualification in some of the provinces is increased, and there are other provisions intended to weaken the Opposition party. The final vote was taken late on Friday night, or, rather, early on Saturday morning, and after it was announced, Sir Richard Cartwright, leader of the Opposition, quietly remarked, "It is the Fourth of July—a fit day on which to disfranchise your own countrymen." Two of the Conservative members voted with the Opposition.

The programme presented to the House of Lords on Monday by Lord Salisbury might have been presented by Mr. Gladstone. He literally "said ditto to Mr. Burke," or, in other words, announced that he would, as far as was possible with the time at his disposal, carry out the plans of the Liberals which he has so fiercely denounced. The one difficult part of his task will, in fact, be to keep his feather-headed recruit, Lord Randolph Churchill, whose "air of an experienced statesman" amused the House of Commons on Monday, from committing some folly or indiscretion between now and November, when the farce will probably come to an end. It is somewhat ominous that Woodstock, Lord Randolph's constituency, will then disappear from the list of English boroughs. There will, indeed, be no boroughs under the new act which can be canvassed by well-dressed ladies in pony phaetons.

The chief anxiety of the Liberals in England just now is about Mr. Gladstone's voice. Were this still good, another Midlothian campaign might be expected from him; but the Liberal Committee there have passed resolutions declaring that, joyfully as the Liberals of the county would again receive him and hear him, they will take care that, in case he is unable to appear, his canvass shall not suffer by his absence. His voice, which is literally "the bugle horn" of the Liberal party, and every blast of it "worth 10,000 men," has always been magnificent, and is still quite equal to any demands which the House of Commons may make on it, but it is feared that it will never again be capable of filling a very large room or reaching a great crowd in the open air. The Liberals, in the meantime, in spite of the little Tory successes at Wakefield and Woodstock, have no doubt of the results of the great conflict before the new constituencies in November. They are encouraged by the ease with which Lord Randolph Churchill has pushed Sir Stafford Northcote up into the House of Lords, because they know that no combination in which Lord Randolph is powerful can long hold together, owing to the badness of his temper. They count, moreover, on forty-five out of the fifty-nine members of the new London districts, and they expect to carry Essex, Cheshire, and Lancashire among the counties, and most of the great northern cities.

The utterances of Sir Charles Dilke and Mr. Chamberlain on the Irish question since they went out of office are curious reading, in view of the policy which even the Liberal party has persistently pursued toward Ireland ever since Mr. Gladstone came first into power. It has redressed several grievances, some of them very serious, but it has left untouched the fundamental one which Mr. Chamberlain describes so graphically—the refusal to allow the Irish to manage their own affairs either in small things or great, and the persistence in governing the island through the "English gentleman," he being probably less fit to govern a dependency, except through military law, than any educated man of any civilized country. For this evil—for the steady denial to the Irish of all chance to learn politics at all—the remedy of even a Yorkshire Quaker like Mr. W. E. Forster was simply arbitrary arrest and imprisonment on a great scale; and even his insolence of manner, while quartered in Dublin as Irish Secretary, was worthy of a Prussian cavalry brigadier in active service. Earl Spencer is probably the last Lord-Lieutenant whose policy will be defended in England by Liberals, on the ground that, being "an English gentleman," there is no need to mind what the Irish say against him.

Letters from the Mahdi have been received in Cairo, in which he says he is certainly coming to that place before long, and he has issued twelve commandments in anticipation of his arrival. The principal one directs the killing of all infidels unless they turn Mussulman and pay taxes. The press, also, is to be suppressed, with the exception of one newspaper which he will edit himself—probably as striking a testimonial to the power of the press as was ever uttered. His paper will doubtless be what we call here "a religious weekly," but will certainly have neither a "secular department" nor a "publisher's department." It will be wholly religious, and will handle the sceptics without gloves.

The result of the *Pall Mall Gazette's* venture in exposing the traffic in young girls is still uncertain, but it will probably, like nearly all such exposures, do more harm than good. It was perhaps suggested by, or is at all events in the line of, the article which Mr. Spurgeon has published on the same subject in the *Monthly Review*, but will be ascribed, as Spurgeon's article will not be, to a desire to make a sensation and "sell the paper." In fact, this is generally the object of newspaper revelations of this character, and the *Pall Mall Gazette*, as at present conducted, is by no means proof against the same sort of imputation. It may be set down as an axiom of reform that all such disclosures are, in their effect on the public mind and the public morals, to all intents and purposes what is known as "obscene literature." They are no more purifying than "scandal" on a great scale ever is, and they gratify precisely the same tastes and tendencies that scandal does. Neither men nor women have ever been improved by accounts of the dirty or disgraceful lives led by some of their outwardly respectable fellows. They are made pure by hearing about purity, and not by hearing about filth.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, July 1, to TUESDAY, July 7, 1885, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND on Wednesday appointed William Dorsheimer to be United States Attorney for the Southern District of New York, and Martin T. McMahon to be United States Marshal for the same district. The appointment of Mr. Dorsheimer was recommended, not very cordially, by Tammany Hall.

The President has removed B. Platt Carpenter, of New York, as Governor of Montana, and has appointed in his place Mr. Samuel T. Houser, of Montana. The appointment is made on the recommendation of Senator Vest, of Missouri.

On Friday Judge Lambert Tree, of Illinois, was appointed Minister to Belgium. He was a candidate for Senator after Morrison's withdrawal.

A despatch from Vienna on Wednesday said: "If the United States Government refuses to recall Mr. Keiley, the Austrian Government will formally decline to recognize him." On the other hand, the Government, it is said, will not withdraw Mr. Keiley, and if he is not accepted, the United States will go unrepresented at the Austrian court.

Mr. Malcolm Hay has resigned his position as First Assistant Postmaster-General. Mr. A. F. Stevenson, of Illinois, was appointed his successor, and on Monday assumed his office.

The Postmaster-General was recently asked whether all the country postmasters in Illinois are to be removed on so-called "trumped-up charges of offensive partisanship." The Postmaster-General replied that the postmasters who attend to their business need have no fear of removal, and that discharges for offensive partisanship would be made only upon conclusive evidence. He thought that under this policy a very considerable proportion of the country postmasters in Illinois would be permitted to serve out their terms.

Mr. Owen Kellar, of Caldwell, Ohio, who was certified by the Civil-Service Commission for appointment to a clerkship in the First Auditor's Office, was recently rejected by First Auditor Chenoweth on the ground that he was a Republican and was distasteful to Congressman Warner and other Democrats of his neighborhood. Mr. Kellar on Wednesday brought the facts in the matter to the attention of the Civil-Service Commission, by whom they were laid before the President. The Commissioners said the refusal to appoint Kellar appeared to be a violation of Rule 8, of the Civil-Service Law, which forbids any discrimination by the appointing officer on political grounds, and they further represented that the reception of recommendations by the Auditor from Congressman Warner that Kellar be not appointed, appeared to be in plain violation of the tenth section of the Civil-Service Act, which says that no recommendations shall be received from any member of the House of Representatives except as to the character of the applicant, by any person concerned in making any examination or appointment under the act. Early on Thursday, when the Commission were further considering the question, a letter was received from Secretary Manning in which he said: "I was not until last night fully informed of the circumstances connected with the Kellar affair. If you have Mr. Kellar's address, will you kindly advise him to report to me this morning for duty? I intend that this Department shall strictly observe the law." Mr. Kellar immediately assumed his place.

Secretary Manning has instructed Collector Hedden to permit the Cunard and French line steamers to land their passengers at their docks instead of at the Barge Office in this city.

Secretary Whitney has issued an order revoking Secretary Chandler's order of July 5, 1883, the famous "General Order No. 307," which declared that "naval officers attached to cruising war vessels, especially commanding officers, are expected to leave their families at their usual fixed place of abode, and not to attempt to transfer them to more convenient points."

The South American Commission, under date of Santiago, May 14, has made its report to the Secretary of State on the result of its visit to Chili. The report, which was made public on Friday, describes the meeting of the President of Chili by the Commission, and says a series of propositions were submitted to him. It continues: "The first was that the old treaty of amity, commerce, and navigation between the United States and Chili, which long since was terminated, might be renewed with advantage to both countries. In reply to this the President said that he did not see any advantage to Chili in such a treaty, and was not disposed to enter into any further conventions with foreign countries. The second proposition involved the idea of a reciprocal commercial treaty between the two countries, under which special products of each should be admitted free of duty into the other when carried under the flag of either nation. This did not meet with any greater favor from President Santa Maria, who was not disposed to make reciprocity treaties. His people were at liberty to sell where they could get the best prices and buy where goods were the cheapest. The next topic seemed to be received with decided favor. It was touching the establishment of a common silver coin of the value of the United States gold dollar, to be coined by each of the American republics, of an equal degree of fineness, and to an amount which should be agreed on, to be legal tender in all commercial transactions between citizens of this hemisphere. The fourth proposition, which invited the views of the Government of Chili as to the practicability of holding a congress of delegates from all the American republics, to adopt measures to secure peace and promote prosperity among the nations of this hemisphere, met with disfavor. His Excellency could not see the advantage of such a gathering. Chili had learned by experience that nothing could be gained, and that the general welfare was not promoted by international conventions."

The Board of Visitors to the West Point Military Academy have submitted their annual report to the Secretary of War. In relation to the discipline of the Academy they report that, so far as the Board can learn, the requirements are reasonable. An appropriation of $30,000 is recommended for a new gymnasium; $5,000 for improving the cadet laundry; $10,000 for improving the blacksmith and other shops; $12,000 for removing the barracks for the cavalry detachment nearer the stables and riding hall; $5,000 for changes in the library building; $175,000 to make suitable provision for the departments of chemistry and philosophy.

Congressman Reuben Ellwood (Rep.), of the Fifth Illinois District, died on Wednesday at the age of sixty-four.

The Ohio Prohibitionists on Thursday nominated the Rev. A. B. Leonard for Governor. They adopted a platform demanding a prohibition amendment to the State Constitution, and opposing a license tax or any such regulation of the liquor traffic. It says friends of prohibition should not be controlled by either of the old parties, because both have shown themselves subservient to the liquor interest.

The publication by the Trenton *True American*, on Tuesday, of Peter H. Watson's memorandum of a conversation he is said to have overheard at the Continental Hotel in Philadelphia in December, 1878—in which, it is alleged, United States Senators Sewell (Rep.) and McPherson (Dem.) bargained away their respective parties for the Pennsylvania Railroad and for each other—has aroused widespread interest.

A Supreme Court jury in Chicago on Wednesday decided that Joseph C. Mackin did have something to do with furnishing bogus ballots, that he perjured himself when he said he did not, and that five years in the penitentiary will be just punishment for his offence.

The Mormons at Salt Lake City on July 4, it is said by orders from the head of the Church, hung the United States flag at half-mast on public and private buildings, saying that the Fourth of July was a day of mourning to "this people, whose best men were in the penitentiary by virtue of Federal officials' perversion of all principles of law and liberty."

On Wednesday afternoon Mayor Grace, Comptroller Loew, and Rollin M. Squire, Commissioner of Public Works, met for the purpose of naming three Commissioners to devise a system for putting telegraph and telephone wires under ground. Mr. Loew and Mr. Squire combined against the Mayor and elected Jacob Hess (Republican machine manager), Theodore Moss, and Charles V. Loew (brother of the Comptroller).

Owing to a strike of West Side street-car drivers and conductors in Chicago on Wednesday, and the attempt of the company to run cars with new men, there were several riots. The cars were successfully run on Friday under heavy police protection, and continued to run in that way. On Tuesday all parties agreed to submit the dispute to arbitration. It is believed that the strike is over.

On Monday and Tuesday considerable excitement was caused in Cleveland by striking iron-workers. Workmen in two factories were, on Tuesday, compelled by the strikers to quit.

A sporadic case of yellow fever was reported on Sunday in New Orleans.

General Grant completed three weeks at Mt. McGregor on Tuesday. He expressed himself on that day as feeling stronger.

Henry H. Gorringe, late of the United States Navy, died in this city on Monday, in his forty-fifth year. He was born in Tobago, West Indies, and was the son of an English clergyman of the Established Church. Coming to this country at an early age, he entered the merchant marine service. The Rebellion breaking out, he obtained an appointment in the American navy as master's mate in October, 1862. He served in the Mississippi Squadron, taking part in many important engagements, and was frequently promoted for gallantry. Commander Gorringe was brought very prominently before the public in 1880 by his work in transporting to this country and erecting in Central Park the Egyptian obelisk, which was offered to this country by the Khedive. The task, which was very successfully performed, was one involving much engineering skill. He resigned from the navy several years ago, and was engaged in a private enterprise for the manufacture of iron ships.

FOREIGN.

The British Cabinet Council, on Wednesday, decided to entirely abandon coercion in Ireland, and to rely upon a strict administration of the general law. The Afghan question was the subject of a long conference on that day between the Marquis of Salisbury and Baron de Staal.

Under an agreement between Lord Salisbury and Prince Bismarck, the German naval demonstration against Zanzibar has been countermanded.

Lord Salisbury, in an interview with Baron de Staal, offered to resume the Afghan frontier negotiations at the point where they were closed by Earl Granville, on the condition that the convention include a Russian engagement to hold the frontier as a permanent limit. A commission from the British Foreign Office will meet a Russian commission to settle the remaining details of the delimitation this week. It is announced that the Marquis of Salisbury will soon introduce in the House of Lords a bill embodying the chief recommendations of the Royal Commission appointed to inquire into the sanitary condition of the houses of the poor, and to report upon the best means of housing them.

The London *Telegraph* on Monday published the scheme for the settlement of the Egyptian question originally proposed by the Earl of Northbrook, First Lord of the Admiralty in the late Cabinet, and says that it was favorably considered at the Cabinet council held last Saturday. It provides for the occupation of the Sudan by Turkish troops under British officers until the country is pacified, the abolition of slave raids and the export trade in slaves, the protection of legitimate trade, the payment of tribute by Egypt to the Sultan, and the recognition of his right of suzerainty over both Upper and Lower Egypt.

The British Parliament reassembled on Monday in the House of Commons. Mr. Bradlaugh, escorted by Mr. Labouchere and Mr. Burt, both Radicals, advanced to the table with the purpose of taking the oath. To this Sir Michael Hicks-Beach, Chancellor of the Exchequer, interposed an objection. He said the House was strongly of the feeling that Mr. Bradlaugh should not be allowed to go through the form of taking the oath. He then moved that Mr. Bradlaugh be refused permission to swear, and that the Sergeant-at-Arms be directed to exclude him from the precincts of the House unless he engaged not to disturb the proceedings. The motion was adopted by 263 to 219.

In the House of Lords the Marquis of Salisbury made a statement to the effect that he would continue the policy adopted by Mr. Gladstone, in regard to the negotiations with Russia for the settlement of the frontier of Afghanistan.

The Marquis of Salisbury said that, as far as he had an opportunity of judging, the negotiations between Russia and England had been conducted with an earnest desire to arrive at an adequate settlement, but he was bound to say that the negotiations had not gone far enough to enable him to speak positively. He must ask their lordships not to attach too much importance to these negotiations as final and conclusive, even when concluded, as the whole condition of affairs in Central Asia was very unsatisfactory and uncertain. "We hope," he said, "to arrive at an amicable settlement of the difference in regard to the Zulfikar Pass, which England has promised the Amir will be included in Afghanistan. The promise must be kept. Whatever settlement may be arrived at, it is our duty skilfully to devise and vigorously to carry out measures for the defence of the Indian frontier. Furthermore, we should stretch out beyond, so that when the tide of war comes it will not come near our defences." In regard to Egypt he said: "It is necessary to establish such a state of things that if we eventually withdraw our protecting hand, Egypt will be left safe. One principle must animate us, namely, to so weigh our steps that once taken we must not retrace them. The military difficulty is a large one; the political difficulty is a greater one still." In regard to his domestic policy, Lord Salisbury said it was intended to avoid contentious legislation and to promote only such measures as were necessary. He hoped that the general elections would be held on November 17. In the House of Commons on Tuesday Sir Michael Hicks-Beach moved that the Government have precedence in the business of the House on Tuesdays and Wednesdays. Mr. Gladstone supported the motion, and it was adopted by 151 to 2.

After a spirited contest, Lord Randolph Churchill was returned to Parliament from Woodstock on Saturday. The borough is small. The feature of the occasion was the personal canvass conducted by Lady Randolph Churchill.

The Conservatives have organized a news agency in London, with a large capital. Its purpose is to provide the provinces with cheap Conservative newspapers and to prepare voters for the general election. It is proposed to issue cartoons and caricatures, and to publish literary matter of an attractive character on cheap terms and on the coöperative principle.

The Dublin *United Ireland* speaks with contempt of the local-government scheme which has been proposed by Mr. Chamberlain, the Minister of Commerce in the Cabinet of Mr. Gladstone. The National League has instructed the Irish people to be wakeful, and to vote for the election to Parliament of the Conservative candidates.

John Bright has written a letter to Deputy Passy, of Paris, in which he says: "If European nations would accept commercial liberty —that is, moderate or abolish customs—Europe might soon tend to an era of perpetual peace. At present all resources are swallowed up by military exigencies. The real interests of the masses are trodden under foot in deference to false notions of glory and national honor. I cannot help thinking that Europe is marching toward some great catastrophe of crushing weight. The military system cannot indefinitely be supported with patience, and the populations, driven to despair, may, possibly before long, sweep away the royalties and pretended statesmen who govern in their names. I hope your country and mine will remain at peace and be real friends."

The inaugural dinner of the Imperial American Club was given in London on Thursday evening. The object of the new club is to provide a centre in London where members of the principal clubs of the United States can meet persons of social standing in England, India, and the British colonies.

M. Waddington, French Ambassador at London, and his wife, have both refused to appear in mourning at the court ball, as prescribed by Queen Victoria because of the death of Prince Frederick Charles of Germany. M. Waddington's refusal was officially declared in a courteous note sent to her Majesty, in which he said he could not disobey the orders of his Government not to wear mourning for the death of any enemy of France.

Five hundred French Legitimists held a meeting in Paris on Sunday. They resolved to support the Comtesse de Chambord. The leading families of the Faubourg St. Germain are organizing a pilgrimage to Gratz, where Don Juan, father of Don Carlos, is staying. The Legitimists hail Don Juan as King, and denounce the Orleanists.

The French Socialists have issued their platform of principles for the coming electoral campaign. Among its demands are: The abolition of the Presidency; the abolition of the Senate; bestowal upon the Assembly of the power to dismiss Ministers of State; the settlement of all questions of war and of constitutional revision by popular vote; the confiscation of Church property; the separation of Church and State; the legal equality of illegitimate and legitimate children; the gradual abolition of standing armies; the free education of children at the public expense; the establishment of a progressive income tax; the gradual abolition of the public debt; reduction in the hours of labor; prohibition of the employment of children under fourteen years of age; prison reform; the maintenance of disabled workmen at the public expense.

Père Hyacinthe lectured in Paris on Thursday evening on the "Secularization of the Pantheon." He protested against the abolition of the cross and the attempt to create antagonism between the spirit of revolution and the spirit of religion. The address was a splendid oratorical effort. Père Hyacinthe was continually interrupted by the wildly excited audience. When he had left the tribune he rushed back and exclaimed, "La croix, je vous le dis, c'est la liberté."

The French Chamber of Deputies on Monday ratified the Chinese treaty by a large majority.

General Bouet, who was formerly in command of the French forces in Tonquin, has returned to Marseilles. He expresses distrust of the efficacy of the Franco-Chinese treaty which was signed at Tientsin on June 9th, and considers that peace is not yet assured.

General Courcy, French commander in Anam, telegraphed on Sunday from Hué that the night after his arrival at that place the Anamite garrison made an unexpected attack upon his forces, but were repulsed. The French commander is taking necessary measures to repulse any further assault. The French lost 60 killed and wounded, and the Anamites 1,500. It is said in Paris that the position of General Courcy's force is a critical one, and that strong reinforcements have been sent to him from Tonquin. It is considered very probable that another campaign will have to be undertaken by the French, as the Anamites are resolved to oppose French protection.

Recent advices from Madagascar say: The Hovas were repulsed in an attack upon Fort Majunga. The interior of Madagascar is now threatened with famine. The rice crop has been destroyed.

Persians complain of a continual Russian violation of Persian territory and meddling with Persian affairs. Ten thousand Russians are massed at Askabad. A detachment leaves daily for Sarakhs and is replaced by fresh troops from the Caspian.

Advices from the Russian front on the Murghab state that the Afghans are massing troops on the frontier. This movement leads the Russians to believe that it is the intention of the Amir of Afghanistan to attempt an attack on the Russian forces in order to revenge the defeat of his troops in the battle of Panjdeh. The same advices say that the Sariks are also excited at the movements of the Afghan troops.

The German papers display the greatest ill-feeling over the Duke of Cambridge's claim to the regency of Brunswick, although eminent lawyers admit that his claim is undeniable if he chooses to assert it.

The Diet of Brunswick, by a unanimous vote, has adopted a resolution declaring that "the succession of the Duke of Cumberland to the throne of Brunswick would be incompatible with the peace and security of the German Empire."

Forty thousand hands are thrown out of employment through the masons' strike in Berlin. The masters refuse to negotiate with the men, and are beginning to employ foreigners.

King Alfonso, of Spain, on Thursday made a visit incognito to the cholera hospital at Aranjuez. In the meantime, the King's departure becoming known in Madrid, the Senate and Chamber of Deputies suspended their sittings and proceeded to the railway station, accompanied by the Queen, in the afternoon, to welcome him back. On alighting from the train he received a tremendous reception from the vast crowd that had assembled.

Reports from all points in Spain in which cholera exists show that the total number of new cases of cholera on Monday was 1,700, and of deaths from the dise se 797.

The Mexican Railway Commissioner has reported that the Mexican Central Railroad has plainly and unequivocally forfeited its concession by making discriminating rates with roads in the United States to bring into Mexico goods at extraordinarily low rates, which discrimination is expressly forbidden by its contract.

Big Bear, the rebellious Northwest Indian, was captured on Friday morning near Carleton, by Sergeant Smart, of the mounted police. He says his band are on the way to Fort Carleton to surrender, having been some days without provisions.

The Newfoundland Government has imposed prohibitory duties of $1 a barrel on flour and $2 on pork. These duties discriminate against Canada as compared with the United States, and are imposed as a retaliation for a duty imposed upon fish and fish-oils coming in from Newfoundland to Canada. This duty was imposed in consequence of the termination of the fishery clauses of the Washington treaty and the revival of the American duties on Canadian fish and fish-oil.

THE FISHERIES.

No more apt illustration can be found of the folly of a protective tariff than that which the periodical recurrence of the fisheries dispute affords. If Canada and the United States were joined together by a political union, all commercial and industrial bickering between the two countries would cease at once. There would be no more cause of irritation than there is between the fishermen of New York and those of New Jersey. We should never hear of the shore line, and the headland, and the marine league, and the right to buy bait and to cure fish, and the other unpleasant controversies which are now vexing the statesmen of the two countries. If all these commercial questions could be put at rest as to both, by a political resolution in which both should unite, why may they not be settled by a treaty? Simply because the country has got its head set on the notion that everybody who produces anything that can be imported from abroad must be protected against foreign competition. The Treaty of Washington, which admitted fish and fish oil free of duty in return for the privileges accorded to American fishermen in Canadian waters, was forced upon the Gloucester fishermen against their protest, and they have never ceased to consider themselves badly used by it—not because they have any natural right to shut out other people's fish from the market, but because they see other people's iron, woollen, and cotton goods shut out for the benefit of American producers and manufacturers. In order to vindicate the "great principle" in behalf of fish and blubber, we gave notice of the termination of the fishery clauses of the treaty, and now we are in hot water again, as we have been half-a-dozen times before.

Yet it is within the recollection of most of our readers that for ten years prior to 1864 there was peace and content between the two countries under the Reciprocity Treaty. The products of the soil, the mines, the forests, and the waters were admitted free of duty into both countries, and nobody fancied himself harmed on either side of the border. But the Morrill tariff was passed in 1861, and straightway the lumbermen, the fishermen, the coal miners, the potato growers, the stone quarriers, and even the ice cutters began to clamor for protection. The friends of the Morrill tariff saw that they must maintain their consistency by abrogating the treaty as soon as its terms permitted. Being all-powerful in the councils of the nation, they gave notice of its termination, and then we had difficulties and disputes about fishing rights until the *Alabama* claims came up for settlement. In considering these claims, it was wisely decided to make one chapter of all outstanding differences between Great Britain and the United States. So the fisheries question and the San Juan Island question were included in the adjustment. England paid us $15,000,000 for the rebel cruiser depredations and surrendered San Juan Island to us. We paid her $5,000,000 for the use of the fisheries during the period which had elapsed since the abrogation of the Reciprocity Treaty, and agreed that in consideration of the future use of these privileges, we would admit Canadian fish and oil free of duty—a grant which would have been advantageous to the nation at large, even without any corresponding grant on the other side.

It is too late now—the world has gone forward too far—to make a serious matter of the old Treaty of 1818, which the Gloucester fishermen denounce as a violation of their rights and a thing to be abrogated at all costs and hazards. This treaty conceded to the British authorities the right to forbid American fishing vessels from entering Canadian ports for any purpose except for shelter or to procure wood and water, thus cutting them off from all commercial privileges, and putting into the hands of the Canadians the power to drive our vessels to sea, and forbid the purchase of ice or bait or supplies. This extraordinary concession on our part constitutes the basis of most of the hostile legislation of the Dominion. They ought not to insist upon it. The right to sell is equal to the right to buy. If our fishermen gain anything by purchasing bait and supplies in their ports, the Canadian venders gain as much. On the other hand, the right to buy is equal to the right to sell. If Canadian fishermen gain anything by selling their mackerel and cod in our markets, the American consumers gain as much. It is a poor rule which will not work both ways. What is wanted now is not a collection of ironclads on the fishing grounds to protect mediæval rights, and enforce an exploded mercantile idea, but an abandonment on both sides of a false principle, which assumes that the producers of a given article have a right to be protected, at the expense of the whole community, against foreign competition.

The abrogation of the Treaty of 1818, which the fishermen now call for, will of course bring up the question of the tariff, since they insist stoutly upon the enforcement of existing duties on fish, and even ask that the ridiculous Treasury regulations, which have multiplied and augmented the restrictions upon trade, shall be enacted into law. One of these regulations declares that "fish, fresh for consumption," which are free of duty under the general tariff, must not be frozen, since in order to make them fit for consumption, they must first be thawed. Frozen fish, therefore, are put in the same category as smoked or salted fish, and made dutiable at the rate of 50 cents per 100 pounds. Again, if the fish are delivered fresh and unfrozen in the American market, and are not immediately consumed, but are salted or smoked for future use, they become dutiable under the rulings of our wise and vigilant Treasury expounders. These regulations the fishermen insist upon having enacted into law at once, lest some present or future Secretary should take it into his head that fresh fish are all fish not smoked, dried, salted, or pickled. Whatever the most fanatical protectionists can conceive in the way of restrictions upon commerce they intend to urge upon the Government, demanding, as they say, "only the same protection that is afforded to every other producing industry." The corollary of such a demand is either a succession of "outrages" producing national irritation and leading to armed hostilities, or the purchase on our part of the fishing privileges for which we paid $5,000,000 a few years ago. We do not imagine that Minister Phelps, or Secretary Bayard, or President Cleveland, or the Congress of the United States will give their sanction to any policy which points to war, or to an annual appropriation of money from the Treasury to buy fishing rights, when they have before them the peaceful and cheap alternative presented by the treaties of 1854 and 1871. As to the decaying doctrine of protection, the time has come to hit it whenever it shows its head.

SOCIALISTIC TENDENCY OF ENGLISH RADICALISM.

Until recently, England might have been regarded as the exception equally with ourselves to the rule of political change. But the wide extension of the suffrage that is about to take place can hardly fail to produce momentous results. No one can tell just what these results will be, but it is obvious that thoughtful men of both parties await them with a certain amount of apprehension. Undoubtedly the number of Radicals in Parliament will be largely increased, and every indication of the policy that they will favor is a matter of deep interest to the public. As Mr. Chamberlain, the late President of the Board of Trade, is perhaps the most influential representative of this party, his utterances are especially significant, and a recent speech of his before the "'80 Club" leaves no room for doubt as to the measures that he will advocate. Posing as a "friend of poor men," his attitude toward property has excited much alarm.

With great bluntness Mr. Chamberlain announces that the people at large have become or will become the source and depositary of power, and that the "manual labor classes" in the vast majority of the constituencies will have a predominance of power. "Whether we like it or not, the wishes and the wants — aye, and the rights — of the whole people will have to be considered. All classes of politicians—Whigs, Tories, and Radicals—will have to recognize their masters and will have to obey their mandate." What the new masters will want, or at least what he is ready to tell them they want, is indicated in the following passages from his speech:

"The most fruitful field before reformers at the present time is to be found in the extension of the functions and authority of local government. Local government will bring you into contact with the masses. By its means you will be able to increase their comforts, to secure their health, to multiply the luxuries which they may enjoy in common, to carry out a vast coöperative system for mutual aid and support, to lessen the inequalities of our social system, and to raise the standard of all classes in the community. . . . It belongs to the State to protect the weak, to provide for the poor, to redress the inequalities of our social system, to alleviate the harsh conditions of the struggle for existence, and to raise the average enjoyments of the majority of the population. . . . I hold that every man who comes into the world has a natural right to life and a natural right to a fair enjoyment of life."

These are dangerous ideas to present to the new Democracy, but Mr. Chamberlain goes further. He maintains that as property has

been acquired under a system that has been oppressive to the poor, it ought to pay a "ransom." This formidable word he uses in what he calls its Scriptural sense, as meaning the compensation which a man has to pay for wrong-doing before he can be received into the congregation. "Society," he says, "owes a compensation to the poorer classes of this country. It ought to recognize that claim and pay it, and society must pay it before it can be admitted to have discharged its obligations." Moreover, "private charity is powerless; religious organizations can do nothing to remedy the evils which are so deep-seated in our social system."

The strongest protest called forth by Mr. Chamberlain's *pronunciamiento* comes from an unexpected quarter and is inspired by a very noteworthy feeling. The important movement known by the most unfortunate and misleading name of "Christian Socialism" has no more earnest and persevering advocate than Thomas Hughes, and it is he who sounds the note of alarm. He foresees plainly that the offer of State aid, the suggestion that the holders of property must pay a "ransom" in order to be protected, and that the Government owes it to the poor "to secure their health and multiply their luxuries," involves the destruction of the coöperative movement, which he and those who think with him have done so much to build up. He says:

"Through all the early days of the movement, not only Maurice and Kingsley and their colleagues of the upper classes, but, among men still with us, Lloyd Jones, A. Greenwood, and other leaders of the working classes, insisted on every possible occasion that self-reliance and independence should be the keynote of the Socialist movement in England. They were to claim nothing but a fair field and no favor, and to show that with these they could work out the well-being of their own class. The result . . . has far exceeded the most sanguine forecasts of that day; and up to the present time the old principles have not been weakened or shaken. In the coöperative congresses held yearly at Whitsuntide, I do not remember a single instance in which any resolution has been carried pointing to designs on the rates or the consolidated fund, to bolster up our failures or help on our designs. It must not be supposed, however, that this result has been gained without constant and steady effort and pressure, or that there is no danger of backsliding. The present leaders are, I think, thoroughly sound, but I wish I could say as much for the 800,000 behind them."

There is no reason to suppose that Mr. Chamberlain's plan of a vast coöperative system of mutual support by means of local parliaments and aid from the rates will be presently carried out. But, as Mr. Hughes shows, the mere suggestion of it is fraught with danger, and though it may never succeed, it may wreck the plan that has hitherto been so successful. Mr. Hughes and many others of his stamp have passed their lives in developing and encouraging among the poor those virtues upon which all material well-being depends, and the greatness of their success must not be taken to imply that the work has been an easy one. The tendency to rely upon friendly aid, to dream of the interposition in our favor of some superior power, is a tendency that every human being who has work to accomplish must steadily resist. Whatever encourages men to believe that their "unfavorable conditions are to be alleviated" by any other means than their own exertions, is pernicious.

MONTAIGNE AS A TRAVELLER.—I.

MONTAIGNE as an essayist is far more widely known than Montaigne as a traveller. The diary of his seventeen-months' journey through Switzerland, Germany, and Italy has comparatively few readers, though this narrative amply repays careful and repeated perusal: what page with his sign-manual does not? Almost the first half of this journal, to be sure, is only, as it were, *signed* by him, and was written by the hand of an anonymous secretary, who reports not merely from but of his "master." But that the report was made *for* him exclusively, every line reveals, and it is rendered more rather than less interesting by presenting Montaigne in the personality of *il* instead of *je*. Yet the latest edition is of 1774. Hazlitt's extraordinarily inaccurate, though very readable, rendering is the only English translation; and though lately the Rev. W. Lucas Collins, in his somewhat clerical and unsympathetic little biography of Montaigne (in the Foreign Classics series), has given a dry résumé of the 'Travels,' yet even the most noteworthy passages in these old volumes are perhaps not too familiar to be worth recurring to.

A considerable portion of their contents one passes over rapidly, but with a rather droll interest, since it consists of frequent medical details of Montaigne's physical condition. The journey was probably undertaken for the sake of his health—for the sake of visiting the waters of Plombières, Baden, and Della Villa (near Lucca), in the hope that they might avail something against the sufferings caused by his constitutional malady, the stone; but, whatever may have been the motive of his travels, his health was by no means his chief object of attention during his stay in foreign parts. His keenness of vision and his largeness of judgment are nowhere more apparent than when employed on points unfamiliar to him; and to learn what were the things he observed and how he observed them, is an admirable lesson in what is to be gained by contact with persons and customs of a different nationality from one's own.

In the essay on Vanity he says of travelling: "The soul is then continually exercised in remarking unknown and novel things; and I do not know a better school, as I have often said, wherein to fashion life, than to set before the mind incessantly the diversity of so many other lives, humors, and customs, and to make it relish so perpetual a variety of the forms of our nature." And he says in the essay "Un Traict de quelques Ambassadeurs": "I use in my travels this practice—in order always to learn something by conferring with others, which is one of the best schools possible—I lead those with whom I am conversing always to talk of the things which they know about." He carried this intention into matters outside personal intercourse. "M. de Montaigne," says his secretary, "in order entirely to enter into the diversity of manners and customs, had himself served everywhere in the fashion of each country, however troublesome he found it." The writer adds: "In Switzerland he said he was in no wise inconvenienced by it, save by having at table only a little half-foot cloth for a napkin, and this same cloth the Swiss do not even unfold during dinner." We appreciate how much this inconvenienced him when we recall that in the essay on Experience he says: "I could dine without a table-cloth; but, after the German fashion, without a clean napkin very incommodiously. I soil them more than they and the Italians do, and make but little use of spoon or fork." The last sentence makes it clear why the journal remarks, "They [the Swiss] always place on the table as many wooden spoons with silver handles as there are men, . . . and they scarcely ever put their hands to the dish." In like manner, the confession in the same passage of the just-quoted essay, "I should be uneasy without a tester and curtains to my bed," explains the not infrequent description of the character of the hangings, or the lack of them, to the beds he lay in away from home.

But these small personalities—and such others as his liking for the German coverlets and the German stoves (cf. 'Essays,' III, 13)—entertaining as they are, and to a reader of the Essays doubly so and specially illustrative, are less interesting than the more thoughtful passages. The theological discussions we will not count among these, though it was not only at Isne that "M. de Montaigne, as was his custom, went immediately to find a theological doctor of this town to have a talk (*pour prendre langue*)." It is rather such little remarks as this that are of interest:

"We were ill-lodged at the Eagle [at Constance], and we experienced from the landlord an instance of the barbarian-like license and assumption of the German character, respecting a quarrel between one of our footmen and our guide from Basle. And the matter coming before the judges to whom he went to complain, the provost of the place, who is an Italian gentleman settled and married there, and for a long time past a free burgess, told M. de Montaigne, on his inquiring whether his [the provost's] house-servants would be believed as witnesses in our favor, he answered, Yes, provided he dismissed them from his service; but that immediately after he could take them back again. This was a remarkable subtlety."

In spite of "la liberté et fierté barbare Alemanesque" of this landlord, Montaigne wrote as follows from Botzen to Francis Hotman (the celebrated French lawyer, whose life his pupils saved at the Massacre of St. Bartholomew), whom he had seen at Basle: "That he had such great pleasure in visiting Germany that he left it with great regret, even though it was into Italy he was going; that foreigners had to suffer here as elsewhere from the extortion of landlords, but he thought that that might be prevented by not putting one's self at the mercy of guides and interpreters, who sell travellers and share the profits. The rest all seemed to him full of ease and courtesy, and especially of justice and security." Sainte-Beuve speaks the truth in saying, "Il a l'esprit bien fait, et prend les gens par ce qu'ils ont de bon." Previously at Brixen he had said—

"That he had all his life distrusted the judgments of others in discourse concerning the conveniences of foreign countries; each one relishing only what was after the arrangement of his fashion and the custom of his town, and he had made very little account of the warnings which travellers gave him; but in this place he marvelled more than ever at their folly, having heard, and especially on this journey, that the crossing of the Alps at this place was full of difficulties, the customs of the inhabitants strange, the roads impassable, the inns rude, the climate unbearable. As to the climate, he thanked God for having found it so soft, for it rather tended toward being too warm than too cold; and in all this journey up to this time he had had only three days of cold and about an hour of rain; in other respects, if he had to take his daughter anywhere, who is only eight years old, he would like as well to do it on this road as in an alley of his garden; and as to the inns, he never saw a country where they were so well placed and so admirable, being always situated in large towns, well furnished with provisions and wines, and at a cheaper rate than elsewhere."

To quote Sainte-Beuve again: "For Montaigne *philosophe*, travel was a perpetual refutation, in action and in picture, of the *préjugés de clocher* for which he had such great contempt."

He entered Italy from the Tyrol, coming first to Verona, where "he remarked on the seignory . . . maintaining entire the noble tombs of the poor seigneurs de l'Escale [della Scala]. It is true that our landlord . . . had been given possession of one of these tombs for his family." "The place they call the Arena he said was the most beautiful building he had ever

seen." This reminds one of Goethe's enthusiasm in beholding it—"das erste bedeutende Monument der alten Zeit das ich sehe, und so gut erhalten!" And of Evelyn's phrase about it—"This I esteem to be one of the noblest antiquities in Europe."

At Padua "we saw the schools of fencing, dancing, and riding, where there were more than a hundred French gentlemen, which M. de Montaigne considered a great disadvantage for the young men of our country who go there, since this society accustoms them to the manners and language of their own nation, and deprives them of the means of acquiring knowledge of foreigners." In like manner, at Rome, "M. de Montaigne was vexed at finding so great a number of Frenchmen here, that he found in the street no one scarcely who did not salute him in his own language." His stay at Venice was very short—apparently less than a week. He intended to return there and revisit all this part of the country at leisure: "he counted this present visit nothing, and what had induced him to undertake it was his extreme hungry eagerness to see this city. He said he could not have stayed quietly at Rome nor anywhere else in Italy if he had not been in Venice, and for this cause he had turned out of his road." He did not get there again—one regrets it as much as he could have done—but he had on this occasion "examined it in all its parts with extreme attention. Its system of government, its situation, the arsenal, the square of St. Mark, and the crowd of foreigners seemed to him the most remarkable things. . . . He said he found the city other than he imagined it, and a little less admirable." This sense of disappointment would probably have soon been lost, and we may so judge by what he experienced in Florence. The Journal there, soon after arriving, says (and the secretary is hardly expressing merely his own opinion): "I do not know why this city is surnamed *Beautiful* especially; it is beautiful; but without any superiority over Bologna, and but little over Ferrara, and is incomparably inferior to Venice." But eight months afterward, when he returned to Florence, Montaigne writes with his own hand: "After all, I must confess that it is with reason that Florence is called La Bella."

ENGLAND: THE MINISTERIAL CRISIS.

LONDON, June 23.

AFTER an interregnum of exactly a fortnight we have again, or we are on the point of having, a Ministry, for it is announced this morning that Lord Salisbury has now made such arrangements as to enable him to accept office. The tranquillity of the public mind during the absence of our Executive Government has honorably witnessed to the stability of English institutions. Everything has gone on as usual; and though there has been widespread and eager curiosity, there has been absolutely no excitement. Two temporary causes have contributed to this tranquillity. One is, the approach of the general election. It is felt that the real party struggle will come then, and that nothing which happens in the meantime can make much difference. Every one is, so to speak, saving his breath till the moment for that conflict arrives. The other is the fact that the most urgent and delicate problems of foreign policy had been settled—practically if not formally settled—shortly before the defeat of the Gladstone Ministry. When, in February last, they got a majority of only fourteen on the Vote of Censure then moved by the Opposition, there were many among them who counselled an immediate resignation: it is, indeed, rumored that the majority for retaining office was a very small one. In the fourteen weeks between that date and the 8th of June they disposed, by an arrangement with France, of the pressing difficulties of Egyptian finance, they resolved on and have begun to carry out the evacuation of Sudan, and they have settled the question of the Afghan frontier by an agreement with Russia. In every one of these cases their policy is warmly attacked by many people in England; but even those who condemn it may be glad that the country was not left without a responsible Executive at the moment when these questions were pending, so that a few days' delay might have involved disastrous consequences. It is true that the arrangement with Russia is not yet formally complete; no one, however, supposes that Lord Salisbury, strongly as he has inveighed against Russian duplicity and the weak vacillation of the Cabinet, will now disturb what his predecessors have settled.

Your readers have heard from day to day of the various incidents of the Ministerial crisis—how Lord Salisbury at first hesitated to attempt to form a Ministry, then accepted the task, then, on more fully realizing the difficulties his lieutenants would have to face in the House of Commons, seemed on the point of abandoning it when the Liberal leaders refused the assurances he required, and finally resolved to go on without those assurances. I will not therefore recapitulate these incidents, but endeavor to indicate how the opinion of impartial men has viewed the position in each of its phases.

When the first surprise of the vote of June 8 had passed by, and men had laughed over the excuses made by the various Liberal members whose absence caused Mr. Gladstone's defeat, everybody asked, Ought the Tories to come in? Is it for the good of the country? Is it for their own party advantage?

Most sensible Tories, as well as Liberals, answered this last question in the negative. The very fact that the Ministry wished to go out, and gleefully welcomed the opportunity of doing so which the unexpected defeat gave them, was a reason why the Opposition should not take office. Office under present circumstances carries little power with it. It is tenure at sufferance; it will not enable them to inaugurate any new policy, foreign or domestic, because a hostile majority in the House of Commons can at once check them. It gives them no means of earning the confidence of the country and recommending themselves to the electors, because there are only four months from now to the elections, and only a few weeks left of the Parliamentary session. They must make—all ministries do make—some mistakes; and these mistakes will draw off public attention from the faults of their predecessors, giving the Liberals the advantage of making their own misdeeds forgotten behind invectives against the present rulers of the country. It is almost an axiom now in England that it is easier to attack than to defend a government, for the last three general elections have gone against the party then in power. Moreover, a ministry must present some appearance of unity, and must have a positive programme. Now, this is a serious difficulty for the Tories, who are much divided among themselves, and have so far abstained from putting forward any collective platform or policy, because they could not agree what it should be.

These grounds made the belief general that Lord Salisbury would refuse to form a Government, preferring to leave his opponents to "stew in their own juice" till the general election. Other counsels have prevailed; and though no formal statement has yet been made, there is little doubt what they are. The Opposition leaders felt a sort of shame at the notion of refusing office after they had so often sought to drive Mr. Gladstone from it. They might fear to be suspected of timidity on the one hand and factiousness on the other in declining to take up the load. They would seem to discredit themselves with the nation should they, after so often declaring that the Cabinet was ruining England, not interpose now to prevent the ruin from being carried further. These patriotic reasons were seconded by others of a more personal nature. There are many persons in the ranks of every party who have private objects to be served by its triumph. Some want to be peers, others to be baronets, others to be Privy Councillors. Others desire a subordinate place in the Government, if not for themselves, then for some relative or connection. Others have a hope that through a Minister of their party they may get preferment in some other direction for a son or nephew, perhaps a living, perhaps an inspectorship of factories or schools. Comparatively few as the posts are to which patronage extends, because with us all posts (except those few high political ones whose occupants go in and out with the Government) are held for good behavior, the hope of getting one is enough to influence a large number of persons, and to produce a sentiment not without weight on the minds of the party leaders. It has no doubt acted on Lord Salisbury and many of those around him, bringing home to them the truth of the maxim, attributed to Mr. Disraeli, that a party must be allowed to taste blood every now and then. If its fate is to be generally in opposition, the more reason for letting it have, when it can, a little of the reputation, and self-confidence, and standing in the country which comes from holding or having held the reins of power; and whatever Lord Salisbury's faults as a politician may be, no one can accuse him of want of courage. The very difficulty of the undertaking may have given it a sort of attraction for him. The Queen is believed to have urged upon him that it had become his duty. At these moments the personal influence of the Crown counts for a good deal. He probably knows — most Conservatives do know—that his prospects at the general election are dark; he may well think that it is as well to seize now that which is offered, since if things go on as at present, he is not likely to have a chance of getting office in December. There is, therefore, no reason for surprise at the result. What is odd is, to see both parties pleased. The Liberals are glad to be out, because they think their chances of coming back with a great majority improved. The Tories are glad to come in—different Tories for different reasons, but all at any rate because for the moment it makes them feel themselves more important; and the world at large is pleased, because it likes novelty, and wonders how the new men will behave themselves.

The difficulties which Lord Salisbury had to overcome did not arise wholly from his being in a minority in the House of Commons. He had jealousies to reconcile among his own followers, a small but active section of whom have been in a state of scarcely interrupted mutiny against Sir Stafford Northcote. Lord Randolph Churchill, who has more "fight" in him than any other three of the Opposition leaders, has long sought to depose Sir Stafford from his leadership, and, since he cannot immediately assume it himself, to push into it Sir Michael Hicks-Beach, a respectable Conservative country gentleman of industrious habits and a strong, though somewhat hard and narrow, intellect—far inferior to Sir S. Northcote in general knowledge, in Parliamentary experience, in argumentative fertility and ingenuity, but more effective in debate because he gives the impression of a more decided and persistent character. When the new Cabinet began to be formed, a struggle arose over the leadership of the House of Commons. Sir Stafford, of course, claimed it, but Lord R. Churchill,

as is commonly believed, made the deposition of Sir Stafford and promotion of Sir Michael Beach a condition of his adhesion. He has triumphed, and the late chief of the Opposition is accordingly dismissed to the honorable exile of the House of Lords, where he is to be consoled by being made, like Mr. Disraeli, an Earl. His amiability and unfailing good temper, joined to his abilities and long experience, had made him a general favorite in the House of Commons; and the regret expressed there accentuates the victory gained by his young enemy.

I reserve further remarks on the new Ministry till the distribution of the offices that form it has been finally settled. This does not seem to have been found a troublesome matter, once the leadership had been given to Sir Michael Beach and the claims of Lord R. Churchill to high office conceded. What thenceforth delayed the transfer of the seals of office was the wish of the Opposition chiefs to have some engagements from the outgoing Ministry as to their conduct during the remainder of the session. A full disclosure of the negotiations between the old and the new Cabinets has been promised by Mr. Gladstone. The point which chiefly fixes public interest here is that the demands of Lord Salisbury did not include any request to be assisted in passing a bill to renew the Irish Crimes Act, or otherwise to deal with criminal law in Ireland. This was the rock on which the Gladstone Ministry would have split had they sailed on for a few days longer. It was of course the chief difficulty which the Tory Government had to contemplate. Most of their supporters, including the solid country gentlemen who still form the backbone of their party, desired to see the Crimes Act renewed, and were prepared to denounce Mr. Gladstone had he not proposed the renewal. But Lord R. Churchill, and those with him endeavoring to found the party of Tory democracy, were against exceptional legislation for Ireland, and willing to bid against the Radicals in a policy of friendliness and trustfulness toward the Irish people. Lord Salisbury might have doubted long as to his course, being himself in favor of coercive measures, had not the prospect of carrying any Crimes Bill been so small. It will be the 5th or 6th of July before Parliament can again resume active work, and in the few weeks that remain small was the chance of carrying a bill which the followers of Mr. Parnell would resist by every engine of obstruction, and for which, against them and some two-thirds of the Liberal party, only a very small majority could have been obtained. He has therefore a good excuse for not attempting to legislate on this subject; and the tacit alliance against the Whigs which has existed between the Tory party and the Irish Nationalists may possibly last for some time longer. It has been an alliance only for the purpose of turning the Whigs out; but as they are still the majority the reasons for it subsist until after the general election, when there will be a new departure in all political relations.

To one person at any rate the change of Ministry has come just in time. Mr. Gladstone had become pale, weak, and feeble-looking during the weeks of anxiety between Easter and Whitsuntide. He is now again vigorous and cheerful, looking as if he were prepared to face a new Parliament and perhaps a new call to office.

Y.

MADAME DE BEAUMONT.

PARIS, June 18, 1885.

THOSE who have read the correspondence of Joubert, as well as those who have read Chateaubriand's 'Mémoires d'Outre Tombe,' are acquainted with Mme. de Beaumont. She was one of the survivors of the aristocratic society of the eighteenth century, who became a sort of connecting link between the ancient and the new régime. M. Bardoux has just written her life, and though his work cannot be much praised in a literary sense, it has a real value as an historical and social document. M. Bardoux is a lawyer of Clermont-Ferrand, who was returned in 1871 to the Constituant Assembly at Versailles. He belongs now to the Senate, and is one of those moderate Republicans who constitute what we call the Left Centre, a group once important, during the life of M. Thiers and of M. Dufaure, but now almost evanescent and forgotten. It would be difficult to say why M. Bardoux, a business man and a lawyer, chose Mme. de Beaumont as a heroine. He feels himself that he runs the risk of being compared to the clerks of the custom-house who placed their heavy lead on the light gauze of Venice. He has borrowed nothing of the grace, the *naturel*, the refinement of the time and the society which have engrossed his attention; his style is chaotic, fatiguing, often incorrect. He speaks somewhere of the women who have had themselves printed (*qui se sont fait imprimer*), and ranks Mme. de Sévigné among them, while every bibliophilist knows that Mme. de Sévigné's letters were printed after her death (the first collection of her letters is dated 1726). Sometimes M. Bardoux indulges in generalities, and then he falls into an extraordinary bathos, and becomes extremely commonplace. Joseph Prudhomme himself might have said, in speaking of the manners of good society: "People had but one fear, which was not to be worthy enough of the consideration of those who listened to them; and this fear was far from being unfavorable to the development of the faculties." I could cite a hundred, if not a thousand, phrases of this sort.

Pauline de Montmorin belonged to one of the oldest and best families of Auvergne. François de Montmorin was governor of the province at the time of the Saint-Bartholomew massacre, and wrote this famous letter to Charles IX.: "Sire, I have received an order from your Majesty to put to death all the Protestants in my province. I have too much respect for your Majesty not to suppose that these letters are suppositious; and if, which Heaven forbid, the order really emanates from your Majesty, I respect your Majesty too much to obey it." The father of Mme. de Beaumont, the Count of Montmorin-Saint-Hérem, belonged to the younger branch. Her mother belonged to the De Tanes family, of Piedmontese origin, established in Auvergne. Pauline was the second daughter. Her sister Victoria was married in 1787 to M. de la Luzerne. In 1778 M. de Montmorin, a personal friend and favorite of Louis XVI., was sent as ambassador to Madrid. He took part in the negotiations which ended in 1783 in the preliminaries of the peace signed between France and Great Britain on the one side, and between Spain and Great Britain on the other, and which were followed on the 3d of September by the recognition of the independence of the United States. After six years spent in Spain, Montmorin asked leave to return to France, and was sent to Britanny as commander of the troops of the province.

Pauline de Montmorin had been brought up by her aunt in her early youth; she had afterward been sent to the Convent of Fontevrault, and afterward to the Convent of Penthémont in Paris, the preferred school of the nobility. (Penthémont is now one of the Protestant churches of the capital.) She was married very young to M. de Beaumont; she was almost a child. She was, as usual, presented at court after her marriage; soon afterward M. de Beaumont left her, and continued a life of dissipation which became so scandalous that M. de Montmorin was obliged to threaten him with a *lettre de cachet*. After the death of the Comte de Vergennes (1787) Louis XVI. chose M. de Montmorin as Minister of Foreign Affairs. His daughter, Mme de Beaumont, was named *dame pour accompagner* of Madame, the wife of the Comte de Provence; she did the honors of her father's salon. The 'Correspondance secrète' speaks of her intimacy at that period with the Abbé Louis, who had been presented to her by another famous abbé, M. de Talleyrand-Périgord. Two years afterward the Abbé Louis assisted Talleyrand at the celebration of the mass on the Champ de Mars at the famous feast of the Federation of the National Guards. She was very intimate also with François de Pange, the Trudaines, Suard, Mme. de Krüdener, André Chénier. The two Trudaines were *Conseillers au Parlement*, both young, patrons of arts and of letters, and imbued with philosophical ideas and with the doctrines of the economists.

François de Pange is well known to the readers of André Chénier. The names of Trudaine and of Pange are found often in his elegies and his epistles. When Necker became the colleague of M. de Montmorin, Madame de Beaumont became acquainted with Madame de Staël and with her circle of friends. Ruthière had a seal engraved for Madame de Beaumont, with this device: "Un souffle m'agite et rien ne m'ébranle." This device is an exact description of a person physically very feeble and morally very strong. Madame de Krüdener (so well known afterward by her influence over the Emperor of Russia) had at that time a great passion for the Academician Suard. She had a sister who was a nun, and visited her in her convent; from this convent she wrote to Suard: "I follow my sister every day before the altar, I kneel with her, and I say: 'O God, who hast given me my sister and my lover, I love thee and adore thee.'" Madame de Krüdener presented to Madame de Beaumont the Countess of Albany, who had come to Paris and who had brought with her Victor Alfieri. André Chénier became intimate with Madame de Beaumont, and read many of his verses to her before he did to anybody else. She knew many by heart, and in 1801 she was able to recite from memory to Chateaubriand long pieces, still unpublished, by the unfortunate poet.

Montmorin played a very honorable part in all the events which preceded the flight to Varennes. He had signed the passport given to the Queen, under the name of Baroness of Korf; and when the King and Queen were brought back to Paris, the populace surrounded the Foreign Office and threatened the life of Montmorin. Madame de Beaumont's health could not resist the emotions which she experienced from that time. A Committee of the Assembly examined all the papers of the Foreign Office, and it was proved that the passport seized on the Queen had been asked for by the Minister of Russia, and that Montmorin could not refuse to deliver it. Montmorin was, in fact, ignorant of the King's plan; but the press denounced him, nevertheless, as a traitor and an accomplice of foreign Powers.

Montmorin left the Foreign Office in 1791. He knew that the King and the Queen were in reality governed by their advices from Brussels and Coblentz. He had blamed the emigration, he felt that he could not reconcile the Court with the Assembly nor the Assembly with the Court. He was nevertheless accused by the popular journals of being a member of a secret committee called the Austrian Committee, and of remaining one of the advisers of the King. On the famous 10th of August Montmorin left his hôtel with his wife and daughter Pauline, and took refuge in the house of a friend. He was hunted by the populace, found in his retreat, thrown into prison, and was one of the victims of the massacre made on the 2d of September, in the prisons.

Pauline de Beaumont left Paris with her mo-

ther and went to Rouen, and afterward to Burgundy. She spent the terrible winter of 1793 at Passy-sur-Yonne, at the house of M. de Sérilly. But the eye of the Convention was everywhere, and the Commissioners of the Revolutionary tribunal one day arrested all the inhabitants of the château at Passy: M. and Mme. de Sérilly, Mme. de Montmorin and her two daughters—Mme. de Beaumont and Mme. de la Luzerne. Mme. de Beaumont was so thin, so feeble, that after a march on the way to Paris she was abandoned on the road; her mother and sister were taken to Paris and implicated in the affair of Princess Elizabeth. Mme. de la Luzerne had already lost her mind from terror on the day of her arrest. She was condemned to be guillotined, but died in a hospital the day before the execution. Her brother had also been arrested; he was executed with his mother. Nineteen persons ascended on that day the steps of the guillotine; Calixte de Montmorin, who was only twenty-two years old, and his mother were the last. Pauline de Beaumont, who had been left almost dying on the road, had found an asylum in the house of a peasant, a good and honest man, who was not afraid of showing a feeling of humanity in those inhuman times. There she heard all the details of the horrible drama; a dark veil was thrown over the remainder of her life, and she liked ever afterward to repeat the verses of Job: "Wherefore is light given to him that is in misery, and life unto the bitter in soul?"

Joubert lived at Villeneuve-sur-Yonne. When he heard in what condition the daughter of M. de Montmorin was left, he visited her, he became her protector and her friend. We know by Joubert's own writings what was, at the time, his state of mind. His soul was essentially noble and delicate; there was an ideality in him which the cold contact of the world, the cruel realities of a sanguinary time, could not destroy. In 1794 Mme. de Beaumont left the humble house of the good peasant Dominique Paquereau (why should we not give his name?), and returned to Paris. She found the capital transformed, empty of almost all her friends, alive with a new life. Her father's hôtel had been sacked, and nothing remained of it but a cypress in a garden. Her only joy was in finding François de Pange and Mme. de Sérilly. It would be interesting to show the effect of the Revolution on a nature like Mme. de Beaumont's. Her soul was for a moment crushed, and she fell into the state of unbelief which goes now under the name of pessimism. Existence seemed to her the great evil, and she lost her confidence in the Author of all existence. It would require another pen than that of Bardoux to describe the languor, the anxieties of Mme. de Beaumont; to note the influence of Joubert and his idealism on a low-spirited, sad, and melancholy person.

Mme. de Beaumont in 1798, at Mme. de Staël's, saw much of Benjamin Constant. She had a great dislike of him; Joubert hated him even more. Mme. de Beaumont writes to him: "I don't know whether it will calm you if I say that Benjamin Constant is as hated as possible. He cannot succeed in liking himself." In 1799 she writes: "Your friend Benjamin does all he can in order not to be forgotten. Unfortunately, like venomous beasts, he draws attention only by wounding; it is his only life. Any mild sensation is nothing to him; and he needs sensations to tear him from his ennui." Speaking of Mme. de Staël, she says: "I am miserable when I think that the fate of a woman whom I love is bound up with a man who is truly hateful." At that time Benjamin Constant had written his first pamphlet, "On the strength of the actual government of France and of the necessity of rallying to it." He defended the Republic, though it had been dishonored by the Terror and was weakened by the divisions of parties and by the arbitrary conduct of the men in power. Mme. de Beaumont did not mix much with politics; she hated the murderers of her family, she despised, as everybody did, the Directory, which was struck with a sort of senile imbecility. All was ready for a Dictator, and the Dictator appeared in the figure of Bonaparte.

Correspondence.

THE *NATION* AND ITS FRIENDS.

To the Editor of The Nation:

Sir: Your editorial in the last number of the *Nation* brings to my mind the thought that I may almost claim to be one of its original readers. I was a student at college when it began to be issued, and have now no very distinct recollection when it first attracted my attention; but I long ago learned to value most highly its utterances, and, except during some years spent abroad, I rarely lost an opportunity to look into its issues week by week. I own a bound set of its forty volumes, and doubt whether I have forty other volumes of equal size that I value equally high. In the department of political economy alone it contains a body of facts and opinions the like of which in genuine worth I can find nowhere else; and as a contemporary history of our nation during these eventful years in literature, in politics, in finance, in its social life generally, it is unapproached in trustworthiness and completeness by any periodical of which I have knowledge.

Perhaps I shall be pardoned if I give expression to a few reflections that have risen in my mind since I read the editorial above referred to. It seems almost incredible that the first issues of a newspaper, which doubtless number many thousands, should in twenty years, or even less, have become so exceedingly scarce as seems to be the case with the first numbers of the *Nation*, to judge from the high prices offered by dealers. But, like human beings born into this world whom no one takes note of except near friends, and whose future no one can predict until time shows whether they are fit to survive, newspapers, too, have their fates, and it is left for the future to decide whether they have sufficient vitality to long sustain them in the struggle for existence.

That the *Nation*, conducted as it has been solely in the interests of truth, without regard to party or resort to the means so generally practised by newspapers to increase their circulation, has had a reasonable measure of success, is a hopeful sign for our democracy. There have always been some thousands among us who have not bowed the knee to Baal, and who have not only been willing to give heed to the truth, but to pay for it. That your success, as success is usually reckoned, compared with organs political, ecclesiastical, diabolical, has not been greater, is the sad comment on so many millions of people who would rather be confirmed in already formed opinions than heed the admonition to scan again and again the grounds of their faith. "E pur si muove." Thirty years ago such a journal as the *Nation* could not have lived six months: it has now nearly reached its majority, with the promise of a long future of usefulness before it. The work it aims to do will be the easier for others who labor in similar fields because of what it has already done. Its friends can wish for it no better godspeed than to bid it continue in the course it has thus far pursued. S.

Athens, O., June 29, 1885.

To the Editor of The Nation:

Sir: I am one of those who commenced reading the *Nation* with the first number, and have been a constant reader since. For a greater part of the twenty years I have been a subscriber, and have now an entire set of the paper in my possession. I know of nothing that has been written and printed during these years that has been of so much benefit to me as your paper.

In 1865 I came back home after three and a half years' service in the Union army. I was twenty-five, single, and took up the same clerkship I had left when I went away. For ten years previous to that I had had more or less of a taste for literature, although my education had necessarily been limited. I commenced taking the *Nation*, as I had commenced before another new periodical, to see what this new paper meant. I liked the prospectus, and I found the paper was what I needed, and I have continued.

I confess that now, looking back from this standpoint, I cannot see how I could possibly have done without it. It has been a friend to me, tried often and always true. I have looked to it for advice and light on all the important questions that have arisen. One thing has surprised me often, and yet perhaps it ought not, and that is that of late years, after some important event has happened, I have found the comments of your paper on it to be exactly my own view, but of course better expressed. I find that I have got in the habit of waiting to read your comments on events and questions of the day before making up my mind about them.

You cannot help a feeling of sadness as you think of those who have worked with you and now are gone; and while there must be a sense of satisfaction at the good work done in the twenty years past, yet to me it seems sad that we are hardly nearer the end of the strife now than we were at the beginning of these score of years. When I was a boy I read of wars and battles as things of the past. I thought the world, at least our part of it, was through with that kind of business; that for us the Millennium had about come. Now my boys, in their teens, study the history of the greatest strife of the century, in which I took a part, and the future for them seems glorious, and they are astonished and surprised when I tell them that they in their generation may be called upon to solve even more difficult questions than confronted their father. So, while you have nobly stood up for things that were true and honest and of good report, and much has been accomplished, yet error and wrong come up year after year, and generation after generation in new shapes, and the battle never comes to an end.

It would be idle to wish that those who have been the editors and writers for the *Nation* in the past could continue their work much longer in the future; but while I live, and long after, I hope the *Nation* will exist with the same aim it has had and with even greater success.

Yours truly,

Edward G. Sherley.

Albany, July 1, 1885.

To the Editor of The Nation:

Sir: As one of your younger readers and eight-year subscribers, I desire to congratulate you upon the successful completion of your twentieth year. I have taken you ever since I knew you, with a short interval of a few months' lapsed subscription. I consider you the safest and best teacher and interpreter of the times for the people, young and old, throughout the Union. As a Southerner, too young for service in the late civil war, too old not to appreciate and value its results, too Southern to condemn the "Lost Cause" and its defenders, too patriotic to regret its issue, I thank you for the faithful discharge of those duties which, twenty years ago, you set before yourself. I can wish you no higher success than the natural growth of your own established power and influence. C. H. C.

Columbus, Miss., June 30, 1885.

A CARD FROM MR. LOWELL.

To the Editor of The Nation:

Sir: Will you grant me, as an old contributor, a few lines of your valuable space in which to beg those who do not know me (it is unnecessary for those who do), not to believe that I have said what the newspapers are reporting me to have said? I have been accused of many things, but never before, so far as I know, of being an idiot.

Faithfully yours,

J. R. Lowell.

Deerfoot Farm, Southborough, Mass., July 7, 1885.

ONE VIEW OF CIVIL-SERVICE REFORM.

To the Editor of The Nation:

Sir: In an editorial in your last number you refer to the charge that the bulk of Americans really care nothing, or next to nothing, about questions of government popularly so called—that is, about changes in legislation or administration, about war or peace, about taxation or education: that their main motive is to keep certain persons out of, or put others in possession of, a number of small places. You then mournfully contrast this with the state of things in England, where, though only a few of the highest places are involved and the laws as to the expenditure of money are very severe, a full vote is always cast amid the fiercest excitement; to which you might have added that many intelligent Americans take even more interest in English politics than in our own—and you ask if it is really true that republican institutions have, in one century, killed popular interest in politics.

That the main facts alleged are true can hardly be questioned, but they admit of an explanation which obviates the necessity of such a despairing conclusion. When the Civil-Service Reform League was started, certain persons, who joined it from sympathy with its objects, expressed distrust of the result. They said: "Neither party has any policy or any means of carrying one out. At present the only means of stimulating united action is the hope of office. If you take away that, without substituting any other, you simply destroy the basis of cohesion. If one party renounces the use of the offices, it will surrender power to the other, and if both parties renounce it, then the resort will be to the use of money in elections to be made up out of the Government afterward in some way." Now it is a very singular coincidence, to say the least, that after twenty years' agitation of civil-service reform, the Republicans, who put the Act in force, should have been turned out at the very next election. As an original Mugwump I am bound to maintain that the election turned upon the personality of the candidates; but it would not be impossible to argue that the efforts of the Republican line, from Congressmen down, were dampened by the feeling that they had been cut off from the hope of reward, while the Democrats, who by no means regarded their hands as tied, were stimulated by the feeling that their time had come. The Administration has indeed met the hopes of the reformers, but we cannot be so sure that the bulk of its own party are equally happy, and it will be very curious to note the effects upon the election of 1888. Before that time comes, however, I cherish a hope that some other and legitimate subject of public interest will be provided.

What, then, is the reason of this sad state of things? If you wish to govern by universal or widely extended suffrage, you must be prepared with questions which will excite a common and powerful interest among masses of men. If the questions are too abstract, the people will be indifferent; if they involve too much detail, even if men are interested and agreed on the general principle, they will be baffled and discordant as to particulars. Again, the questions must be such as to be fully answered by "Yes" or "No," as that is all which can be expected from the multitude. As a London paper lately said: "If you want to get a real political opinion out of an Englishman, you must ask him a very plain short question, and not a highly complex one." Public opinion can say whether it wants civil service or tariff reform or not; but if you ask it to arrange or enforce the details, you will encounter only discouragement and apathy. Once more, the questions asked must be more or less identified with individuals. The world always has been and always will be governed by men, and the enthusiasm of the masses is always most strongly excited by personality, while the most powerful of all political forces is the enthusiasm for principle *plus* the enthusiasm for men. The difference between English politics and ours is that one course is pursued there and the other here. In England the Ministry always settle the details of public measures, subject to the requirements of administration and the criticism of Parliament. The people are asked first if they wish to have a general principle carried out. If they say yes, and elect a Parliament in accordance, a Ministry take office who prepare a bill to effect it. If Parliament and the Ministry differ as to the bill, recourse is again had to the people to say which they prefer, after they have been informed and aroused, first by public discussion and second by the strong projection of personality, with the stirring consciousness that the decision rests with them, or with a majority who say yes or no. Under the extended suffrage, it is becoming more and more the case that everything turns upon one man. To-day it is Beaconsfield; to-morrow it is Gladstone. Yet never has there been in English history a time when there was less danger of usurpation of power by one man. The premier's success must depend upon the nature of his measures and the choice of his staff, but, above all, upon the public confidence in his personal character. This may be right or wrong, but it accounts abundantly for the public interest in politics.

How is it in this country? It may be said that the people choose members of Congress to frame measures for carrying out general principles. But the difference is world-wide. The British Ministry consists of some dozen men, each responsible for some branch of administration and collectively for the whole. Their plans have to be submitted to Parliament, where an active Opposition, headed by chosen leaders, is certain to try them as by fire, so that not only the measures but the men on both sides are placed before the public in the clearest and most interesting light. Members of Congress, on the other hand, have nothing to do with, and are in no way responsible for, administration, either individually or collectively. They are split up into committees totally independent of each other. Their deliberations and their conclusions are formed in secret, and subject to influences which the people regard, to speak mildly, with blind suspicion. Their measures are never debated in public, because, as all business stands on the same footing, there is no time, and, moreover, public discussion is the last thing for which they are adapted. Not even party enters into them, because, as Mr. Wilson, in his 'Congressional Government,' forcibly points out, the committees are made up of both parties. There is no individuality anywhere. Committees report by majority and minority, the houses vote in the same way. Everything is secret and everything irresponsible. The Cabinet and the President have no voice in legislation and therefore no effective power in administration. Except in the appointments to office, they never come before the public in any way.

Not only is the will of the people never carried out, but they have no means of forming any will. Neither measures nor men are ever submitted to them. For the former, they have to take the glittering generalities of "platforms"; for the latter, candidates imposed upon them by nominating conventions, which candidates can neither appeal to any record in the past nor any effective promises for the future. Still, as the Government is carried on by elections, and as public opinion must be crystallized and people must be brought to vote somehow, a whole system of caucus wire-pulling and machine politics has grown up, which must rest either upon the spoils of office or plunder of some kind, because the artisans of the fabric must be paid, and well paid, for work which demands unremitting thought and exertion and a high degree of skill. The condition of things is even worse in the States, but, curiously enough, the remedy for the pitiable spectacle of helpless legislatures is sought for in biennial sessions—that is, in diminishing still further the opportunities for the people of taking interest in politics.

The keynote and stepping-stone to reform is in Cabinet responsibility—not because it is English, but because it is common-sense, and the only thing which will help us out of the slough. The moment the Secretaries stand up to speak on the floor of Congress they will be actors on the grandest arena in the world, riveting the attention and interest of the whole country. Business *must* be dragged out of the committee-rooms into daylight, because the public voice will demand it. Public debate will begin because the mere suggestions of the Cabinet will compel some organization and proportion of business. Members will begin to appear in a different light to their constituents, when, instead of being voting machines, played upon by unknown and suspicious agencies, they have to give an account of their attitude toward policies and leaders. There will not long be reason to complain of public apathy.

In the absence of any other suitable question, here is one which seems to fill the requirements of simplicity and an answer by Yes or No: Shall or shall not the Cabinet have seats in Congress, and instructions be given to that body to carry the decision into effect? Unless I am greatly deceived, there will not be much difficulty, if it is launched by the proper authority, in arousing the public interest upon that. G. B.

Boston, July 6, 1885.

TOBACCO AND CHEWING-GUM.

To the Editor of The Nation:

Sir: In the *Nation* of June 25 your comments upon the remarks of Henry Ward Beecher concerning tobacco led you to observe, that happily the disgusting habit of tobacco-chewing and spitting is passing away. So it is here in the West; but, unfortunately, a new affliction is upon us. The chewing of tobacco by the men was bad enough—it was a sorry sight; but yet every man of any pretensions to good breeding or standing in society would chew modestly, so to say, and in a half-concealed way, and he would also have due regard for the clothes and boots of others. Our women, on the contrary, who are now the chewers, chew boldly, with mouths considerably opened, while the mastication goes on at a lively rate. True, they do not spit, for what they chew is gum only; but the sight they present is abominable. Fine clothes and rough manners, much dress and little tact—this is generally true of the well-to-do classes here in the West. Our girls, especially when good-looking, seem to delight in opening their mouths as wide as can well be done—possibly to show their fine artificial teeth.

Perhaps they wish to attract attention only, and in that they are generally successful. Many of our society ladies go still a step further: they chew so that they can be distinctly heard a few paces off. I confess that several times in a street-car I have quietly exchanged my seat for one a little further away.

You Easterners would laugh at some of our wild Western ways. In the streets of St. Louis, for instance, it is a common occurrence that when a well-dressed young lady of good family enters a street-car in which all the seats are occupied, the following scene presents itself: The young lady, who is cheerily chewing, steps in and halts a moment, whereupon a well-dressed young man quickly rises from his seat and at once turns his back to the lady, without offering her the seat by mien or motion; he then hastily walks off a few steps even before he has had time to stand up straight. You Easterners would say he *sneaks* off, for that is the way it looks. The young lady then takes the vacated seat as of course, continues chewing, and begins to look around to see who is in the car.—Respectfully,

WERNER A. STILLE.

HIGHLAND, ILL., June 27, 1885.

Notes.

GEO. ROUTLEDGE & SONS announce that they will next autumn publish the following juvenile works "of a better than ordinary grade": 'Great Cities of the Modern World' and 'Great Cities of the Ancient World,' both illustrated; 'Heroes of American Discovery,' by "N. D'Anvers"; and also the 'Marigold Garden,' by Kate Greenaway.

J. B. Lippincott & Co. have in press 'The Queen's Empire; or, Ind and Her Pearl,' by Joseph Moore, illustrated; 'Horse and Man,' by the Rev. J. G. Wood, likewise illustrated; and 'A Feather from the World's Wing: a Modern Romance in Rhyme,' by Algernon Sidney Logan.

'The Eastern Question in a Nutshell' might almost be the title of a most useful work just issued by the Clarendon Press, Oxford. The real title is, 'The European Concert in the Eastern Question: a Collection of Treaties and other Public Acts, edited, with introductions and notes, by Thomas Erskine Holland, D.C.L., etc.' The scheme embraces an exhibition of the various formal acts by which Europe has asserted its tutelage over Turkey. The arrangement is by territories, as, Greece (1826-1881); Samos and Crete (1830-1878); Egypt (1839-1885); the Lebanon (1842-1883); the Balkan Peninsula, etc. (1856-1885). The appendix is in four sections: Religious and Political Equality in Turkey; Russia and the Porte; Great Britain and the Porte; Austria and the Porte—the last three relating to the Treaty of San Stefano and the subsequent conventions for peace and indemnity between Turkey and her great enemy; the acquisition of Cyprus by Great Britain, and that of Bosnia and Herzegovina by Austria. Dr. Holland furnishes brief historical introductions to each chapter, and explanatory notes to the text of the treaties, indicating (among other things) to what extent they have become obsolete. The whole forms an invaluable book of reference on a subject hitherto to be studied with difficulty, owing to the dispersion of the sources.

The little anonymous book, 'Pompeii—Illustrated,' brought out by John Ireland, seems hardly more than a pretext for the illustrations by the Photo-Gravure Co. of this city. The letter-press consists mainly of excerpts from Bulwer. The ten views, of a pale-green tint, are interesting enough and sufficient as memoranda; but, as specimens of a particular process of reproduction from nature, they probably fall considerably short of this company's ideal of good workmanship.

'Appletons' General Guide to the United States and Canada' puts in its annual appearance, with the customary marks of revision. We can accuse it of shortcoming only in respect to Alaska, whose accessibility, wonderful interest, or indeed existence, is unrecognized by this excellent work, although it takes the tourist over the Northern Pacific Railroad as far as Puget Sound and Victoria.

A specimen volume of Carlyle's works in thirteen volumes has been issued by John B. Alden. It contains 'Sartor Resartus,' 'Past and Present,' 'The Diamond Necklace,' and 'Mirabeau,' is fairly well printed, and is sold at a price which must leave very little margin for author's copyright.

The *Magazine of American History* has caught the infection of "War Papers," beginning with the July issue. "War Studies," they are called, but that name is rather high-sounding for anything in the first instalment. Both Federals and Confederates contribute reminiscences, of no very weighty import.

The *Southern Bivouac* (Louisville, Ky.: B. F. Avery & Sons) for July continues its review of Hood's Tennessee campaign, and has some minor papers on the war, and some anecdote.

W. R. Jenkins has begun to issue a series of Spanish plays (Teatro Español) parallel with the French which he has for some time been publishing. 'La Independencia,' a four-act comedy by Don Manuel Breton de los Herreros, is the first number.

L. Schick, Chicago, whose German series ("Collection Schick") of novelettes was designed to assist learners of the language, furnishes still more aid by reissuing the same stories in English in an "Overland Library" of corresponding form. Rudolf Lindau's 'Hans, the Dreamer,' and two other stories make No. 1.

The well-known series of "Deutsche Zeit- und Streit-Fragen" (Berlin: Carl Habel) has its imitator in the "Sociale Zeitfragen" lately undertaken by Bruns (Minden; New York: Westermann). Eight numbers are before us, dealing with the defects of the Christian-Socialism movement, insurance for the sick, money in the political economy of the present day, the right to labor (Bismarck's doctrine), machinery and the labor question (by Prof. F. Reuleaux), etc., etc. To foreign eyes the print of these duodecimo pamphlets is not very agreeable.

Westermann & Co. send us the general index of names and matters completing the 'Handbuch der theologischen Wissenschaften,' edited by Zöckler (Nördlingen: C. H. Beck).

From the same source we receive specimen pages of an 'Allgemeine Naturkunde'—natural history in its broadest sense—published by the Bibliographisches Institut of Leipzig. The History of the Earth will fill two volumes, and so will Plant-life and Man; while Ethnology will fill three. The numerous illustrations in each department are of the first degree of excellence, and notably so in the ethnological portion. There will be 120 full-page chromolithographs.

That fantastic drama, 'La Tentation de Saint-Antoine,' is the fifth in number and the third to appear of the complete works of Gustave Flaubert published by A. Quantin (*édition définitive*). A glossary has been added here, as in the case of 'Salammbô.' A volume of 'Mélanges' is promised, consisting of youthful literary fragments hitherto unprinted, and possessing great interest, says the publisher.

Almost uniform with the pretty little series of the 'Almanach des Spectacles,' is a little volume of the same publishers (Paris: Jouaust; New York: F. W. Christern), called 'Le Répertoire de la Comédie-Française—Mars, 1883, Décembre, 1884,' by M. Ch. Gueullette. It is devoted to a consideration of the plays which are "kept in stock" at the Théâtre-Français, ready to be acted at a moment's notice, and is a beauty of a book. The preface by M. Armand Silvestre is interesting and suggestive, and the etching of Mlle. Bartet, which serves as a frontispiece, is worthy of the fine and truly feminine face it reproduces.

The survivor of the Goncourt brothers, having completed the final revision and amplification of their studies of the artists and art of the eighteenth century, in three volumes, has now begun a similar setting in order of the studies of the 'Actrices du XVIIIe. Siècle,' a series of anecdotic and documentary biographies, to be completed in eight independent volumes, of which the first, 'Sophie Arnould,' is now ready, and the second, 'Mme. Saint-Huberty,' is in press. After these two singers will come two dancers, the 'Guimard' and the 'Camargo'; two tragic actresses, 'Mlle. Clairon' and 'Mlle. Adrienne Lecouvreur,' and two comic actresses, 'Mlle. Contat' and 'Mme. Favart.' There will be two editions of the series, one in the handy *format Charpentier*, and the other larger and more elaborate, with etchings and facsimiles.

Bibliography flourishes in Russia. The bookseller Mezhoff promises a list of books and pamphlets that appeared on occasion of Pushkin's jubilee; Mr. Huberti is preparing a third part of his 'Materials for Russian Bibliography'; and Mr. Yazikoff has issued the first of an annual 'Necrology of Russian Authors.' This volume gives accounts of the authors who died in 1881, with a list of their publications, whether in book form or in periodicals.

Polybiblion praises deservedly the indexes of Mr. Griswold, but, being puzzled by his pseudonym, attributes them, or at least their publication, to "La Société des Q. P. Index."

—It was once a charge against poetry that it dealt overmuch with the mere image and description of nature; but now the stricture applies to a considerable portion of our prose, and perhaps more justly. There is a difference, however, inasmuch as the poet's picturing was more personal, and apprehended vaguely, in sympathetic and dissolving emotion, rather than concretely as the plain substantial memory of familiar fact; our novelists transcribe the landscape of their early years or tourist vacations, and hence, owing to the English trait of strong attachment to places, they seem sometimes by their scene-painting to invigorate the local patriotism of readers, as Scott does by his historical characters or Burns by the incidents of peasant life. This quality in George Eliot's work is the occasion of the opening article in the July *Century* on "George Eliot's County." The title is by many thousand acres too large for the matter, for only a small portion of Warwickshire is traversed; and both illustrations and text confirm the report that it is a very tame country. Lovers of quiet, narrow horizons, of swelling green fields, and gray cottages, and boundaries of low woods, may refresh themselves with the writer's gently enthusiastic description, but there is a wonderful lack of vividness, of definition and picturesque touch in it, and especially of George Eliot. But then her personality has very little to do with the subject, after all. A pathetic interest attaches to the few reserved and well-chosen words with which the father of Frank Hatton, the young and brilliant explorer whose accidental death in Borneo has been much lamented, introduces some extracts from the diary of his son regarding the country which he pene-

trated. These two articles, and we ought perhaps to add the instalment of Mr. Eggleston's work on the social life of the colonies (though, by reason of its disconnectedness, it reads too much like a classified dictionary of customs), make the secondary attractions of the number, in which, as in its predecessors for some months, the main place is held by the topics of fiction and war.

—The war papers in the July number of the *Century* continue the story of the Seven days' fight about Richmond; Gen. D. H. Hill contributing a second paper, and the others being written by Generals Franklin and Longstreet. The paper by Longstreet is among the most vigorous and felicitous in style of all which have appeared; a pleasant surprise, in view of the reports recently in circulation as to his health. The Confederate officers give weighty opinions on several points of great importance. First, that the bloody repulse of the Confederates at Beaver Dam Creek was so demoralizing that the way was open for McClellan to have strengthened that position and held firmly to his lines north of the Chickahominy. Second, that in these movements Stonewall Jackson was badly behind time, failing to execute his flanking movements with the promised speed and vigor at Beaver Dam, at Gaines's Mills, and at Frayser's Farm. Third, that Petersburg was at McClellan's mercy when he reached the James River. As to the second point noted above, Franklin's paper is strongly corroborative of the views of the Confederate officers. They agree that Lee's repulse at Malvern Hills was terribly bloody and utterly discouraging, and the necessary implication is, that the retreat of the national forces to Harrison's Landing was needless. Their statements, though cautiously made, tend strongly to diminish the idolatry with which the Southern people have regarded the exploits of Jackson, and to imply that his brilliant successes were in no small part due to the weakness of the opponents against whom he was pitted in his independent campaigns. Franklin distinctly charges Heintzelman with compromising the safety of the national army by the premature withdrawal of his corps from Savage Station. All agree that if the retreat was to be made, it was well managed by McClellan, and that the Confederate ignorance of the topography of the region over which they were fighting was something almost incredible. The portraits of Stuart, Franklin, McCord, Smith, and Whiting are excellent, and the views from photographs are very valuable; but the battle sketches are worthless if not misleading.

—Among the recent minor contributions to the history of the war, we have not met a pleasanter or more praiseworthy one than the 'Story of a Boy Company (C. S. A.), by an ex-boy' (Richmond: Whittet & Sheperson). This little book gives a lively sketch of the organization and camp experience of Parker's artillery company of S. D. Lee's (later E. P. Alexander's) battalion of the Army of Northern Virginia. Parker's company was recruited in Richmond at the beginning of the war, and was composed in very considerable part of boys under military age. The writer (understood to be Mr. R. W. Figg, of Richmond) gives, in simple and graphic style, the incidents of camp life. His allusions to the contemporaneous military events are accurate, but his chief merit lies in the clear and not overdrawn pictures of soldier-life in the Confederate army. His company, like many others in that army, was largely made up of youths from the best ranks of society, and consequently the type of soldiering he describes is of the better sort. But he does not conceal the weaknesses of himself or his comrades, and he is as frank to acknowledge the courage and generosity of a foeman as of a friend. The mellow light which he throws upon the acts and actors of the great struggle is one of the charming characteristics of the book. No bitterness remains. General Hancock is as sincerely applauded in the streets of New York as General Pickett is mourned in his grave in Hollywood. The historical value of this excellent monograph would have been increased by fuller statistics and a roster.

—We deeply regret to record the death of Henry H. Gorringe, late Lieut.-Commander, U.S.N., at about the age of forty-five years. His robust physique and sanguine temperament would have insured him, but for the accident which befell him a few months since, a long life. His rise in the navy, beginning with service in the Mississippi flotilla during the civil war, was extremely creditable to him, and his semi-naval exploit in bringing over the Alexandrian obelisk to New York is within the memory of all. This task tested to the utmost the qualities of Captain Gorringe, and the shaft in Central Park is literally his own monument erected by himself. It would have been well had his success in this achievement not diverted him from the navy, but he chafed under restraints which our debased politics rendered especially intolerable. His impulsiveness led him toward many enterprises which his fertile mind conceived without the control of a wise judgment, and in none of these were his expectations fulfilled. He was a man of singularly winning presence, a warm and hearty manner, a frank, blue eye, which bespoke his Norse-English lineage. It was during his connection with the Hydrographic Office at Washington, in 1875, that Captain Gorringe first became a contributor to the *Nation*. Without being a trained writer, his style was pleasant and his matter always thoughtful. Notable in every way were letters which he sent to this paper from the Mediterranean, during his cruise there in the *Gettysburg* in the years 1877-78.

—The 'Standard Natural History,' edited by J. S. Kingsley (Boston: S. E. Cassino and Co.), has reached its forty-second part. The portion thus far issued comprises the general introduction by Dr. A. S. Packard, and the whole of the Invertebrata, which occupy volumes i-xi, as they will eventually be arranged. Volume v, on the Mammalia, is also completed, and vol vi, Anthropology, nearly half done. There are also four parts of volume iii, on the Lower Vertebrates, which do not carry it much beyond the introduction. This work has, for its foundation, electrotypes of Brehm's beautiful illustrations. To these the publishers have added a number of generally very distinguishable American woodcuts and reproductions of varied merit; and have secured the services of a number of American specialists to provide a text. The text is far from uniform in its relation to the reader; some of it being too abstruse for any but a scientific reader, and some too popular for accuracy. A fair proportion of it, however, will be convenient for the well-read cultivated public, and for the specialist who may like to look up some points in matters out of his own line. The high-water mark seems reached in contributions from Hyatt, Fewkes, Gill, and some others; and the ebb in some of the material on mammals by a little-known contributor. The anthropology of North America seems in large part a translation from second-rate German sources; it contains many errors. The illustrations to this part are also less good originally, and less well printed than in the rest of the work so far received. It is not creditable, with so many good anthropologists in this country and excellent illustrations available, that the publishers should offer nothing fresher and better in this particular direction.

—On a recent visit in Paris to the Bibliothèque Nationale, writes a correspondent, having some interest in portraits of Columbus, we asked what could be seen there in that line. A volume was brought to our table, in which we found no less than fifty-two such portraits pasted. These had been gathered from divers languages and literatures, and were a single specimen and an insignificant fraction of a work expanding into many scores of volumes—a variorum collection of portraits of as many noted men as possible. No such alphabetical or encyclopædic gallery seems to have been attempted in the British Museum. When we there inquired for Columbus portraits, we ascertained that only thirteen were to be seen, and those not bound, but in loose sheets. In some of our States, however, a beginning has been made on the Parisian plan. Mr. W. H. Wyman, of Cincinnati, has turned his leisure hours to good account by compiling a volume of Shakspere portraits. He has thus brought together one hundred and forty-eight specimens, and presented them to the Wisconsin Historical Society, which has already about eight hundred volumes of Shakspeariana. Most of the counterfeit presentments which Mr. Wyman has brought together are common, modern, and not costly. Yet the impression, even in turning over these, is cumulative. They attest patience and painstaking. They cost the sacrifice of not a few noble volumes in the editions of Tallis, Knight, Halliwell, and Scott. But a good many of the pictures have a special interest as ancient, rare, or of artistic excellence. No. 1 in the Wyman volume is the same with No. 124 in the hand-list of the world-famous collection at Hollingbury Copse, namely, "the true effigies engraved by Ward from a painting by Phillipps after a cast by Bullock from the bust at Stratford-on-Avon, 1816." Nor is this the only instance in which Halliwell-Phillipps would discover with wide-eyed wonder, west of our lakes, counterparts of his choice treasures. One of the largest of the Wyman engravings (8x11 inches), as well as the rarest and most exquisite as a work of art, is the so-called Felton picture, and that, too, published in 1796. This date is only four years after the original—one of the two most likely to be authentic—was discovered. This is the likeness which, from the figures 1597 and the initials R. B. inscribed upon it, is believed to have been executed by Shakspere's fellow-actor, Richard Burbage. The Chandos and the Droeshout likenesses each appear on Mr. Wyman's pages in more than a score of replicas, often with great variations. The former is best reproduced by Cochran, and the latter by Picart. The Kesselstadt death-bed, with four views of the death-mask; the picture by Cornelius Jansen; Ward's statue in Central Park; the O'Donovan and Devonshire busts; the Queen's, made of Herne's oak; the poet before Elizabeth, as shown in Baillie's stained-glass window; the statue in Westminster Abbey; the infant genius, as painted by Romney under the inspiration of Gray; the Beaufoy and Boydell medals; the Stratford chancel; and the jubilee procession of 1769, are but a tithe of the aspects in which, thanks to Mr. Wyman's labors, we can behold the most myriad-minded of men.

—It is perhaps not too late to remark, concerning the University race at New London, that the style of oarsmanship which the Harvard eight displayed was very far from anything like the kind of rowing which college men have been accustomed to call "professional." To be sure, professional crew-rowing as a distinctive branch of the art does not exist. There are professional scullers by the hundreds, a very few of whom occasionally make up a four to pull together for two or three weeks in preparation for some local regatta. But neither here nor in England is crew-rowing among such men what it was in the

days of the Kellys and the Renforths, the Wards and the Biglins. And as for a professional eight, either in England or America, who ever heard of such a thing? The scullers for money know little or nothing about this sort of rowing, as the Yale men found to their cost two or three years ago, when, under the influence of a clever mechanic, whose practical appliances had proved valuable in rigging boats, they were led to adopt his notion of the way to row an eight-oared shell. The modification in this year's Harvard stroke (and it is no radical change) was suggested by Mr. Watson, the veteran Harvard coach and a member of Loring's famous '68 crew, discussed, tried, and agreed to by Captain Storrow. Doubtless Faulkner, whose employment has led to so much discussion, was ordered more than once to notice this point or that, and to "pick up the men," as he happened to be running the launch in the absence of Mr. Curtis, the regular coach; but as for influence or control over the crew, he had none whatever. These facts we give upon the authority of Mr. Mumford, who will captain next year's eight, and of a member of the Harvard Faculty who went to New London to investigate the matter as soon as the result of the race with Columbia had opened the eyes of the Yale men to the fact that the Cambridge lads had brought to the Thames a style of rowing hard to beat. Their stroke rowed consisted simply of a firm and even grip of the water, followed by an immediate and vigorous thrust of the legs and lift with the back, ending in a clean pull through with the arms. On the recover they showed an easy swing of the body, the hands clearing the knees without effort, and the oars skimming the crests of the choppy waves without a break.

—M. Naville, in a letter to Reginald Stuart Poole, dated Malagny, near Geneva, June 4, 1885, communicates what he considers the chief result of his winter "campaign" in the Delta of Egypt, in the service of the Egypt Exploration Fund. This achievement is a new identification of the site of Goshen, which he finds at a village called Saft el-Henneh, near the Sweet Water Canal, about six miles east of Zagazig, and a few miles west of Tell el-Kebir. His conjecture—he calls it "the solution of a geographical question"—he founds on part of an inscription found on stone fragments, indicating that the name of the place was Kes, and the locality sacred to Sopt, the chief god of the nome of Arabia. This Kes of the Arabian nome would thus be the Septuagint's "Gesem of Arabia," which stands for the Hebrew Goshen, and identical with the Kesem of the East of the hieroglyphical lists descriptive of the nomes of Egypt. "The same name preceded by the article is the origin of the Greek . . . *Phacusa*; which Ptolemy calls the capital of the Arabian nome, and as Phacusa has a great likeness to the Arabic Fakoos, this last spot, twelve miles north of Tel-el-Kebir, has generally been acknowledged to be the Goshen of the Bible." This view has been defended, among others, by Ebers in his work, 'Durch Gosen zum Sinai.' Now M. Naville upholds the identity of Phacusa with Gesem or Kesem—that is, with Goshen—but rejects the identity of Phacusa with Fakoos, promising to defend this apparently very strange critical proceeding in a "Memoir . . . on the monuments of Saft-el-Henneh."

—The new volume, just published, of Ersch & Gruber's 'Allgemeine Encyklopädie' is the thirty-seventh of the second section, and ranges from Kleinasien (Asia Minor) to Kochen (Cooking). The longest article is one of seventy pages on Convents (Klöster), giving their history from the earliest times, an account of their present strength and condition in the various countries of the world, and a description of the buildings, etc., in which they have their local habitation. Sheridan Knowles has three pages, which is a fair proportion, considering that Klopstock has but seven. John Knox receives eight pages, and King Knut (whom in our youth we only knew as Canute), five. There is a brief account of the Know-nothings, by Friedrich Kapp, who supplied a number of articles on American history and biography in former volumes, notably one on Baron Kalb. Health Resorts (Klimatische Curorte) are exhaustively treated in an article of sixteen pages. Other noteworthy articles are Kleinrussen, Kleist, Kleopatra, Kleon, Klytaimnestra, Klerus, etc. There is a general tendency in this volume and the four or five immediately preceding it to abridge the articles, but that it has not been carried to excess is evident from the fact that six volumes have already been devoted to the letter K, and probably at least three more will be required before L can be begun. Of the entire work there have appeared 161 quarto volumes of between four and five hundred pages, printed in double columns. The first volume was issued in 1818, and its successors have been coming out ever since. Some of the subscribers seem to have been discouraged because the letter A required six volumes, but the publisher consoled them with the reflection that in all dictionaries this letter occupied more space than any other, and he estimated that the book would be completed in fifty volumes. It turned out, however, that B required seven volumes and a half, C and D each eight volumes, E ten and a half, and F eleven. In 1827 the second section was begun, to extend from H to N, and in 1830 the third section, from O to Z. From the outset the work had to contend with disasters. Several of the eminent men who were selected to edit the various sections died in rapid succession, but this was only in its infancy, so to speak; and it was fortunate in passing, in 1832, into the hands of the publishing house of Brockhaus, in Leipzig, with whose imprint it still continues to appear. In 1850 103 volumes had appeared, of which 51 were in the first section, comprising A to F complete, 27 in the second section, beginning with H and reaching to Juden and Jüdische Literatur, (which two articles fill one entire volume), and 25 in the third section, beginning with O and coming down to Phyxios. The third section was temporarily abandoned, and will not be continued until after the second has been completed. The second was dropped in 1855, on the completion of the letters I and J, and was not resumed until 1882, when section one had been completed in 99 volumes, of which 48 were devoted to the letter G.

—It is evident that when the last-named letter had been reached, all attempts to restrict the work within any bounds had been given up. The articles grew into learned treatises by recognized authorities, and some of them were, at the time of their appearance, the main, if not the sole source of information on their respective topics, being, not compilations, but the results of the original researches of specialists. Whether the subject be in Arabian literature, or in Norse mythology, or in ecclesiastical history, or in mediæval biography, there is always the same wealth of learning and the same fulness of treatment; and if an ordinary so-called man of education wants to be made aware of his own ignorance he can do no better than to turn over its pages. As an instance of the scale of the work, it may be mentioned that Greece has eight volumes to itself, Mullach writing on the language and dialects (174 pages), Weissenborn on Rhythm and Metre (30 pages). On India there is an article of 356 pages by Theodore Benfey, and on the Indo-Germanic languages 112 pages by August Friedrich Pott. The articles in the earlier volumes on Oriental Theology are by Hammer Purgstall. Scandinavian antiquities are treated by Karl Maurer. The articles on Great Britain, treating only of the period from 1832 to 1873, occupy 690 pages. Goethe has 144 pages. On Guiana there are 67 pages, and on Guzerat 33. There are two articles on each of the four Georges, one by an English, and the other by a German writer, about 160 pages in all. It is impossible to make anything but a random guess at the prospects of this work for completion. No matter how much compression may be brought to bear, it can hardly take less than 80 to 100 volumes, and 35 to 40 years to finish it, so that the last volume will be more than a century later than the first. Another half century will be needed to publish indispensable supplements. Men may come and men may go, but this book goes on forever.

ZEISBERGER.

Diary of David Zeisberger, a Moravian Missionary among the Indians of Ohio. Translated from the Original German Manuscript and Edited by Eugene F. Bliss. 2 Vols. Cincinnati: Robert Clarke & Co., for the Historical and Philosophical Society of Ohio. 1885. Pp. 464 and 535.

Among the occurrences which invest the Western border wars, during and subsequent to the Revolution, with unusual and often startling interest, not the least important are the experiences that befell the Moravian Mission among the Indians. These experiences, as full of dramatic incidents as any of Cooper's Indian romances, have been set forth by Loskiel in his 'History of the Mission of the United Brethren among the Indians'; by Heckewelder in his 'Narrative' of the same enterprise; and more recently by Bishop de Schweinitz in his 'Life and Times of David Zeisberger.' Now there lies open before us one of the principal sources from which these writers have drawn. It is the Diary of David Zeisberger, the head of the Mission, who deserves the title which he has received of "the Western Pioneer and Apostle of the Indians." For sixty-two years he labored among them, preaching the Gospel, reclaiming them from their savage state, and establishing in their country Christian towns which filled with astonishment all who visited them, whether they were white men or aborigines.

This Diary may be called the artless narrative of a hero unconscious of his heroism. The Moravian missionaries wrote voluminous official journals, which were sent to the Mission Board at Bethlehem, in Pennsylvania. The Diary before us, however, seems to bear more of a private character. For, in the copy preserved in the Bethlehem Archives, are wanting many little clauses found in the original. Such clauses were, no doubt, deemed unimportant by the transcriber; but in point of fact they often contain remarks which beautifully characterize the author. Hence we obtain a glimpse of the inner life of one of the most remarkable men of the last century.

That life was distinguished by transparent humility and self-abnegation. He brings into the Christian Church some of the worst and most bloodthirsty savages of his time; he braves dangers in many forms; he bears, with unruffled serenity, the indignities heaped upon him by the British Indians; he declines to appeal to his rights as an adopted Mousey because he is told that such an appeal must not include his associates; he stands, with calm dignity, stripped by the savages to his shirt, before a British captain, the real leader of the expedition against the Mission, who had more than once enjoyed his hospitality; he hears, while lying a prisoner in a hut, the fate which seems to await him announced by the terrible "scalp-yells" of the warriors, and not a ripple passes

over his peace of heart; he goes with his fellow-missionaries, after their liberation, unguarded and alone for weary miles through the wilderness to be tried at Detroit as an American spy, without a thought of fleeing to Pittsburgh for protection; and yet never writes a word which would indicate that his labors are extraordinary, that he is manifesting a courage rarely equalled, that he is exhibiting a moral greatness of which he might well be proud. He seems to have but one aspiration, and that is the temporal and spiritual prosperity of his converts; while everything that he undertakes is absolutely consecrated to the spread of Christ's kingdom among the Indians. So completely absorbed is he in his labors of love that the thought of self finds no opportunity to intrude; and whatever glory he earns, he gives unreservedly to his Saviour. It is true that the news of the massacre, by American militia, of nearly one hundred of his converts, unmans him for a time and forces a great cry of sorrow from his heart; but he soon regains his wonted composure, and, while he cannot forget the fearful tragedy, records in his Diary the consolation which his simple-minded faith gives him:

"This news sank deep in our hearts, so that these our brethren, who, as martyrs, had all at once gone to the Saviour, were always, day and night, before our eyes and in our thoughts, and we could not forget them; but this in some measure comforted us, that they had passed to the Saviour's arms and bosom in such resigned disposition of heart, where they will forever rest, protected from the sins and all the wants of the world."

Zeisberger's Diary begins in the month of August, 1781, and opens with an account of the destruction of the Mission in the Tuscarawas Valley, of Ohio, by British Indians under the command of Captain Elliot, of the British army, and the Wyandot Half King. Then it relates the deportation of the entire body of converts, with their teachers, to Upper Sandusky; the journey of the latter to Detroit, their trial and acquittal; their return to their flock; the summons which they received to present themselves, for the second time, at Detroit; the intelligence, which reached them on the way, of the massacre of the Christian Indians at Gnadenhütten in March, 1782; the consequent dispersion of the converts; the resuscitation of the Mission, at New Gnadenhütten, on the Huron, now Clinton River, in Michigan; the wanderings from place to place of Zeisberger and such of the Christian Indians as had again gathered round him, looking in vain, amidst the troubles which convulsed the Indian Territory, for a retreat where they could dwell in peace; and at last, when war grew imminent, their flight into Canada, in 1792, in which country they settled on a reservation given them by the British Government, and still held by their descendants.

These records fill the first and nearly one-half of the second volume of the Diary; its remaining part contains a description of the labors of its author and his associates at their new seat of Fairfield, where the Mission flourished almost as of old. The last entry, Sunday, May 27, 1798, relates to the celebration of the festival of Whitsuntide, three months prior to Zeisberger's departure with a number of his converts to their old seats in the Tuscarawas Valley, twelve thousand acres of whose rich land Congress had meanwhile granted them as a permanent home. The Diary, therefore, comprises seventeen years memorable in American history.

That the chief object which, as Mr. Bliss says, he has in view in publishing the manuscript—namely, the furtherance of the study of that history—will be reached, we doubt not. That this book gives an opportunity, as he further remarks, to study "the action of white men upon Indians, Christians upon heathen, the civilized upon savages," is evident. That it sets forth, in the simple language of an aged and long-tried missionary, the triumphs of the Christian religion amid pagans debased by their own vices and corrupted by their contact with the white race, will be considered its greatest merit by such as are interested in the spread of the Gospel. We consequently welcome the publication of Zeisberger's Diary, and congratulate Mr. Bliss on having accomplished a work of great labor and no little difficulty. The manuscript fills 869 pages, some of which must have been hard to decipher. It has been his purpose, as he tells us, to render the German as nearly like the original as the differing idioms of the German and English would permit. There results a style which is quaint, but which on that very account brings the reader *en rapport* with the simple-hearted writer. The introduction by Mr. Bliss is important; the typographical appearance of the volumes, worthy of the well-known publishing-house which has sent them forth.

Zeisberger's Diary, after his death in 1808, was placed in the archives of the Moravian church at Gnadenhütten, Ohio. There it was found by the Hon. Jacob Blickensderfer, of Canal Dover, who, with the consent of that church, presented it to the Hon. Ebenezer Lane, of Sandusky, Judge of the Supreme Court of Ohio. About 1854 Judge Lane donated it to the Historical and Philosophical Society of Ohio, in whose possession it remains.

LAST MONTHS OF CAVOUR.

Lettere edite ed inedite di Camillo Cavour: raccolte ed illustrate da Luigi Chiala. Vol. IV. [1860-1861.] Gli ultimi mesi. Turin: Roux e Favale. 1885.

When the King of Naples was driven from his capital and took refuge at Gaëta, the romantic era of the struggle for Italian independence ended. Posterity, ever ready to remember only the few striking episodes in history, has already singled out for especial remembrance the Garibaldian campaign, and forgets that achievements more difficult, though less brilliant, were needed to turn Garibaldi's knightly exploits to practical account. Historians either keep silent about or understate the danger which the Italian cause ran through Garibaldi himself, perhaps because they, like most men, say nothing but good of the dead, and think it wrong to see aught but good in heroes. The truth is, however, that from October, 1860, until June, 1861, the consummation of Italian unity was always in peril, and that at no other period of his career did Cavour overcome more obstacles, or prove more conclusively that he had been building a nation upon a reality and not upon an illusion.

The idea underlying his work was this: A free constitutional monarchy must eventually triumph over any autocracy, because every citizen is partner in the former government, and therefore personally interested in its welfare. Cavour saw that no republic in Italy could then be stable, although his prophetic eye beheld the probable ultimate triumph of democracy. He wrote in 1833: "The republicans, in a distant future, may become dangerous, for they have evidently with them the tendency of the century and the movement of material and intellectual levelling which is working among all classes of society. We cannot deceive ourselves: society is marching with long strides toward democracy; it is perhaps impossible to foresee the forms which it will assume, but as to the upshot, to my eyes at least, that is not doubtful." He insisted that Victor Emmanuel should assume the title of King of Italy instead of King of the Italians—to emphasize the national union; and in all his acts he adhered strictly to parliamentary forms, even when he was virtually dictator, in order to impress upon his countrymen the sacredness of the Constitution. "It is the support I get from the representatives of the people," he used to say, "which makes it possible for me to do anything. Without that support I were powerless."

During the last months of Cavour's life he had several portentous difficulties to vanquish. Among them were the threatened revolution of the Garibaldians and the Mazzinians; the menacing attitude of Austria, who again massed troops on the Venetian frontier; the double policy of Napoleon III., who was personally friendly to the Italian cause, but who publicly shielded the Pope and the King of Naples; the reconstruction of the central and southern provinces; the Roman question, pure and simple. These complications, of course, were often merged in each other, so that perhaps the dangers may be resolved into two—Red Republicanism on one extreme; Reaction, papal and Bourbon, on the other. Each had its peculiar thorns. Thus, in dealing firmly with Garibaldi, Cavour incurred the enmity of many sincere Italians, whose admiration for that knight-errant's patriotic exploits quite blinded them to the utter impracticability of his scheme of government. When, as Dictator of Naples and hero of Sicily, he greeted Victor Emmanuel, King of Italy, he made demands which the King could not possibly accede to. "There is incompatibility between me and your Minister at Turin," said he; "choose Cavour or Garibaldi." The King did not hesitate in his choice, and happily Garibaldi showed his magnanimity by laying down his sword.

When the King arrived at Naples and found the province on the verge of anarchy, Garibaldi retired to Caprera, refusing splendid honors for himself, but demanding that his fellow-soldiers, upon whom he had lavished the highest military titles, should be put in the foremost positions under the King. Cavour's path was very perilous. If he did not recognize the Garibaldians whose valor had freed a large part of Italy and had crowned them with boundless popularity, he would be accused of ingratitude, and in the storm of indignation which would have burst upon him not only would the Revolutionists have tried to establish themselves, but the King might have so lost his personal popularity that Italians would no longer have rallied round him as the head of their cause. If, on the other hand, he bowed to Garibaldi, the Constitutional Government would no longer command respect; and, moreover, the men in the royal army and navy — some of whom were veterans of 1848, while others had earned their honors in the Crimea or at Solferino—might justly complain at the promotion of red-shirted Garibaldians, who were adventurers, although patriotic adventurers, and who had served only one summer.

Cavour pursued a policy which proved successful. A few of the Garibaldian chiefs were commissioned in the regular army, and a special corps of volunteers was created into which the others were received. But this did not satisfy Garibaldi, who, nursing his anger against Cavour, on April 18, 1861, in the session of the first Italian Parliament, attacked the Prime Minister, whom he deemed a traitor because he had ceded Nice and Savoy to France, and an ingrate because he had not adequately rewarded the Garibaldian legion. The excitement in the Chamber was intense. The sitting was suspended, and the vehement denunciations of Garibaldi from the centre and right were answered by wild approving shouts from the left and from the galleries, which were crowded with Garibaldians. Stung by this insult, Cavour's rage for a short time mastered his self-control. A few days later,

at Victor Emmanuel's request, Cavour consented to meet Garibaldi:

"My interview," he wrote, "was courteous, without being affectionate. Each maintained his reserve. However, I made him understand the line of policy the Government intended to follow toward Austria and France, by declaring that on these points no transaction was possible. He replied that he accepted this programme, and that he was ready to engage not to embarrass the march of the Government. He limited himself to demanding that something should be done for the Army of the South. I made him no promise; still, I pledged myself to endeavor to find means to assure more completely the future (*sort*) of his officers. We separated, if not friends, at least without any irritation."

Cavour's victory over Garibaldi has not been fitly appreciated, yet it was of supreme importance. It showed that the Italian Government was sincerely constitutional; that it denied the right of even the most fervent patriot to substitute his personal wishes for parliamentary laws; that Cavour believed so profoundly in Liberal methods that he did not shrink from facing the anger of a hero who was backed by the blind devotion of the people. Moreover, after Cavour's death, it prevented the foolhardy Garibaldian attempts which ended at Aspromonte and Mentana from injuring Victor Emmanuel's rule, and it postponed indefinitely the setting up of a chimerical republic.

The second great enemy that Cavour had to fight during his last days was the demon of Reaction. Austria, knowing that the existence of a liberal monarchy of twenty-two million souls would render her tenure of Venetia insecure, not only tried to intimidate the new kingdom by increasing the Austrian armies on the frontier; but also, by encouraging the intrigues of the rulers expelled from the States of Central and Southern Italy, she hoped to foment sectional disorders and to nip in the bud the growth of a national Italian spirit. The home of the Reactionaries was Rome, and the fact that the temporal ruler of the Roman State was also the head of a powerful church made doubly difficult the union of the Pope's subjects to the kingdom of Italy. Of the intrigues and entanglements of the so-called "Roman question," only this can be said here—that Cavour had brought his intellect to solve it, and that there is every probability that, had he lived a little longer, it would have been solved more quickly and amicably than really happened. His views were summed up in two sentences: Rome must be the capital of Italy; there must be a free Church in a free State. With the latter words—*libera Chiesa in libero Stato*—on his lips, Cavour died on June 6, 1831, after an illness of but six days. Overwork was the cause; but his death might perhaps have been averted by proper medical treatment, for the Turinese doctors still clung to the mediæval expedient of blood-letting for every malady. When the end was near, his old friend, Father Giacomo, was summoned and he received the last sacrament. "I wish the good people of Turin to know," he said, "that I die like a good Christian. I am tranquil; I have never done harm to any one."

Of Signor Chiala's work little need be said. It is not complete because many letters of Cavour—although their existence is known—are not embraced in these four volumes, and not all the letters in this collection are as complete as they should be. It is an obvious mistake to leave out sentences or paragraphs which have already appeared in other books, because the great value of a work of this kind is largely due to its accuracy. But there are here more than 1,100 letters to furnish the foundation for an adequate biography of the great Italian statesman.

Fresh Fields. By John Burroughs. Boston: Houghton, Mifflin & Co.

Mr. Burroughs presents in literature the curious spectacle of a man actively engaged in the annihilation of his own literary theories. When he discourses of books in the abstract he finds nothing respectable but a certain untamed vigor, and nothing so unworthy as a man who tries to write good English. He is like those frontiersmen who sneer at every one wearing "a boiled shirt"; or like that delightful Irishman in the old novel of 'Cherubina, or the Heroine,' who once had a hated rival with a pair of clean white hands—"which I verily believe," quoth Pat, "he washed every day of his life." Give Mr. Burroughs Carlyle in his worst-tempered moods, or Walt Whitman *in puris naturalibus*, and he can recognize a man. It is the constant burden of his complaint that people are coming to write too well, and that we may yet attain to as light and fine a touch as if we were no better than Frenchmen. In some ways he formerly lived up to this; left his sentences at loose ends, and ventured sometimes—in a description of Parisian social conveniences, for instance—upon passages nearly as unpresentable as the franker utterances of his favorite poet. Thus far his theory; but in practice, how changed! He is writing better and better, according to the ordinary, debasing standards; he avoids, like *Bunthorne* himself, all that could "bring a blush to the cheek of innocence"; and there is serious danger of his being tempted at last into the very broadcloth and kid gloves of literature.

The simple truth is, that his theory was foredoomed to failure from the beginning. He was like the mountain guide who looks with contempt on the well-dressed frame of the artist or the *savant* who employs him; and finds to his dismay that the man of the studio or the laboratory takes him to heights that he had deemed inaccessible. He was like the philosophers who maintained so long that the civilized man was smaller, weaker, and shorter-lived than the savage, until inexorable statistics showed the balance to be the other way. Mr. Burroughs has held—and probably still holds in the abstract—to the noble-savage theory. The trouble is that it always involved him in contradictions. It defeated itself; and though he may still hold it in the abstract, he has abandoned it in practice. No man can make literature his profession without learning at last to feel some respect for the sense of form and beauty; and there is great danger that Mr. Burroughs, in spite of himself, may yet join the despicable army of good writers.

No doubt there remain, here and there, even in this book, phrases which belong to an earlier and cruder style, such as, "They were tame indeed in comparison with such rock scenery *as that say at* Lake Mohunk" (p. 41); or, "And it may be said here that his wife [Carlyle's] had the same form of complaint, *and had it bad*" (p. 241)—the italics being our own. And as to the larger matters of literary execution, we find in his long essay on Carlyle, entitled "In Cheyne Row," a great deal of what would ordinarily be called diffuseness and repetition. That those seventy pages could have been profitably condensed into twenty, is our firm conviction; and all the more as he has elsewhere in the volume given us thirty pages more on the same theme, entitled "In Carlyle's Country." As usual, we like Mr. Burroughs best in his outdoor life; and he has never made keener or fresher observations, or uttered better aphorisms, than in this volume. In his pages we miss some traits of the English landscape that are usually very impressive to Americans—the ivy-mantled trees, for instance, in the woods, and the delicious scent of the bean-blossom on farms. In some instances Mr. Burroughs betrays that hastiness of generalization and comparison which has so often involved him in controversy, and which reached its climax when he asserted that Lowell did not know the difference between dandelions and buttercups on his own lawn. Thus, in this volume, he says that in America there would not be seen, as in England, "a garden of ships and of turnips side by side: haymakers and shipbuilders in adjoining fields" (p. 8)—whereas this is the precise combination that charms the eye along the Maine coast, wherever shipbuilding still flourishes, as at Camden: you see the bow of a new three-masted schooner running up into a farmer's kitchen-garden. But there is not much in this book of that "fury of personality," in Emerson's phrase, which sometimes comes out in Mr. Burroughs; and if there were more of it, we could still pardon the offence, in view of some of the many capital phrases and condensed epigrams that he gives us. When he says that "England is like a seat in the chimney-corner" (p. 30), or "Even in rugged Scotland nature is scarcely wilder than a mountain sheep" (p. 27), or "One does not seem really to have got out of doors till he goes to sea" (p. 289), he says things which nobody else has said so well, and which nobody else is ever likely to say better.

Farrow's Military Encyclopœdia: a Dictionary of Military Knowledge. Illustrated with maps and about three thousand wood engravings. By Edward S. Farrow, U. S. Army. Vol. I. Published by the Author at No. 240 Broadway, N. Y.

This book, according to the preface, is not "a mere collection of elaborate treatises, but a work to be readily consulted as a dictionary on every military subject." Neither the great heroes of military history, however, nor the more famous battles, are embraced in the scheme, while *antimony, algebra, air-compressors, bricks, carpentry, engines, electricity, furnaces, force,* and like "military" topics are freely admitted. The compiler's sense of proportion may be judged from the fact that *batteries* occupy but one page, *barometers* two and a half; *cavalry* one and a half, *Chinook-jargon* three; *Emery's testing machine* three and a half, *endurance of guns* one. *Files* and *firearms* have each two pages. The easy method adopted for giving a military tenor to certain subjects, and, we suppose, thereby justifying their insertion in a military work, is shown by the following amusing definitions: "Algebra is a branch of pure mathematics much used in the solutions of problems of gunnery." "Calculus is a branch of mathematics which commands by a general method the most difficult problems in gunnery and physics."

The preface also announces that "the several topics are not treated with a view to the technical instruction of those who have to make a special study of particular branches of military knowledge or art"; yet in the next paragraph we learn that "the description and illustration of more than five hundred varieties of gun-machinery, steam-hammers, cranes, etc., constitute a novel feature of the work, to be appreciated by those wishing to investigate the subject of construction, testing, etc." A little further on it is added: "A description of *all* tools and machines found commonly in workshops may prove acceptable to departmental officers on their first going to Government manufacturing establishments." Although not "technical," the Dictionary aims to be "scientifically correct," and it is said that "the scientific department is treated in the most *effulgent* manner." Our astonishment, therefore, continues to increase as we look into the contents. The book bears date "West Point, 1885," and the author appears to have been on duty there in the Tactical Department; yet under *cadet* he gives for the oath of admission one no longer required. The method described

for the simplest analysis of gunpowder is hopele sly confused and unintelligible to those not already familiar with it. In referring to the pressures of exploded gunpowder, Lieutenant Farrow gives Rumford's formula and speaks of the "recent experiments" of Rodman (made in 1857-9), while he makes no mention of the formula now in use, and ignores the much more recent experiments of Bertholet, Abel, and Nobel. After such ignorance of subjects strictly within his profession, we are still hardly prepared for what follows. Under the head *dynamo machine*, we find the astonishing statement that "Oersted in 1820 proved the *identity* of electricity and magnetism." With a knowledge of this identity, we are not surprised that the author has settled the question of the superiority of dynamo machines for arc-lighting. He pronounces in favor of a machine not figured at all in recent standard works on electricity, and of a company which is little heard of in this country. In the description of arc-lamps no allusion is made to the methods almost entirely used in this country for regulating the carbons, Foucault's being the only regulator referred to. The description of incandescent lamps is very meagre and not exact.

Since the scientific department is treated in such an "effulgent manner," and it is especially stated that "the changes of nomenclature and notation in the science of chemistry which have occurred during the progress of the work are duly noted," we add a few illustrations from this branch. Under *acids* are repeated the obsolete distinctions of thirty years ago, with the closing remark that "a new view is beginning to prevail"; in illustrating the "new view" the formulas for water and sulphuric acid are given as OH and SO_4 H. Under *aluminium* we read, "On the whole, considering its valuable properties, this metal has not received such extensive application in the arts as might have been expected." The immense efforts which have been made to render aluminium available for general use are thus calmly ignored. *Ammonia* is defined as a compound of N, H, and O. *Asphalt*, we are laconically told, "is used for ships bottoms." Under the *binary theory* sodium sulphate is formulated, $Na\,SO_4$. Under *copper*, equivalent and atomic weights are confused, as also under *electrolysis*. We might continue these examples indefinitely.

The bulk of the book seems to have been compiled, with but little regard to the promise of the preface, out of the material most accessible. It is much to be regretted that initials were not attached to the alleged 5,000 original articles said to have been prepared by specialists at home and abroad, and that the names of the specialists are nowhere given. The 3,000 illustrations embrace full pages of bolts, files, and the ordinary woodcuts of old text-books. The system of cross references appears to be a means of introducing a larger number of subjects and avoiding the labor of selecting what could properly come under a single head.

The Divine Origin of Christianity, indicated by its historical effects. By Richard S. Storrs, D.D., LL.D. 1 vol. 8vo. A. D. F. Randolph & Co.

It is not easy to understand the *raison d'être* of this work. In his prefatory note, Dr. Storrs asserts that it is as useless to present arguments to those who deny the possibility of Revelation as to communicate philosophical speculations to dogs. In his first lecture (p. 13) he further tells us, "that only by spiritual experiment of the Gospel can man be assured of its Divine origin, as ultimately proved by its Divine energy." If, therefore, external evidence and argument are useless alike to the believer and the unbeliever, one is somewhat at a loss to appreciate the motive which has led the eloquent author to bestow on us this portly volume of nearly seven hundred pages, or to guess for whose benefit his labors are undertaken.

The fundamental difficulty which lies at the basis of all such attempts is, that every writer assumes his own individual conception of Christianity to be that which Christ came on earth to reveal to man. To Dr. Storrs, we presume, the faith of three-quarters of Christendom is a travesty of Christianity, in which the ethical precepts of the Gospels and the dogmas of the Pauline Epistles have been used, with more or less intention, as a basis on which to erect a system enabling a hierarchy to gain power and wealth from the superstition of the masses. Now when any one assumes that he is able to declare the purpose of God, and to point out how that purpose has wrought its fulfilment, he must deduce his arguments from the totality of results and not from a narrow and self-limited circle. Notwithstanding the marvellous expansion of European civilization within the last two or three centuries, Christendom embraces to-day only about one-third of the human race. Latin Christianity is the faith of probably a majority of Christians. In Latin Christianity the two events of chief religious significance in our day have been the settlement of century-old quarrels by the adoption of the dogmas of the Immaculate Conception of the Virgin and of the Infallibility of the Pope, thus carrying the Catholic Church still further from Gospel simplicity. Similarly, the only sect of Christians who really profess to practise the precepts of Christ—the Society of Friends—is not only one of the smallest but is daily growing smaller. Moreover, the missionary work of Islam is to-day obtaining more converts to Allah than that of Christendom to Christ. Evidently, the time in which Dr. Storrs's conception of Christianity is to become the universal religion is yet far off. We take for granted that "its perfect contemplated supremacy in the world," which is to create a "society as pure as the Sermon on the Mount" (p. 326), refers to the expected supremacy of Dr. Storrs's own church. If it should happen that either the Latin or Greek churches should obtain such supremacy, believers such as Dr. Storrs would be suppressed by Pope or Tzar with the scantiest possible ceremony.

That the world owes an enormous debt to Christianity and to its Founder no thoughtful student of history will deny; that society will in the future grow purer and better we may reverently hope; but nothing is to be gained by shutting our eyes to facts, or by drawing from them distorted conclusions which give us false views as to the past and mislead us as to the future. The fallacy of the *post hoc ergo propter hoc* line of argument which furnishes Doctor Storrs with his material, is easily demonstrated by the facility with which it can be made to prove any required theorem. If Dr. Storrs, for instance, desired to show that Christ was really Satan in disguise, and that Christianity was the exaltation of the power of evil, he could readily point out that when the new religion made its appearance the civilized world enjoyed universal peace and prosperity, and that persecution for opinion's sake was virtually unknown. Then he would draw a hideous sketch of the civilized world after Christianity had been dominant for a thousand years, and had erected a theocratic structure in which the ministers of Christ controlled the life of every man to a degree of which there had been no previous example. In place of the *pax Romana* he would picture to us war in its most horrid form, ubiquitous and universal—between factions in cities, between neighboring towns, between every petty noble and his rival, and between jealous nations, while free companies of brigands ravaged the fairest lands of Europe, and wretched peasants ever and anon arose against their oppressors. In place of religious toleration, moreover, he would exhibit to us the sight of hundreds of virtuous men and women burnt alive simply because they desired to worship in their own way the Author of Good. The fallacy of such an argument need not, we hope, be explained to Dr. Storrs, and yet it is the same as his own. We cheerfully, therefore, admit with him the futility of the whole attempt.

The Ancient Coptic Churches of Egypt. By Alfred J. Butler, M.A., F.S.A., Fellow of Brasenose College, Oxford. 2 vols. Oxford: At the Clarendon Press. 1884.

Mr. Butler has taken up a subject which has not been consecutively treated before—the antiquities of the old Christian churches of Egypt. The monasteries of the Natrun Valley, it is true, have been described more than once, and are known to English readers by the account of them in Curzon's 'Monasteries of the Levant.' The Church of St. Sergius (Abu Sergeh, or, as Mr. Butler writes it, St. Sargah) and one or two other churches in Old Cairo are noticed in our guide-books. The voluminous French 'Description de l'Égypte,' and the writings of a few travellers—Denon, Pococke, Brugsch, Gau—have given us scattered notes, more or less exact, of the most conspicuous Christian buildings dotted along the valley of the Nile. Yet we know very little of this architecture. The overpowering importance of the remains of pre-Christian art in Egypt, the only art that is commonly thought of as Egyptian; the splendor of the Arabian architecture; the political and social obscurity of the Copts; the purposed inconspicuousness of their churches, hidden from persecution like the nests of field-mice—all these things have diverted the attention of the world from the relics of what is the most archaic, if not the most venerable, of the churches of Christendom.

Mr. Butler's study of the neglected Coptic churches in and near Cairo is therefore essentially a new thing. He has many exceptional qualifications for the work. He is apparently at home in the Arabic and Coptic tongues. He is a well-trained scholar, and has the energy and persistence which belong to his race. One can but admire the persuasive power which, backed, as he says, by politeness and piastres, carried him through obstacles and opposition that would have blocked most travellers. He is a close observer, and has the true antiquarian instinct as well as an unusual faculty of clear statement. In view of this excellent equipment, the reader would fain forget the disqualification with which, as Mr. Butler frankly confesses, he undertook his work—the lack of special knowledge of architecture or ecclesiology. Fortunately he is too much the scholar to content himself with the loose record that usually satisfies the amateur investigator. His book is a foundation for study, a collection of facts from which he does not assume to have deduced the historical conclusions. He goes through the chief Coptic churches of Lower Egypt with minute observation and with every appearance of accuracy. The first of his two handsome volumes treats of the architecture of the churches, and is illustrated with plans. These, excellent as far as they go, make us wish for such other drawings as should give a fuller idea of the structure and architecture of the buildings. Exteriors the churches cannot be said to have; for they are either built about with houses or nestled within lofty walls raised as a necessary protection against Arab plunderers. This also makes them dark, so that it is probably impossible to photograph them; and it was hardly to be expected that any one but an archi-

tect would provide the sections and detailed drawings that are necessary to represent them fully, and answer the many questions that come into the reader's mind as he examines the plans. The second volume is filled with a minute study of the church furniture, vestments, and ritual, more adequately illustrated, and described with the zeal of an antiquary.

But the most observant habit will not replace the sympathetic eye of the specialist, and the reader finds himself wishing that the author had an architect's training. It is not an easy problem, at the best, to trace out the threads of various influence that are woven into the early Christian art of Egypt. The country was as much the meeting-ground of different styles as was Cyprus in the early period of classic art. Byzantine, Syrian, Latin, Arabian influences have worked with whatever native tendencies remained active; and the result, apparently simple enough in its forms, is complex in its character. The fact that the Copts have used the churches and their belongings continuously for ten or fifteen centuries has necessarily, and in spite of their conservatism, complicated the matter by introducing many changes, unrecorded, and not explicable in their isolation by the light of the history of other architecture. We may be thankful to Mr. Butler for what he has given us, and for its good quality, without complaining that he did not give what he did not have or assume to have. We may feel confident that what he has done will not need to be done again, like the work of some less careful explorers who have preceded him, and hope that specialists may be attracted to complete what is so well begun. The work is undertaken none too soon; for (by Mr. Butler's story) age, neglect, and more destructive restoration are doing their best to disfigure and destroy what remains, while the poverty and cupidity of the priests second too well the efforts of English and other lawless curiosity-hunters to strip the churches of whatever can be carried away, even their doors.

Les Anciennes Villes du Nouveau Monde. Voyages d'Exploration au Mexique et dans l'Amérique centrale. Par Désiré Charnay. Paris: Hachette et Cie.; New York: F. W. Christern. 1885. 4to, pp. 469. 214 gravures et 19 cartes ou plans.

THIS is not Mr. Charnay's first appearance in the field of American archæology, neither, we are happy to say, is it to be his last. Some twenty years ago he made a similar venture, and though the volume which he then published can hardly be called a success, yet the views which accompanied it are among the best representations we have of the deserted "cities" of Mexico and Central America. Since then it has been his rare good fortune to make a second visit to these same regions, and, in the present elaborate work, he gives us a very satisfactory account of these ruins, together with certain conclusions as to their "unity and modernity," which would commend themselves to our acceptance by reason of their simplicity and probability, even if there were not other evidence of their truth. As a matter of fact, however, there is no lack of such evidence; and while we may not always agree with Mr. Charnay in his speculations as to the use or uses for which these buildings were originally intended, we are very sure that there are few who will follow him in the comparison which he institutes between the architectural methods that prevailed in Mexico and in Central America, or who will study these ruins in the light of history, but will be ready to admit that they are "relatively modern," and that they belong to one and the same stage of development.

This our author calls "Toltec," and the term would be unobjectionable if, instead of being used to designate a particular people, it were intended to be merely descriptive of a certain phase of civilization. Such, however, is not the case, for we are given to understand that all these ruined pueblos were the work of the identical tribe or tribes which built Tula, Teotihuacan, and other places in and around the valley of Mexico, and which are supposed to have been driven thence some time during the eleventh or twelfth century, and to have moved southward, carrying with them their arts, their industries, and their religious culture. This, of course, is not impossible, but the myths and traditions upon which our author depends to support this theory do not afford adequate evidence, "historical" or otherwise, of the fact; and the similarity in the sculptures and in the architecture, while it indicates a parity of development in the people who built Tula, Palenqué, Uxmal, etc., does not necessarily carry with it any inference as to the tribe or family to which they belonged. Admit that the nations or confederacies which held these regions at the time of the conquest had reached about the same stage of progress, as was unquestionably the case with the tribes that lived east of the Mississippi and south of the St. Lawrence and the lakes, and these ruins can be satisfactorily accounted for without the intervention of a *deus ex machina* in the shape of a band of civilization-bearing fugitives.

Who these Toltecs were, and what their civilization, are questions which our author proposes to take up at some future time. Meanwhile he assures us that they were Nahuas, and that they came from the eastern part of Asia. To the first of these propositions we do not object, and it is possible that the second is also true, though this would depend somewhat on the sense in which it is to be taken; but when we are told that these people "had nothing in common with the autochthonous populations [*sic*] of America," it is time to call a halt. Not only do we not admit this, but we hold the very reverse to be true; and while we are willing to concede that this "Toltec" civilization may have been colored by Asiatic influences, we think it would be a grave mistake to suppose, as our author apparently does, that it is a sort of mosaic, made up of elements (*souvenir*) contributed by "the tribes of the Antilles on one side, and by the Polynesians, Chinese, Japanese, and Malays on the other." Resemblances there may have been and probably were, but derivation is such a different matter that, when called on to admit it, we prefer to await the result of the future investigations which we are promised.

During the course of this visit Mr. Charnay made certain explorations at Tula and Teotihuacan, which convinced him that the method of building and the style of ornamentation that prevailed at these two sites did not differ materially from those which existed in regions further to the south and east; and this opinion was confirmed by his explorations at Lorillard City, a ruin in Guatemala which he was the first to visit and describe. Of these places, as well as of the widely-known deserted pueblos of Chichen Itza, Palenqué, etc., his accounts are very full and explicit; and they are, withal, so profusely illustrated by maps, plans, and engravings, as to make it an easy task to follow him in the effort to trace the resemblances which exist in the sculptures and in the architecture of these different localities. That a few of these illustrations—as, for instance, those on pages 49 and 427—are of a somewhat fanciful character, is perhaps true; and there can be no doubt that those personal adventures, which are repeated here in the same shape in which they were originally published some twenty years ago, might well have been omitted. But, after all, these defects are of a trivial nature; and, as they cannot possibly do any harm, we can afford to overlook them in view of all that is good in the volume.

In a few well-chosen sentences the work is dedicated to Mr. Pierre Lorillard, of New York, to whose liberality much of the success of the expedition was due.

Text-Book of Popular Astronomy for the Use of Colleges, Academies, and High-Schools. By William G. Peck, Ph.D., LL.D., Professor of Mechanics and Astronomy in Columbia College. A. S. Barnes & Co.

PROFESSOR PECK is the author of several text-books on different branches of pure and applied mathematics. They possess the common characteristic of being all short. This brevity, however, is not attained by the omission of any topics usually included in much larger treatises—nothing that the title-page leads one to expect is passed over; but no words are wasted. The definitions of technical terms are generally concise, but given with all the accuracy and clearness of which the English language seems susceptible. The illustrations are few but apt, and, having done so much, the Professor expects the teacher and pupil to do the rest. As text-books to be used under the direction of a competent teacher they are admirable. But if a student attempted to study alone one of the branches of science covered by a text-book of Professor Peck's, he would probably find it to his advantage to choose a larger book in which the same thing was presented in several different forms, in which there was greater fulness of illustration, and in which misapprehensions were more frequently anticipated and guarded against.

Professor Peck calls his work 'Popular Astronomy.' The epithet "popular" has been so often used of late years as a cover for superficiality, vagueness, and unscientific methods—in short, quackery—that it frequently excites suspicion when one sees it on the title-page. But in the case of this book such a suspicion would be entirely unfounded. It is eminently scientific, and marked by the precision and accuracy which characterize the author's other text-books. Such portions of the work as necessarily involve mathematical principles and formulæ (and they constitute but a small portion of the whole) are printed in a smaller type, and so managed that they may be passed over with as little detriment as possible by those who lack the ability or inclination to study them. The rest of the work, to which, we presume, the epithet "popular" is intended more especially to apply, contains about one-half as much as the 'Popular Astronomy' of Professor Newcomb. This more limited extent, and the desire to make the work conform to all the requirements of a text-book, render necessary the great abridgment, or entire omission, of those discussions and speculations and those historical details which, among other things, make Professor Newcomb's treatise one of the most charming of scientific works. Nevertheless, many of the chapters in Professor Peck's book will be found very interesting to the general reader, as, for instance, the chapter on comets and meteors.

Religion in England from 1800 *to* 1850. A History, with a Postscript on Subsequent Events. By John Stoughton, D.D. 2 vols. London: Hodder & Stoughton.

DR. STOUGHTON does not make his first appearance now as an ecclesiastical historian. His 'History of Religion in England,' completed a few years ago, began with the Long Parliament and ended with the eighteenth century. It was literally a voluminous production, extending through six volumes. But it received, as it de-

served, high praise from critics of whose good opinion Dr. Stoughton might be justly proud. He has not so large a canvas now as he had then, and his situations are not so interesting and dramatic; but he has made a sensible and instructive book with such material as he could command. He has evidently been a diligent and careful student of the century's ecclesiastical development, and he has arranged his narrative in a convenient and effective manner. Decidedly evangelical in his own opinions, his liberality is remarkable, and it is no easy matter to infer from his history his immediate sectarian environment, so fairly does he deal with every shade of doctrine and ecclesiastical observance. He has eyes to see a man in whatever doctrinal disguise. In point of style his only attractions are clearness and simplicity. There is no fine writing. The substance of his narration, too, is plain matter of fact. There is little penetration, no philosophy of development; he is content with obvious causes and superficial aspects. To know how differently the same facts can be presented one has but to turn to the Rev. Brooke Herford's 'Story of Religion in England,' a book written for young people, but one that an octogenarian might read with profit and delight.

Dr. Stoughton's history is not dry, but it is generally cold. His opening chapters deal with the political relations of religion, and conclude with Catholic Emancipation. He then passes to the Episcopal Church, to which five chapters are devoted. The chapter on the Presbyterians will be astonishing to many Unitarians in America, as the English Presbyterians of the century are almost all Unitarians. In his Presbyterian chapter we are all the time in Unitarian company. The Independents, to whom the next following chapter is devoted, have kept themselves more free from heresy. In short, the development of Independency (Congregationalism) and Presbyterianism in this country and in England has proceeded in opposite directions. Three chapters are allotted to the Methodists; to the Whitefield Calvinists, the Wesleyans, and New Connection a chapter each. The Hicksite heresy is the point of interest in the Quaker chapter. The chapter on Irving and his Church is especially attractive. It was Dr. Stoughton's happy fortune to know Irving personally, to hear the famous "tongues," and to receive his blessing.

The second volume treats of a variety of interesting matters: the Reform Bill, the Tractarian Movement, "Typical Churchmen," Broad Churchmen, the relations of Establishment and Dissent, efforts looking towards a closer unity of the sects, etc., etc. The New Jerusalem Church brings up the rear; not in a fashion that will suit the Swedenborgian mind. There is a "Postscript" of some fifty pages, indicating the tendency of thought and organization for the last five and thirty years.

Birds in the Bush. By Bradford Torrey. Boston: Houghton, Mifflin & Co. 12mo, pp. 300.

MR. TORREY'S little book consists of eleven essays, most of which originally saw the light in the *Atlantic Monthly*, only two of them being now for the first time published. These are "An Owl's Head Holiday" and "A Month's Music." When, a year or two since, the essays here given under the titles "On Boston Common," "Bird Songs," and "Character in Feathers," appeared, it became evident that a new "poet-naturalist" had arisen among us; one, too, who not only loved birds, but knew them "in the books" as well as in the bush, and was rarely to be caught tripping in his statements, either as regards the names or the habits of birds. Mr. Torrey's literary style is chaste and simple. As a keen and discriminating observer he is entitled to high rank as a field ornithologist, while to this he adds a happy way of telling what he sees. But a series of essays on bird-life, no matter how distinctive and delightful in their effect as read separately at intervals, are apt to seem repetitive and monotonous when read connectedly in book form, and this is to some extent the case here; yet we can but thank the author for having brought them together. The same bird appears again and again in the different papers, yet each time something new is said about it—additional traits of character are depicted, some fresh feature of song or habit, which, though the author may not have been the first to discover, he is often the first to relate. His book has, therefore, a value beyond that of a pleasant recital of what a poetic layman has found to say about the birds any one may meet with, in his daily walks in city parks or country lanes and woodlands. Of the many quotable passages, the following will serve as an indication of Mr. Torrey's style and manner of treating his subject:

"Glad as we are of the society of the goldfinches and red-polls at this time of the year, we cannot easily rid ourselves of a degree of solicitude for their comfort; especially if we chance to come upon them after sunset on some bitterly cold day, and mark with what a nervous haste they snatch here and there a seed, making the utmost of the few remaining minutes of twilight. They will go to bed hungry and cold, we think, and were surely better off in a milder clime. But, if I am to judge from my own experience, the snow buntings awaken no such emotions. Arctic explorers by instinct, they come to us only with real Arctic weather, and almost seem to be themselves a part of the snow-storm with which they arrive. . . . It gives a lively touch to the imagination to overtake these beautiful strangers in the middle of Beacon Street; particularly if one has lately been reading about them in some narrative of Siberian travel. Coming from so far, associating in flocks, with costumes so becoming and yet so unusual, they might be expected to attract universal notice, and possibly get into the newspapers. But there is a fashion about seeing; and of a thousand persons who take a Sunday promenade over the Milldam while these tourists from the North Pole are there, it is doubtful whether a dozen are aware of their presence. Birds feeding in the street? Yes, yes; English sparrows, of course; we haven't any other birds in Boston nowadays, you know."

The Social Philosophy and Religion of Comte. By Edward Caird, LL.D., Professor of Moral Philosophy in the University of Glasgow. Macmillan & Co. 1885.

THIS work originally appeared in the *Contemporary Review*, in 1879, as a series of four articles, and is now republished without material alteration. A few paragraphs have been rewritten, some verbal changes made, and a preface added. It deals mainly, though not exclusively, with the social and religious aspects of Positivism as developed in the later writings of the founder of the Religion of Humanity. The discussion of the nature and methods of the sciences contained in the 'Cours de philosophie positive' is referred to only so far as is necessary for the understanding of the social and religious reconstruction found in the 'Système de politique positive' and 'Synthèse subjective.'

Professor Caird agrees with the orthodox, or complete, Positivists in holding that there is no marked division between the earlier and later writings of Comte. He states that "the changes observable in the latter do not amount, as has sometimes been represented, to a sudden revolution, but are rather the last development of tendencies which had been gaining ground in Comte's mind as his work advanced, and gradually carrying him away from his original principles, or at least greatly modifying their first significance." He is also in harmony with the followers of Comte in regarding the later writings as more original and more important than the earlier. He is of opinion that "the ultimate interest of Comte's philosophy lies in the success or failure of this attempt of his to find a new satisfaction for those higher wants of humanity which Theology and Metaphysic, or, as I should prefer to say, Religion and Philosophy, have so long been supposed to satisfy." He endeavors to show that Comte's philosophy fails to furnish mankind with such a satisfaction. The novelty which he claims for his criticism is that it "seeks to show that the true synthesis of philosophy must be objective as well as subjective, and that there can be no religion of Humanity which is not also a religion of God. And this means that it is logically impossible to go beyond the merely individualistic point of view with which Comte started, except on the assumption that the intelligence of man is, or involves, a universal principle of knowledge."

Professor Caird, while seeking to show that Comte's system is inconsistent with itself, that his theory of historical progress is insufficient, and that his social idea is imperfect, does not fail to express his admiration for the many valuable elements in his historical and social theories. His thorough knowledge of the system he criticises is evident on every page. We have observed but a single error, and that literal. In giving an account of the schism which occurred among the orthodox Positivists in 1878, he speaks of M. Laffitte, the Director of Positivism, as "M. Lafitte." Whatever opinion may be held concerning the points discussed by Professor Caird, no one can fail to see that he has produced a valuable contribution to the study of a system which no student of sociology can afford to leave unexamined.

Society in London. By a Foreign Resident. Harper's Handy Series, No. 2.

WE do not know that 'Society in London' was prepared under the direction of the editor of the *Nouvelle Revue*, but, in any case, it is an imitation, and a very poor one, of the writings of "Count Paul Vasili." The only theory on which such a book can be justified is, that a foreigner feels at liberty to write without the reserve which various considerations impose upon the permanent members of a society, even with respect to facts generally known and anecdotes which have real humor to make them interesting, as well as the attraction common to all varieties of forbidden fruit. But 'Society in London' is not only destitute of originality or individuality of judgment on the part of the author, but his disclosures, such as they are, have not even the merit of novelty: the book reads, in fact, as if the compiler had exhausted his powers of composition in getting up the titles of the chapters, and, for the rest, had simply strung together paragraphs from the *World* and *Truth*. Judged even by the standard which the compiler would choose, the work is a failure because it is dull. Its sins against propriety are trifling compared with those of its French models, but what it gains in respectability it loses in vivacity, so that it is not even amusing.

The Man versus the State: Containing "The New Toryism," "The Coming Slavery," "The Sins of Legislators," and "The Great Political Superstitions." By Herbert Spencer. D. Appleton & Co.

MR. HERBERT SPENCER is a consistent advocate of the largest individual liberty as against state interference. His views do not substantially differ from those of Mill in his 'Essay on Liberty'; but he has invented a number of new and ingenious arguments to fortify the position of those who think that democracy tends to sap the foundations of individualism, of character, of self-

respect, and of freedom. The history of mankind is the history of the emancipation of the individual from tyranny; and having emancipated himself from tribe, family, nobles, kings, emperors, and other species of despots, he now runs the risk of reënslavement by a new oppressor, a majority of his fellows. The proof of this tendency Mr. Spencer finds partly in the growth of the belief that the majority can do no wrong, and partly in a good deal of recent legislation in England interfering with the right of contract. He might have taken still more striking instances from the history of this country. The granger laws passed by the Western States and the prohibitory statutes go far beyond anything attempted in England, and the use of the caucus and of the "previous question" to stifle minorities and to rebuke individualism have been at different times marked features of American life. In fact, we doubt very much whether it may not be said that the American has, to a certain extent, lost his sense of individuality, and is conscious of himself chiefly as one of a crowd, and of his acts as parts of the general movement of society. We see the results about us of a long reign of equality and democracy, and we enjoy in perfection the tyranny of universal suffrage. As we have nothing like a crown or aristocracy to impede us in the race, there seems nothing to prevent our reaching the goal, whatever the goal is, sooner than any one else.

The goal would appear to be some form of communism, in which the individual, his tastes, opinions, and prejudices, would be ruthlessly sacrificed to the supposed interests of the whole; and as the origin of society, property, and civilization is now known to be communal, it would seem as if the law of evolution, of which we are just beginning to get glimpses, in reality involved a vicious circle quite as bad (because apparently grounded in the laws of nature and inevitable) as any of which political pessimism has ever dreamed. Our coming slavery would be much worse than primitive communism, because that was not felt as such, while our communists really mean to impose a yoke on the individual and his recognized rights coterminous with that of territorial sovereignty, and from which he cannot free himself except by death, or at best by expatriation to some country which has not reached the communistic stage. If such a tendency as this exists, it exists everywhere in the modern world, and the inference is that our descendants with a taste for old-fashioned "individualism" will see civilization, or what remains of it, finally snuffed out in the garish light of the new communistic era.

There are one or two criticisms upon this gloomy outlook which do not seem to have occurred to Mr. Spencer. One is that human knowledge is not yet in such a state that we are able to predict the general course of civilization. We may see a tendency, and complain of it, and resist it, and do our best to counteract it; but that the general sum of all the tendencies of the age is toward the suppression of the individual, or the extinction of individualism by means of democracy or equality, must be open to question. A few years ago it was generally believed that mankind was tending toward an era of universal peace. Who believes it now? Again, we know that history thus far has been marked by the steady increase of individuality, of private right, of liberty, and at the same time by the growth of law, of government, and of territorial sovereignty. Nobody has proved, and we doubt if anybody can prove in the present state of science, what the general resultant of the social forces now at work is to be. Another thing which Mr. Spencer leaves out of view is that a great deal of the "tyranny of the majority," of which people complain, has nothing to do with majorities or minorities at all, but is the outcry, in the midst of increasing materialism, of sensitive, refined, educated people against the materialist tendencies of our day and generation. What angers them is not that their fellows are not individual, so much as that their individualism is repulsive. There are any quantity of railroad kings, bosses, and other types who have individuality enough, but their individuality marks a period engrossed in material pursuits and forgetful of higher interests. But we know perfectly well that one of the fundamental doctrines of political economy is that the basis of the highest civilization is, and must be, the accumulation of wealth by uncivilized people.

Equal political rights, or universal suffrage, is a mere governmental device, which cannot *produce* equality. If we can imagine all individuals to be equally good, just, and powerful, there would not only be much to be said for communism, but communism would probably seem, as it originally did in primitive communities, like an ultimate fact of nature. But as civilization and progress tend perpetually to produce inequalities, and the stronger, wiser, and more prudent will always get more and more power, can a political device like equal suffrage stand in the way of this law of development? Democracy or communism is no more final than royalty, or aristocracy, or feudalism; and the only effect of pretending that "one vote is as good as another" will be that individualism in politics will take the form of corruption, as it sometimes does in this city, or "intimidation" or "influence" where government has been brought as near the communistic level as possible. There is a vast amount of aggressive individualism in this city. But that the wealth and power of the world will ever permanently pass into the hands of the ignorant and poor, is almost a contradicti n in terms. As an analysis of a temporary tendency, Mr. Herbert Spencer's book is very interesting; but we are far from thinking it a complete or adequate treatment of the subject. Indeed, it bears marks throughout of haste and superficiality, especially in the remarks on law, which show that he misunderstands Austin fundamentally.

BOOKS OF THE WEEK.

Scribner & Welford's

NEW BOOKS.

Memoirs of the Life of Colonel Hutchinson.

By his Widow, Lucy. Revised and Edited by Charles H. Firth, M.A. With Ten Etched Portraits. In two volumes, fine paper, medium 8vo, and handsome binding. $12.

To understand the history of any period, it must be studied not only in the records of public events, but also in the daily lives of individuals.

Of the many Memoirs and Autobiographies which illustrate the Civil Wars of the seventeenth century, none is more popular or entertaining than the 'Life of Colonel Hutchinson.' But though these Memoirs have passed through many editions, and their value is universally admitted, they have not yet been edited with the care and labor they deserve. In the earlier editions, the irregular and unfamiliar spelling of the original renders the book difficult for the general reader to enjoy. In the later ones the text has been modernized with more freedom than fidelity. In the present edition the spelling alone will be modernized, while the phraseology and grammatical peculiarities of the original will be carefully preserved. The most valuable of the annotations of the Rev. Julius Hutchinson will be retained, and a large number of new explanatory and illustrative notes will be added. Letters written by Colonel Hutchinson during his government of Nottingham, and other documents of interest, will be for the first time collected. A full and accurate index to the Memoirs will complete the work.

Ten newly-etched portraits of persons of whom mention is made in the text will help to render this a worthy edition of an English classic.

Lord Salisbury.

The Life and Speeches of the Marquis of Salisbury, K.G. By F. S. Pulling, M.A., Exeter College, Oxford. 2 vols., with Photogravure Portrait. Cloth, $8.40.

SCRIBNER & WELFORD, 743–745 Broadway, N. Y.

"The author of this volume," says the New York *Times*, speaking of Charles Marvin's 'THE RUSSIANS AT THE GATES OF HERAT,' "has long occupied a unique position among the authorities on the political questions of Central Asia. He has not only travelled widely and frequently in Afghanistan and the lands of the Turcoman: he has travelled and observed there for special purposes, and these purposes have been the writing of informing books and the spreading of exact knowledge among the statesmen and people of England. . . . It was altogether desirable that he should write the present volume at this time, when information about this disputed territory is so much needed and so very hard to get. The volume is a perfect mine of information."

'THE RUSSIANS AT THE GATES OF HERAT,' illustrated with portraits and maps, is now for sale at all book stores. 1 vol., 12mo, paper, 50 cents; cloth, $1.00.

STEPNIAK'S GREAT WORK.

Russia Under the Tzars.

By the author of 'Underground Russia.' 1 vol., 12mo, $1.50.

"This work gives a more complete and clearer picture of Russia than has ever been presented."—*N. Y. Commercial Advertiser.*

"The author is obviously a man of considerable intellectual attainments; . . . his use of language is easy, forcible, and at times masterly."—*N. Y. Times.*

"As a picture of contemporary Russia, all the more mordant for its studied moderation, it is a book of the first importance."—*Philadelphia Record.*

The Nation.

NEW YORK, THURSDAY, JULY 16, 1885.

The Week.

THE opinion of the Attorney-General in the *Dolphin* case is a "root-and-branch" opinion of the strongest kind. It may not be—probably is not—the last we shall hear of the case. Mr. Roach is bound either to take his claim into court, or to make restitution to the United States of the sums of money that have been paid him on the *Dolphin* contract. He will probably elect to take the former course, more especially since the Navy Department has an action against him for non-fulfilment of the contract. The Court of Claims was instituted to try such cases, and either party has the right of appeal to the Supreme Court. Therefore it may be assumed that justice will be done in the end. The position taken by the Attorney-General covers completely the point raised by Mr. Roach, that all his steps were taken at the instance and under the direction of the Naval Advisory Board. It is not in the power of the Naval Advisory Board any more than of Mr. Roach, says the Attorney-General, to go counter to the law of Congress or to fall short of it. Neither one of them can help the other to evade the law. Both are bound to know what the law is. The dereliction of the one is no excuse for the other. It is open to dispute, of course, whether the law making provision for "one despatch-boat as recommended by the Naval Advisory Board in its report of December 20, 1882," was sufficient notice to the contractor that he was to furnish a boat "with a sea-speed of fifteen knots an hour"—that being the requirement of the report, but not repeated verbally in the law. There is room for argument here pro and con, but if, through the laches of the Board or the contractor, one or both, the *Dolphin* had been found to be unfit for sea altogether, would the Government be without remedy? This is really the question which the Attorney-General answers in the negative. A sea speed of only twelve knots is practically the same thing as total unfitness, since speed was the main requisite.

The resolution adopted on Monday by fifty-four out of the sixty-three banks embraced in the Clearing-House Association, to furnish the Government $10,000,000 gold in exchange for fractional silver coin or other funds approved by the Association, and the further sum of $10,000,000 if it should become necessary, to avert the silver crisis until Congress shall have had opportunity to suspend the compulsory purchase and coinage of silver, is a wise and highly patriotic movement. It secures that concerted action among the banks which is absolutely essential to give the intended relief to the Treasury, and to enable it to continue as heretofore to give all public creditors the option of receiving such funds as they prefer—that is, gold. The co-operation of the banks in other cities is asked and will probably be given, in a common endeavor to maintain the public credit, and to keep the business of the country on a sound basis until it can be known whether Congress will afford the simple relief to the commercial and taxpaying community of stopping the expenditure of $2,000,000 per month for a metal and a coin which already exists in superabundance, and with which the Treasury is gorged to the point of distress and disaster. There is much reason to believe that this relief will be afforded. The contortions of the Hon. Mr. Warner, of Ohio, imply that he considers the position of the silverites no longer tenable. It is quite certain that a political crisis is impending, and that the Democratic party cannot count upon retaining power if it allows a financial crisis to supervene when it has in its hands the easy means of averting it by repealing or suspending the Silver Bill.

Despite many a slip, the principle of making fitness the test of appointment is steadily securing more and more general acceptance. Every such action as that of Secretary Manning's the other day, when he refused to honor the earnest request of Mr. Randall and other leading Democrats that a desirable place as chief of division be given to a Democratic worker, because he believed that the faithful Republican incumbent could do the Government better service, helps to establish the true rule. Mr. Manning gave another proof of his sincerity afterward when he restored as Superintendent of Construction of Government Buildings at New Orleans a man whom he had been persuaded to discharge, but whose service had been so faithful that the community, without distinction of party, protested against his removal. More than one of the recently appointed Collectors of Internal Revenue have found it advisable to keep the subordinates of their predecessors, in whole or in part, the new man in Rhode Island retaining the whole force. A New Hampshire correspondent of a Boston Republican organ notes the fact that the Post-office Department has decided to continue in office the Republican postmasters of two towns whose places were sought by Democrats, for the simple reason, apparently, that there was no ground for a change.

Every incident of this sort is an object-lesson both to the office-holder and to the office-seeker. It will be found that the public servants whose retention is desired by the people whom they have served, are invariably men who have not been "offensive partisans," but who have considered that they were paid their salaries for doing work that the taxpayers wanted done. Take the case of the country postmaster, as the office-holder who everywhere has most to do with the people. His proper business is to receive, sort, and distribute the mails, and to treat all patrons of the office in an accommodating and impartial manner. If he confines himself to this, and does it well, his patrons will feel no more concern about his politics than they do about the politics of the village boot-maker, and will no sooner think of asking for "a change" in the post-office because a Democrat has been elected President, than of asking for a Democratic boot-maker under the same circumstances if the old one chances to be a Republican. But if the postmaster has not stopped with the proper discharge of his duties, if he has become the electioneering agent of one political party, if he has made the Federal office really a part of the Republican machine, and treated Democratic patrons as though they had not the same rights as Republicans, one-half of the community will naturally and rightly insist that he ought to be "fired out." Unfortunately, the tendency has been exceedingly strong to develop the objectionable class of postmasters, and in the interest of common justice a great many removals ought to be made. The Administration only needs to prohibit offensive partisanship on the part of the new appointees, and within four years the absurdity of considering the question of politics at all in the great mass of appointments will be so plain that no party will dare again to champion it.

Governor Hoadly seems to have made some curious mistakes at the farewell dinner given to Judge Stallo, on his departure for Rome, in Cincinnati the other day. A number of Catholics, who believe the Pope has been robbed of his dominions by the Italian King, were asked to the dinner as a compliment to Judge Stallo, an agnostic, who is going, as an American sympathizer, to represent the United States at the Italian Court. This was blunder Number 1. The second was like unto it. "The Papacy," instead of "The Pope," was put down as one of the toasts. Anybody can drink to the Pope, who is a scholar and a gentleman, and the worthy head of a great religious organization, although laboring, as we think, under a delusion about his mundane rights. But what Protestant or non-Catholic can drink to "The Papacy" without his gorge rising? To crown all, an ardent Irish Ultramontane Temporal-Dominion Catholic was called on to respond for "The Papacy," after he had been listening to Governor Hoadly praising Garibaldi and Mazzini, and the Italian Consul ridiculing the Pope. He accordingly accused King Humbert of "theft," and generally abused the Italian monarchy, and the dinner broke up unpleasantly. Would it not be well for those Americans who for any reason have to do with Rome or Italy, to study a little recent Italian history, and get into their heads somehow what the relations between the Pope and the Italian people really are?

If any timorous Republican be still distressed by the fear that "the Confederacy is again in the saddle," he should be relieved from all apprehension upon reading the letter which Meade, the Copiah County rascal whose appointment as postmaster was so summarily revoked by the President, has sent to a New Orleans paper. Meade makes a long explanation of his conduct in the matter of the killing of Matthews two years ago, clearing himself of complicity in the act of murder, but defending his endorsement of the outrage. He declares that the action of the Pres-

ident in removing him "does not meet the approval of the people in this section, the only persons who had a right to be heard in the matter," but says that he supposes Mr. Cleveland cared little what they thought of it, "since it meets the endorsement of his Northern Republican allies." He quotes with a sneer the action of a colored Republican club in Boston which thanked the President for his course, and closes his diatribe as follows:

"This action of the President seems to be but a part of the programme he has laid out for his guidance; and if he continues as he has begun, the future historian who undertakes to write up this Democratic Administration will, I fear, often find himself in a quandary, for the course of the Administration will not at all harmonize with its title, and the unfortunate writer will be compelled to resort to the strategy of an amateur artist who once drew the picture of a horse and wrote under it, 'This is a horse,' for upon every page of his volume he will find it necessary to stamp these words: 'This was a Democratic administration.'"

All which only shows how exceptionally fortunate Mr. Cleveland still continues to be in "the enemies he has made." The abuse of the Southern bulldozer is a fit accompaniment to the howls of the Northern spoils-seeker.

It is encouraging to find that Massachusetts is at last coming to recognize Senator Hoar as the narrow-minded partisan and Bourbon politician that he is. The Boston *Transcript* hits the nail exactly on the head when, after referring to the recent letter of Meade, the deposed Postmaster of Copiah County, Miss., and to the Senator's "ill-natured fling" at the President because of his action in the matter, it says: "Hoar and Meade would seem to be nearer together than Cleveland and Meade." It only needs to be added, that the Bourbonism of Hoar is as much more discreditable than that of Meade, as the opportunities of an educated member of a highly civilized community are superior to those of a man who lives in a barbarous corner of a region which yet feels the demoralizing influences of slavery.

It has not taken long to convince the Democratic heelers that the new Collector whom the Administration has set over the New York Custom-house proposes to conduct that great office on business principles, in the interest of the taxpayers, instead of as a part of the Democratic Machine. The following brief but heartfelt paragraph from Friday's *Sun* tells the whole story:

"Yesterday was Mr. Hedden's ninth day in office as Collector of Customs. In that time he has not made a single removal or a new appointment. All that he has done has been to reappoint a number of deputies who belong to the Republican party. The Democratic workers who wanted places and have failed to get them do not feel very cheerful. Most of them when handed blank civil-service applications throw the papers away."

The Washington *Capital* has been endeavoring to learn why the clerks in the Treasury Department are the only ones required to undergo examinations for promotions. The gentleman who has been for the past fifteen years the civil-service examiner of that department, very bluntly assures it that it is because the Treasury Department observes the act of March 3, 1863 (which forms section 164 of the Revised Statutes). This section declares that "no clerk shall be appointed in any department in either of the four classes . . . until he has been examined and found qualified by a board of three examiners, to consist of the chief of the bureau or office into which such clerk is to be appointed, and two other clerks, to be selected by the head of the Department." The First Comptroller of the Treasury, it is said, decided years ago that a promotion is an "appointment" within the meaning of the above law, and it is required of each clerk, in accordance with this decision, to take the customary oath of office upon every promotion. The *Capital's* informant is of the opinion that it would be justifiable in the proper accounting officers to refuse to pay the clerks of any department who had been promoted without having been examined and found qualified. Without expressing any opinion upon this question, which involves the propriety and binding force of a construction given to the statute mentioned by the First Comptroller, we desire to add to what has been revealed by the *Capital*, that the examinations for promotion as generally conducted in the Treasury are little better than farces. Originally they were competitive, and any construction of the act of 1863 which should require examinations for promotion to be such, would be praiseworthy in its intent. But it may be doubted whether there is much reasonableness in it if—as it now in practice does—it simply requires the clerk *designated* for promotion to go through the form of an examination, and pay a quarter of a dollar to the notary in the appointment room. When a vacancy occurs in the Treasury, one who is considered the proper man for any reason to fill it is designated for promotion, and *then* examined in order to test his fitness for the place. President Cleveland and Mr. Manning will before long, doubtless, reverse this, by applying first the test of examination to all applicants to discover their fitness, and by selecting from a certain number of those standing highest the one who may seem, to the head of the bureau or office in which such vacancy exists, best qualified in all respects to discharge the duties which will devolve upon him.

The Fourth of July marked the completion of one year since the prohibitory law went into operation in Iowa. A careful review of its effect is presented by the Davenport *Democrat*, which addressed a series of comprehensive inquiries to the authorities of twenty-eight cities and large towns, and received replies from the Mayors in four-fifths of the cases and in the other fifth from the City Clerk, the City Marshal, or a trustworthy correspondent. "Is the sale of liquor openly carried on?" was answered in the affirmative by half the Mayors, including those of all the larger cities; the others say that the traffic is known to be clandestinely carried on. The whole number of saloons in operation is reported as 916, against only 770 before the law went into effect, and in most of the larger cities the increase has been marked—in Council Bluffs from 50 to 75; in Burlington from 68 to 109, and in Davenport from 130 to 150. Under the old system every large place levied a heavy license tax upon the seller, ranging as high as $1,000, which produced an annual revenue of $26,000 in Davenport and $27,000 in Burlington. Of course, no license can now be lawfully issued, but by a shameful arrangement the authorities in four cities grant licenses for the sale of "legal drinks," such as lemonade and soda water, with a clear understanding on both sides that the saloon-keepers may vend beer or whiskey. Finally, the *Democrat* asked: "From your experience in an official capacity, do you regard the repeal of the present law as advisable?" With scarcely an exception, the authorities of all the leading cities reply emphatically in the affirmative.

That intemperance would be fostered by the enactment of a prohibitory law is what was to have been expected—what was predicted by all unprejudiced judges. In some small places the Davenport investigator found that liquor-selling did not prevail, but this was not by reason of the law. It was because public sentiment frowned upon the traffic. In such places the existence of a statute upon the subject is a matter of no consequence, since the people themselves keep the business under the ban. But it is not in country villages that the evils of intemperance are most serious; it is in the large cities that drunkenness prevails. For the greater part of the State the passage of the prohibitory law was of no importance, since it was not needed and would not change the existing situation. But in cities everywhere there is imperative need of effective checks upon indiscriminate liquor-selling. Such checks did exist under the old license system, but they have now disappeared, and more saloons are in operation than before, while except in four cases the keepers pay nothing for the privilege. The four cities where the authorities are in open conspiracy with the sellers are really worse off than the rest, for no amount of revenue can compensate for such unblushing contempt of the law by those sworn to execute it.

A report made to the convocation of the Protestant Episcopal Church at its second annual session in Cheyenne a few weeks ago, upon the necessity of religious work in Wyoming, presents some facts about the Territory which are of general interest. To mention only one subject, the dimensions which the culture of live stock has already reached, in a Territory but little more than sixteen years old, are surprising. Governor Warren, himself a large investor in this industry and exceptionally well qualified to judge of its extent, estimates the number of horned cattle at 3,047,328, which, at $30 a head, are worth $91,419,840; horses, 193,725, at $60, $11,623,500; mules, 8,160, at $65, $530,400; sheep and goats, 1,636,305, at $3 unfleeced, $4,908,915; swine, 8,358, at $8, $66,864—a grand total of 4,893,876 head of live stock, valued in the aggregate at $108,549,519. One ranch devoted to the breeding of draught horses for the New York city market represents a successful investment of $500,000, and a herd of 5,000 horned cattle is not regarded as large in that region. The possibilities of this industry in Wyoming are vast, and it is steadily attracting the attention of investors. The Territory had only about 21,000 population in 1880, but the number of inhabitants now is estimated with good reason as high as 35,000.

While there is no reason to doubt that cattle-raising will continue to be profitable in Wyoming and the neighboring States and Territories, it is clear that it must soon encounter serious competition from the lower valley of the Mississippi. This region offers some great advantages over the far West—as the facts that there are no sterile and waterless wastes; that grass is so abundant and lasts so nearly the whole year round that a much greater number of cattle can be raised to the acre; that the climate is so mild that cattle can graze all the while without the heavy loss from cold always suffered in the West, and can be fattened and made ready for market much earlier in the year; that labor is cheaper; and that the district is much nearer the markets of the world. An old Nevada ranchman, who has made a thorough study of the matter, has just purchased a large tract of land for a stock farm near Blount Springs, Ala., and there is a good prospect that within a few years stock-raising will be an important industry in Alabama, Mississippi, and Louisiana.

No sign of Southern progress is more hopeful than the growth of public sentiment against the brutal system of leasing convicts. Some recent revelations of systematic cruelty in South Carolina move the Charleston *News and Courier*, the leading newspaper of the State, to demand the abolition of what it calls "this worse than Siberian system," and there is every reason to believe that the next Legislature will take this step. Indeed, it would have been done last winter but for the difficulty of providing accommodations for the convicts under lease until the addition to the penitentiary is completed, as will be the case in a few months. Georgia, otherwise the most progressive State in the South, is also awakening to the disgrace of the system. Its Legislature met last week, and Mr. Felton, an ex-Congressman, and one of the most prominent members, promptly urged the passage of a bill, which seems certain to pass, doing away with the worst evils of the chain-gang, by establishing a reformatory prison for females and juvenile convicts. General R. Brinkerhoff, of Ohio, the well-known champion of prison reform, bears hearty testimony to the evidence of progress which he noted during a recent visit to the South, declaring that everybody in South Carolina seemed delighted at the near prospect of the entire abolition of the lease system, that the same reform is bound to come in North Carolina and Virginia within a year or two, and that the change would be speedily made in Georgia, were not the State tied up by twenty-year leases entered into in 1879.

The reckless indecency of "wild Western journalism" has long been notorious. That Western newspapers should greedily seize upon the unsavory revelations of the *Pall Mall Gazette* and spread them before their readers by the page in all their disgusting detail, was therefore what every Eastern person expected. The expectation was realized as to more than one prominent newspaper in the West. But there was a conspicuous exception. The St. Louis *Globe-Democrat* joined the syndicate which ordered the mess of garbage, received the 6,000 words of noisome matter—and then suppressed the whole thing, upon the ground that no editor of any decent newspaper could "think of printing such a vile monotony of nastiness and justify himself to himself for doing it." Considering all the circumstances—the cost of the long despatch, the fact that the paper had a monopoly of the business for its city and region, the certainty that its publication would have run up the sales of the edition by tens of thousands—we do not hesitate to characterize the action of the *Globe-Democrat's* editor in throwing the matter into the waste-basket as one of the most honorable incidents in the history of American journalism. The conductors of sundry newspapers in New York, Philadelphia, and other Eastern cities, if they are not lost to all sense of shame, must feel the force of such a stinging rebuke as this from "the wild West."

The financial condition of Canada is already very serious and seems bound to grow worse. On the first of June the actual debt was $258,000,000; and of the $40,000,000 which the Government proposes to borrow, only about $16,000,000 will be used to pay off the floating debt, and the remainder will increase the funded debt to $282,000,000—which is nearly $60 for every man, woman, and child in the country. Taking the difference in population into account this is equivalent to a debt of $3,500,000,000 in the United States; and, making due allowance for the difference between the two countries in wealth, the Toronto *Globe* probably makes a fair estimate in calling it equal to a debt of five or six thousand millions in the United States—say double what our national debt was at its highest point in 1866, when it stood at $2,773,236,173. Two-thirds of this vast debt has been incurred since confederation was brought about in 1867, the enormous payments on the Canadian Pacific Railroad account having been largely responsible; and the annual revenues fall below the expenditures, so that the debt is steadily growing. A worse advertisement for a nation which is seeking immigrants could not be found than the balance-sheet of the Dominion Government to-day.

The telegraphic despatches sent to the Associated Press relative to the recent financial operations of the Mexican Government were somewhat confused, and, in minor particulars, inexact. They appear to have emanated from an American newspaper published in Mexico, and to have stated for fact what was but rumor. For instance, the statements in reference to the sale of the Government's stock of nickel coin, and the new basis of arranging the English debt, are denied by the official organ of the Administration. It is to be said, however, that the fuller and clearer accounts of the law of June 22, brought by mail, do not lessen wonder at the grave violations of good faith and the peril to the national credit which that measure involves. It is entitled a law for the consolidation of the floating debt, yet made to apply only to debts incurred since 1881. Whether debts contracted before that date are to be repudiated or to be "arranged," does not appear. The Government certificates given to the National Bank and to the railroads, and receivable at the Custom-house in payment of duties, are robbed of all value, practically, as they are now good for nothing but to exchange for bonds running for twenty-five years at 6 per cent. If, as is openly alleged, the Government made haste to dispose of several thousand dollars' worth of these certificates to importers, on the very eve of the promulgation of the new law, the disgrace attaching to the transaction is deepened. There will be some curiosity to see what price this new issue of bonds will bring, when it is put upon the market. No surer or more solemn guarantee can be given for the payment of these obligations than was pledged in the case of those which have just been nullified. It is said that the officials of the Central and National Railroads propose to invoke diplomatic interference on the part of the United States. Long ago it was foreseen and predicted that in some such way Mexico might find the investment of American capital in the railroads which she so eagerly welcomed, a source of serious international complications.

Ireland has attracted a great deal of attention during the last fifty years, for the number of assassinations which occur in it for reasons unconnected with robbery, and the British Legislature devotes a considerable portion of its time to contriving means of stopping them. But Ireland, as a homicidal region, has never come anywhere near some States of this Union, and especially Kentucky. It is no exaggeration to say that in every year as many murders and murderous outrages occur in one county of Kentucky as have occurred in the whole of Ireland in any two of the worst years. In fact, in some counties, Rowan County in particular, civil war—and not civilized warfare either—is always raging. It is raging in Rowan County now. Fifteen men were there lately besieged in a barn without food or water, and the attacking force declared its intention to murder them as soon as they were forced to surrender. Whole families are exterminated in these contests, and the Sheriff is apt to be a prominent actor on one side or the other. There are scores of Kentuckians, in fact, who may be called professional murderers—that is, who follow murder as a calling, and do not follow it secretly either. The Louisville *Courier-Journal* recently lamented this state of things and explained it. It is due, it said partly, to the counties being too independent, and partly to their being too small. It thus sometimes happens that the bulk of the inhabitants of a county, including the law officers, rather like murder. It is their theatre, and opera, and museum, and library, and concert hall, and park, and in fact their "Yurrup." When a man feels jaded and nervous and overworked, he takes his shot gun or rifle and revives a "family feud" by taking a shot at a neighbor, or by going to the court-house and warning the judge to "let up" on a prisoner. The Governor of the State looks on at all this in much the same state of mind as the Emperor Francis Joseph or Queen Victoria, interested, amused, and sometimes horrified, but quite powerless.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, July 8, to TUESDAY, July 14, 1885, inclusive.]

DOMESTIC.

THE President has appointed Colonel John Gibbon, of the Seventh Infantry, to be a brigadier-general of the army, vice General C. C. Augur retired on Friday.

The Governor of Kansas on Thursday made a strong appeal to the Secretary of War for the protection of the Kansas border from Indian raids by an adequate body of Federal troops.

The Secretary of War on Thursday directed Lieutenant-General Sheridan to take immediate steps toward the concentration of all troops, that they may be available in case of Indian disturbances in the West.

General Sheridan left Washington on Friday night for Fort Reno, Indian Territory, after receiving the following letter from President Cleveland: "In view of the possible disturbances that may occur among the Indians now in the Indian Territory, and the contemplated concentration of troops in that locality, I deem it desirable that you proceed at once to the location where trouble is to be apprehended, and advise with and direct those in command as to the steps to be taken to prevent disorder and depredations by the Indians, and as to the disposition of the troops. Your acquaintance with the history and the habits and customs of these Indians leads me also to request that you invite statements on their part as to any real or fancied injury or injustice toward them, or any other causes that may have led to discontent, and inform yourself generally as to their condition. You are justified in assuring them that any cause of complaint will be fully examined by the authorities here, and if wrongs exist they shall be remedied. I think I hardly need add that they must be fully assured of the determination on the part of the Government to enforce their peaceful conduct, and by all the power it has at hand to prevent and punish acts of lawlessness and any outrages upon our settlers."

Secretary Endicott on Saturday ordered three regiments of cavalry and the Fourth Infantry, making a total force of nearly 3,000 men, to proceed at once to the vicinity of Fort Reno, Indian Territory, from their present stations in the Departments of Texas and the Platte. This will make a force of about 4,000 men in the Territory.

The War Department on Monday was in receipt of despatches from the Indian Territory which say that the disaffected Indians are becoming quiet, and that there is a favorable outlook for the settlement of the difficulties.

Attorney-General Garland has rendered a decision on the three points relative to the acceptance of the *Dolphin* by the Government submitted to him by Secretary Whitney. He holds that the vessel cannot be accepted by the Secretary of the Navy, that no contract exists between Mr. John Roach and the Government, and that the large sums of money paid to Mr. Roach for the vessel may be recovered.

Secretary Whitney purposes effecting an entire reorganization of the nine Government Navy-yards not later than next fall. An investigation looking to this end has been in progress for some weeks. He sent on Saturday an order to Captain Kirkland, of the New York Navy-yard, providing for the appointment of a board to conduct the examinations of persons applying for appointment to the various foremanships in the yard. Accompanying the order is a letter in which the Secretary says: "The examination is for the purpose of sifting the applicants and getting out those who should be fairly considered. The antecedents and the amount of experience of each man, where he has worked, and in what capacity, you will, of course, ascertain in each case. In important cases, if I am in doubt, I will endeavor to have personal interviews with the most likely candidates. It is idle to expect liberal appropriations for Navy-yard work unless a great change is made in this respect. You will treat all foremanships of skilled labor as vacant and allow all present incumbents to compete. I desire, however, a new force, and, except for very good cause and an exceptional record in the Navy-yard, I shall not appoint a foreman whose habits have been formed through Navy-yard work of recent years."

Secretary Manning has taken as effective measures toward a reorganization of the customs service as those which the Treasury Commission proposed for the internal-revenue service. Besides a special commission appointed to investigate the service at New York, Philadelphia, Boston, and Baltimore, he has instructed the special agents at all points where custom-houses are located to conduct searching inquiries with special reference to a reduction of the force and expenses. These reports are already beginning to come in, and the dismissals recommended will follow very promptly. It is roughly estimated that a reduction of 20 per cent. of the total force engaged in the collection of customs is contemplated, and that Secretary Manning believes that such a reduction will increase the efficiency of the service.

Secretary Manning on Thursday gave orders to the Collector at this port to allow any steamship company to land its passengers and baggage at its own docks. This will result in the abolishment of the Barge Office.

An important meeting of New York bank officers was held at the Clearing-house in this city on Monday afternoon, to confer with Conrad N. Jordan, United States Treasurer, and Henry W. Cannon, Comptroller of the Currency, in regard to the present scarcity of gold in the United States Treasury as compared with the large surplus of silver. The result of the conference was the unanimous adoption of a resolution: "That to avert this threatened danger, and in the confident belief that Congress will take early steps to prevent the deterioration of the present commercial standard of value, the banks hereby tender to the Government from their gold reserves the sum of $10,000,000 in exchange for that amount in fractional silver coin, or for such other currency as the Clearing-house Committee may approve; the same to be apportioned among the banks in the Clearing-house respectively, pro rata of their deposits, and gold reserve." It was also resolved that $10,000,000 more, if necessary, should be tendered to the Government.

United States Minister Foster has suspended the negotiations with Spain concerning the proposed new commercial treaty with the United States.

The papers in Madrid announce that Baron Blanc, the Italian Minister, has awarded Captain Blanchard, an American citizen, $51,600 on account of the ship *Masonic*. The case was submitted last month to Baron Blanc's arbitration by the Spanish Government and the American Minister, and Mr. Foster has scored a diplomatic triumph in quickly settling an affair twice referred to in Presidents' messages since 1878. Two thousand six hundred dollars more were awarded than was claimed. The *Masonic* was bound from New York to Japan with petroleum. Being driven into the Spanish port of Manila by an accident which forced the reshipment of the cargo, she was seized, fined, and sold for alleged smuggling. Spain has heretofore refused to reimburse her owners.

Land Commissioner Sparks has rendered an important decision, affirming the right of entry, under the public land laws and the decisions of the Supreme Court of the United States, to lands heretofore withdrawn by the voluntary action of the General Land Office for railroad indemnity purposes, where no requirements of law existed for making such withdrawals. The effect of this decision, if sustained by the Secretary of the Interior, will be to restore to entry under the Homestead and other laws many million acres of public lands which have been kept out of market for many years because claimed by railroad corporations.

The Pacific Mail Steamship Company intend to withdraw their steamers from the line between San Francisco and Australia on November 1. Their contract with the Australian colonies expires on that date, and the Colonial Government declares that it will not renew the contract by which they pay the steamship company a subsidy unless the United States agree to pay a portion of it. The recent decision of Postmaster-General Vilas not to use any part of the $400,000 appropriated by the last Congress to assist in the transportation of the mails, it is said, determined the Pacific Mail Steamship Company to pursue this course of action.

The plant and all the movable property of the World's Exposition at New Orleans were sold at auction on Monday to the new North Central and South American Exposition Company for $175,000. This sum, added to the amount appropriated by the Government, will be enough to pay all the existing debts of the old company except the sums loaned by the Federal, State, and city governments. The buildings probably cost ten times the amount now paid. The work of putting the buildings and grounds in order for the opening of next winter's exhibition will begin at once.

The Galveston (Tex.) *News*, reviewing the crop prospects of that State, says: "The outlook is most assuring, the cotton yield of the State for the coming year being variously estimated upon the present basis of the crop prospects at from 1,500,000 to 1,800,000 bales. With no untoward disaster to the cotton crop, the State is on the eve of the grandest period of agricultural prosperity which she has ever enjoyed. The commercial and general business situation may naturally be expected to sympathize with this prosperity."

Great storms and tornadoes prevailed in Minnesota, Wisconsin, and Iowa on Wednesday, doing considerable damage to property and crops.

The Pennsylvania Republican State Convention on Wednesday carried out the Machine programme, and nominated Colonel M. S. Quay, the well-known boss, for State Treasurer—the only State officer to be voted for this fall. Quay is fifty-two years of age. In 1863 Governor Curtin appointed him to the office of Military Secretary. He resigned in 1865 to accept a seat in the Legislature, where he soon showed his skill in politics. In 1867 Quay was defeated for Speaker as Governor Curtin's candidate, and this settled the Governor's fate for the Senatorship. Quay became Secretary of the Republican State Central Committee, and it was he who got R. W. Mackey elected State Treasurer. He did hard work in the Hartranft campaign, and the Governor made him Secretary of State, a position which he held till he was chosen Recorder of Philadelphia.

Among the planks of the platform is the following: "We invite public attention to the acts of the present Democratic national and State Administrations; to the unjust war of the former upon 'offensive partisans'; to its hypocritical avoidance of pledges touching the civil service; to its star chamber proceedings against Republicans, for whose removal no public reason can be given, and to its constantly disloyal preference for the rebel elements of the Democratic party at the South and the semi-rebel elements of the same party at the North."

The Indiana Democratic State Editorial Convention on Friday passed resolutions declaring it their belief that radical reform in Government affairs is only possible through the appointment to civil positions of persons in full sympathy with the Democratic party, as represented by its statesmen and leaders. A resolution was also adopted deprecating the presumption that cause should be shown for removal of Republicans from office.

Senator McPherson prints a denial of his alleged bargain with Senator Sewell, in which he

says: "These charges are supported upon the sole alleged statement of Peter H. Watson—a man who is a total stranger to myself, and whom I have never seen—who, it is said, occupied an adjoining room, and who overheard the conversation between the parties. The answer to it all is, the man who makes this statement was either crazy, an egregious liar, or grossly mistaken, the presumption being that he was the latter—at least mistaken as to the identity of one of the parties accused, and possibly as to both."

Mr. James Russell Lowell writes to the Boston *Advertiser* that his name has been used in connection with the Presidency of Cornell University without consulting him, and that he is not a candidate for that place or for any other.

The trustees of Cornell University on Monday night elected Professor Charles Kendall Adams, of Michigan University, President, by a vote of 12 to 3. A committee of the New York alumni asked in vain for a delay of a few weeks.

Professor Barnard, of the Vanderbilt University Observatory at Nashville, Tenn., discovered on the evening of July 7th a very faint comet.

Dr. Rufus H. Gilbert, projector of the elevated railroad system in this city, died on Friday, aged about fifty-five years. He was a native of Guilford, Chenango County, N. Y. The Metropolitan Elevated Road was at first known as the Gilbert Elevated Railroad, and Dr. Gilbert at one time held much of its stock. He died, however, a comparatively poor man.

FOREIGN.

The street sales of the *Pall Mall Gazette* were suppressed on Wednesday in London owing to its publication of articles on the secret vices of London.

Cardinal Manning has accepted the proposition made by the proprietors of the *Pall Mall Gazette* to submit complete proof of all its revelations, including every name and detail, to a party of responsible men, to include the Cardinal and Mr. Samuel Morley, the examiners to have the privilege of reporting to the public upon the affair as they may deem best.

In the House of Commons on Friday afternoon Mr. Albert H. G. Grey, Liberal member for South Northumberland, asked Sir Richard Assheton Cross, Home Secretary, whether he could assure the House that the Government had given orders to the police to do their utmost to suppress the abominations in London revealed by the *Pall Mall Gazette*. The Home Secretary replied that the police would use every exertion to suppress the alleged practices. The existing law, supplemented by the Criminal Law Amendment Bill, would suffice to bring to justice the perpetrators of such abominations.

Sir Richard Assheton Cross, Home Secretary, announced in the House of Commons on Tuesday afternoon that the Government had concluded that it was not advisable to prosecute the *Pall Mall Gazette*.

In the House of Commons on Thursday Sir Michael Hicks-Beach, in presenting the budget, said the Government regretted that the expenditures on account of the $55,000,000 credit exceeded the $45,000,000 to which Mr. Childers's estimate limited them. The Government proposed to issue $20,000,000 in treasury bills to cover the deficit of the past and present year. The House agreed to this proposition. The Criminal Law Amendment Bill was ordered to a third reading, and its passage insured. A leading feature of this bill is a provision to restrict the age at which a female can become a consenting party to unlawful cohabitation. The Government have appointed a Committee of Inquiry into the causes of the depression of trade. All classes of opinion will be represented.

In the House of Commons on Monday the Marquis of Hartington, ex-War Minister, referred to the intention of the late Government to evacuate the Province of Dongola, in the Sudan, and expressed a wish to know whether the present Government meant to continue the work of constructing the Nile Railway. Mr. Smith replied that the Government would not abandon the railway behind the defending force, but that it had no intention of increasing the British forces in Egypt. A bill was introduced by the Government on Monday night by which the acceptance of gratuitous medical relief will not be considered as disqualifying a voter.

A blue book has been issued in London on the evacuation of Dongola. General Wolseley telegraphed as follows to the Secretary for War: "There are some troops still in Dongola. There would be no difficulty in reoccupying the places evacuated. No frontier forces will suffice to arrest the Mahdi if our retreat be continued. The Mahdi will invade Egypt, and we shall then be compelled to fight him under the disadvantage of a possible rising of the Egyptians also, if a slight reverse happens. The Mahdi must be smashed. A Khartum campaign in the autumn would be certain of success."

Mr. Gladstone will not acquiesce in the decision to drop the Crofters' Bill, but will urge the passage of the bill this session.

John Bright writes that the time has arrived for a reform in the Land Law of Great Britain which shall be equitable alike to the nation and the landlords—not a wild, one-sided scheme. He says he cannot himself enter into the great movement, but hopes to see the reform accomplished.

The Marquis of Salisbury, replying to a letter from Glasgow asking his views on the proposal to disestablish the Church of Scotland, declares his opposition to the movement. He contends that the established Church secures to the poorest as well as to the richest districts regular ministrations of religion, which he says are so necessary to the public welfare.

Baron de Billings writes to Henri Rochefort's Paris newspaper that he conducted negotiations between El Mahdi's authorized agents in Paris and Lord Lyons, the British Ambassador, the object of which was to secure the release of General Gordon. El Mahdi promised to deliver General Gordon safe within the British lines for a sum variously stated from £5,000 to £50,000. The British Government twice rejected the offer, asserting that it was a trap and that El Mahdi could not fulfil his proffered contract. The British Government denies this report.

The anniversary of the battle of the Boyne caused a large increase in the usual Sunday number of drunken men to be seen on the streets of Waterford, Ireland, on July 12. Among them were many of the soldiers belonging to the Welsh regiment doing garrison duty there. A number of citizens got into a drunken row with the soldiers, during which the latter bayoneted to death one of the former. The commotion attracted crowds of men to the scene. The people became enraged at the action of the soldiers and chased them to the barracks. Some straggling soldiers were fearfully handled, being kicked, beaten, and stoned. The regiment on Monday was transferred to another place.

The British Minister at Teheran, Persia, has received information to the effect that the Afghan tribes north of the Hindu Kush have declared their willingness to support Russia as against the present Amir.

A despatch from St. Petersburg says: "Events of importance are pending in central Asia. Troops are leaving various parts of Russia daily for Merv."

The French Government has telegraphed to General de Courcy at Hué, directing him to punish severely the Anamite officials who took part in the recent ambuscade, but to confine his action to the limits of his protectorate.

The French Chamber of Deputies on Friday afternoon voted an appropriation of $800,000 to be expended by the State in maintaining and educating every seventh child born in French families. This action was taken to revive an obsolete law enacted during the French Revolution in the interest of increase in the French population. It applies to the children of parents in needy circumstances.

M. Spuller, at a meeting on Friday in Paris of the Moderate French Republican Deputies, read the completed text of the manifesto which the Republican party intends to issue just prior to voting day in the coming general election. The main features of this document are: A demand for a reduction in the period of military service to the shortest time compatible with the exigencies of the national defence; a demand for economic reforms, especially a readjustment of taxation and reëstablishment of real equilibrium in the budget. In regard to the proposal to separate Church and State, the manifesto says that although opinions may differ among Republicans, all can agree upon a policy which, while it will guarantee freedom of conscience, will resolutely oppose clericalism, "which, under the mask of religion, is really a union of all the factions hostile to the republic." The platform condemns a foreign policy of adventure, and declares that the desire of the Republican party is for a national policy based on self-respect firmly carried out. The Paris *Gaulois* asserts that M. Grévy will not run for the Presidency again.

A marked decrease of the cholera epidemic in Spain is reported, especially at Aranjuez. The official report shows a total of 30,000 cases in Spain since the inception of the scourge up to Sunday evening, and a total of 13,000 deaths.

The Spanish Ministers of the Interior and Marine have resigned, and their successors have taken office. This settles the ministerial crisis which has been pending ever since King Alfonso made his visit to the cholera district.

Dr. Ferran arrived in Madrid on Saturday to protest against the Government's stopping other doctors from practising inoculation. In an interview he informed the Governor that the Government on Friday also withdrew the permission given to him. Dr. Ferran says he will leave Spain. It is believed that the Government's action is due to Dr. Ferran's strange treatment of foreign doctors.

The regency of the Duchy of Brunswick is to be offered to Prince Henry of Reuss, who has signified his willingness to accept the position.

A Canadian order in Council has been passed granting certain gratuities and pensions to the officers and men of the active militia who have been wounded in the Northwest rebellion, or to the families of those killed. The allowances are based, as far as practicable, on the Imperial army regulations, and rate from $1,200 yearly to a lieutenant-colonel down to 90 cents per day to disabled soldiers.

Two hundred of Big Bear's Indians have surrendered to the troops at Fort Pitt, and are now prisoners.

The trouble over the settlement of the English debt continues in the City of Mexico. Additional arrests of students and Opposition editors have been made, and the public mind is much alarmed, fearing that if the students continue their agitation, there may be serious disturbances, as the Government is determined to put down mobs without any compunctions. The streets are patrolled at night by troops, and the cavalry regiments have their horses ready-saddled day and night.

On July 4 the entire force of the Peruvian Government troops were attacked by the revolutionists under General Caceres. The fighting lasted five hours, and the losses on both sides were heavy. An armistice was then renewed.

A revolution has broken out in Venezuela. The Government troops at Carupano have pronounced in favor of the revolution. Other towns are reported to have joined the insurgents.

THE PENNSYLVANIA REPUBLICANS.

It is not to be doubted that Mr. Matt Quay represents the Republican party in Pennsylvania in the same sense and to the same degree that Mr. Blaine represented the party in the nation last year. The party, indeed any party, consists, for practical purposes, of those who take a lively interest in its primaries, its conventions, its nominations, its appointments, and its distribution of the good things which the control of Government puts at its disposal. It is beside the question to say that a great multitude, perhaps a majority, of the members would have preferred somebody with a cleaner record than Quay's or Blaine's. If they lacked the personal interest or the organizing talent to make an impress upon the campaign in its preliminary stages, they cannot be counted among the effectives of the army. Mr. Quay possesses on a smaller field all the qualities which Blaine has exhibited on a larger one—dash, fertility, audacity, unscrupulousness, brag, and *bonhomie*. His record is tainted, but, like Blaine, he intends to make an "aggressive campaign," to ignore all disagreeable charges against himself, and to "carry the war into Africa."

It remains to be seen whether such a campaign, with such a candidate, can be made with greater profit than attended the Blaine campaign. After such a disastrous experiment as that of last year, all the maxims of prudence would have taught the Republicans of the Keystone State to choose, at all events, an unexceptionable candidate for the head of their ticket—one against whose moral repute nothing could be alleged. This appears to have been the impulse of the Philadelphia *Press*, the leading Republican organ of the State, upon whose editor the lesson of 1884 was not entirely wasted. That its serious warnings were not heeded is a most singular commentary on the state of politics. It betokens not so much the deadness of moral sentiment in the community, as the paralysis which comes over a party when its principles have lost their vitality, and the mastery which training gives to the "bosses," the confidence with which they rely upon party discipline, and the small regard they have for any party success which is not their personal success also. The large majority which Pennsylvania gave for Blaine last year has probably emboldened them to believe that any Republican candidate regularly nominated is sure of election, and that the more he resembles Blaine the surer he is of a majority. But the vote of Pennsylvania is not always to be depended upon. Reactions come on at unexpected times and in violent fashion. At the last election for Governor the Democratic candidate (Pattison) received 355,791 votes, against 315,589 for Beaver (Rep.) and 43,743 for Stewart (Ind.). Those Independent voters are not dead. They may yet be heard from in a variety of ways before the election or at the election. The *Press* has premonitions of disaster. It "hopes and trusts" that no mistake has been made. "The demand and desire for harmony in the party," it says, "for common action and united effort, was never stronger, and never, we may add, more necessary."

The platform adopted by the Convention, where not positively bad, is dry and husky and foolish beyond precedent. It demands, first, the repeal of all internal-revenue taxes except those upon spirituous and malt liquors, to the end that the tariff may be augmented for the purpose of giving "full protection to all home industries." The fact is, that all internal-revenue taxes, except those upon spirituous and malt liquors and *national-bank circulation*, and a moiety of the tobacco tax, have been repealed already. Bounties on exports are the natural corollary to protective duties on imports, and are sure to be urged whenever protection has swelled domestic production beyond the bounds of home consumption. Accordingly, we are not surprised to find in the Pennsylvania platform an explicit demand for appropriations of public money "to pay proper bounties to goods exported in American bottoms," together with a wholesome reprobation of "foreign contract labor." The Republican party has not quite reached the point of demanding that all foreign labor—that is, foreign immigration—be prohibited, but it is rapidly nearing that goal. Touching the civil-service question, the Pennsylvania Republicans have made a declaration which was probably intended to satisfy the public demand for reform, but which, either from ignorance or design, leaves the subject in a worse muddle than before. The platform calls for the "establishment of a true system of civil service, one which will give competent officers, and yet not bind either the political thoughts or actions of American citizens, one which will give a fixed tenure of office, and no removal during the term of office except for adequate public cause."

This phraseology may easily convey to the unthinking the notion that Mr. Quay and his friends desire to bring about some reform in the civil service, or at least to render some homage to those who do. But their language does not commit them to any change in existing methods except in one particular, and that not a desirable change. A fixed tenure (that is, term) of office we now have under the four years' act, which all civil-service reformers desire to get rid of. The four years' act was passed in order to facilitate changes, and to break down the only then existing barrier to the spoils system. Ever since the passage of the Pendleton bill the Civil-Service Reform League have used their best endeavors to secure its repeal. They have circulated hundreds of petitions and forwarded to Congress thousands of signatures to this end. They desire to restore in this particular the legal status which prevailed under Washington, Jefferson, and the Adamses. Under the four years' act it is not necessary for a President to take any responsibility in removing any officer, since the commissions of such officers are sure to expire at some time during the President's term. It is not necessary for him to run counter to public opinion by creating vacancies, since the vacancies create themselves. It was the object of the four years' act to smooth the way for official changes in the interest of parties and politicians. How effectually it serves this end may be seen by the different views which people now entertain of appointments made to fill vacancies occurring naturally—that is, in pursuance of law—and of removals made arbitrarily, whether with or without "adequate public cause." When we read that John Doe has been appointed in place of Richard Roe, "commission expired," we see nothing to criticise or find fault with. When we read that Richard Roe has been appointed in place of John Doe, "removed," we want to know what John Doe was removed for; and if the answer is offensive partisanship, we want to know in what the offensive partisanship consisted and how offensive it was, and if we are Republicans, we want to know whether the new appointee is likely to be an offensive partisan. Yet the man who goes out because his commission has expired is as badly served and as much entitled to sympathy as the one who is removed a day or a week or a year before his commission expires. The public service is injured as much in the one case as in the other.

It is this fixed tenure which the Pennsylvania Republicans now call for as a step toward "the establishment of a true system of civil-service." That they mean "term" when they say "tenure" is proved by the context, which says that there should be no removal during the "term" except for adequate public cause. But what is an adequate public cause? This question has been carefully considered by the civil-service reformers, and they long ago reached the conclusion that there is and can be no tribunal to pass upon that question consistently with the efficient working of the Governmental machinery. If the Secretary of the Treasury, for instance, thinks that the whiskey tax is not fully collected in a certain district, although he cannot prove remissness on the part of the collector, he must have the power to remove him and put a new one in his place. He must not be hampered in his work by a jury trial. He must not be crippled by the technicalities of the law of evidence. All the ends of civil-service reform will be attained if proper rules are laid down regarding the *entrance* to office. If the new appointee gains his place on the score of proved merit, regardless of political backing, it is quite certain that the old one will not be removed without adequate public cause. There will be no motive for making removals if there is no underground railroad to the vacant offices.

It appears, therefore, that the Pennsylvania Republicans have placed themselves in antagonism to the methods of civil-service reform which the civil-service organizations of the country have formulated. They have decided in favor of fixed terms of office (which we now have), and they have declared themselves opposed to removals except upon specific charges which must in the nature of things be tried before a competent tribunal subject to the rules of evidence. As to the entrance to office, they ask only that the system to be adopted shall "give competent officers." How competency is to be ascertained is not stated, but it would be strange if Don Cameron and Matt Quay could not find competent persons to fill any offices which might fall vacant in their lifetime, if they should happen to have the appointing power.

MOVEMENTS OF POPULATION.

The announcement that a large colony of Vermonters has recently gone out to Dakota is

a reminder that New England still continues to settle the Western country. The population of Vermont has remained almost stationary for many years, despite a considerable accession of foreigners, especially from across the Canadian line. The reason is, that a remarkably large proportion of the natives have migrated to other parts of the country. The last national census shows that Vermont is the greatest colonizing State of the Union—that is to say, a larger ratio of people born within its limits live outside them than is the case with any other State. In 1880 there were found in the United States 428,688 white natives of Vermont, but only 251,112 of them had remained in the State of their birth, nearly 42 per cent. residing elsewhere. The census of 1860 showed almost identically the same ratio, a trifle above 42 per cent. of native Vermonters in that year being found in other States. The neighboring commonwealth of New Hampshire ranks next to Vermont as a colonizer, having sent away nearly 35 per cent. of her people. Connecticut comes third among the Eastern States in this list, with almost 26 per cent. of her natives elsewhere in the country; then Maine, Rhode Island, and New York, with about 25 per cent., and Massachusetts with 20 per cent.

It is always interesting to trace the movements of population in a growing country. In the United States, as a matter of course, the original drift was necessarily westward, as the first settlements were along the Atlantic seaboard; and the tide has seemed to gain force as it swept across the land. Even in the older of the Western States, the man who decides to make a change of residence still turns his steps toward the Pacific. There were 185,300 natives of Ohio living in Indiana five years ago, but only 26,596 natives of Indiana in Ohio; 102,515 natives of Illinois in Iowa, but only 16,382 natives of Iowa in Illinois. So in the South, there were 32,535 natives of North Carolina who had crossed the Blue Ridge into Tennessee, but only 4,888 Tennesseeans who had climbed over the mountain barrier into North Carolina; 69,607 natives of Tennessee who had crossed the Mississippi into Arkansas, but only 2,811 persons born in Arkansas who had crossed the river into Tennessee.

The almost universal law of internal emigration, as was pointed out in the Introduction to the Census Report of 1860, is that "it moves west on the same parallel of latitude." The operation of this law is strikingly illustrated by an analysis of the movement from New England. Maine stretches from the 43d to the 47th parallel of latitude, between which parallels is also comprised the greater portion of Michigan, Wisconsin, and Minnesota. The more southerly States of Ohio, Indiana, Illinois, and Iowa have always been more easily accessible, and their combined population is nearly three times as great as that of Michigan, Wisconsin, and Minnesota. Yet the three States whose winter most resembles that of Maine had attracted 25,432 of her people in 1880, as against only 16,738 in the four more temperate States. On the other hand, Pennsylvania, covering a belt of territory averaging three degrees lower in latitude than Maine, has kept pretty closely to that line, sending 217,547 people to Indiana, Illinois, and Iowa, and only 69,818 to Michigan, Wisconsin, and Minnesota.

The general law of westward movement has hitherto been reinforced by the influence of the old struggle between slavery and freedom. Maine has sent fewer men to the whole of the "solid South" than to the single State of Wisconsin. Before the war an occasional Yankee, who had gone South as a teacher, settled there and became prominent, like that famous Mississippi orator, Sergeant S. Prentiss, who was born and educated in Maine. Since the war, carpet-baggers from the North have made a longer or shorter stay in the South, but organized emigration from this part of the country to the other is as yet almost unknown. The same truth holds in a general way as to the South. No more Mississippians ever found their way into the North than natives of Maine into the South.

There has always been one notable exception to this rule. The Ohio River has acted as a magnet to draw population from the South across its waters into the free States, and the influence of its western tributaries, especially the Tennessee, in the same direction can easily be traced. Virginia, which is the Vermont of the Southern States in the largeness of her contributions to other common wealths, nearly 36 per cent. of her natives living elsewhere, has always sent many of her sons to Ohio. Even before the war the census of 1860 showed no less than 75,874 natives of Virginia in Ohio. It was from this source that Ohio derived President William Henry Harrison, who settled in the southern part of the State, and it was a Virginian Lincoln whose son Abraham, born in Kentucky and moving thence in early life across the Ohio, first into Indiana and then into Illinois, became the great war President. Maryland felt the same influences, and colonies from that slave State settled in Ohio at about the same time that the New England ancestry of James A. Garfield entered the State. Kentucky has sent nearly three times as many people to the three States bordering her on the north as she has received from them, 137,908 natives of Kentucky being found in Ohio, Indiana, and Illinois, and but 50,395 natives of those States in Kentucky. The Tennessee and Cumberland Rivers have drawn along with their currents a living stream of emigrants, 32,812 natives of Tennessee having passed through the neighboring State of Kentucky and crossed the Ohio into Illinois.

With the final disappearance of the old controversy between the North and the South, we may look to see a growing movement of population from this direction toward the South and Southwest. The influence of lines of latitude is always perceptible, but it is never controlling. We find the Norwegians and Swedes who have come to this country naturally seeking the Northwest—only 78 of them, for example, being reported in Texas to 101,697 in Minnesota. But the Germans are not bound by parallels of latitude, and though immigration from Europe had not long set in that direction, the last census showed 35,347 natives of Germany in Texas, as against 66,592 in Minnesota. Northern men who settle in the South prove able to maintain their vigor, and the opportunities for profitable investment in that part of the country only needed to be supplemented by the present assurance of good government and peaceable society to set the current running in that direction. Indeed, it has already begun, and in the rapidly growing infusion of Northern blood into Florida and Texas we can see the promise of a movement which must ultimately affect all the other States in that region, to the advantage of the whole country.

COLLEGE PRESIDENTS.

THERE is more or less trouble all over the country about college government, and it is in the main due to two causes. One is the gradual substitution of lay for clerical government—in other words, the disposition to put laymen in the place of clergymen at the heads of great institutions of learning. This is a change which is not yet by any means completed, and will not be, without a good deal of friction. The tradition which charges ministers with the work of education, or at all events the higher education, is very strong both in England and in this country, and it will not be entirely broken in either country without a severe struggle. It has been much shaken, however, by the loss by the clergy of their position as *par excellence* the learned men of the community, by their diminished authority even in their special field of religious instruction, and above all by the greatly increased demands of the natural sciences in the universities. The change is also perhaps partly due to the greatly increased size of the universities themselves, calling for an amount of administrative talent and experience which ministers rarely possess. The administration of a church differs essentially from that of a college, owing to the fact that a church is made up of persons who cultivate a disposition to agree with the pastor as one of their duties, and, indeed, are drawn into the church in a large number of cases by liking for him or admiration of him. A college faculty, on the other hand, is composed of very different materials, and examines the doings of its chief in a very different temper. The result in the case of clerical presidents has in a good many cases of late been very unfortunate, and has led to an amount of bickering and heartburning which will doubtless cause the fitness of clergymen for this particular line of duty to receive hereafter much severe scrutiny.

But probably nothing does so much to make college government in our day in America a difficult problem as the position which the faculty occupies in this country as compared with either Germany or England, or any country in which the universities are not administered by the State. A university, as the English and Germans conceive it, is a teaching body, which nobody can in the nature of things be so fit to manage as the teachers or professors. Accordingly in both these countries the faculty governs the university, and nobody thinks of disputing its competency to do so. University management, like the management of the public finances, of the army, and the navy, and everything else which concerns the public weal, undergoes a great deal of criticism on general grounds, but nobody proposes to take it out of the hands of the teachers and give it to the critics, any more than to make admirals of the

people who think the navy is not what it ought to be.

In the United States, however, the teachers in the university system occupy an entirely subordinate, and one may say irresponsible position. The real government is apt to be in the hands of business men composing the boards of trustees who look after the finances. The power and importance of these gentlemen in our universities are in part a tradition of the common-school system, in which the trustees hire the teachers, and watch over them like clerks in their stores, and the college professor seems simply a more highly-paid school-teacher. They are due in part to the fact that all our colleges are constantly in need of money, and have to have their wants supplied almost wholly by private donations—a fact which of course exalts the donor and gives weight to his opinions. They are due, also, in part to the authority on all subjects which is in the United States conceded, in a greater or less degree, to the successful business man. He is the one able man of our time, in the popular eye, and everybody else is, in almost any field, considered more or less of an amateur. The consequence is that nearly all our smaller colleges are in the hands of people to whom a college is simply a large school, and the professor an enlarged schoolmaster, bereft of the highest of all faculties—that of making money—whose opinions, even about his own work, therefore, are to be received with a certain amount of caution.

Even where this is not literally true of the relations of the trustees to the faculty, and where the professors have a good deal of swing in the management of the college, the suspicion of the governing body about their competency is not wholly allayed. There is hardly any man who has ever been at college, even though he graduated forty years ago, and made a very poor figure when he was there, who does not think himself competent to "run" any college to-day, or at all events to give mandatory advice to those who do. The human mind is in very much the same condition on this subject as on the subject of editing newspapers. There is hardly any man who knows how to read and write who does not think himself competent to step into a newspaper office, and instruct the editor what to put in and what to keep out of his paper. So, also, there is hardly any college graduate, no matter how old, who is not prepared to walk into any room in a college, and tell the professor what subjects he should teach, and how he should teach them, and what is the best mode of managing young men of this generation. In these two things the difficulty which even very enlightened people have, in admitting the existence or value of special knowledge, is very curious.

Another American idea which interferes much with the success of university education in this country, is the idea that the university is a kind of mill, in which all grist can be made into flour. The English and German idea, and particularly the latter, is rather that of a well, from which he who chooses can draw and quench his thirst. There are not many modern fathers who occupy themselves at home with the mental and moral training of their children less than the American father; but—and perhaps for this reason—there is no father who expects so much mental and moral training from the university. It is very hard for him to admit, when his boy remains a dunce, that the faculty are not to blame, or that when he runs in debt or goes on sprees, the fault is not somehow in "the elective system," or exemption from compulsory church service, or in the acceptance of the Darwinian doctrine of evolution by some of the professors. In fact, like so many other institutions, the American universities are in a transition stage, which will probably last for some years, and of which we are only seeing the beginning.

DIRTY REFORM.

Revelations such as the *Pall Mall Gazette* has been making about London vice serve, and can but serve, the purposes of "obscene literature." There are all the objections to them, as regards influence and suggestion, that there are to any filthy book or picture. Of the hundreds of thousands who have been reading the *Gazette's* exposures during the past week, we venture to say, not one in a thousand has read as an aid either to personal or social improvement. Not one in one thousand, especially of the younger readers, has, we venture to say, laid down the beastly publication without having his horror of vice somewhat lessened, and his ideas of vicious possibilities and opportunities somewhat enlarged. It is not true of the particular vice which the *Gazette* professes to expose, that it is "a monster of such hideous mien, as to be hated needs but to be seen." On the contrary, it is the vice which familiarity most readily robs of repulsiveness, and the vice, too, be it remarked, toward which ordinary human nature is burdened with most constant temptation. It is not, therefore, as a matter of taste that certain cases are heard in court with closed doors, that certain books are in all well-regulated libraries kept under lock and key, and are avoided by even the most pure-minded, and that the law follows up the wretches who sell them. It is a matter of social and moral expediency of the highest order. In legislating against such things every country simply recognizes that old fact of human nature, of which ascetics have made so much, that there are some ideas of which the mind finds it harder to rid itself, when they have once obtained entrance, than others, and that the wisest man is he who, in the field of what is called "immorality," seeks safety not in knowledge or in courage, but in ignorance or flight.

In its proposal to lay the whole matter now before Cardinal Manning, the Archbishop of Canterbury, and other divines and moralists, the *Pall Mall Gazette* helps to bring the gravest suspicions on its motives. Of course the facts which it spent its $1,500 in finding out could have been submitted, if it be necessary to submit them, as it appears to be, to these worthies, just as well before they were printed and sold as now. It is rather unfortunate that the editor should not have got ready to have his evidence examined by pious notables, and should not have had his interview with Sir Richard Cross, the Home Secretary, about the Criminal Law Amendment Bill, till after he had made what is called in England "a pot of money" by selling undiluted nastiness. There is not the smallest reason for supposing that the Cardinal or the Archbishop, or anybody else who now offers to analyze the disgusting mess which the *Gazette* has prepared, would have refused to do so until the proprietors of the paper had first made a good profit out of it. We may say the same of the medical and religious papers and the reformatory associations which have been sending their congratulations to the editor. If he had called them to a private meeting, and had then submitted his budget of obscenity, they would have been just as much horrified and just as grateful as they now are. He would not have made his office the fountain-head of a stream of impurity which is now flowing steadily into every English-speaking village and city in the world, and English children would not be all discussing the foulest sins of modern society as part of the news of the day. It must be remembered, too, that when Sir Richard Cross saw the exposure, he said, according to the editors' own story, that if "he had known all this before, he would have passed the Criminal Law Amendment in a moment." He did not say, "I would not have passed the Criminal Amendment Law until you had got this dirty stuff thoroughly well diffused through the country and the world."

It is doubtless unfortunate that the motives of reformers who have to keep "eight presses running night and day" to supply the demand for obscene literature of their own composition should be suspected, but the experience of mankind justifies the suspicion. The number of saints and reformers who have made money by selling dirty books as a warning against vice, is so small that it may be said of Mr. Stead, as is said of John Howard on his monument in St. Paul's, that he is "treading an open but unfrequented path to immortality." He evidently thinks that he has opened up a new and glorious as well as lucrative field for "journalism," for he suggests, in a conversation with a correspondent of the *Evening Post*, that similar work may be done in any great city in America. That some of our contemporaries are quite ready for such a job we have no doubt. One of them on Saturday printed a portion of the *Gazette's* filth without the *Gazette's* flimsy excuse, and there are others which we have no doubt consider this a most mortifying "beat." In fact, the readiness of a good many journalists to do the scavenger work of modern society, to live in its sewers and make fortunes by describing its foulness and indecency, seems to have no limit. It is one of the facts which make the profession seem a sorry calling for young men with high aims, and would make Anthony Comstock a valuable professor in one of those "schools of journalism" which we hear every now and then that some puny college is thinking of setting up.

MONTAIGNE AS A TRAVELLER.—II.

The vehemence of his desire to reach Rome induced Montaigne to set off from Ronciglione (19 French miles from Rome) three hours before day—"tant il avoit envie de voir le pan de Rome."

But the flesh was weak; he never could bear the dew of the evening, and he now "found that it gave as much trouble to his stomach in the morning as the evening, or very little less, and he found himself consequently indisposed until day, though the night was clear." A cruel check to enthusiasm! But nothing could hinder his noble appreciation of Rome when once he was her inhabitant. The admirable discrimination and large sobriety of the half-dozen pages in which he recounts his impressions, give them a dignity which enforces their imaginative picturesqueness. There is not a touch of pure description, yet never have "the glory and preëminence of this city" been more effectively set forth. It is one of the passages, scattered here and there through all his writings, which reveal Montaigne as a poetic, as well as a philosophic, thinker. The very opening words suggest all that comes after: "He said that there was nothing to be seen of Rome but the sky under which she had lain, and the outline of her bed."

One of the incidents of his social life at Rome is so characteristic as to be worth quoting in his own words, though it has been well retold by Sainte-Beuve. It will especially interest those who recall the warm eulogy of "that first and king of translators," as Sainte-Beuve styles him, Jacques Amyot, which opens the essay, "À demain les affaires." Montaigne's sense of indebtedness to him for familiarity with Plutarch was rendered boundless by his enthusiasm for Plutarch himself:

"Dining one day at Rome with our ambassador, in company with Murat and other learned men, I turned the talk on to the French translation of Plutarch [that of Amyot, which had lately been published], and against those who esteemed it much less highly than I did I maintained that at least where the translator had missed Plutarch's true meaning he had substituted for it a possible one, well supported by what goes before and after. To show me that even thus I gave him more than his due they produced two passages. . . . So, accepting what they assumed to be the actual meaning of the language, I honestly granted their conclusions."

The phrase, from the essay above cited, "il ne luy a au moins rien presté qui le desmente ou qui le desdie," reminds us how seriously Montaigne himself has suffered in this respect from his few translators. One passage in the Travels has been so repeatedly wrongly rendered that we cannot resist pointing out here the injustice that has been done him. It is in a portion of the journal written by him in Italian, which is perhaps more open to misunderstanding than the French part. He speaks of not finding in the Italians the wonderful mental gifts which report gives them credit for: "I do not perceive in them extraordinary abilities; rather they wonder at and esteem too highly any small faculties." In proof of this he tells of being himself consulted about medical matters by a young man who was at the baths with him, and who made him umpire in the discussions of his physicians. "I secretly laughed at this," Montaigne adds, "but similar things happened to me often both here and in Rome." The French translator of 1774 twisted this into "je n'avois guères bien soutenu la réputation d'esprit et d'habileté qu'on m'a faite: on ne m'avoit point vu aucune faculté extraordinaire, pour qu'on dût s'émerveiller de moi," etc. And Hazlitt, following him, represents Montaigne as declaring that an opportunity had not been given him "of bearing out the reputation for capacity and mind that somehow or other I had got credit for"!!—a piece of egotism perfectly at variance with the tenor of the passage; a translation "qui desmente et desdie" the author.

We will not delay over the trivial treacheries of translations, but regain our place by the side of Montaigne. As we make with him his "traites" day after day, riding at his bridle hand, we must not fail to remark his delightful admiration for beautiful scenery—an admiration characteristically in advance of his age, since it included not only the charm and fertility of a landscape, but its picturesqueness and its grandeur. An illustration of this is in his description of the country near Foligno. After speaking of the thousand different hills quite covered with very beautiful groves of every sort of fruit-tree, and with the most beautiful possible cornfields; of the most lovely valleys and the infinite number of brooks, he continues:

"Sometimes far above our heads we saw a charming village, and under our feet, as if at the antipodes, another, each possessing many and contrasted conveniences; and what nowise diminishes the effect (*n'y donne pas mauvais lustre*) is that among these so fertile mountains the Apennines show their rugged and inaccessible peaks, whence one sees many torrents rushing down. These, having lost this their first violence, change themselves thereafter in these valleys into very pleasant and very gentle brooks. Among these heights could be seen both above and below more than one rich plain, sometimes large enough to be lost to view in certain twists of the prospect. It does not seem to me that any painting could represent so rich a landscape."

Neither less nor more, one would say, than such sights as these the sights belonging to great cities pleased him. In Florence he saw a chariot race, which took place in "a large, fine, oblong square, surrounded on all sides by handsome houses. . . . The balconies were full of ladies, and the Grand Duke and Duchess and the court were in a palace." He describes it minutely, and the clamor of question that arose whether the chariot of the Grand Duke or of Strozzi had won the prize, and says: "This spectacle gave me more pleasure than anything else I had seen in Italy, from its resemblance to the ancient races." Just afterward he describes in great detail the Festa di S. Giovanni, then, as now, the principal festa of Florence, and very magnificent. He liked to see and compare the great show-places of Italy—Pratolino and Castello, near Florence, the palace and gardens of the Cardinal of Ferrara at Tivoli, Bagnaia, near Viterbo, and, close by, Caprarola, a seat of Cardinal Farnese, so surpassingly fine that Montaigne says there is no other "che li stia a petto."

He was also interested in the farming arrangements of Don Pietro di Medici, at his "cascine," a little distance from Pisa; and they seem, indeed, to have been of an unusual kind. "He has there," Montaigne says, "a world of possessions which he manages himself, changing every five years the laborers, who have a right to half the crops. It is a most fertile soil for grain, and there are pastures where every sort of animal is kept. I dismounted to see the establishment in detail. There are a great number of persons employed in making curds, butter, cheeses, and the different utensils for these labors."

To show even a little more fully than we have yet done what a charming, accommodating, and gay and easy traveller was the "doublure" of the delightful writer—a traveller who, riding through such dust that it obscured the air, said that it was riding by moonlight, "que c'estoit la lune de ses tretes"—let us now quote a passage about "the pleasure he took in visiting unknown countries, a pleasure which he found so delightful that it made him forget the infirmities of his age [he was but forty-seven] and of his health":

"He was wont to say that after having passed an uneasy night, when it came to his remembrance in the morning that he was to see a city or a new tract of country, he rose eagerly and joyfully. I never saw him less fatigued nor less complaining of pain—his mind, both on the road and indoors, being so on the stretch from what he came across, and seeking every occasion for intercourse with strangers, that I believe it diverted his malady."

The secretary then speaks of what Montaigne refers to himself in the Vanity essay—his liking for taking things as they come; for being led by chance. When any of the party complained of his back-and-forth guidance—

"he answered that for his part he was for going nowhere but where he happened to be, and that he could not miss nor stray from his way, having no project but to wander through unknown places; and, provided they did not find him passing twice over the same road, or revisiting twice the same place, they must find no fault with his plan. . . . He said, too, it seemed to him to be like those who are reading some very pleasant story which they fear will come too soon to an end, or a delightful book. He himself, in like manner, took such great pleasure in travelling that he hated approaching the place where he was to stay; and he proposed several plans for travelling at his ease, if he could arrange to be alone."

But his kindly nature could not be content with solitude. Later, when his three travelling companions had temporarily parted from him, he writes: "Meantime I enjoyed a quiet mind, as far as my infirmities and old age would permit, and was outwardly exposed to very few storms. I felt only the want of companionship which would have been agreeable to me, being forced to enjoy the surrounding pleasures alone and without sympathy."

Of Montaigne's admirable patience and vivacity under acute and prolonged bodily suffering, as evinced on this journey, we shall perhaps take occasion to speak at another time.

MADAME DE BEAUMONT.—II.

PARIS, June 30, 1885.

MME. DE BEAUMONT obtained her divorce in the year 1800. Her husband had abandoned her almost immediately after their marriage, leaving her without any resources during the Terror. He had not emigrated, but he had led a very adventurous life. After the Terrorist reaction of Fructidor, we find him secretary of General Damas. He was detected, even in the army, and temporarily arrested and thrown into the prison of Wetzlar, near Mayence; but he made republican professions, and was set free. Mme. de Beaumont took advantage of the law of divorce, and had no difficulty in untying a knot which had always been of the loosest kind.

In this year 1800 we find her, like Joubert, completely enamored of Bonaparte. "Cet homme," he says, "n'est point parvenu, il est arrivé." Mme. de Beaumont was a little cooler. She received, in her salon in the Rue Neuve du Luxembourg (one of the streets which have fortunately preserved their name), near the Ministry of Justice, all the remains of the old French society—Mme. de Pastoret, Mme. de Lévis, Mme. de Vintimille, M. Pasquier, Fontanes, Molé. Joubert was the soul of the salon. One day Fontanes brought with him and presented René de Chateaubriand to Pauline de Beaumont. "Her fate was sealed," says M. Bardoux, her biographer, melodramatically; "she had ceased to belong to herself."

Chateaubriand was thirty-two years old. We have his portrait at that period—a fine head, beautiful eyes, a strange expression. Everything had contributed to develop in the savage Breton a morbid imagination—the Terror, the sufferings of exile, so well described in the 'Mémoires d'Outre-Tombe.' Chateaubriand had *fatal* look which became the fashion after the publication of 'René.' It is now the fashion to laugh at all this exaggeration of melancholy, at this perpetual state of despair. Sainte-Beuve made a study of Chateaubriand which is a cold, clever, satirical analysis of the chaotic, vain, morbid author of 'Atala,' of the 'Essai sur les révolutions,' of the 'Génie du Christianisme.' Greatly as I admire Sainte-Beuve (and I am never tired of

reading the 'Causeries du Lundi,' which I believe will remain a monument of our modern literature, though somewhat neglected at present), I cannot help finding him unjust to Chateaubriand. He had known him old, jaundiced, bitter, disgusted with his time, with everything; weary of life; sitting at the feet of Mme. Récamier like a growling lion. He had seen this great literary sun setting in tempestuous clouds and on a dark horizon. He had not seen the young Chateaubriand. "I should like," wrote Joubert to Molé, "to have you see Chateaubriand here at Villeneuve, and see of what incomparable goodness, of what perfect innocence, and what simplicity of life, of what endless gayety and happiness and peace he is capable, when he is subject only to the influences of the seasons and agitated only by himself." Chateaubriand was at once attracted by Mme. de Beaumont; it seemed as if their souls had long been waiting one for the other. He visited her every day, sometimes twice a day. His nature needed a passion; he twined all his life round an idol. He read to her all he wrote; she saw the inedited pages of 'Atala,' of 'René.' He told her all the anecdotes which afterward found a place in the 'Mémoires d'Outre-Tombe.' Mme. de Beaumont first became acquainted with a new literary school, very different from what she had known before—the school which afterward took the name of Romantic. She was astonished; she was charmed.

'Atala' appeared in April, 1801; it was only an episode of the 'Genius of Christianity.' Mme. de Beaumont feared that, by itself, it would not be understood; it had, however, an immense success—all in it was so new, so strange; the language itself seemed a transformation of the French language. Chateaubriand became known in an hour; his name passed the frontiers, and 'Atala' was translated into English, Italian, German, and Spanish. The old Voltairian school attempted a feeble protest. A parody was written in which Atala was called Mlle. Atala, and made a visit to Paris, the "city of vice." But criticism was drowned in the universal enthusiasm. France, so long deprived of its old altars, of its priests, tired of the bloody goddess of Reason, of the pagan feasts prepared by David, was ready to receive the 'Genius of Christianity.' The book was the only form of Christian apologetics which the time could understand and feel; France was led back to the old faith by sentiment, not by theology.

It can be said that the 'Genius of Christianity,' begun in England, was made over and really finished in France, in the society and under the poetical influence of Mme. de Beaumont. She had taken a house at Savigny. Chateaubriand followed her to this retreat. "I shall," wrote Mme. de Beaumont to Mme. de Vintimille, "hear his voice every morning: I shall see him at work." The seven months spent at Savigny were the happiest of Mme. de Beaumont's existence. All around Savigny are charming promenades. The landscapes about Paris are very different from those of the New World; still, Chateaubriand says in his memoirs, "I have never painted as well as I did then the deserts of America." Chateaubriand was seized with a fever of composition. There were few visitors—Joubert only from time to time, with his young wife and his young daughter; Chateaubriand's sister Lucile, almost out of her mind, always in alarms, always afraid of secret enemies (who labored under what doctors now call the delirium of persecution). Chateaubriand had the faculty of writing, without being over-fatigued, for ten hours in succession.

Mme. de Beaumont gives us, in her letters to Joubert, an insight into what might be called the genesis of the famous work of Chateaubriand on Christianity. She is not blind to his defects: "He has suppressed many citations, but he has added many more. What frightens me more than anything is the levity with which he gives some judgments which ought to be presented, in order not to alarm the reader, with an infinite art. There is no remedy for that; what makes me more timid in my observations is the necessity of the book appearing very soon; otherwise I should be much more brave, and be afraid only of his extreme docility." For Chateaubriand, strange to say, was docile. He was not one of those ferocious writers who resent every remark as an insult. Afterward, when he was at the height of his glory, he always allowed Bertin, of the *Journal des Débats*, to correct his articles. It is true that newspaper articles were not signed at that time.

Why was it so important that the 'Genius of Christianity' should appear soon? Because the hour had struck. Bonaparte had signed the Concordat, he had reconciled revolutionary France with the Church. Chateaubriand worked "comme un nègre," as he wrote to Joubert. By the end of November the work was done.

It was surely a very extraordinary defiance to the rules of the world, this summer spent at Savigny, in a small country-house. Mme. de Beaumont was divorced, Chateaubriand was married; but he had not seen his wife for many years. As his friends had given him hopes of a diplomatic post, they insisted upon the propriety of his renewing acquaintance with Mme. de Chateaubriand, and in November, 1801, he wrote to her from Savigny itself, asking for permission to make her a visit. Mme. de Beaumont was resigned to a reconciliation which seemed a necessity. She returned to Paris for the winter more ill, but consoled in her troubles by the triumphant success of the 'Génie du Christianisme.' Chateaubriand had sent the first proofs to Lucien Bonaparte, and in his preface he said: "Every man is bound, weak as he may be, to join his strength to the strength of the powerful man who has dragged us out of the abyss." Fontanes had announced the book in the *Mercure*. In a few days the first edition was sold; the second edition had a dedication to Bonaparte: "The peoples of the world look on you." Cardinal Fesch, the uncle of the First Consul, who was Ambassador at Rome, offered to Chateaubriand the place of first secretary. Chateaubriand hesitated; he says in his memoirs that he was determined by the hope that the climate of Italy might benefit the *Swallow* (Mme. de Beaumont often appears under that name in the letters of her friends and in her own letters). Chateaubriand left for Rome in the month of May, 1803. The temple of Mme. de Beaumont had lost its idol; she was left with Fontanes, Molé, Joubert, Pasquier; she consoled herself with Chateaubriand's letters to her. His first impressions were like a fever. He wrote copiously on the great city, "where the trace of the last Roman plough is not yet effaced"; of the Pope, "who has an admirable face, pale, sorrowful, religious. All the tribulations of the Church are on his forehead." Pius VII. had received him with much distinction, and had shown him the 'Genius of Christianity' open on his table.

Joubert became very much alarmed at the health of Mme. de Beaumont, and pressed her to leave Paris, to go to the Mont-Dore. Before going, she made, at Mme. de Krüdener's, the acquaintance of Bernardin de Saint-Pierre, the author of 'Paul and Virginia.' He did not make a pleasant impression on her: "I am glad to have seen him. I don't wish to see him again." Bernardin de Saint-Pierre was, in fact, what we call now a *faux bonhomme*. Seeing himself in presence of the friend of the author of 'Atala,' he said: "Nature has given me only a very small pencil, while she gave M. de Chateaubriand a brush." Mme. de Beaumont left Paris on the 28th of June; her health was deplorable, and she had not many illusions about the result. "Why should I hope to live?" she says. "My past life has been a succession of misfortunes; my present life is full of agitation and of troubles. The peace of the soul has left me forever." She found the mountains of the Mont-Dore very oppressive; she was restless, impatient. "The Dordogne," she writes to Joubert, "goes its way, running everywhere, running rapidly to escape this ugly country." Mme. de Beaumont was unjust to the mountains and to the torrents; she was not unjust to men; she fully appreciated the endless devotion of Joubert. She felt that she was really not loved by Chateaubriand, whom she had for a time thought worthy of her affection. Chateaubriand wrote, however, and wrote punctually, but always on monuments. She was an incident in his life; she had hoped for something more. Mme. de Beaumont took an heroic resolution; in her miserable state she started for Italy. Chateaubriand met her at Florence. They travelled slowly toward Rome. "What was Italy to me then?" said Chateaubriand in his Memoirs. "I found its climate still too rude, and, if the wind blew a little, the slightest breeze seemed a tempest."

Mme. de Beaumont died in a house in the Piazza di Spagna, between Chateaubriand and Bertin. Nothing can equal in eloquence the pages which Chateaubriand wrote on her agony. Her last visit had been to the Coliseum. She received on her death-bed the consolations of a priest. She had lived all her life as a "Voltairian," but she told the Abbé de Bonnevie that "she was ready to recognize her errors and to commend herself to the eternal justice; she hoped that the sufferings which she had experienced in this world would abbreviate her expiation in the other." The fatal event took place on the 4th of November, 1803.

Correspondence.

THE CATTLE BUSINESS.

To the Editor of The Nation:

Sir: Under the above caption you publish a review, in your issue of July 2, which virtually asserts that the Western plains are unfit for aught except for cattle-raising. Were the premises of your reviewer correct, it would be a question why cattle-raising by monopolies or large owners should be encouraged to the detriment and exclusion of the smaller fry. Having this last spring taken an exploring trip to southwestern Kansas, I can say that, being connected with agricultural pursuits in Iowa, I have drawn the following conclusions from my trip:

First. That the soil of southwestern Kansas is good, and I have been informed by a party who herded cattle in New Mexico and Texas that the range in those parts comprises equally good lands.

Second. That the rainfall is extending gradually but rapidly; and this is proved by the very admissions of the cattle men in that region, who explain their very heavy losses for the last two winters principally by the fact that the *rains* of the last two seasons had taken the nutritive qualities from the buffalo grass, and thereby caused actual starvation of quantities of cattle. And although the theory of the cattle men has been that they could better afford to lose a percentage of their stock than to prepare and distribute feed for the winter, yet these losses will at the same rate grow to be very large, and will compel winter feeding, which can be better done by small droves than by large herds.

The argument that we have nearly reached the limit of our exports in cereals, and that there should be an increase in the production of beef

cattle, is probably correct, but I beg to submit that these matters adjust themselves, in consequence of the prices paid, without inducements from the Government except in the sanitary protection which it should give, if any protection is needed. Witness the increase in the breeding of hogs and cattle in Iowa.

If settlers are found who are willing to settle on any part of the Plains, it is of itself evidence that they consider the land and the conditions favorable to agriculture, from the fact that the country is not settled at random, but systematically—each new comer who locates taking the land that is vacant and fit, next to the latest settlement. If under the present laws and rules the land is being taken, it proves that the cattle kings are not needed there. Where the land is absolutely unfit for anything except their industry, they need no protective action, because the settler don't go there. If in time it becomes advisable to give inducements to occupy or utilize any vacant lands of the United States, there will be no difficulty about it. All that needs to be done is to permit the preëmption or homestead of 640 acres instead of 160 acres, or even of a larger tract if necessary. But as long as people are glad to take homes of 160 acres, and crowd the cattle corporations so uncomfortably, it shows that everything is for the best, and that the cattle king eventually must go and his place be taken by owners of small herds.—Yours truly,

JOHN B. POITEVIN.

DOW CITY, IOWA, July 9, 1885.

THE REAL AND THE IMAGINARY KEILEY.

TO THE EDITOR OF THE NATION:

SIR: If the *Nation* will pardon me, I desire to enter one more protest against its conclusions. I do not understand the *Nation* to hold that Mr. Keiley's having been in arms against the Federal Government disqualifies him for representing it abroad. Its utterances on that point have of late been too clear to be mistaken. But the trouble is, that he considered (the *past* tense was used in his speech) the invasion of his State "a gross and bloody violation of public rights." Why, what a conclusion is here! Is not the fact that he fought for what he considered a constitutional right the *only* circumstance that could extenuate armed opposition to the Government—the only ground on which Mr. Keiley, or any other Confederate soldier, could be restored to citizenship in the Union? If *not* considering the invasion of his State a gross and bloody violation of public rights, he had taken arms against the Government, he ought to have been hanged twenty years ago.

On the general subject I will only add that the real Keiley is as different from the imaginary Keiley that the Northern papers have manufactured for themselves, as—well, let us say, as the editor of the *Nation* is from that monopoly-paid South-hater that a Southern journal described him to be on account of his exposures of Southern homicides.—Yours respectfully,

A PROTESTANT MINISTER.

RICHMOND, VA., July 7, 1885.

WAGNER IN BERLIN.

TO THE EDITOR OF THE NATION:

SIR: Will you allow me to say that the opinion which you recently expressed of the relative popularity of Wagner and Verdi upon the German stage holds true in Berlin quite as emphatically as anywhere in Germany, with the possible exception of Munich? Your correspondent from Leipzig, "C. H. G." (*Nation*, 1041), says: "In Berlin, the prevalence of Millöcker and operas of the hand-organ type averages everything else out of sight." A glance at the official report of the performances at the Royal Opera-house, in Berlin, during the year just closed, will show this to be a mistaken impression. Wagner is easily first in the list, with forty performances, followed by Nessler 28, Weber 20, Lortzing 20, Meyerbeer 16, Mozart 15, and Verdi 9. The popularity of Nessler is accounted for by the fact that his new opera, "Der Trompeter von Säckingen," is founded upon Victor Scheffel's well-known poem of the same name, which is a household classic in every German family, and appeals to national feeling in such a way as to win immense success wherever it has been produced. The "Trompeter" alone is responsible for 26 of Nessler's performances. Light operas of the sort referred to by "C. H. G." are never heard here except at the operetta theatres, with which Berlin, like Vienna and every other metropolis, is well supplied. I may add that the Wagner performances here draw by far the largest audiences, and that at the daily concerts of the two chief orchestras Beethoven is the only composer whose works rival those of Wagner in popularity and frequency of performance.—Respectfully yours,

E. B. C.

BERLIN, June 25, 1885.

THE *NATION* AND ITS FRIENDS.

TO THE EDITOR OF THE NATION:

SIR: Your editorial on the completion of the twentieth year of the *Nation's* existence has decided me to do what I have many times contemplated—*i. e.*, write to tell you how valuable its successive numbers have been to me. About twelve years ago I accidentally picked up a copy of the *Nation* in a bookstore, having never heard of it before. I was surprised to find it expressing opinions which I entertained regarding various political matters, notably the "bloody shirt." From that time to this I have been a regular reader, and I can say truly that among the good things which life has given me I regard the *Nation* as near the head of the list. It has gone far toward compensating my want of education; has enlarged my views of men and the world; has furnished me a great stock of exact political information; has stimulated my love of truth and righteousness; and has been in every way helpful. For whatever I may be able to accomplish in the line of my ambitions I shall be indebted to the *Nation* more than to all other things combined.

Trusting that you may long be able to continue your patriotic work, but regretting that I cannot more fully express to you my affection for the *Nation* and my sense of gratitude to you personally, I am, yours truly, A. T.

OHIO, July 10, 1885.

TO THE EDITOR OF THE NATION:

SIR: I want to proffer, at a distance many hundred miles from my home, my congratulations to the *Nation* on its nearly arrived majority. I have always considered the *Nation* our best specimen of a wise, able, and thoughtful periodical. The constant effort, in exposition and criticism, "to see the thing as it is"; its intolerance of sham and pretension; and its earnest labors for practical rather than quixotic reform, have proved it a rare mental educator and tonic, the like of which I should not know where to look for. In saying all this, I do not mean to say that I *always* agree with its conclusions; but I am frank to confess that I commonly do.

As an evidence of my interest in it, and devotion to its style and methods, I can say that I have not only read every number that has been issued, but I have read the various issues without skipping an article, a sentence, or a word. I waft to it my wish that it may attain a long (and I know it will be a notable) future.

Yours truly, JOEL BENTON.

MINNEAPOLIS, MINN., July 10, 1885.

TO THE EDITOR OF THE NATION:

SIR: The American people, as well as yourself, are to be congratulated upon the satisfactory position of your publication in this its twenty-first year. For a long time I have been a subscriber. It is no exaggeration to say that during the turmoil of partisan controversy that has so long raged to the perversion of men's judgment, the weekly utterances of the *Nation* upon momentous questions have been as the very voices of the breathing nation striving to make her pleading heard amid the angry clamor of hostile meetings. The value of such bold advocacy of calm and deliberate action, based always upon honest and competent judgment, so persistently urged during this long period of national corruption and confusion consequent upon the civil war—how shall it be estimated? At present the full measure cannot be even conjectured, in the vastness of its dimensions. When the general press was divided into two irreconcilable, bitterly hostile factions, that voice, raised continually for peace and justice, cheered faith and fed the hope for a better future. When it forced itself upon men's minds that the party that had conducted the war to a fortunate ending had degenerated into a huge machine, managed by a few desperate demagogues and maintained by a gigantic scheme of office brokerage, prostituting the welfare of the nation to the gratification of a debauched faction, then it became evident that civil-service reform was the only chance for our salvation. That cause of reform you at once upheld. Ridicule, violence, fraud—all these devices of a most powerful enemy, armed with the whole authority of the usurped Government and the acquiescence of a deluded people, you and your associates fearlessly faced. At last there is triumph. For the cause of good government, and as an assurance of the perpetuity of this nation, there has been no greater moral triumph in our history.

This is written with a sense of personal triumph, since through your courageous advocacy I was induced to become one of the National League when, as it later appeared, there were but two other members in St. Louis, and the local organization did not come into existence until some time afterward. To effect this organization I exerted all possible effort—not much of itself, but one citizen specially labored with subsequently became one of its most efficient and enthusiastic members.

The friends of the *Nation* should be as numerous as are the friends of good government and honest policy, and should manifest their appreciation in the way most directly effective, in securing its widest circulation.

With sincerest hope for long-continued success of the *Nation* in the never-ending cause of reform, CHARLES A. TODD.

ST. LOUIS, July 12.

Notes.

'MALTHUS and his Work,' by James Bonar, is announced by Macmillan & Co.

Ginn & Co. have in press 'Studies in General History,' by Mary D. Sheldon; and 'Stories for Kindergarten and Primary Schools,' by Sarah E. Wiltse.

Houghton, Mifflin & Co. promise a calendar for next year drawn from the writings of Mrs. A. D. F. Whitney, and also a "Lowell Calendar."

The Leonard Scott Publication Co., Philadelphia, are preparing a limited reëdition of the

scarce first volume of *Shakespeariana*. Only two hundred copies will be bound.

We learn from the Messrs. Putnam that Mr. S. R. Van Campen, of New York, has returned to London for the further prosecution of his literary researches relating to Holland in the British Museum. His first work will be the revisal and enlargement of his present volume, 'The Dutch in the Arctic Seas,' surveying the North Polar question, and the bringing out at the same time of the second or historical volume, recounting the story of the old Dutch northern voyages, as well as the history of Holland's later essays in the field of Arctic research.

We have received some specimen sheets of the 'Directory of Antiquarian Booksellers' now in preparation by C. N. Caspar, Milwaukee. The title does not do the work full justice, for its aim is to aid any one to find any book, whether for purchase or for consultation. Hence the introduction and lists which precede the directory are full of bibliographical directions of a very practical kind. The Directory is calculated to save much misdirected inquiry, and to assist materially the pursuit of the best current literature.

Mr. Hickcox has enhanced the value of his Monthly Catalogue of Government Publications (Washington) by adding to No. 5 a list of prices current for the issues enumerated. We presume this will be a regular feature hereafter.

A series of bibliographical monographs entitled "Bibliotheca Lindesiana" has lately been announced by Quaritch. Three tracts have already appeared in the series. They give collations and notes by Lord Lindsay of his copies of Sander's 'Brabant,' Fowler's 'Mosaic Pavements,' and De Bry's Collections of voyages. These are to be followed by others on the rarer works of the Crawford Library, a collection comprising some of the greatest rarities. A history of the origin and growth of this library is preparing, which will be published in advance of a projected complete catalogue.

It is stated in the English papers that a Manchester photographer proposes to reproduce in facsimile, by the process of photo-lithography, the Mazarine Bible. Mr. William E. A. Axon will write for it a bibliographical and historical introduction. The copy to be used for reproduction is loaned for the purpose by Lord Lindsay.

We call the attention of all interested in the subject—and the number is indirectly a pretty large one—to a series of able articles on the Panama Canal now publishing in the London *Financial News*. The writer, who is evidently extremely well informed, traces the enterprise from its inception, and his very unfavorable exhibit of promise and performance is a mine of facts for editors and diplomatists. One would naturally expect a pamphlet to result from the series.

'A Treasury of Tales: containing one hundred choice stories by the best American and foreign authors,' edited by William Swinton, recently published by the Caxton Book Company, of this city, is a reissue, with a few stories left out, of the nineteen numbers of 'Swinton's Story Teller,' a collection of short tales which appeared weekly from October, 1883, to February, 1884.

Surgeon Billings's report (Part I) on the Mortality and Vital Statistics of the Tenth Census forms volume eleven of the Census series. Among the curious facts which a cursory glance discovers is the result of an attempt to correct the inevitable deficiencies of enumeration by means of blanks sent to physicians (*soi-disant* and real) all over the country. Only 37 per cent. of these were returned. Montana returned 22 out of 26, Rhode Island 95 out of 175, and New York and Pennsylvania each more than 50 per cent. The death-rate for the Census year is estimated at 18 per 1,000.

Mr. George Saintsbury's edition of Voltaire's "Mérope" (Oxford: Clarendon Press) is all that it should be. The text is correct, the notes are short and to the purpose, and the Prolegomena interesting. The chapter on the stage in the time of Voltaire and the Introduction to "Mérope" are especially good and full of information. It may be doubted whether the selection of Edgar Quinet's letters to his mother, made by the same hand and issued from the same press, will be much read in schools, in spite of Mr. Saintsbury's excellent editing. Letters are rather hard reading in class—even Mme. de Sévigné's—except in very small doses. But if any selection deserves success, it is this one, brimful of modern interest and of sympathetic humor (if humor can be said to exist in French), with numberless allusions to men and things, all beautifully explained in Mr. Saintsbury's notes. A selection from Sainte-Beuve's 'Causeries,' by the same editor, is announced. This will be very welcome to many college instructors, especially if it forms a good-sized volume three or four times as large as the usual Clarendon Press publications. Nothing of the kind exists even in France.

Parts 151-156 of the new 'Brockhaus Conversations-Lexikon' (New York: L. W. Schmidt) bring this work down to Malgue. Luther's is the leading biography, as London is the chief topographical article. There are maps in the text of Liverpool, Lisbon, Lyons, Madrid, and Magdeburg, besides an inserted colored map of Mexico and Central America. Two American Presidents—Lincoln and Madison—are embraced in the present section of the Lexikon, and it is characteristic of the diligence with which the bibliography of the articles is kept up, that Gay's 'Madison' in the "American Statesmen" series is mentioned among the authorities for this subject.

A like timeliness is shown in the current instalment of 'Meyer's Konversations-Lexicon,' Parts 5-8 (New York: B. Westermann & Co.). Under T. B. Aldrich, his 'Ponkapog to Pesth' is recorded, and under Alaska a book of travels of 1884. Alexander, Algeria, Alps, and America are the principal articles. No less than three colored maps of Africa, viewed in as many different phases, are inserted, one being a very pretty showing of the routes of the chief explorers. The chromo sheet of Asiatic ethnology is noticeably well executed, with a real fidelity to race characteristics. Some of the types we recognize as derived from photographs, and all may well have been. Quite otherwise, by the way, is it with the colored sheet of races of mankind in No. 151-152 of Brockhaus. Meyer, again, has a fashion of utilizing its cover for "answers to correspondents," as our American phrase is—*Korrespondenzblatt*, in the German idiom. Subscribers who wish to have their doubts solved concerning anything that has already appeared in the Lexikon, are here gratified. One such was not satisfied that two modes of pronouncing Beaconsfield should be given where but one could be right. The editor thereupon sought information of the statesman's pastor, who replied that the hamlet Beaconsfield is *only* pronounced Beck'nsfield, but admitted that the Disraelis had never had an estate there, nor any associations with the place, and that Lady Beaconsfield insisted on the long ē (as in the word beech, after which the village was called). The members of the Beaconsfield Club, adds Pastor Bowles, probably observe the same usage.

The Proceedings of the Wyoming Historical and Geological Society, vol. ii, part 1 (Wilkesbarre, Pa.), betoken by their handsome print a prosperous organization. An account, with heliotype views of skulls and pottery, of aboriginal grave-openings at the junction of the Chemung and Susquehanna; a paper on local shell-heaps lately revealed along the latter river, and very rich in remains; and a bibliography of the Wyoming Valley, lend a high degree of interest to this pamphlet.

We may perhaps foresee a book in the papers contributed to the *Pennsylvania Magazine of History and Biography* by Mr. Edward D. Neill, under the title, 'Virginia Carolorum: the Colony during the Days of Charles I. and II.' The first chapter is in the July number of that excellent periodical, and contains many lists of immigrants. One section discusses the first introduction of slaves. This has sometimes been laid upon the *Mayflower*, without reason; but it appears that the captain who brought over the Pilgrim company in that vessel did, five years afterward, bring into Chesapeake Bay a captured Spanish frigate and one negro named Brass, in connection with whom arose "the first question as to the legal status of the negro in North America," though slaves had been landed in 1619 by a Dutch frigate at Jamestown.

The Boston *Civil-Service Record* is just entering upon its fifth year of publication. Few reform organs have seen their hopes so nearly realized in so short a time. The conduct of the *Record* has been noticeably discreet, and its bound volumes will always be valuable for the history of the period.

Mr. Howard Lockwood sends us the first number of his *Bookmaker*, a journal whose concern is everything that goes to the manufacture of books. We have found the contents very interesting.

M. André Theuriet, the novelist, was one of the most intimate friends of the late Bastien-Lepage, the painter, and he has now written a brief personal sketch of him, 'Jules Bastien-Lepage, l'Homme et l'Artiste' (Paris: Charpentier; New York: F. W. Christern), in which his character and career are outlined in simple words. Although M. Theuriet refers to the influence the dead painter exercised over the young foreign artists studying in France, he does not mention that his greatest work, the "Joan of Arc," is owned in America, and that the best likeness of him is the bas-relief by Mr. Augustus St. Gaudens. M. Theuriet's little book contains a portrait by M. Liphart, and the facsimile of a letter to the author.

J. C. Poestion, an Austrian writer, author of several works on ancient and Scandinavian literature, has published an extensive description of Iceland, geographical, ethnographical, and historical: 'Island: Das Land und seine Bewohner, nach den besten Quellen' (Vienna, 1885). It comprises detailed accounts of the littoral and orographical features of that interesting but rarely visited country, of its flora and fauna, mineral resources, industry, institutions, literature, folk-lore, national customs, etc. In composing it the author availed himself of the best authorities on the subject, Icelandic, Danish, and other; but he confesses that he never trod the shores of the island the beauties of which he proclaims.

In a note last week on Ersch & Gruber's Encyclopædia, we erroneously named *Karl* Maurer as the writer on Scandinavian antiquities instead of Konrad Maurer, of Munich, the greatest living authority in respect of the laws and customs of the ancient Scandinavians.

We should have mentioned last week that the American publishers of Dr. Stoughton's 'Religion in England from 1800 to 1850,' as also of his 'Religion in England from the Long Parliament to the End of the Eighteenth Century,' are A. C. Armstrong & Son.

The meeting of the American Association for the Advancement of Science will be held at Ann Arbor, Mich., on August 26-September 1. The headquarters will be at the University. The local secretary is Prof. John W. Langley.

—Leon & Brother, of this city, send us the first attempted catalogue of 'First Editions of Ame-

rican Authors.' It is a sale catalogue, and for the collector's benefit the prices are annexed; yet the higher needs of bibliography are well served by it. In the case of Emerson, for example, the list is full and valuable for reference. We remark here a set of the *Dial*, valued at $30, the Divinity School Address of 1838, rated proportionately high at $4.50, and 'Nature,' at $12. Leon & Brother ask for the 1823 edition of George Bancroft's Poems, $15; Barlow's 'Columbiad' (1807), $12.50; Artemus Ward's 'Travels among the Mormons' (1866), $30; the second edition of Bryant's 'Embargo' (1809), $15; his 'Poems Selected from the *U. S. Literary Gazette*' (1826), $15; Franklin's 'Poor Richard' for 1734, $50; Hawthorne's 'Gentle Boy' (1839), $30, 'Grandfather's Chair' (1841), $12.50, 'Liberty Tree,' 'Famous Old People (both 1841), $15 each, 'Biographical Stories for Children' (1842), $15, 'Scarlet Letter' (1850), $12.50; Holmes's 'Harbinger' (1833), $10; Irving's 'History of New York' (1809), $22.50; Longfellow's 'Outre-Mer' (2 nos., 1833-4), $35; his 'Evangeline' (1847), $25; Poe's Poems (1831), $25; his 'Tales Grotesque and Arabesque' (1840), $25; his 'Narrative of A. G. Pym' (1838), $17.50; Whittier's 'Legends of New England' (1831), $20; his 'Moll Pitcher' (1832), $25. Even so late an author as Walt Whitman has mounted into the decades. His 'Leaves of Grass,' of 1855, is worth, it appears, $15, and the editions of the next year, of 1871, and of 1876, will each bring $10.

—The impulse given some years ago to the study of bibliography, more especially in its practical applications, by the American Library Association, through its organ the *Library Journal*, has not yet spent its force. Its influence quickly extended to England, and the wave of progress is still advancing over the continent of Europe; its course may be traced in the establishment of such journals as the *Bibliographer*, *Library Chronicle*, *Centralblatt für Bibliothekswesen*, and the publication of such manuals as those of Cousin and Ottino. In Italy, among other American ideas, the card catalogue seems to be finding its way into favor, though its adoption is not likely to become general, unless we are to regard as exceptional the method of using it recently observed in one of the Italian libraries by an American visitor who writes, "The accessions are catalogued on the card system, rather primitively, however; and one is amused to see some ancient reader walk up to the boxes, deliberately pick out a handful of cards, stuff them into his pocket, and walk off to a desk in some corner, where he shuffles and cuts them to his heart's content." The condition of a card catalogue subject to such usage may be better imagined than described, and would furnish a strong argument against its introduction. It is nevertheless in Italy that the most promising signs of progress are beginning to appear. By a decree issued in February the Government offers for the encouragement of bibliographical studies in Italy three prizes of 1,000 lire each—one for the best bibliographical monograph published in 1885; another for the best work describing and illustrating any one of the more notable collections of manuscripts, or printed books, contained in the public libraries; and the third for the most intelligent and practical set of rules for the preparation of alphabetical or classified catalogues. The introduction to the decree gives a brief summary of what has been done in America, England, Belgium, and Spain, for the promotion of national bibliography, concluding with these words: "To promote bibliography is to assist science." Another evidence of progress is shown in a recent regulation by which the national libraries throughout the kingdom are placed under direct Government supervision, subject to the general civil-service rules. One of the first promotions under the new rules is that of Signor Chilovi, the head of the Marucelliana library, to be Prefect of the Biblioteca Nazionale in Florence, the largest in the kingdom. Signor Chilovi, who has thus gained one of the few great prizes of the profession, is spoken of as a man of great ability, who has made a thorough study of American and English library methods; and it is understood that his plans for the reorganization of the library include the introduction of the card catalogue, and the publication at regular intervals of a bulletin of accessions similar to those issued by the larger American libraries. He has now in a press what promises to be a valuable contribution to bibliography in the form of a general catalogue of the periodicals taken in the various public libraries of the kingdom, somewhat resembling the 'Catalogue of Scientific and Technical Periodicals,' edited by H. C. Bolton for the Smithsonian Institution. Under the Italian copyright law the Biblioteca Nazionale in Florence and the Biblioteca Vittorio Emmanuele in Rome are the only two libraries entitled to receive a copy of every book, pamphlet, or journal published in Italy, but, by a wise provision of the law, the local national library in each province receives a copy of everything published in the province, and in this respect at least we may find that our own legislators have something to learn from Italy.

—The Annual Report of the Paris Observatory for 1884, which has just reached this country, contains the first published evidence of the immense value of photography as a means of making star charts and catalogues. Astronomers have known for some time that experiments of this nature had been successfully carried on at the observatories of Paris, Harvard College, and the Cape of Good Hope. The exquisite heliotype reproduction of the plate of the clusters in Perseus, which was made by the brothers Paul and Prosper Henry, at Paris, on October 10, 1884, is convincing evidence of the power of the new method. The plate is six by eight inches, and is reproduced from the original absolutely untouched. It covers a space in the sky of something over a degree by a degree and a half, or about the apparent surface of seven full moons. In this area there are shown 509 stars, from the seventh to the thirteenth magnitude. The photographic lens had a diameter of about six inches, and the faintest stars photographed are about of the same brilliancy as those which could have been seen with the eye, if such a lens had been employed in the usual way as part of a telescope. The exposure was fifty minutes, and thus less than an hour's work has fixed the places and the relative brilliancy of 500 stars. To do the same thing by the ordinary methods would require several nights' work. The success of this experiment by the Messrs. Henry has made it certain that small areas of the sky, of a degree or so, can be photographed so as to show all the stars that could be seen by ordinary telescopes. The photographic plates employed are far more sensitive than those which were available when Mr. Lewis Rutherfurd, of New York, made the first pictures of the kind (before 1870), or while Dr. B. A. Gould was extending the same research to the clusters of the southern sky at Cordoba in 1875-1880.

—A note in the *Observatory* for June gives the very latest details concerning stellar photography at Paris. The 6-inch lens first used has been replaced by one of 13.4 inches in aperture and of 11 feet 3 inches focal length. The field of view is over three degrees. The negative plates are more than ten inches square, and show a portion of the sky comprising over five square degrees. An exposure of one hour showed 2,790 stars on such a plate, the stars ranging from fifth to fourteenth magnitude. Stars of the fifteenth magnitude, even, exhibited faint traces. The diameters of the images of the fourteenth-magnitude stars were about 1-1000 of an inch. The chart thus constructed automatically in an hour would have required several months to make by the ordinary methods. The Harvard College Observatory is now experimenting in a similar field. The effort is to make photographs which shall be ten degrees square, and which shall show all stars as bright as the tenth magnitude. A comparatively small number of such plates will cover the whole visible heavens, and will give a map absolutely complete down to a certain brightness. A similar undertaking is begun at the Royal Observatory at the Cape of Good Hope, for the southern sky. There seems to be no doubt of ultimate success in both these cases. Thus we are likely to have accurate maps of every star in the sky automatically made and ready for printing; and it is by no means unlikely that photographic methods may be further extended so as to give extremely accurate positions of small groups of stars, as well as extensive maps of large regions. For the study of stellar statistics, the construction of the heavens, the laws governing the aggregation of stars in groups, this method has no equal.

—The sudden death is announced, at Weymouth, Mass., on Sunday morning, of Mrs. Maria Weston Chapman, at the age of seventy-nine. Thus passes away one of the most remarkable women of our time. She belonged to a large and gifted family (Weston), of Pilgrim descent, and, having married the late Mr. Henry Grafton Chapman, of Boston, she made her home in that city. Here, in 1834, she was irresistibly drawn into the anti-slavery cause, then in its infancy, and speedily became one of its foremost directors. Indeed, she may be said to have been among the *necessary* leaders of the agitation. Ever on terms of the closest friendship with Mr. Garrison, she rendered him invaluable support in the early and struggling days of the *Liberator*. She did not found the Boston Female Anti-Slavery Society, but she became the life of it, and was one of the most conspicuous figures at the meeting which was mobbed by "gentlemen of property and standing" in October, 1835. Of this memorable occasion she wrote an account called 'Right and Wrong in Boston,' first of a series having a similar title, in which the history of that turbulent epoch is now to be sought. She was indefatigable with her pen, reporting meetings, writing articles and not seldom verse; and founded the *Liberty Bell*, an anti-slavery annual of a distinctly literary character, to which her large European acquaintance drew many admirable contributions from abroad. For public speaking she was not well fitted, and the single instance in which she essayed it was in the midst of a howling mob surrounding Pennsylvania Hall, in Philadelphia, before it was burned by the rioters. This was in 1838. In 1840 occurred the great schism in the anti-slavery ranks which led to the temporary paralysis of the American Anti-Slavery Society, and the transfer of its organ, the *Emancipator*. A new organ was indispensable, and Mrs. Chapman's liberality, energy, and extraordinary executive ability produced the *Standard*, and maintained it by providing the ways and means through the instrumentality of annual fairs. Mrs. Chapman was among those who agreed with Mr. Garrison in thinking the work of the anti-slavery societies ended when the war terminated in universal emancipation. Since that time she has come before the public only as the literary executor and biographer of Harriet Martineau, with whom her ardent friendship began in 1835, dur-

ing Miss Martineau's visit to this country. Mrs. Chapman survived her husband, who was in full sympathy with her, for more than forty years. She spent a number of years in France, and one of her daughters became the wife of M. Auguste Laugel, the Paris correspondent of the *Nation*. Another married Mr. Edward Dicey, the well-known London journalist. Her son, the late Henry G. Chapman, of this city, married a daughter of Mr. John Jay. Mrs. Chapman was remarkable for her stately beauty, which she retained to the very last, along with her vigor of mind, her vivacity and *esprit*. She was taking a daily delight in reading the proofs of the forthcoming 'Life of Wm. Lloyd Garrison,' which reviews the disinterested labors of herself and her associates in a once odious and persecuted cause.

—A writer in *La Ligue* says: "The end of a century has its own literature. When a new century commences it awakens enthusiasm; it rejuvenates humanity. When a century ends, it has seen everything, tried everything, and in literature as well as in manners the pleasures of an old man are most suitable for it." It is strange that any one should be so entirely under the dominion of words. What has a period of arbitrary length, starting from an arbitrary point, to do with the growth of humanity? If our fathers had wisely adopted a duodecimal system, instead of unluckily taking the Arabic notation by tens, our century would have had 144 years, and humanity would have been enthusiastic and enervated at entirely different dates. If we had been Mussulmans or Buddhists, the world would have rejuvenated itself in our eyes at very different periods, perhaps at the very time when to the Christians it was becoming effete. Undoubtedly there are periods of growth and periods of rest, periods of corruption and periods of purification, periods of enthusiasm and faith and hope, and periods of indifference or of despair; but the former do not occur exclusively when the last two figures of our era are small, nor do the latter come only in the eighties and nineties.

—Among the interesting and pretty little books which Messrs. Field & Tuer issue from time to time in parchment covers for a shilling, the latest is certainly the most striking—and not the least important. It is frankly called "Why Not Eat Insects?" and is written by Mr. Vincent M. Holt. The subject sounds like a joke, but, after reading Mr. Holt's arguments, many people will be convinced that he has really made out a strong case on a serious subject. He says: "I am quite aware of the horror with which this opinion will be read by many at first sight, but when it is carefully thought over I fail to see that any one capable of correct reasoning can deny its practical truth." He begins by drawing a line of distinction between carnivorous and non-carnivorous insects. Men, he says, have almost invariably agreed not to eat carnivorous animals, nor does he advocate the eating of carnivorous insects; especially not, is his rather ghastly assurance, *Blaps Mortisaga*, the ghoul. As regards the food of the creatures we eat, he insists, with a good deal of scorn, that it is ridiculous for people who enjoy lobsters and eels, both filth-eating animals, who choose cheese largely composed of mites, and who esteem the unmentionable peculiarity of the woodcock on toast, to turn up their noses at the cleanly grubs which eat vegetables, or the delicate moths and wasps which eat honey. Two reasons for insect-eating he chiefly urges. First, that philosophy bids us neglect no wholesome source of food; second, that, in these days of agricultural distress, insect-eating would be a double boon to the agricultural laborer, for his children would be rewarded by the farmers for hand-picking the destructive insects, and the family table would be enriched by costless toothsome and nourishing dishes. The insects eat up every green thing, complains the farmer. Well, eat them, retorts Mr. Holt, and grow fat. It is evidently a case of the biter bit, or, as the author says, of battling with the enemy tooth and nail. To enforce the economical side of his case he instances the strong-stomached and hungry sailor, who raps his sea-biscuit on the table to shake out the worms before eating it. Let him shake out the worms by all means, says Mr. Holt, but let him collect them, fry them in lard, and spread the dainty upon his dry biscuit. He will not again throw meal-worms away. The fashionable world has little to overcome in this respect, for at the Chinese Restaurant at the London Health Exhibition last year the sea-slug was a much enjoyed delicacy, and the trepang, as Mr. Holt sarcastically remarks, by any other name would taste as sweet—even by the name of garden-slug. Peculiarly distressing to Mr. Holt is the waste of cockchafers. "You ought to get sixpence a score for them from the squire's housekeeper," he tells the laborers' children.

—None of the orders of insect life come amiss to Mr. Holt's pan—orthoptera, coleoptera, hymenoptera, lepidoptera; his *menu* holds them all. Most of what we call the less cultivated races have eaten insects, he urges; and since we have been glad to take from them Peruvian bark, potatoes, curry, and tobacco, why should not we imitate them in their insect-eating too? The classical authorities are also all on his side. Homer praised the *Cicadæ* for their tunefulness and delicate flavor; and Aristotle, and Pliny, and Ælian, and many modern travellers, are quoted with good effect. Moses, however, is Mr. Holt's most valued authority: "These ye may eat: the locust after his kind, and the bald locust after his kind, and the beetle after his kind, and the grasshopper after his kind." And so eclectic is he willing to be in his argument, that he even condescends to quote with approval the suggestion that the Latin name of the locust, *Gryllus*, suggests the creature's proper destination. Our most delicious sweet comes from the bees; there is an equally delicious savory awaiting us in the properly-cooked dish of wasps, he says; and over the moths he grows enthusiastic. "Why," he exclaims, "they are the very incarnescence of sweetness, and beauty, and deliciousness—living storehouses of nectar, gathered from the most fragrant flowers!" And really touching he considers their noble and suggestive sacrifice as they hurl themselves into the candle of the solitary student at midnight, to provide him with ready-cooked delicate nutriment against his exhausting labor. He concludes with a number of specimen *menus*, in which insects play the leading part. "Fried Chafers with Wireworm Sauce" would probably be a little too vernacular for most people, but *Choux fleurs aux Chenilles* is tempting by its very alliteration. "Cauliflowers with Caterpillars" is a solid and neatly alliterative English dish; and there is nothing foreign about "Stag-beetle Larvæ on Toast," or "Gooseberry Cream with Sawflies." For piquancy of title, however, give us *Grasshoppers au Gratin*.

—The last *Heft* of Stade's *Zeitschrift für die alttestamentliche Wissenschaft* (Giessen, 1885) contains a felicitous conjecture, offered by W. Bacher, of Buda-Pesth, concerning the origin of *Jeshurun*, the symbolical name for Israel used in Deuteronomy (xxxii, 15; xxxiii, 5, 26) and Isaiah (xliv, 2). The best Biblical expositors, with very few exceptions, derive it from the Hebrew root *yāshar*, to be right or upright, and deem it applied to the chosen people as the representative of righteousness among the nations, in the same way in which Bileam designated the people by the appellation *y'shārān*, the righteous (Num. xxiii, 10). Even those who, like Michaelis and Gesenius, consider the name a contraction of *yisr'ēlūn*, little Israel—an opinion now universally discarded—see in it an allusion to *yāshār*, righteous. The suggestion of the Hungarian Hebraist is that the word was introduced, by some poetical writers, as a substitute for Jacob, on account of the very opposite and offensive derivation of the latter national name—the root of which, *'āqab*, means 'to be crooked,' 'to supplant,' 'to cheat.' "Is he not rightly named Jacob? for he hath supplanted me these two times," says Esau (Gen. xxvii, 36), and a prophet (Hos. xii., 4) repeats the reproach. The two roots are contrasted in derivatives in the sentence of Isaiah (xl, 4) rendered "the crooked shall be made straight." Jeshurun was substituted for Jacob in the reverse spirit from that in which the prophet Hosea (i, 6, 9) changed the endearing appellation "the pitied one" and "my people," applied to Israel, into *Lo-ruhamah*, the unpitied, and *Lo-ammi*, not my people. That in one instance (Is. xliv. 2) Jeshurun occurs in a parallelism with Jacob is apparently an objection to this view; but it is not a fatal one, considering the late age in which the prophecies of Deutero-Isaiah were composed.

McMASTER'S HISTORY OF THE AMERICAN PEOPLE.

A History of the People of the United States, from the Revolution to the Civil War. By John Bach McMaster. In 5 volumes. Vol. II. D. Appleton & Co. 1885.

PROFESSOR McMASTER'S second volume covers the fourteen years from 1790 to 1803, a period not only rich in interest for its own sake, but, in many respects, unsurpassed in importance by any other portion of American history of similar length. Within these years was settled the question of the future tendencies of the American people; and they hold much the same relation to the history of subsequent years that the aim of a gun holds to the direction of the bullet's flight. The years 1783-90, covered by the first volume, may, of course, claim something of the same distinction; but there is this great difference, that the forces which opposed the natural growth of the Constitution were comparatively weak, so that all that was necessary in the men who guarded and guided the development of the growth was self-restraint and a certain harmony with the controlling forces. The four tremendous years of the civil war, however gigantic and imposing in outward appearance, were but the natural outcome of the direction given to the development of the people through the period of this volume. The solid and substantial character which the Federalism of Hamilton, during the years 1789-97, gave to the national edifice secured by the Constitution; the sudden list to individualism, equally unexpected and undesired by the "fathers of the republic," which was given by the Democracy of Jefferson during the years 1793-1800; the territorial expansion of 1803, with its inevitable and far-reaching consequences—here were three fundamental and discordant forces, whose reduction to harmony would alone make this a period of vital importance in American history. As the ship, sliding from the ways, lurching first to one side then to the other, settles down into her natural position, American history, not only then but thereafter, was *made* during these fourteen years.

Such a period is a crucial test for the historian. In treating it, while the author maintains fully the points of peculiar excellence in his first volume, he has been compelled by the broader demands of his subject to bring into bolder prominence the defects consequent upon the limitations which he has prescribed to himself. It is not sufficient, even in a history of the *people* of

the United States, that the narrative should be confined closely to a minute detail of their dress, amusements, buildings, diseases, medical theories, and means of communication, their modes of living and laboring, and their general social conditions and limitations. However unwisely these elements in the history of the people may have been neglected by other historians, an author does himself but scant justice by confining his work to picking up their dropped stitches. He becomes, in his way, as partial an historian as they, and, slipping the opportunity to supply a comprehensive history, he merely adds another to the multitude of books which the student is compelled to read in order to get a real history of the people of the United States. And the gap is not filled by occasional summaries of debates in Congress, outlines of widely circulated pamphlets, or specimens of the political billingsgate of the time. All these, like the social conditions already referred to, are important as symptoms, but they quite fail of their full significance unless their relation to the general sweep of events is keenly appreciated by the author and plainly indicated to the reader. The history of the people of the United States cannot be written without them; it may be too largely missed, even with them.

It is just here that some reservation must accompany the heartiest endorsement of this volume. It must be admitted that our historians have been used to take the bulk of their materials from their predecessors. Any one who has had occasion to follow the statement of any event in our history back through the various "authorities" to its original sources will testify that, once stated, it has seldom been reëxamined; it has been too easy to take the facts at second-hand, and argue from them. Professor McMaster has probably put an end to all this. He has gone back regularly to the sources from which the originals of the line of authorities must have obtained their information. No spring has been so hidden or so insignificant that he has not resorted to it. Newspapers, pamphlets, almanacs, handbills—all the floating material which lives but for a day in the history of a people, has been laid under contribution with as much eagerness as if it had already been digested into six-volume histories; and, as the accumulations of libraries and collections of fugitive literature are now far more numerous and more accessible than in 1790 or 1803, he has given us a closer and more minute narrative of events than could probably have been given by their contemporaries. To this constant recurrence to original sources the work is largely indebted for its immediate and strong hold on popular attention and liking; and its method will almost certainly furnish one of the standards by which future historians must submit to be judged. The day of easy reliance on "standard authorities" is over.

But the method has its dangers, which are more apparent in this volume than in the first. A Chinese fidelity and minuteness of detail are often accompanied by an equally Chinese lack of the sense of historical perspective. Out of 635 pages in the volume, the Louisiana purchase is disposed of in ten pages, which is only half as much as is given to the Whiskey Insurrection in Pennsylvania, and barely twice as much as is given to the Western camp-meetings and "the jerks" of 1800-02. In such cases as these latter, the temptation to digress at unnecessary length into fields which have not been minutely explored is apt to lead to the sacrifice of a fitting treatment for the great events which, though they have affected the mass rather than the individuals of the people, have been no less important to "the people" for that. Details of home life in the little towns of outlying districts are given so minutely that the result not only takes on a gazetteerish aspect, but infringes on the spheres of influence which really moulded the national life. Furthermore, the unity of the narrative is evidently waning as the interests which it treats grow wider, and we have instead a congeries of minute historical, or rather antiquarian, studies, connected by the faintest of chronological threads. The effort is indeed made to obtain some connection between the various fragments, but the means employed are too manifestly artificial to be always pleasing. The word "meanwhile" is a favorite connecting link—*e. g.*, "Meanwhile Congress had been considering a very different matter," as if the writer, feeling the solution of continuity, had decided to rest on the mere coincidence of time. Many of the expedients are of such a nature as to suggest that which is known among professional wizards as "forcing a card." The debate on a bill in Congress is considered up to its passage. "Among the twenty-four Southerners who voted for it was John Sevier." On this delicate pivot the narrative is made to diverge to John Sevier and Tennessee. After a paragraph or two on the affairs of Tennessee, a statement of its condition "as far north as the Kentucky border" is introduced as another pivot on which to turn into Kentucky, and so on and on, throughout the volume. All this is not only a tempting and dangerous mannerism; it has a distinct tendency to speak peace to the author's conscience, and to persuade him that he has established an historical connection where there is in reality no connection at all. Among the more remote consequences of over-attention to such matters is a looseness of style in more important respects. "A strife which no one can tell why it was undertaken"; "all this, the proprietors declared, was ruinous to good morals, and, in a public appeal, begged their patrons not to give their checks to loungers"—infelicities such as these, to give them no worse name, argue almost a disrespect for his readers on the part of the author.

Professor McMaster is falling into the fashion of Hildreth, of incorporating into his narrative a running summary of debates or of both sides of public opinion. Such a step requires the most careful and constant attention to the details of workmanship, in order to distinguish the author's own language from that which he is merely summarizing; and that attention is not always given. Some of the sentences are startling, for they inculcate the most heretical doctrines, and yet a second or third look at their surroundings is necessary before the reader can be certain that the doctrine is that of one of the parties to a controversy, and not that of the author. Nor is he always successful in giving a clear summary of opinions. The argument of the Jefferson-Madison faction, for example, against Washington's proclamation of neutrality between France and Great Britain in 1793 does not receive justice. That that proclamation was one of the wisest of American diplomatic acts, that it is the corner-stone on which our whole subsequent foreign policy has been built, cannot be disputed. But it is no easy matter to reconcile it with the terms of the existing treaty with France. The fact was, that the United States, by the eleventh article of the treaty of alliance of 1778, had most unwisely and improvidently "guaranteed" the French possessions in the West Indies "from the present time and forever against all other powers." Five years before 1793, when a war between France and Great Britain was imminent, the French court had served notice on our Minister at Paris that his Government was expected to take care of the guaranteed possessions, and had received no reply going to show that neutrality was to act against the guarantee. The basis of the Republican charges against the Administration in 1793 was, that it had assumed to suspend or nullify, by a Presidential proclamation, the guarantee clause of the treaty. Madison, over the signature of "Helvidius," in his first letter assigns as the main Federalist heresy "that, *in particular*, the Executive had authority to judge whether, in the case of the mutual guaranty between the United States and France, the former were bound by it to engage in the war." His concluding letter is entirely devoted to the guarantee clause, and the intermediate ones refer to it continually. And yet Professor McMaster mentions the clause in question but once, and that twenty-two pages before he gives what purports to be the summarized Republican argument, in which he leaves *Hamlet* out altogether.

The case is much the same with the argument on the Jay treaty of 1795. That treaty brought to plain view some of the most perplexing of our constitutional questions, which have never since been settled on principle, and are practically still open. One point was, whether the House of Representatives was bound to vote without hesitation any amount of money called for by the treaty power. The doubt has never been resolved, was revived with little diminution of warmth so late as the Alaska treaty of 1867, and deserved in this volume a more thoughtful consideration than it has received. But the case of the Jay treaty was made more serious by the fact, to which Professor McMaster does no sufficient justice, that in it the President and Senate assumed the powers to regulate commerce, to regulate duties, and to define piracy, which are constitutional privileges of Congress. The argument of the Federalists, that a treaty is "the supreme law of the land," is cited without any indication of doubt as to its correctness; whereas it is the Constitution, with the laws and treaties made under it, which together make up "the supreme law." How far can a treaty not only nullify and override an existing law, but trench on the constitutional distribution of privileges as well? The incipient discussion, a few months ago, on the Spanish treaty, and on its renewed incursion of the treaty power into this field of the regulation of commerce and duties, showed that the questions involved in the old Jay treaty may still be of the highest importance to "the people of the United States." Pages of this volume are devoted to specimens of the vituperation which fell upon Jay and Washington, of the handbills and calls for public meetings, and of the resolutions which proceeded out of them. These are all interesting, but would it not have been possible to sacrifice enough of the space devoted to them to give us, as this volume nowhere gives us, a clear and simple statement of the constitutional objections to the treaty, and of the answers, such as those of Hamilton over the signature of "Camillus"? The time may very possibly come when the American people will be glad to know the grounds on which their forefathers based their decision on these questions in 1795. History has been said to be philosophy teaching by example; it is to be feared that, in such cases as those just referred to, Professor McMaster's muse is taking too much to object lessons, and leaving her pupils to draw their own futile conclusions from insufficient premises.

Probably no extract from this volume will be more widely cited than its estimate of Washington as "the cold and forbidding character with whom no fellow-man ever ventured to live on close and familiar terms." It is true that he was "not the greatest of generals, not the wisest of statesmen, not the most saintly of his race, but a man with many human frailties and much common sense"; but this is very far from being all. The reader who should turn from Professor McMaster's characterization to the published letters of Washington himself, would find at once that

he had been given but a one-sided view of their writer. Washington's fame is secure while his letters survive. In all the twelve volumes of them he shows, as no other letter-writer of his time shows, the solid and enduring charm of a great, complete, well-rounded, and self-poised character. It was this, not common sense alone, that made Washington as the shadow of a great rock to his contemporaries, and that justifies the popular estimate of him in subsequent years.

It is not only in this case that estimates of public men are put into terms which fail to convey any adequate view of them, but in the other cases to which we refer it would not be at all fair to the author to anticipate the final verdict which will doubtless fall in the next volume. Monroe was certainly not of much account, but is his character to go on record as completely summed up in the following sentences? "His ability was small, his spirit mean, and the Administration he heartily despised. No sound was more grateful to him than the hollow applause of an ignorant and unthinking mob." This is quite too much like an extract from a Federalist pamphlet. Jefferson fares still worse. He is "saturated with democracy in its rankest form," "a servile worshipper of the people," actuated by "a malignant hatred" of Hamilton; and one of his letters is "such folly" as to be "of itself enough to deprive him of every possible claim to statesmanship." If one estimates at anything like their real value the services for which individual rights, not only in the United States but all over the world, are indebted to Jefferson, he will speak more kindly of him, however he may disapprove or regret his occasional lapses. In particular, he will not say, as does Professor McMaster in another place, "either Adams or Hancock might, like Jefferson, have written the Declaration of Independence." Surely this is assigning too high a literary station, if not to the author of the 'Discourses on Davila,' at least to the Boston merchant.

Whatever adverse criticism may be passed upon this volume, its merits are as easily perceptible as in the case of its predecessor. Granting the limitations which the author has chosen to impose upon his work, the result is a success. It is our only systematic attempt to obtain a faithful picture of the social conditions of the American people at successive stages of their development; and though such successive photographs cannot be expected to be as successful in the case of a great people as in the case of the horse in motion, the success in this case is certainly beyond any of our past criterions. The author has brought to his task peculiar powers of mind and method. His capacity for discovering and recording the necessary facts is not of itself so uncommon; his most noteworthy characteristic is his ability to handle and reduce to comparative order and sequence the enormous amount of material with which he has dealt. His two volumes are already a history *sui generis*, which has made and will keep its own place in our literature.

Typographical errors are not numerous. The name given as that of a French privateer, "*Les Dieux Amis*," has an odd look; and so has the Pass of Thermopylæ, when occupied by a "Spartan Bard."

BOOKS ABOUT THE STAGE.

Mary Anderson: The Story of Her Life and Professional Career. By J. M. Farrar, M.A. London: Bogue; New York: Scribner & Welford. 4to, pp. 86.

Le Théâtre de la Cour à Compiègne, pendant le règne de Napoléon III. Par Alphonse Leveaux. Paris. New York: F. W. Christern. 8vo, pp. 213.

Souvenirs d'un Jeune Premier. Par Adolphe Laferrière. Avec une préface de Jules Claretie. Paris: Dentu; New York: F. W. Christern. 8vo, pp. 206.

La Comédie Satirique au XVIIIe. Siècle. Par Gustave Desnoiresterres. Paris: Perrin; New York: F. W. Christern. 8vo, pp. viii-458.

Comédiens et Comédiennes. Par Francisque Sarcey. Deuxième Série. Paris: Librairie des Bibliophiles; New York: F. W. Christern. 8vo, pp. 384.

MACAULAY declared that Gleig's 'Life of Warren Hastings' seemed "to have been manufactured in pursuance of a contract, by which the representatives of Warren Hastings, on the one part, bound themselves to furnish papers, and Mr. Gleig, on the other part, bound himself to furnish praise." Such a contract we are inclined to declare contrary to public policy, and it is the duty of a critic to expose the collusion between the parties. But Warren Hastings was, at least, dead, and he did not make the implied contract in person, but through his heirs, administrators, and assigns. Mr. Henry Irving, Mme. Modjeska, Miss Mary Anderson, are alive, and it is from them, appearing in their proper persons, that the recent biographers have derived the facts on which the biographies have been based, and it is to them in person that the biographers pay the full sum of praise. We have had occasion before now to express our opinion of the habit of publishing biographies of living celebrities. The lives of Mr. Gladstone and Dr. Holmes were taken at least without their active coöperation, whatever may be said of that of M. Pasteur; but Mr. Irving, Mme. Modjeska, and Miss Anderson have aided and abetted Mr. Frederic Daly, Miss Mabel Collins, and Mr. J. M. Farrar. It is pleasant to be able to say that this biography of Miss Mary Anderson is not as ill-done or as offensive as the biography of Mme. Modjeska. Mr. Farrar knows little about America, less about the history and conditions of the stage in this country, and least of all about the principles and the practice of the art of acting. But his book is harmless enough, and but slightly objectionable. Even in this age of exuberant self-advertisement, we do not believe that a campaign biography of this sort is of any real and lasting benefit to the actor or the actress whose sayings and doings it celebrates. On the other hand, we may doubt whether Mr. Farrar's mild and lady-like sketch will be as injurious to Miss Anderson's artistic reputation as were the absurd books of Miss Collins and Mr. Hatton to the artistic reputations of Mme. Modjeska and Mr. Irving. There is no need to spend time over it; still, we may as well point out that, in spite of the French population of New Orleans, the chief theatre in that city is the Varieties, and not the Varietés (*sic*), as Mr. Farrar prints it (p. 20); and it is sad to be forced to draw attention to the oblivion into which Dean Milman's "Fazio" has fallen in England—an oblivion which allows Mr. Farrar to call it Phasio! (p. 19).

M. Leveaux was the collaborator of M. Labiche in the writing of that little masterpiece of modern French farcical comedy, "La Grammaire," but as the combination of the authors' names was too comic for real life, the former was forced to adopt a pseudonym and called himself Jolly. During the reign of Napoleon III., M. Leveaux was the intendant or director of the little theatre in the palace of Compiègne. He now publishes a full record of the performances before the imperial household. They were given from 1852 to 1869, and were forty-seven in number, of which fifteen were by the Comédie-Française. M. Leveaux was present at all of them, and gives the exact play-bill of each, with an account of the circumstances under which it was produced, the effect it had, and the list of the chief of those invited to be present. The final performance of all, in November, 1869, consisted of three plays by the Palais Royal Company, one of them being "La Grammaire"—which was so effective that it was acted at the Tuileries in the following March by the Prince Imperial and his young friends. M. Leveaux also notes another amateur performance, that of the feeble "Portraits de la Marquise," written by M. Octave Feuillet to be acted by the Empress. The Compiègne Theatre was built in a tennis court, like so many other French theatres; in shape it was awkward; and the performances before the court were nearly always dull and ineffective. Perhaps for this reason a *revue* which was acted by the members of the court in 1865 was performed in the Empress's private apartments; it was called "Les Commentaires de César," and the Princesse de Metternich played three characters in it. Three years later there were *tableaux vivants* arranged by MM. Cabanel and Viollet-Le-Duc. One of the plays acted in 1864 by the Comédie-Française was "Les Finesses du Mari," by "M. de Saint-Remy," *i. e.*, de Morny, who found time in the midst of his financial schemes and speculations to write comic plays, for one of which, an *opéra-bouffe*, "M. Choufleuri restera chez lui," Offenbach arranged the music composed by Morny himself.

Several years ago we had two volumes of the 'Mémoires de Laferrière,' and now comes this posthumous volume of 'Souvenirs,' which derives its whole value from the pleasant preface of M. Jules Claretie. The 'Mémoires' were neither important nor interesting, and the 'Souvenirs' are still less so; the New England phrase "running emptyings" describes them accurately enough. Their sole excuse for being seems to be the circulation of a long and elaborate puff of a proprietary medicine of some sort—a puff which also disfigured the early volumes.

M. Desnoiresterres is a writer of untiring industry; he proposes to follow his exhaustive volumes on Voltaire and his times with a similar series on French satiric comedy. The present volume covers the period of Louis XV. and XVI. and the Revolution. The next two will treat of the earlier periods. We hope to be able to consider the work at length when it is complete. Meanwhile it must suffice to say that this final volume is of importance to all students of the French Revolution and its causes, and to all students of the English dramatic literature of the eighteenth century. The exchange of ideas between England and France a hundred years ago was far closer than most people imagine. There was a constant borrowing of plays from one side of the Channel to the other, and the English were not always the spoilers. The indebtedness of the French dramatic literature of the eighteenth century to England has never yet been fully worked out.

It is ten years now since M. Sarcey began the publication of his 'Comédiens et Comédiennes.' When the first series had completed its sixteen allotted numbers, the work was reviewed at length in the *Nation*. It served also as the basis of Mr. Henry James's essay in the *Galaxy*, and of an illustrated article in *Scribner's*. A second set of sixteen numbers is now complete, uniform with the first, and, like it, adorned with full-length portraits in character, etched by M. Lalauze or M. Gaucherel. The first series was devoted wholly to the Comédie-Française, and, although this second series is avowedly miscellaneous, of the seventeen actors and actresses considered, eight are now or have been attached to that incomparable company. These eight are MM. Worms, Barré, Coquelin Cadet, and Lafontaine, and Mmes. Dinah Félix, Jeanne Samary,

Blanche Pierson, and Rousseil. Of the other critical biographies, the most interesting are those of Mme. Pasca and Mme. Farguell, and of MM. Geoffroy, Saint-Germain, and Dupuis. It is needless to say that this book of M. Sarcey's is one of the most useful and instructive books about the stage ever written. The individual actors are often only the text or the pretext for acute disquisitions on the principles of the art of acting—an art as little understood as it is superabundantly discussed.

MORE DENOMINATIONAL HISTORIES.

American Presbyterianism. Its Origin and Early History. By Charles Augustus Briggs, Davenport Professor of Hebrew and the Cognate Languages in the Union Theological Seminary, New York City. With Maps. Charles Scribner's Sons. 1885.

A History of Methodism, comprising a view of this revival of spiritual religion in the first half of the eighteenth century, and of the principal agents by whom it was promoted in Europe and America, etc., etc., down to A. D. 1884. By Holland N. McTyeire, D.D., one of the Bishops of the Methodist Episcopal Church South. Nashville: Southern Methodist Publishing House.

AND still they come—the histories of the various sects. Doctor Briggs marshals in his preface such a list of more or less elaborate histories of Presbyterianism that it is strange that he imagined himself called to write another. He would not, he assures us, have ventured on a field so well cultivated, "if it had not been for the discovery of original documents which cast a flood of light upon the origin and early history of American Presbyterianism." None of his predecessors had used the information stored up in the MSS. of the ecclesiastical and missionary bodies of Great Britain, with a single exception. To this information he has had immediate access, in England, Scotland, and Ireland; and if diligence of research could have insured the final history of American Presbyterianism, it would be now in our possession. But very rarely is the passion for minute investigation united with the art of skilful literary presentation. Certainly it is not so united here. A history which, rightly handled, would have had an epical nobility, has been so written that it is a collection of the driest facts, obscuring by their multitude the general impression. There is no indication, except the most purely incidental, of the new interpretations that have been forced upon the writer by his fresh authorities, so that only the most careful readers of the histories that have heretofore appeared will be likely to appreciate the gain of which he is so confident.

The reader who is not himself a Presbyterian will possibly be amused by the ingenuous ingenuity of Doctor Briggs's opening chapter, in which he shows that Presbyterianism is everything that is good. It is preëminently Christian. It is preëminently catholic, limiting catholicity to "the truly catholic features of the Church of Christ which are found alike in the Greek and Roman and Protestant branches of Christendom." But Presbyterianism is not more catholic than orthodox. By orthodoxy Doctor Briggs means "the doctrinal achievements of the Latin Church"—Augustine's doctrines of sin and grace, Anselm's doctrine of the atonement, and Wiclif's doctrine of the Scriptures. It will probably be news to many simple-minded persons that orthodoxy is a matter of such late discovery. Protestantism is Christian, catholic, and orthodox and more, and Presbyterianism is Protestantism *par excellence*. "The Calvinistic system of grace is the most comprehensive and liberal of all Christian systems. It recognizes the salvation by the divine grace of men who are incapable of being outwardly called by the ministry of the Word or reached by the means of grace." Puritanism is the British type of Presbyterianism, and Doctor Briggs has many arguments to prove it the highest type of all.

Having shown in his first chapter that Presbyterianism has all of the excellences and none of the defects of other Christian systems, in his second chapter Doctor Briggs relates "The Struggle of Presbyterianism for Supremacy in Great Britain." He frankly admits that the Puritans were too much influenced by the Old Testament. The antagonism of the Presbyterians and the Commonwealth is clearly stated; but, under Charles II. and James II., the monarchy, for whose restoration they had longed, dealt with them cruelly. The Revolution of 1688 brought them toleration in England and Ireland, and an establishment in Scotland. In his third chapter Doctor Briggs arrives upon our shores. He follows Dexter's 'Congregationalism' in his characterization of the Plymouth colonists as semi-Presbyterians—Barrowists, not Brownists. The general outcome of this chapter is extremely hostile to Doctor Hodge's statement that the foundations of the Presbyterian churches in the different colonies were laid by "strict Presbyterians." It is Doctor Briggs's contention that they were a free development out of the most diverse elements, which were, moreover, largely Congregational. The variety of elements—English, Scotch, Irish, Welsh, and French—led to the formation of the original Presbytery in a broad and tolerant spirit. The history of this important matter is detailed in the fourth chapter, and in the fifth the growth of the first Presbytery into the first Synod is elaborately explained.

The following chapter has a less happy theme—"American Presbyterianism Divided." The split was on the rock of Strict Subscription, which the increase of Scotch-Irish Presbyterians had made an unavoidable question. It coincided with the preaching of Whitefield. Doctor Briggs's terminology allows to Methodism much earlier date in the colonies than the Methodists themselves have reckoned. It is a terminology that will prove misleading with the ill-informed, and is, besides, somewhat disingenuous. To call Jonathan Edwards a product of American Methodism and "the real theologian of Methodism," is to exaggerate the transient element of Whitefield's contribution, and to ignore the vastly greater and more permanent work of Wesley. By the middle of the eighteenth century the colonies of New York, New Jersey, and Pennsylvania were overwhelmingly Presbyterian, but their polity was of many types, which Doctor Briggs describes: this in his seventh chapter, and in the eighth the reunion of the Synods of New York and Philadelphia. The concluding chapter treats of the Presbyterians in the American Revolution. It is an honorable and inspiring story that he has to tell in this particular. An appendix of 122 pages, full of interesting matter, is followed by an index which is itself a witness to the multitude of facts embraced in the body of the work. The general effect of Doctor Briggs's presentation of his subject will be to strengthen a tradition of liberality among American Presbyterians, and to invite a more fraternal sentiment among their various divisions.

Doctor McTyeire's History is an octavo volume of nearly 700 closely printed pages, but the ground it seeks to cover is so extensive that the treatment is not at any point elaborate, and, unfortunately, is least so where it should have been exceptionally full, for obvious reasons. The work was begun at the request of the Centenary Committee, and was encouraged by the recommendation of the College of Bishops of the Methodist Episcopal Church South. "Much the larger portion of the volume," the writer confesses at the outset, "deals in that wherein all Methodists agree." This is a damaging confession. Stevens and Tyerman, whom Doctor McTyeire warmly praises, have written the history of early English Methodism so well that it did not need to be rewritten. Doctor McTyeire would have done better if he had given us a rapid summary of their results and a much fuller account of American Methodism, especially in its later aspects. As it is, not till p. 345 do we come to the Christmas Conference of 1784, and less than one hundred pages are devoted to the last fifty years, although it was mainly with a view to giving a correct impression of this period that Doctor McTyeire entered on his laborious task.

The twenty chapters upon Early Methodism suffer in comparison with the fuller accounts of Stevens and Tyerman, and with Southey's effective literary presentation, for which Doctor McTyeire has a sincere contempt. The well was deep, he says, and Southey had nothing wherewith to draw. The sharp angles of Wesley's character are here smoothed away with a thick coat of indiscriminate adulation, and the interest of the narrative is correspondingly decreased. Occasionally the attempt to gloze over a disagreeable feature leaves a worse impression than would the frankest exposition. The circumstances which drove Wesley from Savannah, for example, were only discreditable to his prudence and his common sense. Doctor McTyeire's gingerly notice is calculated to excite injurious suspicions. Whitefield's negro plantation episode is set down without comment or apology in his own words, remarkable for their obtuseness in a matter where the sense of Wesley was so keen:

"God has put it into the hearts of my South Carolina friends to contribute liberally towards purchasing in this province a plantation and slaves, which I purpose to devote to the support of Bethesda. Blessed be God! the purchase is made. Last week I bought, at a very cheap rate, a plantation of 640 acres of excellent land, with a good house, barn, and outhouses, and sixty acres of ground ready cleared, fenced, and fit for rice, corn, and everything that will be necessary for provisions. One negro has been given me. Some more I purpose to purchase this week."

The number of sermons preached by Whitefield in thirty-four years is estimated to have been 18,000, and Wesley's in fifty-three years to have been 42,400.

Doctor McTyeire's History will be read for nothing else with so much interest as for its treatment of the controversy respecting slavery, which twice divided the Methodist Church, and would have made a third division if the war had not removed the stone of offence. The splendid declaration against slavery of the Christmas Conference of 1784 is given in full. It was taken back in 1785. Doctor McTyeire quotes the words of Doctor Stevens, "Now was their sublime hour, and the critical hour of the nation, in respect to this question. But they failed, and history must not evade the fact"; and his comment is, that "Methodism would have been abolished as the first result of abolitionism." Coming down to the times of the Wesleyan schism, which culminated in the organization of the Wesleyan Methodists in 1843, Doctor McTyeire is very brief in his narration, and exceedingly contemptuous of Sunderland and Scott and other leading spirits of the anti-slavery party. But a greater schism was at hand. In the General Conference of 1844 the anti-slavery or more politic pro-slavery Northern party proceeded to discipline Bishop Andrew for owning slaves and marrying a wife with more. Hence the establishment of the Methodist Episcopal Church South. Doctor McTyeire, whose narrative is for the most part colorless and impersonal, gives us in this connection a bit of realistic portraiture:

"Doctor Winans, of Mississippi, was the first speaker on the Southern side—tall and raw-boned. The veins in his stringy neck might be seen, swollen with earnestness, for he spoke in italics and wore no cravat. His limp shirt-collar lay around, his clothes were baggy, and his shoes were tied with strings [twine ?]; but his eye was blood-shot with intensity, and his head was a magnificent dome of thought."

The speech which follows this description is not in any way remarkable. It was a threat of secession, and the threat was carried out: "The Plan of Separation, as conceived and agreed on, was honorable to both parties: it was a healing mea sure, a fitting farewell to the fifteenth General Conference of United Episcopal Methodism, and the last."

On page 619 we read: "All Mr. Garrison did was to madden the slaveholders and bring on the war. The war might have created a slave empire, and have perpetuated the system forever. The abolition was not a moral achievement, but a war measure." But these astute remarks are not Doctor McTyeire's; they are Doctor Whedon's, and Doctor Whedon was himself a *quasi* abolitionist, and latterly he has endeavored to make good the anti-slavery fame of Methodism. Mr. Oliver Johnson has made it very hard for him to do so, and Doctor McTyeire does not make it any easier. He makes it very plain that, even when relieved of the pressure of the Southern party, the Methodist Church was almost as timid and complaisant with the slave power as before. "While professing to abhor slavery," he says, "the church North held on to all slaveholders who would adhere at first, and sought to take in as many as possible afterward"; and he mentions facts that justify the charge. In 1864, slaveholding was made a bar to church membership by "a very decided three-fourths vote." In 1864! Doctor McTyeire's only comment upon this action is a foot-note, which reads: "The President's Emancipation Proclamation (January 1, 1863) anticipated this action of the church by about two years." He praises the English for not indulging their philanthropy at the expense of others, and, mentioning their payment of $100,000,000 for West India emancipation, says: "Similar propositions never tempered the schemes of American abolitionists." This is not true. One American abolitionist, Ralph Waldo Emerson, in 1855, addressing an abolitionist society, earnestly advocated the buying of the slaves, though it should cost two thousand million dollars. He asked, "Was there ever any contribution that was so enthusiastically paid as this will be?" There were many who agreed with him, but the temper of the South did not admit of any such solution, or of any transaction whatever looking to the liberation of the slaves.

The fortunes of Methodism in America for the last quarter of a century are summarized in two brief chapters—one on the civil war and its effects, the other on "The Era of Fraternity" that has since been inaugurated. The Methodist Church South was a conspicuous sufferer from the war, but it has already rallied to its former standing, and to something more, while the African Methodists have organizations of their own that are full of vigorous life.

The History of the Surplus Revenue of 1837. By Edward G. Bourne. G. P. Putnam's Sons. 1885.

It seems at first thought an extraordinary proceeding to include in the series entitled "Questions of the Day" a discussion of the fiscal policy of the Government half a century ago. But we must remember that a change of a few hundred votes last November would have given us as President a statesman whose principal claim to distinction arises from his advocacy of the plan of raising an excessive revenue and distributing the surplus among the States. It seems long since we escaped that peril, but it is well to reflect that the clear skies under which we are now sailing may yet be clouded, and that eternal vigilance is the price of liberty. We are perhaps all too prone to follow the example of the convict under sentence of death, who had been prayerfully studying the Bible given him by the prison chaplain, but, being reprieved, returned it with thanks, saying that he hoped now never to need it.

The incident described by Mr. Bourne was of an almost unparalleled character. As early as 1805 we began to be troubled with a surplus of revenue, and for more than thirty years the question what to do with it was debated. A part of this surplus arose from customs duties and a part from the sale of public lands. No better plan of dealing with these lands occurred to the statesmen of those days than to get rid of them as fast as possible. Before the introduction of railroads the usual method was to sell them to speculators at a nominal price, and this was so successful that the amount realized by the Government in 1836, the culminating year of speculation, was nearly $25,000,000—not, however, in hard cash. The removal of the deposits from the United States Bank was followed by their distribution among the State banks, the "pets" of the Administration, many of them situated in the Western States. Upon the strength of these deposits these banks increased their circulation, discounting the notes of land speculators and lending the same notes again as fast as they were deposited. The result was the same as in the case of the French *assignats*. The basis of the financial structure consisted of a very little specie and a great deal of land. When the period of liquidation arrived, the banks necessarily failed. Their discounts consisted of the notes of speculators endorsed by other speculators, secured perhaps by land estimated at ten times its worth. The deposits of the Government of course, could not be returned, but they nominally existed as surplus revenue.

The Distribution Bill, however, was passed before the crisis came. The Opposition could not tolerate the retention of the enormous deposits of the Government by the Administration banks, and the Administration could not defend the policy. Neither party was disposed to interfere with the tariff, because the compromise had been accepted as a definite solution, and it would have been thought bad faith to alter the law so early in its term of operation. There was nothing left but to increase the expenses of the Government, or to return the revenue to the people. The Opposition would not consent to the former policy, and the latter was finally adopted. But it was not a free distribution: it was a loan to the States, and one which they are still technically bound to repay. Herein, Mr. Bourne remarks, lies the difference between the measure of 1836 and that recommended by Mr. Blaine—a difference, however, that is merely nominal. Still, the theory that the deposit was a loan and not a gift was sincerely maintained by the leading statesmen of that time.

We cannot trace the history of these deposits. In a few States they still exist, substantially unimpaired. In most they have been squandered—lost in wild-cat banking or sunk in useless canals and turnpikes. Some of the States actually distributed the money among the voters *per capita*, and some paid their debts with it. In New York the money has been lent on mortgage by Commissioners appointed in the several counties, and we have in the city of New York one of the strangest results of this remarkable episode. Mortgages made to the Commissioners in that city must be searched for in their office instead of among the records of other mortgages, and there is therefore not a sale or mortgage made in the city of New York that is not subject to a tax for the benefit of these leeches. The amount of these fees is supposed to be near $10,000 a year, for which the people receive nothing in return.

Mr. Bourne has displayed the most admirable industry in the preparation of this book, and he has succeeded in making his work interesting as well as thorough. His results do not afford much encouragement for the modern advocates of distribution of revenue, but they do afford very substantial arguments for those who wish to silence these advocates. We especially commend this monograph to the consideration of those who have been captivated by Mr. George's schemes, as showing what usually occurs when governments undertake to expend large sums for the benefit of the public. Our legislatures may be trusted to dispose of as large an "unearned increment" as Mr. George can provide, without leaving any very perceptible traces of it.

Arthur Penrhyn Stanley. His life, work, and teachings. By Grace A. Oliver, author of 'Maria Edgeworth,' etc., etc. Boston: Cupples, Upham & Co. 1885.

Mrs. Oliver's 'Memoir of Mrs. Barbauld' and her 'Study of Maria Edgeworth' were such pleasant books that those who read them will approach her latest work with expectations that can hardly be fulfilled. In those just named she had subjects so ripe and mellow that they could not be even lightly handled without giving out a fruity smell. Others had labored and she entered into their labors. A store of anecdotes had gradually been collected for her to draw upon. In the life of Dean Stanley she had no such advantages. His biography has not yet been written. The lectures of Dean Bradley were her best resource, and they are more remarkable for their meagreness of interest and detail than for anything else. Nevertheless, she has done well with such material as she could command, though she has been obliged to stretch it so much that an appearance of thinness was inevitable. Dean Stanley's works have served her many a happy turn, and she has had frequent recourse to quotation when she would characterize his books or actions. She says in her preface: "Claiming to belong to those who profess liberal Christianity, I have not thought this unfitted me for the task." And certainly, as she suggests, a Ritualistic or Evangelical Churchman could hardly be so impartial as she has been. A Broad Churchman could not have brought a livelier sympathy. But she is so anxious to be just that she distrusts herself, and walks with timid, hesitating steps just where we want a guide to strike a firm and confident hand into our own.

The childhood, youth, and early manhood of the Dean are treated with disproportionate fulness, but on this account it is the most interesting portion of the book. The Dean had written with so much freedom of his excellent parents, persons of decided character and large intelligence, that it was not easy for Mrs. Oliver to go astray. Her pages here and for the Rugby period are rich with quoted passages. For Stanley's school days at Rugby she had not only his 'Life of Dr. Arnold,' but also Mr. Hughes's 'Tom Brown's School Days' to profit by. He was so good a boy that it is refreshing to be told that once he sat up all night to see what it was like, and once had one hundred lines of Horace to translate for "some unlawful letting off of squibs." These were mild offences, and presumably the worst that he was guilty of. He was a boy of twelve or thirteen when he met Gladstone, then fifteen, who advised him to read 'Gray's Poems' so vehemently that he did at

once, and was grateful ever after for the good advice. His Oxford life was studious and restrained. He did not, like Matthew Arnold, go fishing when, in Clough's opinion, he (Arnold) should have been reading. Dr. Arnold's correspondence kept him safe amidst the Tractarian excitement, but then and always he demanded for the Tractarians the freedom of the Church. It is at the point of young Stanley's subscription to the Articles and Liturgy that Mrs. Oliver's sympathy suffers the severest strain. Arnold's assurance that he does not believe the damnatory clauses of the Athanasian Creed and yet reads them, strikes her as immoral, and she evidently enjoys putting in a somewhat irrelevant passage from his letters: "Our Church bears and has ever borne the marks of her birth. The child of regal and aristocratic selfishness and unprincipled tyranny, she has never dared to speak boldly to the great, but has contented herself with lecturing the poor." It was other marks than these that endeared the Church to Stanley, and made it possible for him to endure some things he did not like with a protesting and yet patient spirit.

There is no lack of interest in the narration from the time of Stanley's taking orders till his death. It includes an account of Arnold's death and Stanley's funeral sermon for him and biography, Stanley's canonry at Canterbury, and his interesting memorials of the old cathedral and its famous Becket shrine, his Eastern travels, and the books that came of them, his Oxford lectureship, his marriage, his Westminster deanery, and the writings, controversies, travels, that filled up his later years. The little man must have weighed at least a ton when he delivered his soul concerning Colenso at a meeting of the Society for the Propagation of the Gospel, and, after recounting his good actions, said: "For these deeds he will be remembered when you who censure him are dead and buried and forgotten."

Mrs. Oliver has done so well with this biography that she should no longer suffer the 'Story of Theodore Parker,' to which she wrote an elaborate introduction a few years ago, to go uncorrected on its way. It is written by an English lady, and it abounds in silly blunders. In future editions of 'Dean Stanley,' too, will she not spell the "Swamscott" of her preface with a "p," the traditional way, and certainly the more pleasing to the eye?

A Summer in Scandinavia. By Mary Amelia Stone. Anson D. F. Randolph & Co. 1885.

"This time we had crossed the Atlantic under a vow—that we go northward, and find out for ourselves what were the charms of higher latitudes; and had we not already found them in the beautiful free town of Hamburg?" Thus begins our author, for whom, however, the only charm of the great Hanse town was found in the modern parts. The picturesque old streets, the narrow canals, the long rows of quaint, mediæval houses —all the evidences of ancient grandeur—had no attractions for the travellers. From Hamburg their course lay, by way of Kiel and Korsör, across Seeland to Copenhagen, where the usual visits were made to Thorwaldsen's and other museums, among which the Museum of Northern Antiquities, well known of archæologists, would alone justify an excursion to the Danish capital. Nor must the visitor to Copenhagen in summer neglect to see Tivoli, the favorite pleasure garden of the people, where, for an admission fee of a few cents, very good music and all sorts of "shows" may be enjoyed—family groups lingering over their evening meal in the long twilight. Charming is the coast of Seeland, with its many villas, the blue waters and innumerable sails of the Sound, and the outline of Sweden in the background. At the narrowest point of the Sound lies the town of Elsinore (Helsingör) and its castle, immortalized by Shakspere, where toll was levied for centuries on passing commerce. The Swedish town and ruined fort opposite is Helsingborg, not Malmö (p. 47), which is situated some thirty miles further down the coast. Excellent steamers, touching at Gothenburg, make the trip from Copenhagen to Christiania in twenty-four hours. Of the unsurpassed scenery of Norway the travellers, however, saw but little, and, after a short stay in Christiania, they went by rail across Sweden to Stockholm, to the beauty of situation and charm of which the author does full justice. Her party, in fact, appear to have found it difficult to tear themselves away, and they lingered long in the city and its neighborhood, making excursions to the lovely islands and shores of Lake Mälaren and its many points of historic interest.

The little volume which enables us to accompany Mrs. Stone during her delightful summer in the North is made up in part of historical information, appropriate and accurate on the whole; but the reader would be justified in complaining of the frequent misspelling of names, and a carelessness in the use of the English language, which might have been avoided by a closer revision of the manuscript. We also think that, having correctly (p. 134) recorded the death of the great Swedish noble Bo Jonsson (misspelt Jourson all through the chapter) during the reign of King Albrekt, the author might have let him rest in peace, instead of resurrecting him some years later (p. 159) in order to endow him with the copper mines of Falun under Queen Margaret.

Carlyle. Personally, and In his Writings. Two Edinburgh Lectures. By David Masson. Macmillan & Co. 1885.

It is refreshing to have so small a book from Professor Masson, particularly on a subject which most writers treat so voluminously. There is little else that is novel, however, in these two lectures, which are issued, one would think, because every one has a right to his say upon the body of our Cæsar. The first lecture is an indictment of Mr. Froude, as was to be expected, in which it is a pleasure to note the clearness with which the fact is brought out that the Carlyle whom we have in the six long volumes is only the autobiographic Carlyle, the always self-conscious dyspeptic, as seen through his own peculiar blue spectacles; and the author by way of illustration gives some picturesque glimpses of his friend during his famous Edinburgh visit which was described so dolefully, and makes it plain that the "waeful creature" had at least a few jolly evenings with his countrymen. The second and much the longer lecture, if it is not fresh, is clear, and simply arranged by topics; but here, too, one can remark only the emphasis with which prominence is given to the fact that Carlyle, considered with reference to his religious attitude, merely asseverated the "structural beliefs" necessary to his intelligence and conscience, but for which the only warrant was the *ipse dixit* of "the heart hath felt." These asseverations, delivered with the imagination, humor, and pungency of an extraordinarily fervid genius, were the channels of that moral force which Goethe saw beneath the crust that encased Carlyle's early years, though he could not foresee the volcanic violence and dark splendor of its outburst. His words were always summons to the conflict, whether he took a page-tract or a six-volume history to scrawl them over; they stand out and still burn, and many a man who has felt them flame through him, with more heat than light, will hereafter, like Professor Masson, try to formulate as teaching what was after all mainly a mere stimulus, and will, like him, write down an essay, an abstract of Carlyle's beliefs, which makes one wonder how so fluent and glowing a lava could harden into so cold and rigid a rock.

TEXT-BOOKS FOR TEACHERS.

A Cheap American Edition of

FITCH'S LECTURES ON TEACHING.

LECTURES ON TEACHING Delivered in the University of Cambridge, by J. G. Fitch, M.A., one of Her Majesty's Inspectors of Schools. New Edition. With a Preface by an American Normal Teacher. 16mo, cloth, $1.

"His great work on teaching."—*President Hunter.*

"Worthy of the most careful consideration."—*National Journal of Education.*

"We could almost wish to be of school age again, to learn history and geography from some one who could teach them after the pattern set by Mr. Fitch to his audience."—*Saturday Review.*

"Mr. Fitch's book covers so wide a field, and touches on so many burning questions, that we must be content to recommend it as the best existing *vade mecum* for the teacher."—*Pall Mall Gazette.*

ON TEACHING: ITS ENDS and Means. By Henry Calderwood, LL.D., F.R.S.E. Third Edition. With an additional Chapter on Home Training. 16mo, cloth, 50 cents.

"Here is a book which combines merits of the highest (and, alas! the rarest) order. We have rarely met with anything on the subject of teaching which seems to us to appeal so directly both to the teacher's head and heart, and give him so clear an insight into the true nature of his calling."—*Monthly Journal of Education.*

NEW EDITION JUST READY.

THEORY AND PRACTICE OF Teaching. By Rev. Edward Thring, M.A. *New and Cheaper Edition.*

"We hope we have said enough to induce teachers in America to read Mr. Thring's book. They will find it a mine in which they will never dig without some substantial return either in high inspiration or sound practical advice. Many of the hints and illustrations given are of the greatest value for the ordinary routine work of the class room."—*Nation.*

LOCKE ON EDUCATION. With Introduction and Notes by the Rev. R. H. Quick, M.A. 16mo, 90 cents.

"There is no teacher too young to find this book interesting; there is no teacher too old to find it profitable."—*School Bulletin.*

LOCKE ON THE CONDUCT OF the Understanding. Edited, with Introduction and Notes, by T. Fowler, M.A. 16mo, 50 cents.

"I cannot think any parent or instructor justified in neglecting to put this little treatise in the hands of a boy about the time when the reasoning faculties become developed."—*Hallam.*

*MILTON'S TRACTATE ON EDU*cation. Edited, with Notes, by Oscar Browning, M.A. 16mo, 50 cents.

THREE LECTURES ON THE Practice of Education Delivered in the University of Cambridge. 16mo, 50 cents.

"Like one of Bacon's Essays, it handles those things in which the writer's life is most conversant, and it will come home to men's business and bosoms. Like Bacon's Essays, too, it is full of apophthegms."—*Journal of Education.*

MACMILLAN & CO.'S New Educational Catalogue, embodying also the educational works issued by the Universities of Oxford and Cambridge, is now ready and will be sent free by mail on application.

MACMILLAN & CO.,
New York, 112 Fourth Avenue.

NOW READY.

Second Volume of McMaster's United States.

A HISTORY OF THE
People of the United States,
FROM THE REVOLUTION TO THE CIVIL WAR.

By JOHN BACH McMASTER.

VOLUME TWO.

8vo, Cloth, Gilt Top. Price, $2.50.

The second volume extends from 1790 to 1804, including the greater part of the Administration of Washington, all of that of Adams, and the first term of Jefferson.

"The second volume of 'A History of the People of the United States,' by John Bach McMaster, satisfies the high expectations raised by its predecessor. Although the period depicted offers many temptations for divergence, he has refrained from departing from the carefully defined limits of his original plan, and has never suffered himself to forget that he is aiming, not at a political discussion, but at a social study; at a history, not of government and legislation, but of the community at large, the thoughts, feelings, works, and ways of the plain people who made up a century ago, as they do now, a vast majority of the American citizens. No reader will fail to be impressed by the huge mass of materials in the diverse forms of pamphlets, contemporary newspapers, and published or unpublished letters which has been ransacked, winnowed, weighed, and condensed by the indefatigable weaver of this narrative. There are in this volume more than 630 large octavo pages, yet we could not spare one, for every one is crammed with facts which, when not new themselves, contribute by their collocation to a new and vivid picture."—*New York Sun.*

NEW BOOKS.

Memoirs of the Life of Colonel Hutchinson.

By his Widow, Lucy. Revised and Edited by Charles H. Firth, M.A. With Ten Etched Portraits. In two volumes, fine paper, medium 8vo, and handsome binding. $12.

To understand the history of any period, it must be studied not only in the records of public events, but also in the daily lives of individuals.

Of the many Memoirs and Autobiographies which illustrate the Civil Wars of the seventeenth century, none is more popular or entertaining than the 'Life of Colonel Hutchinson.' But though these Memoirs have passed through many editions, and their value is universally admitted, they have not yet been edited with the care and labor they deserve. In the earlier editions, the irregular and unfamiliar spelling of the original renders the book difficult for the general reader to enjoy. In the later ones the text has been modernized with more freedom than fidelity. In the present edition the spelling alone will be modernized, while the phraseology and grammatical peculiarities of the original will be carefully preserved. The most valuable of the annotations of the Rev. Julius Hutchinson will be retained, and a large number of new explanatory and illustrative notes will be added. Letters written by Colonel Hutchinson during his government of Nottingham, and other documents of interest, will be for the first time collected. A full and accurate index to the Memoirs will complete the work.

Ten newly-etched portraits of persons of whom mention is made in the text will help to render this a worthy edition of an English classic.

Lord Salisbury.

The Life and Speeches of the Marquis of Salisbury, K.G. By F. S. Pulling, M.A., Exeter College, Oxford. 2 vols., with Photogravure Portrait. Cloth, $8.40.

SCRIBNER & WELFORD, 743–745 Broadway, N. Y.

ANNOUNCEMENT.

CHARLES SCRIBNER'S SONS will publish about August 1st three interesting new books for Yachtsmen, Tennis Players, and Wheelmen.

Coming at an opportune time is Captain Roland F. Coffin's history of THE AMERICA'S CUP: HOW IT WAS WON BY THE YACHT AMERICA IN 1851, AND HOW IT HAS SINCE BEEN DEFENDED. The large class of readers who are eagerly awaiting the coming contest between the American and English yachts will find Captain Coffin's genial and breezy narrative of the greatest interest. The book will be freely illustrated from designs by Frederick S. Cozzens, presenting portraits of the GENESTA, PURITAN, and other famous boats. *1 vol. Paper, 50 cents; cloth, $1.00.*

Lawn-Tennis players will be glad to welcome a book which treats the sport as a game of skill. Such a book is Lieut. S. C. T. Peele's volume, which is edited by Mr. Richard D. Sears, the champion of America. It is thoroughly practical, and, as the London *Saturday Review* says, "a compendium of the game which ought to be in the hands of every player." *1 vol., 16mo, cloth, 75 cents.*

A CANTERBURY PILGRIMAGE: RIDDEN, WRITTEN, AND ILLUSTRATED by Joseph and Elizabeth Robins Pennell, is a delightful story of a journey from London to Canterbury on a tricycle. The pages are crowded with illustrations in Mr. Pennell's happiest vein. *1 vol., square 8vo, paper, 50 cents.*

Orders addressed now to the publishers will be filled promptly upon publication of the books.

BOOKS OF THE WEEK 80

TERMS OF SUBSCRIPTION.

Three Dollars per year, in advance, postpaid to any part of the United States or Canada; to foreign countries comprised in Postal Union, Four Dollars.

The date when the subscription expires is on the Address-Label of each paper, the change of which to a subsequent date becomes a receipt for remittance. No other receipt is sent unless requested.

The paper is stopped at expiration of the subscription, unless previously renewed.

Remittances at the risk of the subscriber, unless made by registered letter or by check or postal order payable to Publisher of the NATION.

When a change of address is desired, both the old and new addresses should be given.

Address THE NATION, Box 794, New York.
Publication Office, 210 Broadway.

TERMS OF ADVERTISING.

[No deviation.]

On any page not specified, 15 cents per line each insertion; with choice of page, 20 cents.

A column (140 lines), $20 each insertion; with choice of page, $27.

A page (3 columns), $60 each insertion; with choice of position, $80.

Twenty per cent. advance for top of column or other preferred position, when specified; where positions are not specified, advertisements are classified as far as possible and arranged in order of size, the largest at the top.

Twenty per cent. advance for cuts, fancy or other letters not comprised in THE NATION fonts, and all other special typography. (Subject to approval.) Cuts are inserted only on inside pages of cover or fly-leaves, not on outside of cover, nor on pages numbered for binding.

Marriage and Death Notices, 50 cents each.

DISCOUNT on yearly accounts amounting to $250, 10 per cent.; $500, 15 per cent.; $750, 20 per cent.; $1,000, 25 per cent. Credits are made December 31. On a yearly account amounting to 52 pages the discount is one-third.

Advertisements must be acceptable in every respect. Copy received until Tuesday, 5 P. M.

THE NATION is sent free to those who advertise in it, as long as advertisement continues.

The EDITION of THE NATION this week is 8,500 copies. The Subscription List is always open to inspection.

***Copies of THE NATION may be procured in London of B. F. Stevens, 4 Trafalgar Square; George Street, 30 Cornhill, E. C.; H. F. Gillig & Co., 449 Strand; and American News Reading Room, 8 Haymarket.

CELEBRATED "DIAMOND

S. DAVIS JR. SUGAR CURED HAMS

1841. HAMS. 1885.
CINCINNATI.

The following letter in regard to them from the late *Mr. Peabody* was addressed to a friend in New York more than 30 years ago:

LONDON, February 12th, 1853.

MY DEAR SIR: I owe you a thousand apologies for my neglect in not before acknowledging, in a direct way, your kindness and liberality in sending me such a beautiful supply of American Hams last summer. I distributed a portion of them among my friends in England and Scotland, all of whom bear testimony of their superior quality, thinking them finer than Westphalias. I hope you will convey to your friends, Messrs. DAVIS & CO., the satisfaction I have had in receiving so fine a specimen of the productions of their noble State.

I am truly yours, GEORGE PEABODY.
To W. M. C., Esq., New York.

Standard Classic Atlas,

WITH INDEX,

Containing complete and authoritative maps of places mentioned in Ancient History and the Classics, engraved on steel, with tinted boundaries. The Index gives the latitude and longitude of places mentioned in the maps, with both their ancient and modern names.

Price by Mail, $2.50.

Webster's Condensed Dictionary.

800 Pages. 1,500 Illustrations.

An entirely new compilation. It treats about 60,000 words, and in its etymologies and definitions is more thorough and accurate than any other abridged dictionary. A Pronouncing Vocabulary of 24,000 Proper Names is given in the Appendix. *For sale by all booksellers.*

Price by Mail, $1.80.

Handy Atlas of the World.

Contains, among many other valuable features, Maps showing Standard Time, Railway Maps of all the States, Commercial Map of the United States, Maps of the Principal Cities of the Union, Recent Polar Explorations, Central Africa, Egypt and the Soudan, Alaska, etc., etc.—in all, 38 maps and valuable statistics. *For sale by all booksellers.*

Price by Mail, 50 Cents.

NEW YORK, THURSDAY, JULY 23, 1885.

The Week.

THE history of American politics does not record a more complete conquest of a party in a great commonwealth by one man than has been achieved by Mahone over the Republicans of Virginia. The most arrogant Northern boss never reached the point where he dared to name his candidate for chairman of a convention, thrust him upon the delegates without giving them a chance to say a word, and confer upon him the power of making up the committees, and thus absolutely controlling the action of the body. Indeed, the boss was quite justified in aping the manner of speech affected by the Emperors of "the effete despotisms of Europe," and introducing the agent whom he had selected to represent him in the presiding officer's chair as "our distinguished friend and brother." The whole course of the convention had been outlined by Mahone long before it met, and his dictation was followed to the very end, two-thirds of the delegates sustaining him in even the most unrepublican of all his methods, the refusal to allow the various county committees throughout the State to select their own chairmen. The fight in Virginia this year is simply a fight for life on the part of the worst demagogue in the South. Remembering that the worst demagogue in the North once succeeded in securing an election to the Governorship from one of the most intelligent States in the Union, one cannot wonder that Mahone should have got such a hold on a State with so large a proportion of ignorant voters as Virginia. All friends of honest politics, however, will hope that his race has been run, and that he may this year be sent into retirement along with Ben Butler.

At the meeting of the National Cotton Exchange held at Greenbrier White Sulphur Springs, Va., a week ago, a resolution was reported by a special committee favoring a stoppage of the silver coinage. After discussion it was passed with only one dissenting vote. This action, coming so soon after the resolution adopted by the Atlanta Commercial Convention, betokens a wholesome change of views upon this paramount question of the day in the South, where hitherto the silver fanaticism has had its principal seat and its strongest hold. When the vote was taken in the House of Representatives last February upon Mr. Randall's amendment to the Sundry Civil Appropriation Bill, more than three-fourths of all the Southern members of both parties voted to continue the coinage. If they had divided with anything approaching to equality, the Randall measure would have passed. The vote stood 118 to 150, the majority being composed of 118 Democrats and 32 Republicans, and the minority of 54 Democrats and 64 Republicans. A change of 16 votes would have changed the result. It will be very strange if the commercial interests of the South, which appear to be now fully alive to the danger, do not stand for at least 16 votes in the new House.

It appears that the new Postmaster at Indianapolis, Jones by name, has discovered a way to circumvent the Civil-Service Law. It should be mentioned for his distinction, as well as that of his fellow-postmasters in offices having more than fifty employees, that he is the only one of President Cleveland's appointees who has made the discovery, or has shown any disposition or desire to depart from the spirit of the act. The law leaves the power of removal undisturbed in the hands of all officers who have any responsibility for the performance of public duties. It provides, however, that when anybody of a specified grade, such as a clerk in a post-office, is removed, or when a vacancy from any cause exists, it shall be filled after a competitive examination by selection from the four applicants who stand highest in the list. The Postmaster of Indianapolis has perceived that he can change the entire *personnel* of that office, and make it as completely subservient to the spoils system as though the Pendleton bill had never been passed, provided one Democrat out of every four applicants can be found to pass the examinations with sufficient credit to meet the requirements of the law and regulations. The necessary vacancies he can of course make without violating the letter of the law. This plan has been put in practice with exceeding vigor by Postmaster Jones, who avows to all persons who remonstrate against his proceedings his intention to "make a clean sweep," and who has already carried his intention into effect by discharging all the janitors and scrub-women and other employees not included in the provisions of the act, and filling their places with Democrats. It is stated that among the persons thus thrown out of service is a niece of the late General Burnside, whom misfortune had reduced to the necessity of working for $8 per week in some manual employment in the Indianapolis Post-office building. The effrontery of this newly-fledged postmaster calls for the immediate attention of President Cleveland, whose integrity is quite as much at stake as that of the law which Mr. Jones has undertaken to nullify.

The last Congress authorized the appointment of five new copyists in the Bureau of Statistics, specifying $900 as the yearly pay for each. The Missouri politician who was made chief of the bureau a few weeks ago conceived the brilliant idea that, if the copyists should be paid only $720 a year, they could escape the necessity of competitive examination, as this system does not apply below the $900 grade. He therefore asked whether he could not appoint arbitrarily five persons as copyists at $720, and the First Comptroller, being deceived by his version of the act of Congress, replied that he could. The five "workers" whom he proposed thus to unload upon the public service were not installed, however, before the facts in the matter came to Secretary Manning's notice; and the First Comptroller, upon learning that the appropriation bill specified $900 as the pay, decided that the copyists came within the classified service and must be examined. Mr Manning evidently meant what he said the other day when he declared, apropos of the Kellar case, "I intend that this department shall strictly observe the Civil-Service Law."

If the "Comments" department of the *North American Review* is open to such blackguardism as that which Mr. Rossiter Johnson expends upon Mr. Dorman B. Eaton in the August number, it ought to be closed forthwith. As Mr. Eaton is abundantly able to take care of himself, we shall leave him to deal with his assailant, if he finds anything worth replying to. We shall take notice merely of Mr. Johnson's repetition of an exploded calumny against Postmaster Pearson, which is given in these words:

"Even the boasted reappointment of Postmaster Pearson was thoroughly partisan; for Mr. Pearson, by keeping his 1,200 employees at work on a legal holiday, and thereby preventing them from voting, secured the elevation of Governor Cleveland to the Presidency."

This was an accusation brought by a surcharged Blaine man (Mr. Clarkson, of Iowa), not against Mr. Pearson, but against Post master-General Hatton, who was accused of forbidding and preventing Mr. Pearson from giving his employees an opportunity to vote. Mr. Hatton replied by producing documents and official orders showing, first, that he (Hatton) was absent from Washington at the time, and gave no orders whatever; second, that Postmaster Pearson did give orders that every employee should be allowed the necessary time to vote and caused the same to be posted in every room in the office; and third, that every man who desired to vote did vote, no complaint of want of sufficient time and opportunity having been made by anybody. A writer who can repeat such an accusation after it has been proved false, has got the Blaine malady in a stage where treatment at the town-pump would be of no avail. The publication of such matter in the *North American Review* gives a new significance to the Latin motto which adorns its title page.

The view appears to be taken at the Treasury Department, and especially in Treasurer Jordan's office, that if the New York banks would be a trifle less niggardly with their gold, the situation as regards silver would be relieved of existing difficulties, and that the necessity of a loan of gold from the banks to the Government might be averted. This view is formulated in a Washington despatch, which says:

"Treasurer Jordan's position, as it was stated to the New York bankers in summary, is substantially this: That the New York bankers hold the key to the situation; that they can determine the kind of currency which the Government shall use in the payment of Clearing-house balances by the kind of currency which they give to the Government in payment of duties at the Custom-house. If the New York banks choose to hoard their gold, and to pay the customs dues in silver, the Government will be obliged to pay its Clearing-house balances in silver. If, on the other hand, the banks will consent to pay a fair proportion of customs dues in gold, the Government can meet its obligations in gold. Should, however, the banks continue to hoard gold and pay silver to the Government, the Government will be compelled to borrow gold, or to pay silver to the banks."

It would be interesting to know the process by

which the banks are to get their gold into the Custom-house in the payment of duties. The banks, in the first place, have no duties to pay. They only pay checks drawn upon them by importers and others who have money on deposit. The Custom-house does not accept checks in payment of duties. The law requires all such payments to be made in ready money of certain specified kinds, in which silver dollars and silver certificates are included. The theory held at Washington apparently is, that a bank is able not only to identify a check drawn for money to pay duties with, but to follow the drawer of the money to the Custom-house and see that he does not stop at a broker's office by the way, sell his gold for silver certificates, and pocket the difference before he pays his duties. This conception is too grotesque, we think, to have had its origin with Mr. Jordan, whose life has been passed behind a bank counter in Wall Street.

The Louisville *Courier-Journal* says that when the Adjutant-General was sent into Bell County (Ky.) by the Governor in May to see about the murders down there, he found "the people talked to him with marked timidity," and the Sheriff, out of a summoned posse of 150, could only get eight to respond. The judge holding court, too, was afraid to ask for troops lest he should be held responsible and murdered on their arrival. The Adjutant-General seems to have been amused with the way justice was dealt out to small offenders. They were promptly convicted and savage sentences passed on them, but these sentences were never carried out, "and the jail was empty." He estimates that one in fifty of the voting population of Bell County is charged with murder. So much for Bell County. In Rowan County the murdering is mainly done by two factions, the Martins and the Tollivers. One of the Tollivers was recently on trial for killing Ben Reyborn when trying to kill one of the Martins, and the County Attorney, being connected with one of the factions, left the case in the hands of the Attorney-General, Hardin. At the trial, however, the County Attorney appeared to denounce one of the witnesses of the prosecution, and to show his sympathy with the accused, and neither the Attorney-General nor the Court seems to have been able to silence him without killing him. The County Attorney was anxious to have it believed that a certain man had been engaged by the Martins to kill him for $50. Murderers in Kentucky are, in fact, frequently retained for small sums. It seems at this distance as if the Attorney-General and the Judge ought to have killed Young, the County Attorney, in open court, and then the Martins present would have killed the prisoner, besides losing some of their own number.

An interesting feature of migration is the proposed removal of a body of 20,000 Hungarians *en masse* from the heart of Pennsylvania to the northwestern part of Canada. Count Esterházy is now in negotiation with the Dominion Government regarding this matter, and there is little doubt that his scheme will be carried through. His countrymen are now working in the coal and iron mines, but they were farmers in their native land, and would like to till the soil on this side of the ocean. They propose to pay their own way from Pennsylvania to the nearest point on the Canadian Pacific Railroad, whence the road will transport them free of charge to the Qu'Appelle district, and here the Government will place a tract of 200,000 acres of fertile land at their disposal. This will be probably the largest movement of population in an organized body ever known in this country.

How the publication of filthy matter pays is shown in the case of the weekly edition of the *Sun*, which ordinarily reaches about 40,000 copies. During the three weeks ending July 11 it ranged from 40,742 to 41,692. By printing the obscenity of the *Pall Mall Gazette*, however, in the edition of July 18, it was run up to 163,732. The extra profit on the obscene edition would be, say, $1,830 60, of course a mere trifle to the proprietors of so prosperous a paper as the *Sun*. This being so, we trust they sometimes ask themselves, in the silence of these summer evenings in the country, whether it was worth while for this beggarly sum to put 120,000 copies of this beastly stuff in the hands of the boys and young men of this great city, in which pulpit, press, and police find it such hard work not to extirpate immorality and uncleanness, but even only to abate them slightly.

The way in which the "reportorial commissioner" of the *Pall Mall Gazette* opens his narrative is well calculated to strengthen the suspicion that a desire to make a sensation was at the bottom of the enterprise. It is actually introduced by a column of cheap literary balderdash, beginning with an account of the Minotaur, the mythological devourer of maidens, embellished by quotations of Latin verse, and bringing down the history of Minotaur's appetite to modern times. The style and the thought are, in fact, just what might have been expected in an advertisement of a cheap anatomical show or a dime novel. No man whose soul was really impressed to the extent Mr. Stead would have us believe his is, by the evils the *Gazette* has been describing, could have sat down to write such wretched trash or have allowed it to appear in his paper when written. It is enough to turn any decent man's stomach. The cry is still kept up, that the story could not have been made to affect legislation—that is, to impress Cabinet Ministers—by mere submission to such a commission as is now sitting on it, without selling it by the ton; but it will not be kept up long.

The latest news of the *Pall Mall Gazette's* exposures is curious and suggestive. In the first place we are told that the expenses of the Committee of Inquiry, on which Cardinal Manning and the Archbishop of Canterbury are sitting, are to be paid by "a complete publication, in a single edition, of the full text of all the revelations," and this is "having an enormous sale." In other words, the expenses of a committee of divines and philanthropists conducting an inquiry in the interest of purity are to be paid by the sale at a low rate of one of the most obscene books ever issued from the press. Was the like of this ever known either in the ancient or modern world? We believe that many of the people who are sanctioning or encouraging this amazing absurdity will live to repent bitterly their present folly. In the next place, we have been furnished with a specimen of the evidence which the *Gazette's* "reportorial commissioners" are presenting to the Committee of Investigation, in the shape of an offer to produce as many girls, for immoral purposes, as the members of the Committee might name, "to be delivered anywhere to their order." While they were deliberating on this proposal, the reporter went and produced a girl of the kind specified, "dressed in an old black frock," but, strange to say, none of the Committee would receive her. Both Cardinal Manning and Archbishop Benson declined her, which is good as far as it goes, but we should have been pleased to hear that they had also, laying aside for the moment their episcopal character, thrown the ink-bottle at the "reportorial commissioner's" head. As evidence, the incident reminds one of the man who offered to prove his story of having shot a woodchuck by showing the hole out of which the animal came. Of course ten thousand excellent poor women in London would send girls dressed in old black frocks to a commission of bishops and philanthropists for half a crown apiece without fear or trembling.

The old Tory Squire who writes to the *Tribune* from London expressed the opinion in a very solemn manner last December that the British Parliament was making "a great mistake" in increasing the number of the members of the House of Commons. With his usual reticence, however, he only said this in New York, when by saying it in London he might have saved the English people from what may be a disastrous blunder. He has now turned his attention to "President Cleveland's civil-service reform." That he does not approve of it, we need hardly say, but what has "drawn his attention" to it more particularly is the removal of Mr. Shaw, the American Consul at Manchester. For this the Manchester people, or some of them, are said by the Squire to be very sorry, but he adds, with his 'cutest air, "I do not think President Cleveland's civil-service reform is clearly understood in Manchester. Possibly he does not understand it himself." There is no good reason why the Manchester people should understand it, but the Squire should, as long as he acts as a newspaper correspondent, try to understand it, as well as English and American politics generally. Mr. Shaw was removed for a reason which would have caused the prompt dismissal of any consul in the British service—his leaving his post during the late campaign and coming home to perorate against President Cleveland on the stump. In other words, he was removed for being an offensive itinerant partisan. To this deliverance the Squire tags on the announcement that he was not present at the dinner lately given to Edmund Yates, and he intimates obscurely that he does not approve of Yates. He seems, in fact, to be in a very haughty, implacable mood.

It has not been explained yet, though we hope it will be before long, of what use the American lawyers were in the Lauderdale peerage case. Although called in as witnesses to a fact (for foreign law is a fact to the House of Lords), they had no more knowledge about it than any English peer might himself have acquired by spending a few hours in a library, and they were equally divided when called on to testify. The only one, in truth, who threw much light on the matter was Mr. Clarence Seward, who had gone over the records and found no case in colonial history where marriage had not been preceded by the publication of banns. What is most curious and mysterious in the matter is, however, the willingness of the peers to consider the law of New York in 1772 foreign law at all. At that time New York was as much part of the British dominions as Ireland or Scotland. An appeal from the New York courts at that day would have gone to the Privy Council, which would have had judicial knowledge of what the marriage law of the colony was. How, under these circumstances, the Revolution can have had the retroactive effect of converting the colonial law into foreign law, has not yet been made comprehensible to the lay mind.

The result of a great experimental sham fight of the British fleet in Bantry Bay, with ironclads, torpedo boats, and a boom, is that it seems to show that torpedo boats cannot do much, if anything, against a good boom well defended, but that, on the other hand, a well-handled ironclad ram will go through any boom that is at all likely to be constructed. The manœuvres were made for the purpose of ascertaining, if possible, what kind of thing the naval battle of the future will be, but cannot be said to have thrown a great deal of light on it. The only thing that appears certain is that disabled and beaten ships will no longer figure much in sea fights as they did in the old days of the sailing fleets. The modern ironclad will apparently go to the bottom promptly when put *hors de combat*, and so will the torpedo boat. There will be nothing moderate or medium about the naval wars of the future.

The Radicals in Paris have issued an electioneering manifesto, in preparation for the elections, which has not received the attention it deserves. It is to be imposed, if possible, on all the candidates on the general ticket of the Department of the Seine. To begin at the beginning, every child is to receive gratuituous education at every stage from the State, at the hands of lay teachers, and while receiving it is to be boarded, lodged, and clothed at the public expense. In this way every couple can have as many children as they please without reference to the amount of their income. All indirect taxes are also to be abolished, and there is to be substituted for them a "progressive tax," both on capital and income—that is to say, it is to be very high on much capital and very low on a little capital; very high on large incomes, and very low on small ones. Besides this, there is to be a heavy succession duty on property transmitted by parents to their children, the only succession which is to be permitted. Whether any capital would stay in France under these conditions is not a matter about which the Radicals concern themselves: in fact they would be rather pleased to have capital emigrate, inasmuch as they ascribe to it most of the evils by which French society is afflicted. This done, the State is to take possession in one way or another of all railroads, canals, and mines, and work them for the public benefit. The maximum of the hours of labor is to be reduced, and no children under fourteen are to be allowed in factories or workshops. "Credit" is to be provided for people who can give no security as well as for those who can. "Groups" of workingmen are to have a preference in all contracts awarded by the State. The State prisons are to be "reformed," though in what manner is not mentioned, and people who cannot labor are to be supported at the public expense. To crown all, illegitimate and legitimate children are to be put on a complete equality before the law, or, rather, there are to be no illegitimate children hereafter. Nearly all good Radicals are opposed to legal marriage, and therefore cannot be expected to recognize two classes of children.

This last point is one, however, which has occupied French political speculators and legislators a good deal. The amount of writing which French jurists have done on what they call "la recherche de la paternité," that is, on the propriety of allowing women to point out the fathers of their children not born in wedlock, is enormous. The weight of opinion, both among lawyers and politicians, has, however, always been against it, and the enormous evils which might flow from it have been painted in the most eloquent language. The Radicals propose to get rid of all this trouble by cutting the Gordian knot. That is, they propose to create a state of things in which it will make no difference whose child any child is—all will be the children of the State, which will thus become a great foundling hospital. There is, it must be confessed, in the succession laws of all civilized countries a distinction in favor of legitimate children which it is difficult to defend on grounds of natural justice. The exclusion of illegitimate children from all share in the inheritance of their father in case of intestacy when there are legitimate children to take it, is a provision which is, whenever it exists, intended to fortify the institution of marriage; but the Radicals maintain, and not without some show of reason, that we have no right to fortify any institution at the expense of the innocent. If anybody should suffer for the failure of parents to get married, it is undoubtedly the parents themselves, if they can be got at; for the consequences of illicit unions nobody is less responsible morally than the children born of them. In France the question is made more serious than elsewhere by the great pains taken by the law to strengthen the family bond, in all dealings with property, and by the serious limitations put on the testamentary powers of parents. The legitimate children have in France, in fact, rights in the property of their parents such as the law gives them in no other country, and under these circumstances it is not surprising that the sympathy of French radical reformers for the illegitimate should be stronger than elsewhere. This sympathy is in their case of course increased by their hostility to marriage, which, strong as regards civil marriage before the Mayor, is ruthless and furious as regards church marriage. There is probably no country in the world but France in which a political candidate would be driven from the stump by a storm of execrations, on his admitting, in answer to a question, that he had had one of his children baptized, and in spite of his expressions of penitence; and yet this occurred in Paris not long ago.

There has been a rumor running through the European press for a week or two back, that the Pope was going to come to terms with the Italian kingdom—that is, was going to abandon his sham "captivity" in the Vatican, and accept the allowance set aside for him by the Italian Government of $625,000 per annum. But this has been emphatically denied on very high authority. The story had its origin in the discipline which Leo XIII. has been compelled to administer to Cardinal Pitra and some others, for trying to be more papal than the Pope himself, and inveighing savagely against the conciliatory policy. The *Journal de Rome*, published at Paris, in which the Cardinal's letter appeared, has been suppressed by the ecclesiastical authorities in consequence of the Pope's reproof. In fact, the Pope's policy, which is evidently now to be carried out with a stern hand, is to be an almost complete reversal of that known as "Ultramontane" since Pius IX.'s day, or is, in other words, to be one of conciliation toward the Church's enemies everywhere; but there is as yet no sign of peace with the Italian kingdom, or the acceptance of its subsidy. Nevertheless, in the opinion of many observers, the steady and rapid decline in the amount of Peter's Pence must bring this about at no distant day.

The reform recently effected in the Hungarian House of Lords has been completed by the appointment, on the part of the Crown, of thirty new members, five more per annum remaining to be similarly appointed in the next four years. The selection of the thirty has been made by the Tisza Cabinet entirely in the spirit in which they organized the reform. Industry and finance, science and art, are strongly represented. Among the most noted of the new magnates are the Governor of the Austro-Hungarian Bank, and several other bank directors; ex-Premier Coloman Ghiczy; the Academicians, Paul Hunfalvy and Gyulai; the architect Ybl, and the oculist Hirschler. The last named is one of two representatives of the Jewish element of the population of the kingdom, whose denominational representation in the person of a rabbi-magnate Tisza vainly endeavored to effect by a special paragraph in the Reform Bill. It is also noticed that a considerable number of men with German names are now to occupy seats side by side with Esterházys, Batthyányis, Pálffys, and other hereditary bearers of old historical names, while not a single Slovak, Serb, or Ruman has been added to the august body. Among the magnates created by Francis Joseph is General Máriássy, who gallantly defended a fortress against him in the revolutionary war of 1848-9.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, July 15, to TUESDAY, July 21, 1885, inclusive.]

DOMESTIC.

THE President has made the following special civil-service rule: "Appointments to the 150 places in the Pension Office provided to be filled by the act of March 3, 1885, except so far as they may be filled by promotions or transfers, must be separately apportioned by the appointing power in as near conformity to the second section of the act of January 16, 1883, as the need of filling them promptly and the residence and qualifications of the applicants will permit." The section referred to provides that appointments shall be apportioned among the States and Territories and the District of Columbia upon the basis of population as ascertained at the last preceding census.

Francis H. Underwood, of Boston, has been appointed to succeed Bret Harte as United States Consul at Glasgow. He is a well-known writer, and has published biographies of Whittier, Longfellow, and other New England authors.

William B. Webb has been given a place on the District of Columbia Commission by President Cleveland. Mr. Webb is a Republican. He is about sixty years of age, a native of Washington, was graduated from Columbian University in 1844, admitted to the bar in 1847, and has practised ever since, except during the three years following 1861, when he was Superintendent of the Metropolitan Police.

Maurice F. Holahan has been appointed to the position of Chief of Division in the Custom-house. He is a secretary in the Tammany Hall organization and the Tammany leader in the Twelfth Assembly District of this city. For three years he represented that district in the Legislature. He was recommended for the position by Tammany Hall and Governor Hill.

A Washington despatch to the *Sun* on Saturday said: "It is the uniform impression of distinguished Democrats who have lately visited the White House that the President gives no indications of changing, but, if anything, is more resolute than ever in keeping his Administration as distinct as possible from party politics. The President leaves on the minds of all visitors the belief that he regards his steadfast adherence to this line as the most valuable feature of his Administration and the best exemplification of his theory of politics. In this way he thinks he will build up a Democratic party that will be worthy of the support of the country, and thus, though for a time his course may be criticised by Democrats, it will ultimately be concurred in as the best possible."

Secretary Lamar on Saturday sent a despatch to Inspector Armstrong, at the Cheyenne and Arapahoe Agency, in the Indian Territory, ordering that "the cattle trail leading from Fort Supply in a northerly direction to and into the neutral strip known as the Camp Supply trail must be opened for the passage of cattle forcibly stopped, and for other purposes of inter-State commerce."

General Sheridan, who has arrived at the scene of the Indian troubles along the Kansas border, has talked with a number of Indians, including Stone Calf, one of the leading dissatisfied chiefs. They are divided on the question of a lease to cattlemen. The Indians appear to realize that if the Government undertakes to disarm them, they must submit, and it is believed that all danger of an outbreak is practically ended.

As a result of "pow-wows" with the Cheyennes and Arapahoes, it is said that General Sheridan will recommend the forming of a military force of 100 young Indians. This, he thinks, will divert them from mischief. He will also recommend the abolishment of grass-leases. A round-up or counting of the Indians took place on Tuesday. The Arapahoes numbered 1,500 instead of 2,500, and the Cheyennes only about 3,000.

The Northern Cheyennes, in Montana, were on Sunday reported as showing signs of discontent, and an outbreak was feared.

General Howard thinks there is a possibility of serious trouble with the Mormons. By his order the troops that were to leave Fort Douglas and Fort Laramie for Kansas to act against the Cheyennes have been retained at those posts. A collision between Mormons and Gentiles is possible on July 24th, the anniversary of the settlement of Utah. They come in by thousands on that day to Salt Lake City, from all parts of the Territory, to unite in the celebration. Should they attempt to repeat any such performance as they carried out on the Fourth of July, there may be bloodshed.

The Virginia Republican State Convention assembled in Richmond on Wednesday. The rival factions were led by Senators Mahone and Riddleberger. Governor Cameron's influence was anti-Mahone. During the evening a test vote revealed the fact that Mahone's strength was 494½ and Riddleberger's 235½. There were indications of a serious fight at one time, but this disorder was quelled by the two Senators. A platform was adopted containing the following planks: "We declare our resolute opposition to the present Federal Administration, as the fit creature of the immoral and faithless relations of apostate Republicans with the national Democracy, and as the natural product of folly, fraud, force, and perfidy." The platform proclaims "for a free ballot against a Bourbon ballot killer; for free schools and increased appropriations; for the enlargement and extension of the system of opposition to the Bourbon hostility to free education; for the enforcement of the Readjusters' settlement of the State debt; for economical government against Bourbon waste, improvidence, and crippled finances; for free labor and its just share in its contributions to the power and wealth of the nation; for every possible encouragement and aid to promote the construction of railroads and other facilities to open up the immense mineral and other resources of the State; for the enforcement of the paramount obligation of the various works of internal improvement to the people of the State; for money wages for labor, against the Bourbon store and order system, whereby corporate and other employers control the expenditures of their employees, and under which great extortion and oppression are imposed; for eight hours as a day's labor for all labor employed on public works and in mines and manufactories and corporations, with weekly payments."

At Thursday's session of the Convention, John S. Wise, Mahone's man, received more than 450 votes for Governor, and was nominated unanimously before the conclusion of the roll-call. H. Clinton Wood, of Scott County, for Lieutenant-Governor, and Captain Frank S. Blair, of Wythe, for Attorney-General, were nominated by acclamation, after which the Convention adjourned. There was a melodramatic reconciliation of the two Senators before the adjournment, and it is believed that Riddleberger will heartily enter into the canvass.

The Niagara Falls reservation was on Wednesday formally opened free to the public with elaborate exercises. Speeches were made by Governor Hill, Erastus Brooks, Mr. Dorsheimer, and James C. Carter. Letters were read from President Cleveland and Lord Lansdowne, Governor-General of Canada. The Niagara Park Commissioners have appointed ex-Assemblyman T. V. Welch Superintendent of the State Reservation at a salary of $1,800. The Commissioners have authorized him to retain the old employees on Goat Island and in Prospect Park, and to make the best terms possible for the rest of the season with tenants of the buildings situated on the reservation, which will be demolished. Goat Island and Prospect Park will be closed at dark, the Commissioners having no means of lighting them. The inclined railway will be run by the new Superintendent, and a fee of ten cents will be charged. Nobody is compelled to use this road, as there are stairs to the bottom of the cliff. The man who collects a fee of one dollar for taking visitors under the falls will be allowed to continue his calling and to demand a nominal fee for his service.

John Roach, the noted builder of iron vessels under contracts with the United States Government and private companies, made an assignment late on Saturday afternoon. It names as assignees George W. Quintard and George E. Weed, and gives preferences to the amount of $122,217 98. The wages and salaries of employees of the assignor are first directed to be paid. It is asserted that Mr. Roach can pay $2 for every dollar he owes. He lays his embarrassment to the neglect of Congress to provide suitable subsidies for American steamships.

The Poles and Bohemians on strike in Cleveland, Ohio, after listening on Wednesday afternoon to incendiary speeches, marched to the number of 2,000 to the rolling-mill, and broke down the gate giving access to the premises, with the intention of driving off the operatives. A body of police were inside the gate, and a desperate encounter ensued. Two strikers were killed, and others so battered that they will die. One policeman received fatal injuries and others were badly hurt.

The President of the Cleveland rolling mill on Thursday posted a notice that the entire works would be closed until the employees returned to work peaceably. The strikers are very threatening and are said to be buying arms and drilling.

Prof. Charles Kendall Adams has formally accepted the Presidency of Cornell.

Bowdoin College defeated Brown University in the mile and a half race on Lake Quinsigamond on Thursday by four lengths.

General Grant grew suddenly worse on Tuesday afternoon. It was thought during the evening that he was dying. He rallied a little, but it is feared that he will die very soon.

Edward M. Madden, a prominent Republican politician and business man of Middletown, N. Y., died on Friday, aged sixty-eight. He was a member of State and national conventions, Chairman of the Saratoga Convention which nominated Judge Folger for Governor in 1882, and a member of the State Senate four terms.

The Rev. Dr. S. Irenæus Prime died at Manchester, Vt., on Saturday, after an illness of six days. He was born at Ballston, N. Y., on November 4, 1812, the son of a Presbyterian minister. Early in life he showed his literary tastes. At the age of seventeen he was graduated at Williams College, and then studied at Princeton Theological Seminary. In 1833 he was licensed to preach, and filled pulpits at Ballston Spa and Matteawan on the Hudson. His health failing, it became evident that he could not endure the strain of pastoral work, and he decided to turn his attention to religious journalism. In 1840 he became connected with the New York *Observer*, of which he was made assistant editor five years later. In 1858 he purchased the interest of Sidney E. Morse in that journal, and acquired the senior editorship, which he has ever since filled, with an interval of but two years. Among his books are 'Travels in Europe and the East,' 'Letters from Switzerland,' 'The Alhambra and the Kremlin,' 'The Old White Meeting-House,' 'Life in New York,' 'Animals of the English Bible,' 'Thoughts on the Death of Little Children,' and 'The Power of Prayer' (a sketch of the Fulton Street prayer-meeting), which it is said reached a circulation of 175,000 copies. Dr. Prime held many positions of trust and honor, and was of a genial and sympathetic nature.

FOREIGN.

Excitement was caused in London on Wednesday by a despatch to the *Times* which said it was rumored that the Russians had advanced in force to Zulfikar Pass, and that they were

treating Persian territory as though it were Russian. The despatch also said that the British Frontier Commission was moving nearer to Herat. Reinforcements were arriving at Askabad. The advance of the Russians has made the Afghans anxious, but they are determined resolutely to resist any attempt to seize their territory. It is believed by the Afghans that General Alikhanoff, the commander of the Russian advance, is determined to force on a war, and that he is deceiving the Czar in regard to his real intentions. This alarming news resulted in a fall of Russian securities and English consols in the London market. It closed panicky on Wednesday. In the House of Commons Lord Randolph Churchill admitted that the Government had heard of the movement. Speaking of the hasty retirement of the members of the British Afghan Frontier Commission in the direction of Herat, Lord Randolph said that the people of Herat, fearing that the Russians contemplated a descent on Herat, had invited Colonels Yate and Peacock to enter the city, and the request had been complied with.

A large number of Russian reinforcements have arrived at Merv and Puli-Khisti during the past fortnight. The London *Daily Telegraph* on Thursday morning had a double-leaded editorial in which it said: "The situation, without having reached a distinctly acute stage in the negotiations between England and Russia concerning the settlement of the Afghan question, has become decidedly serious. Lord Salisbury's Cabinet took up the negotiations with the intention of bringing to a direct conclusion the settlement begun by Earl Granville. It was then discovered that new claims on the part of Russia were incompatible with the terms, as they had been officially defined, of the understanding between M. de Giers and Earl Granville. Communications have passed on the subject between the English and Russian Governments, but the replies of the latter have been, we regret to learn, of an unyielding character."

It was announced in the House of Commons on Thursday that the Government had nothing to impart in regard to the Russian advance. There was a panic on the Paris Bourse on Thursday, and a heavy fall occurred in the prices of most securities, owing to the reports that a crisis between Russia and England was imminent. In Vienna it was reported that Russia calculated on a French alliance against England. On Friday the excitement somewhat subsided.

It was semi-officially denied in St. Petersburg on Sunday that Zulfikar Pass had been occupied by Russian troops. General Komaroff made slight movements of troops there to prevent a surprise by an Afghan attack. He has been ordered to hold the positions, to enable him to occupy the defiles if necessary. The Government is firmly determined to do nothing that may compromise the pending negotiations with England.

A London despatch to a Vienna newspaper on Monday said: "M. Lessar states openly that the possession of Herat has become necessary for Russia and ought not to cause war."

On Tuesday the London stock market was stronger and the Afghan alarm had subsided. Russia has made fresh proposals.

The Amir of Afghanistan, having been invested with the Order of the Star of India, has proclaimed that in virtue of that investiture he is entitled to the aid of the Indian army if necessary.

Mr. Robert Bourke, Under Foreign Secretary, stated in the House of Commons on Friday afternoon that the Government would do its best to obtain an early issue of the Egyptian loan of $45,000,000. Negotiations with the interested Powers were being carried on with that end in view now, Mr. Bourke said, and the Government were unable to make any further statement at present. On Tuesday, Russia's consent to the loan having been given, the issue was ordered through the Rothschilds.

In the House of Commons on Friday Mr. Parnell moved that the Government order a special inquiry into the Maamtrasna murder cases. In a long speech he dwelt on the maladministration of criminal law in Ireland under Earl Spencer, whereby innocent persons had in some cases been condemned and executed, or sentenced to long imprisonment. He analyzed the cases of Michael Casey and Miles Joyce, showing how the Crown acted contrary to the evidence. Sir Michael Hicks Beach said that the present Government had nothing to say concerning the merits of the case, and nothing to say in defence of the late Government. He was, however, authorized by the Earl of Carnarvon, present Lord-Lieutenant of Ireland, to state that the present Irish Executive will make a careful personal inquiry into the subject submitted by Mr. Parnell for investigation, but must add that the Government felt themselves compelled to ask the House to resist Mr. Parnell's motion, which was derogatory to Earl Spencer, a member of the late Government. Lord Randolph Churchill praised Parnell's calmness and the argument with which he introduced his motion. He added that if there had been a miscarriage of justice it would be brought to light. He therefore appealed to Mr. Parnell whether it was wise or fair to press the motion. Mr. Parnell agreed that the request was a reasonable one, and asked leave to withdraw the motion. It was negatived without a division.

The Conservative course toward the Parnellites is severely criticised in their own party. They simply followed at Parnell's heels. Their own organ, the *Standard*, censured them, and the *Times*, *Telegram*, and *News* denounce them. The Irish Conservatives are certain to be greatly alarmed.

The Munster Bank, with headquarters in Cork and twenty nine branches in the Irish provinces, suspended on July 14, with liabilities estimated at £3,349,000. Its capital was £1,500,000, of which £975,000 was not paid up. There is a large body of shareholders among the middle classes who will be ruined by the call for the remaining unpaid capital. The shareholders have been for some time in litigation with ex-directors, including Mr. Wm. Shaw, M. P., for advancing money to fellow-directors without ample security and allowing them to overdraw their accounts. It is said that Mr. Shaw is indebted to the bank $400,000, much of it unsecured. The bank will probably be reorganized. The failure paralyzed business in Cork on Wednesday, and a feeling of despair prevailed. Trade throughout the south of Ireland was checked. Great crowds assembled in the streets adjoining the bank, and serious disorders were feared. The assets are estimated at £3,350,000.

The excitement resulted in a run on the Hibernian Bank of Dublin, which has forty-two branches in Ireland. On Friday the bank officials, as a precautionary measure to prevent the bank's assets from being thrown on the market and sold at ruinous figures, insisted that the depositors should give them a week's notice of their intention to withdraw their money before they would be permitted to close their accounts with the bank. The bank is legally entitled to this demand of its officers, and it is hoped that by the expiration of the time the scare will have at least partly subsided.

The Government, through the Lord Lieutenant of Ireland, refused on Monday direct aid to the Munster Bank

In the House of Lords on Friday evening Lord Ashbourne presented the Irish Land Purchase Bill. The bill provides for the advance of three-fourths of the purchase money at 4 per cent. interest for forty-nine years. Where needed, the whole money will be advanced on conditions which, while just and generous, will not expose the Government to risk of loss. It is therefore proposed in such cases to retain a deposit of one-fifth of the purchase money, at a moderate interest, until the tenant has repaid by instalments an equal sum; also to utilize the Irish Church surplus to guarantee the State from ultimate loss, but only after the forfeiture of the one-fifth retained. The act is to be administered by the existing Land Commission, which will be reinforced by two Commissioners for three years at a salary of £2,000 a year. Earl Spencer approved the measure. Lord Ashbourne said the Government proposed to limit the amount of money to be advanced to £5,000,000. The church surplus is estimated at £750,000. The bill passed its first reading. The Parnellites appear to be satisfied with it.

The text of the bill to improve the housing of the poor of London prepared by the Marquis of Salisbury has been given to the public The measure provides that, in the construction of workingmen's lodging-houses in London and its urban and rural sanitary districts, a compulsory condition shall be that on leasing unfurnished houses a guarantee be given that the dwellings shall be placed in a reasonably fit condition for human habitation.

The bill removing the electoral disqualification from voters accepting gratuitous medical relief passed its second reading in the House of Commons on Thursday by a vote of 279 to 20.

The budget was read a second time in the House of Commons on Thursday evening. Sir Hugh Childers, the late Chancellor of the Exchequer, said that he was confident that beer, wine, and spirits ought to be subjected to higher taxes. He expressed his belief that they could be made to produce fully £6,000,000 per year.

Twenty-five thousand cotton operatives at Oldham, Eng., have struck work.

The Monetary Conference was opened in Paris on Monday.

The French Senate on Thursday ratified the Tientsin treaty.

The Council of the Seine has voted to remove Voltaire's heart from the National Library to the Pantheon in Paris.

Anselme Fleury, a French statesman, and member of the Corps Législatif in 1852 and after, is dead at the age of sixty-five.

The King of Dahomey, Western Africa, with a large army, has massacred many of the French in the protected villages. The King has also captured 1,000 French women and children, and he and his followers propose to eat them.

The garrison at Kassala recently repulsed an attack of the Sudan rebels, killing and wounding 3,000 of them.

News has been received in Berlin of the safety of Juncker and Casati, who have been exploring the Congo River, and about whom no intelligence had for many months been received, and who were supposed to be dead.

A Republican conspiracy was unearthed in Spain on Wednesday. A camp of insurgents was formed near Mataro, and soon a large number of recruits, well armed, joined the rebels. The Government got news of the existence of this camp, and sent a large force of troops to capture it. The troops made a sudden descent on the insurgents, and the latter fled in every direction. The troops captured most of them. Instructions were sent to all the cities and towns in Spain to look out for revolutionary plotters. The police of Saragossa raided a house in that city which they had reason to suspect was being used for a treasonable object. The officers surprised sixty conspirators and captured eighty rifles. Colonel Magallon, who is supposed to be the leader, has been tried and sentenced to death.

In the Canadian House of Commons on Thursday night, Sir John Macdonald gave notice of a proposal to vote $20,000 to General Middleton in recognition of his services in the Northwest campaign.

The Canadian Parliament was prorogued on Monday afternoon, the Governor-General making a speech.

THE ROACH FAILURE.

MR. JOHN ROACH, in an interview published in the *Tribune*, ascribes his failure to the neglect of Congress to vote suitable subsidies for American steamships. The Democratic party is blamed for the depressed condition of the shipbuilding trade, and "the mendacious free-trade press" are rather hastily charged with indifference to the fate of the workmen in his yard, now thrown out of employment. In addition to these contributing causes Mr. Roach ascribes his disaster in part to his own excessive patriotism, exhibited in costly endeavors to float the American flag on the high seas and to build up an immense foreign trade carried on in American bottoms, built of American iron with American labor, and navigated by American seamen. The action of the Secretary of the Navy and of the Attorney-General in respect of the *Dolphin* is mentioned as an untoward event, but rather incidentally, as though the failure might have happened without that contingency. Mr. Roach repudiates utterly an interview published in the *Herald* of Sunday, in which his misfortunes are charged to the *Dolphin* mis adventure, and says that the conversation published and attributed to him was fabricated from beginning to end.

We shall never be able to agree with Mr. Roach as to the proper method of building an American mercantile marine or of promoting foreign trade. We regard all attempts to carry on shipbuilding, or any other trade, with the proceeds of general taxation, as false in principle, delusive in practice, enervating in example, and especially scandalous in method, since it implies the use of lobby influence and corruption at the seat of government. Nevertheless, we regret that Mr. Roach has been compelled to make an assignment. We should greatly prefer that his shipyard were running with a double force of men, at even higher wages than he was paying. Whether his laborers were all native Americans or partly American and partly foreign, and whether all his materials were produced here or partly produced abroad, would not concern us as much perhaps as it concerns him; but if we could have our way, we would set his furnaces in full blast and his rollers and hammers in swift motion at once. This, we think, is the feeling of the entire free-trade press, mendacious or otherwise.

Things being as they are, the free-trade press will be apt to make reflections something like these: Mr. Roach's failure is not due to any change in the tariff, because there has been none. It is not due to any change in the navigation laws, because there has been none. If Mr. Roach has spent money in Washington fighting against the free-traders and in favor of subsidies, he must see now that it might better have been kept in his business and laid up against a rainy day. If he has taken too active an interest in politics and has staked too much on the continued success of the Republican party, as one might infer from his *Tribune* interview, he has violated a business principle of prime importance, and furnished an awful warning to his fellow-shipbuilders. The Messrs. Cramp, the Harlan & Hollingsworth Company, and the Bath Shipbuilding Company will undoubtedly take heed to conduct their business on a plan which shall take account of the principle of universal suffrage as one of the underlying facts of trade, and not venture everything on the belief that one party will remain in power forever. But what, after all, has the Democratic party done to harm Mr. Roach? It refused him a subsidy, but the Republican party had done so repeatedly before. For seven years past the subsidy pot has been boiling at Washington at great expenditure for fuel and without net proceeds, and any candid historian will say that the Democrats have furnished a liberal contingent to the support of subsidies.

But it was not anything that the Democratic party had actually done, Mr. Roach says, that caused the mischief. It was the public apprehension of what they might do. It was the shadow and not the substance of evil that closed Mr. Roach's yard. "The Democratic party," he says, "is supposed to be in favor of free ships, and when the election excitement began, and people saw the possibility of Democratic success and of the passage of a law that would mean the annihilation of American shipbuilding, there was no business. Carrying companies would not build ships because they did not know how soon the foreign ships, operated by foreign cheap labor, would be admitted to drive their business away." Probably Mr. Roach's assignees will find a more concrete reason for the assignment than a vague apprehension that foreign-built ships would be admitted to American registry in order to do what they are now and always have been doing—that is, carrying American goods to foreign ports and bringing the proceeds back. Nobody having any influence has proposed to open our coasting trade to foreign ships. As to all other trade, the advent of the Democratic party to power can make no difference as regards the carrying of goods, but merely as regards the carrying of the flag, and it is well known that importers and exporters pay their money exclusively for the transportation of property, and never a cent for the colors displayed at the mainmast.

Mr. Roach is clearly laboring under the impression that his shipyard is an institution, and peculiarly an American institution. It represents American labor, the American flag, and American interests generally, as distinguished from foreign affairs. Its embarrassments are American embarrassments, and the naughty Democrats who have caused its failure by filling merchants with the idea that cheap foreign ships would soon be sailing under the American flag are responsible for the pulling down of this noble institution. The inquiry will naturally arise why the other iron-ship yards in the country are not pulled down also. Mr. Roach's yard is not the only one of its kind on the Atlantic Coast, although Mr. Roach's political activity and his frequent presence at Washington city have led many people to think that he is the only man in the United States able to build an iron steamship. The bids for the new cruisers embrace the names of seven other firms and corporations offering to do the work for which Mr. Roach put in the lowest bids. If Mr. Roach's failure is due to the election of Cleveland, why were not the seven other shipyards prostrated in like manner?

This question seems to be answered in a second interview—an interview with Mr. Weed, the assignee of the failed firm—also published in the *Tribune*. According to this report, Mr. Weed says:

> "With a capital of about $2,500,000, he was doing a business of about $5,000,000, half of which was involved in his contracts with the United States. Confronted with the Attorney-General's opinion that those contracts were so much waste paper, he did not know where he stood. He was paying out tens of thousands of dollars weekly in wages upon work which, it was threatened, would not be accepted. He would then be liable for about $1,500,000, part of which had been paid in cash, and part in various portions of the machinery, spars, masts, and other parts of the vessels which had been provided by the Government. For this he would have had four worthless hulks, which, condemned by his own nation, could scarcely be sold to advantage to any other. It was time for a prudent business man to call a halt and find out where he stood. 'If that opinion of Garland's had not been rendered,' said one of his chief advisers yesterday, '2,400 American workmen would not have been turned into the streets last Saturday night, but would now be at work providing the finest iron cruisers known to modern naval science.'"

This is a shifting of the ground, and an attempt to lay on the shoulders of the Administration the responsibility of Mr. Roach's failure, which Mr. Roach himself said was due to the public apprehension lest the Democratic party should let in cheap foreign ships, and expose American owners to a ruinous competition. This apprehension, stirred up originally by the mendacious free-traders, was so intensified by the election that "there was no business." He was left with no work on hand except the three cruisers.

Of course the political bearing of the failure will be turned to all possible account, both in its general aspect as a reproach to the Democratic party, and as a special accusation against the persons whom ex-Secretary Chandler describes as "newly-fledged Cabinet ministers." The majority of the American people voted wrong, and Secretary Whitney and Attorney-General Garland decided wrong, the result being the destruction of an American institution and the turning adrift of 2,400 American workmen. It is desirable that the real facts should be made known, not because Mr. Roach's embarrassment is more important than that of hundreds of other firms which we have witnessed in the prevailing business depression, but because this is the only one that has had a distinctively political character assigned to it. The facts cannot be known until Mr. Roach's schedule of assets and liabilities shall have been filed. It may then be ascertained how much money he claims to be due him from the Government, and what proportion this sum bears to his aggregate liabilities. Among his assets has been mentioned the plant of the Combination Steel and Iron Co., an outfit for the rolling of steel rails, which was set up at Chester at the culminating point of the steel-rail "boom" a few years ago. The making of railway bars is an honorable branch of industry, but is not a necessary part of the ship-building trade. The depression which has come over it has probably affected Mr. Roach as it has affected other firms and corporations. If capital has been lost in it or made temporarily unavailable, such loss must not be laid to the

charge of Secretary Whitney. Nor can the discharge of any workmen so employed be made the basis of an accusation against the Democratic party. The same may be said of Mr. Roach's investments in real estate in Westchester County, of which the *Tribune* furnishes a list, amounting to $198,000. These are, of course, private matters, which would not be suitable for newspaper comment if Mr. Roach's failure were not publicly charged upon a political party and upon the national Administration. It will be found, we apprehend, when all the facts are known, that the failure is due mainly to the neglect of business principles, and to the mixing of politics with business in undue proportions.

THE NEGRO IN SOUTHERN POLITICS.

A BRIEF Washington despatch a day or two ago, which was doubtless overlooked by the majority of readers, was full of significance to any careful observer of Southern politics. The despatch stated that L. C. Moore, a negro from Issaquena County, Miss., had been appointed messenger in the Interior Department, and that the appointment was made upon the recommendation of Senator Walthall, Mr. Lamar's successor in Congress.

The significance of this incident is, that it shows the leaven of liberal ideas to be working even in a State where Bourbonism has always been so strong as in Mississippi. The same spirit has been exhibited in other Southern States since the Democrats came into power. Almost the first appointment made in South Carolina was that of a negro to a desirable position as postal clerk in the railway mail service, as successor to an incompetent person of his own race, upon the recommendation of Senator Butler and with the hearty endorsement of the chief Democratic newspaper. Just now the Democratic politicians of Tennessee are greatly excited over the candidacy of a negro named Shaw for the important Federal office of Surveyor of Customs at Memphis, his appointment being strongly urged in preference to that of his white Democratic rivals by Senator Harris, the Nashville *American*, and other leading men and papers. Such occurrences as these presage great changes in the division of voters at the South. Broadly speaking, the blacks in that part of the country have been Republicans, and the whites Democrats. The blacks were Republicans because they had been taught by their carpet-bag leaders that the whites wanted to reënslave them; the whites were solidified in the Democratic party by this union of the blacks. Thus, the race line came to be drawn, with all its attendant evils to both races, of which the weaker necessarily suffered the larger share.

It was believed by candid students of the Southern problem that the only way to efface this race line was to elect a liberal-minded Democrat as President, convince the negroes that their fears were groundless, and thus pave the way for a division of their votes on rational grounds, with its necessary and not less desirable sequel of dividing the white votes. It is already clear that this is to be the result of Cleveland's election. The apprehensions of the blacks have been "entirely allayed," to use the language of that representative colored Republican, ex-Congressman Lynch, of Mississippi, temporary President of the last Republican National Convention. Further interesting testimony from Mr. Lynch's State is furnished in a very striking open letter from H. C. Carter, a prominent colored man of Vicksburg, published in the *Commercial-Herald* of that city, and addressed "to the colored people of Mississippi." Some parts of this letter deserve to be quoted in full, as these:

"The time seems to have come when some one should point out to the colored people the fact that under Democratic rule their lives, liberty, and property are as safe as they were under a Republican President. Our guides, philosophers, and friends of the Republican faith insisted that no rights of a colored man would be regarded in case the national Government should change hands, and that even our personal liberty would be endangered. Under this party lash for years we marched to the polls voting steadily as we were bid to do, often for men whom we despised; often for men of whose moral corruption we had personal knowledge, and against men whose integrity and intelligence were beyond question, and whose kindness, advice, and judgment we implicitly relied on in all private matters. Let us hope that this lesson, at least, has been thoroughly learned by the colored man—party hacks can and will lie if it be apparently to their advantage to do so. Vote for men and not for creeds; choose the honest, capable, and sound-ideaed man, trusting that he will bring to bear on public questions those same qualities he displayed in the management of his own affairs, and you will not be deceived. Granting that we owed the Republican party a debt of gratitude, we have paid it, paid it by keeping its minions in power twenty years. We have paid it by aiding in the retention of a scheme of Federal taxation that has robbed the agricultural South to enrich the manufacturing East. We have thus robbed ourselves to enrich Northern Republicans, to whom our fate, except to subserve their interests, is a matter of utter and profound indifference."

Mr. Carter proposes a change. "Let us stand up and act for ourselves," he says. He points out that the real advancement of his race depends upon the improvement and perpetuation of the public-school system, and urges that its perfection can be more surely obtained if they join hands with their white Democratic friends. "Let us try the experiment of aiding them, at least for the present," he concludes. "If in the long run it appears that justice is withheld from us, we can then take the track of our inclinations or interests. If my views startle any of you or my words grate harshly on your ears, remember the wisest of political philosophers in America has said: 'Wherever there is freedom of thought there is bound to be difference of opinion.'"

In the same line was the letter recently addressed to the editor of the Norfolk (Va.) *Landmark* by a leading colored clergyman of that city, named Pollard, who says:

"I am not a politician, and in no sense a leader of the colored people, but I do believe that the colored people are beginning to realize that their interest is your interest, and that your interest is their interest. All the people in the South should have one common end and object in view—viz., good government and a development of our natural resources. We have been enemies long enough. It is time now that we should be friends."

There are Democratic politicians at the South who do not want to see the race line disappear. A Memphis paper, which bitterly opposes the appointment of Shaw, insists that, if the color line is broken, "the country will be worse off than it was before." But the ruling sentiment of the South is plainly with the progressive wing of the party, which advocates friendly relations between the races and is already willing to begin sharing the offices with the old slaves. In Mississippi we observe that almost without exception the whites in the counties with large negro majorities are deciding in favor of "fusion" county tickets for the coming election. This removes all danger of the choice of men of "moral corruption," who, as Mr. Carter says, have been too often supported by the blacks when they ran a straight ticket, while, as a Democratic correspondent of the *Commercial-Herald* points out, wherever this policy is adopted "we hear of no Matthews affairs or Yazoo killings, but profound peace and good will prevailing."

There are Bourbon Republican politicians at the North who will join the Bourbon Democrats of the South in mourning over these signs of progress. The great thing for which the Republican party has always fought was equal rights; but now that the Southern whites manifest a disposition to grant them, there are Republicans narrow-minded enough to sneer at any movement looking in that direction. But the great mass of patriotic men at the North will rather endorse the just view of the matter taken in the last issue of the Nashville *World*, a Republican journal, which says:

"The announced policy of the Cleveland Administration to appoint a negro to one of the principal Federal offices in this State is a portentous one, and if carried into execution, which we do not doubt, is destined to exercise an influence for good on the destinies of the Southern section of the nation, which will affect alike beneficially both the negro and the white man, not one more than the other. . . . The negro has prayed for just such a condition of things as is promised by this new departure of the Democratic party, and once assured of its sincerity and permanence, he will not be slow to break the color line by hastening in considerable numbers to unite his political destiny with that of the Democratic party. . . . The Republican party has for twenty years fought to protect the citizenship with which the negro was clothed, and would, if necessary, continue so to fight; but when the Democratic party in Tennessee accepts the situation, and by its public action guarantees that this right of American citizenship shall be sacred even when worn by a negro and ex-slave, then the Republican party would be untrue to itself and recreant to the motives which have hitherto actuated it in this matter if it sought by improper means to interfere with the independent action of the negro voters. It would also be untrue to its patriotic record and impulses if it refused to accord deserved praise to the Democratic politicians and press who may manifest and exhibit the courage to lead in this great and patriotic movement in the direction of the welfare and prosperity of so large a section of the American Union. The Republican party can better afford, under the circumstances, to lose half or all the negro vote than to place itself on record as justifying past Democratic charges, that it counsels and controls the negro against his true interest only for the selfish aggrandizement of its white leaders."

THE RADICAL PROGRAMME REGARDING IRELAND.

ONE of the plans which a good many sanguine Englishmen had counted on for preventing the Parnellites from holding the balance of power in the House of Commons, was an agreement between the English and Scotchmen of the two great parties that the Irish vote was not to count in any question threatening a change of Ministry; that is, neither side was to consider a majority obtained by the aid of the Irish for a resolution of censure or want of confidence, as sufficient warrant for the resignation of the Cabinet or for a dissolution. No such agreement or understanding was ever reached, but there was a widespread belief that whenever the occasion came it would be reached and acted on. But the

first time the expected crisis came the Tories showed not the slightest objection to stepping into power on the Parnellite votes, although these votes are now probably only one-third of what they will be in the new Parliament.

This is most mortifying and alarming to a great many moderate Liberals represented by the London *Spectator*, although it is not nearly so mortifying and alarming as the almost open revelation which the recent debates make, that not only have the Tories accepted office at Parnell's hands, but they have actually entered into an alliance with him, and have promised an investigation of the Maamtrasna murder trials, which is in itself a reflection on Lord Spencer, who said there was nothing to investigate. In view of these facts, the *Spectator* solemnly calls on all right-minded Englishmen to make up their minds now how far concession to Ireland is to go. *Truth*, which probably contains more Radical doctrine than any other newspaper in the country, sneeringly advises the *Spectator's* friends not to draw the line very close, in making up their minds, but to leave an ample margin, for the concessions will probably go further than most people now dream of. In fact, there is hardly a doubt that they will go as far as Mr. Chamberlain has gone in his late article in the *Fortnightly* on "Local Government and Ireland"—that is, to the length of setting up a national council in Dublin to legislate on purely Irish affairs.

Mr. Chamberlain's article is pronounced by the editor, in his Monthly Summary, "an exhaustive and authentic exposition of the views of the leaders of advanced Liberalism, on what will infallibly prove the paramount question of the new Parliament." "That its solution," he adds, "will be found in the direction indicated in our pages, that it will be accepted by the country, and that Mr. Gladstone will superintend the conduct of the scheme through Parliament, is scarcely doubtful." If this be true, the article is an exceedingly important political programme, and, indeed, as such it has already excited a great deal of curiosity. Mr. Chamberlain's position is, that as the first great work of the Reformed Parliament in 1832 was the establishment of local government in towns, and the first great work of the still more reformed Parliament of 1868 was the extension of the sphere of local government in the matter of education, so the first work of the Parliament elected by the new constituencies in 1885 will be "the crowning of the edifice of local government in some parts of the United Kingdom, and the foundation as well as the completion of its structure in others." The machinery he proposes to create would be County Boards to take charge of the affairs of counties, and "National Councils" to take charge of such affairs of each of the three great divisions of Scotland, Ireland, and Wales as are not imperial in their character.

What he says about Ireland is, however, the most important part of the programme, and amounts, in fact, almost to a complete justification of the Parnellites in their hostility to the House of Commons considered as the Government of Ireland. He dismisses with very few words the suggestion, with which many good Americans justify themselves in treating Irish grievances as unworthy of attention, that so good a man as Mr. Gladstone, or so good a party as the Liberal party, may be trusted to manage Irish affairs properly without this tremendous Irish clamor. "The task is for them," says Mr. Chamberlain, "a hopeless one." "The Castle," as the English branch of the Irish Government is called, is utterly isolated from the Irish people. "There is no channel of trustworthy communication between the people and the Government." The grand juries, which manage county affairs, are composed each of twenty-three gentlemen, summoned by the sheriff as a matter of social consideration, who meet for one day, or at most two, each half-year, vote the taxes and adjourn; and they are all landlords. The county Inspector of Police knows as little of the opinions and feelings of the people as they do, being a sort of semi-military "swell," and probably not on speaking terms with any man of lower social grade than that of a county magistrate, and "would be shocked by the suggestion that he is the servant, and not the master, of these people." The same arguments apply to the magistrates, both paid and unpaid. They are all appointees of the Crown, and "the vast majority are opposed to the people, differing from them in interests, in religion, and in politics."

And yet it is through such channels as this that the Lord Lieutenant and the collection of administrative bureaus known as "the Castle," which manages the affairs of the whole island, learn what popular opinion or feeling in Ireland is. Lord Spencer was, of course, no better off in this matter than any of his predecessors, and yet his opinion had actually more weight with the late Gladstone Cabinet, when the question of continuing the Coercion Bill was under consideration, than any other organs of opinion—the Irish press, or clergy, or members of Parliament; he being an Englishman who had never lived in the country at all till he became Lord Lieutenant, and had passed his whole time in it surrounded by cavalry escorts. As Mr. Chamberlain truly remarks:

"A system which places the entire administration of a country in the hands of a central Government, and which divorces an entire people from sympathy with or influence upon that Government, must result in misunderstanding on one side, followed by misrepresentation and unmeasured vilification on the other. The rulers at the Castle, blindly striving to do their best for the country which they do not, and which, under the circumstances, they cannot be expected to understand, complain not unjustly that the Irish people are unreasonable; the Irish people retort that the rulers at the Castle are tyrannical and corrupt. Under such a condition of things an intelligent and an economical administration of the country is impossible. Reforms most urgently needed are not even attempted, abuses the most glaring pass unchallenged. The public money now spent in Ireland, if intelligently and honestly applied, would probably abundantly suffice for her public wants. But it is in a great measure misapplied, and it will continue to be misapplied until the system of government shall have been so amended as to place in the hands of a national body, elected by and responsible to the Irish people, the application and distribution of the funds now contributed by the imperial exchequer to Ireland."

Some of the examples he gives of this are very striking and worth recurring to.

THE PURPOSE OF THEOSOPHY.

AMONG contemporary grown-up attempts to find the spot on which the end of the great rainbow rests, the palm for originality may fairly be claimed by Mr. A. P. Sinnett for his introduction to this incredulous Western world of the Mahatmas of Thibet. About four years ago, it will be remembered, Mr. Sinnett first drew attention to this extraordinary brotherhood by his book called 'The Occult World.' This contained only a candidly written account of his own adventures in search of the rainbow, and the phenomena on which he rested his claim to have found it. The philosophy of the discovery was given by him in a later book called 'Esoteric Buddhism,' and what may be called the romance of it later, in a novel of occult life called 'Karma.' The first two of these books have already passed through several editions, and the interest they have excited has been sufficiently great to lead to the founding of a Theosophical Society, with a flourishing Lodge in London and many branches in different parts of India, and to induce several apparently serious and sane people to leave their occupations, their families, and their future in England, to devote themselves in India, under the guidance of an Adept-Guru, to the life of a Chela or Neophyte on the long, hard road leading to the mountain fastnesses, both physical and intellectual, in which the mysterious Mahatmas dwell.

The difficulty, however, with this interesting doctrine has been from the first its preternatural vagueness. The most extraordinary phenomena have been put forward upon entirely insufficient evidence, and the most fascinating theories of life and immortality have been offered on the *ipse dixit* of a being whose existence can only be in flat contradiction to all the accepted opinions of modern science. But through the whole system has run a thread of empirical method, which has served, in spite of every improbability, to secure for it the appearance of a causal relationship to common life. Under these circumstances, the title of the little volume just written by Mrs. Sinnett, 'The Purpose of Theosophy,' will be extremely attractive alike to the faithful and the scoffer. The chapters into which it is divided are Elementary Truths, An Outline of Occult History, Western Misconceptions of Eastern Philosophy, The Seen and the Unseen, The Mahatmas, and Advice to Students. But, although the intention of Mrs. Sinnett's book is admirable, it will lead few readers beyond the ploughed field on this side of the hill. "The tendency of intellectual thought and scientific inquiry," says the authoress, "has for many years past been toward materialism and agnosticism. There still remains, however, in human nature the desire for belief in a future life, and these pages aim at pointing out how the study of Theosophy or the esoteric doctrine shows the reason of this instinctive longing, and what it will necessarily and surely lead to in the future races of mankind." The only definition of Theosophy, however, which she gives us is, that it is not a religion with a creed or code of doctrines, and that "it teaches people to search for the fundamental truth that is the basis equally of every creed, philosophy, and science, to discover and put aside the superstructure raised by the superstition, persecution, love of power, ignorance of science, and bigotry of humanity, and thus to lay bare the fact that one truth supports every religion, no matter how divergent they may now appear; that truth being the Divine wisdom of the ancients, discoverable alike in the symbolical writings of the Kabbala, the books of Hermes, the Vedas, and other sacred books of the East, in the Talmud, the Koran, our own Bible, as well as in the teachings of Pythagoras, Socrates, and many of the more recent philosophers."

Beyond this modest claim for the new science, however, the authoress gives very few particulars about it, believing apparently with Emerson that details are melancholy. She asks, What does this Divine wisdom really consist of, whence comes it, by whom has it been taught, and for what purpose? And it is precisely to these ques-

tions that clear and accurate answers are essential before any one ought to consent to accompany her gifted husband on his search. To the disappointment, however, of the reader who takes up the 'Purpose of Theosophy' in the hope of discovering the method of calling down fogs upon his enemies, like the Ram Lal of Mr. Marion Crawford's romance, or of being able to receive from his master in Thibet the answer to a letter which he posted a quarter of an hour before in Piccadilly, there is nothing in the little volume that will disclose these secrets to him. It apparently, indeed, tells a good deal about the Mahatmas, the Arhats, the Rishis, of the fundamental difference between Hatta yog and Raya yog, of the significance of Karma, and the nature of the Elementals, of the peculiar composition and qualities of the Astral Light, of the purposes of the Guru Devas, and even of the unspeakable advantage it is to the Teshu Lama of Thibet, the head of the occult hierarchy, to be able to reincarnate in the body of a young baby when his own tenement becomes too frail for further occupation. But the would-be Chela will be compelled to admit that his relation to all this superlatively desirable information is that of the Irishman to the little creature which he could never quite catch, because, as he said, "the moment you have your finger on it, it is gone."

Still, as we have said, there is an undercurrent of empiricism in the teachings of this "inner brotherhood" which they will do well to emphasize in future works. "The doctrine of Karma," says the authoress, "is well calculated to guide and assist those who realize its truth to a higher and better mode of life, for it must not be forgotten that not only our actions, but our thoughts also, are most assuredly followed by a crowd of circumstances that will influence for good or for evil our own future, and, what is still more important, the future of many of our fellow-creatures." And the "Rules for Students" are a simple vegetarian diet; a firm conviction of the transient character of this mortal existence; mental abstinence, that is, subjugation of all envy, hatred, malice, revenge, and the purification of the mind from all worldly anxieties; bodily abstinence; freedom from bigotry; perennial cheerfulness; ardent longing for spiritual freedom, and liberation from conditioned existence. Many of these rules might be followed with advantage by other persons than would be Chelas; but the rule which prescribes for the neophyte a full and perfect belief in his own power of receiving spiritual knowledge and of the ability of his Adept-Guru to teach him this science, will probably be of importance chiefly to the person whose faith still leads him to seek for the rainbow behind the hill and for the moon in his bucket.

THE NEW BRITISH MINISTRY.

LONDON, July 4.

THE appointments consequent on the change of Government have now been completed, and the Tory Ministry may be examined as a whole. Attempts have been made to oppose the reëlection of several of its members by their respective constituencies, but these attempts have failed in every case hitherto, partly because the constituencies were previously Tory in their complexion, partly because there is a general and not unnatural feeling that it is unfair to prevent a man from resuming his seat in Parliament just when his ambition has been gratified by the receipt of an appointment. Besides, electors have a sort of pride in being represented by a person honored by the Crown with an office, and fancy that if they want anything done for their locality (not that a Government can do much for localities under our system) they have a better chance of getting it put through.

The appointments made have been received with less interest and aroused less criticism than might have been expected. One reason for this is that the centre of interest has for the moment been transferred from Parliament and the Executive to the constituencies, where the battle of the general election is already beginning. Another is to be found in the belief that Lord Salisbury's Ministry is a temporary one. It is contemptuously called a "Cabinet of Caretakers" by the Liberals, who are universally confident of a triumph at the general election. Even should Lord Salisbury remain in office after that crisis is passed, it is probable that he would recast his Ministry, with a view to its permanent efficiency. But his supporters are not themselves sanguine of success. He puts a bold face upon the matter, and refers with satisfaction to an election held the other day at Wakefield in Yorkshire, where a seat previously held by a Liberal has been won by a Tory candidate. But the most careful calculations show an overwhelming probability of a Liberal majority, and of a Liberal majority large enough to outvote not only the Tories but the Tories and Irish Nationalists combined. Thus the country does not greatly care who are the men placed in office for the five months that have to run before the results of the election are ascertained. It is amused at the elevation of Lord Randolph Churchill, and not wholly unsympathetic, for, in spite of his violence and apparent want of political principle, it likes to see a hard fighter rewarded. It is incurious about the other ministers, for they are either "old stagers," whose good and bad points are pretty well known, or men with little that is distinctive and striking about them.

Of these new men the most notable are Mr. Stanhope, who becomes Vice-President of the Committee of Council on Education—that is to say, Education Minister; Mr. Balfour, who is President of the Local Government Board; Messrs. Webster and Gorst, who have been named Attorney and Solicitor-General respectively. Mr. Stanhope is a brisk and pointed speaker, and a gentleman personally well liked, although apt to be bitter in debate. Without any commanding powers, he does creditably whatever he has to do, and would probably have obtained a wider reputation had his health, which is reputed to be not very strong, permitted him to do more of that stump work which is now becoming so large a part of the duties of English politicians. Mr. Balfour, although not more known to the general public, is a man of a finer and higher quality of intellect. He has written a remarkable book—'A Defence of Philosophic Doubt'—which proves him possessed of no small metaphysical ability, and he always shows in the House of Commons an unusual subtlety and ingenuity in argument. Naturally fitted to take a broad and philosophic grasp of questions and rise above the pettinesses of party strife, he has latterly been led (partly, perhaps, by the influence of his uncle Lord Salisbury, or in unconscious imitation of that statesman's manner) to display his powers chiefly in keen criticism of the language and conduct of the Liberal leaders; and it is not to be denied that this is a surer road to political success than the exercise of those rarer gifts of mind which he possesses. He is not the kind of man most likely to become a popular leader, but, if he chooses to apply himself energetically to public affairs, he can hardly fail, adding social advantages to his eminent capacity, to obtain and keep a place in the front rank.

The Attorney-General, Mr. R. E. Webster, has not hitherto sat in Parliament, so that it is a great tribute to his professional reputation that he should be appointed to the post of chief law adviser of the Ministry, and chief defender of their measures from the legal side. He has enjoyed for the last fifteen years a very large practice both as a junior and a Queen's counsel, and is credited with sufficient capacity as a speaker to insure his success in Parliament. Mr. Gorst, the Solicitor-General, is in an exactly opposite position. With comparatively little forensic practice, he has made his way in Parliament by his activity and acuteness in debate. Some displeasure is expressed among the bar at the promotion of one whose fame has been won in a different sphere, but, in spite of his comparatively small experience in handling causes, he is a well-read and sound lawyer, better furnished both with knowledge and with judgment than many Queen's counsel whose professional income has far exceeded his own. Those who know him best are confident that he will supply most valuable aid to the Government in the conduct of their legal business; while his services to the party, both as an organizer outside and in attacks on the Liberal Ministry within the House of Commons, could not have been passed over.

"Cabinet-making" is a proverbially difficult and unsatisfactory process in all free countries, and here in England, where so many different considerations have to be regarded, it is more difficult than elsewhere. The Prime Minister must, in choosing his colleagues, look not only to talent for debate in Parliament (a point that the President of the United States may ignore), but to administrative capacity, to social and family connections, to influence with certain sections of opinion, to personal honor, and a record as little stained as possible; finally, to services rendered to the party on the stump. The chief moral of recent appointments to office, both among Liberals and Tories, is that this last consideration is becoming increasingly important. It is not real capacity, either for administration or parliamentary debate, that Lord Salisbury seems so much to have prized in the minor appointments he has made—and though these minor appointments are trivial in themselves, they lead to higher posts ultimately—as activity and vehemence in party warfare. Mr. Ashmead Bartlett, Baron de Worms, Mr. Marriott, are none of them men who have obtained the ear of the House of Commons, or shown any of the higher aptitudes for politics. But they have all assailed the late Government with unceasing invective, particularly at public meetings, and have thus made their names familiar if not important. Mr. Chaplin, member for Lincolnshire, is one of the dullest as well as the most pompous orators of the House, but he never lets a debate pass without delivering an elaborate philippic against Mr. Gladstone. All four have been rewarded with places, while men of incomparably higher ability and reputation, such as Sir Matthew Ridley, have been left unprovided for, because they have not thrust themselves forward as restless sharpshooters. This is one of several signs of evil omen for the political life of England.

Similar is the lesson enforced by the victory of Lord Randolph Churchill, who has not only gained one of our greatest offices—the Secretaryship of State for India—for himself, but procured the dethronement from the leadership of Sir Stafford Northcote, and secured good posts for his two followers, Sir H. D. Wolff and Mr. Gorst. Lord Randolph's success has been won by qualities of combat, or rather of onslaught, by vigor, audacity, recklessness. Of the requisites for serious statesmanship he has not yet given any sign, though it is possible that office may develop them. On some other occasion I shall endeavor to sketch to your readers his character and position; for the moment it is enough to observe that his power is due not to his Parliamentary following, which is insignificant, but to his popularity with Tory clubs and associations through-

out the country. That violent intemperance of language which repels moderate men is welcome to such clubs, and as they are powerful in the populous districts which Toryism is trying to win from the Liberals who had previously counted on working-class support, their favorite has to be reckoned with by the old-fashioned aristocratic set who used to rule the Tory party. Much as Liberalism has changed its color, Toryism has altered even more. It is no longer the party of caution and resistance, the party which stands by existing institutions and rests on the sentiment of respect for the rich and noble. It may not have yet found a new programme, but it has at least broken with its old traditions; nor has any one done so much as Lord R. Churchill to complete this greatest of Mr. Disraeli's achievements. Y.

Correspondence.

SOUTHERN FEDERAL APPOINTMENTS.

To the Editor of The Nation:

Sir: Knowing how earnestly the *Nation* has labored in the cause of civil-service reform in general, I feel that I am not out of order in addressing you a few words on the subject of civil-service reform in the South. I wish to say, first, that I voted for Cleveland, and that in my humble judgment he satisfies one's idea of the thoroughly honest politician. I believe we are all satisfied that he means to do the right thing; but here in the South, far away from the people with whom he is familiar, the imperfections in the civil-service law render it hard for him to do the right thing. It is not his fault, for I cheerfully recognize the difficulties under which he labors; but it does look as if "we of the South" were not to have the full benefits of the laws such as the North enjoys. The South has not yet learned the principles of civil-service reform as expounded in the national primer. In the local government of Memphis the policy of keeping acceptable and competent men in office has long been recognized. Our various official appointees are seldom or never dismissed without cause, while one-third of our police force is made up of colored men, who are appointed by Democratic commissioners regardless of politics. This is business. This is right.

Now when there was a change of Administration, of course a large number of Democrats began a lively scramble for the Federal offices here. The District Attorney was suspended without a shadow of offensive partisanship falling across his name. The United States Marshal was also beheaded, but he had mingled extensively, though honorably, in politics. The postmaster here had a model office. He was formerly connected with the large cotton house of Brooks, Neely & Co., had business qualifications merely, and though I have attended every Republican Convention held in Memphis since the passage of the civil-service law, I never saw Postmaster Smith there in any other light than as a mere looker-on. He has now in his possession a document, signed by all the leading men in Memphis, endorsing his official performance—a testimonial unsolicited, and which is therefore stronger than a mere petition. Now I admit that good men have been appointed to these offices, and that the suspension of the Republican officials did not violate the letter of the civil-service law; though I maintain that in two cases it tampered with its spirit. For revenue collector of this district the President has appointed a Mr. Hillsman, one of the old-time political machinists, recommended, I believe, by Senator Harris, an outspoken adherent of the spoils system. The Democratic party is not under any obligations to Mr. Hillsman, for that gentleman has been living off the party for the last few years. He is an "offensive partisan" of the very worst stripe.

The officials in Louisville, Ky., have been ousted in much the same way as in Memphis. If this, however, were all, I would not write this letter to the *Nation;* but in the *Courier-Journal* of a few days ago I saw the statement that one of the recently-appointed officials had concluded not to make a clean sweep of his subordinates, as there were several good Democrats among them. The Louisville and the Memphis officials declare, without reservation, their intention of ejecting all the Republican deputies and mail-carriers, and substituting Democrats. My object in writing this letter is twofold. I first desire to show that, in making Southern appointments, the Administration should be more critical than in making Northern appointments, and that a sharper eye will have to be kept on the officials in the South to see that the law is enforced. My second object is to call attention to the fact that the civil-service law does not go far enough; that, unless it is strengthened and enlarged so as to embrace all purely business offices, it will be a dead letter in the South. Mr. Eaton's articles on the subject, as well as the admirable articles in the *Nation*, prove that the cause has not gone awry in the North and East, and I hope the South will soon be able to say the same thing. I hope to see the *Nation* urge the civil-service movement on, and take even a higher stand than it has taken in the past. The constant reiteration of the demand for the calm and equable businesslike performance of official duty will assuredly tell in the long run. Public opinion is advancing to meet the position of Mr. Curtis and—I say it without the intention to flatter—of the *Nation*. As a Southern man who never expects nor desires to hold a public office, I do not want to see the South deprived of the blessings of civil-service reform. Walker Kennedy.

Memphis, Tenn.

COUNTRY POSTMASTERS AND THE ADMINISTRATION.

To the Editor of The Nation:

Sir: Will you kindly allow me a short space in which to "take the case of the country postmaster," as suggested in your editorial of last week's issue? Your attitude in support of the present Administration, as a true servant of the country, calls for my hearty sympathy. No unbiassed observer can doubt that Mr. Cleveland and his Cabinet are endeavoring to conduct the affairs of the nation in a just and business-like manner. However, I think that we have a right to expect that this policy shall be maintained in subordinate offices. Moreover, I believe that "Blessed are they that expect much." The demand often brings what is demanded. To this end, I desire to call attention to the fact that the Administration is giving up its principle in these country offices. For instance, the late postmaster in this place (a Republican) is a man of honor and integrity, than whom none in the community is more generally respected. He was not an "offensive partisan." He never "worked," never canvassed a single vote, but simply rode to the polls and deposited his own ballot. He has even carried the present postmaster in his buggy to vote the opposition ticket. The office was kept in a grocery store, the most convenient and respectable place in town. The business of the office was faithfully performed, to the perfect satisfaction of the whole community, irrespective of party; indeed, there is on file in Washington a petition, signed by nearly every resident who has much postal business, asking that there should be no change.

The man has been replaced by an active political worker of the Democratic party. While there is nothing against his personal character, he has not the same general respect of his townsmen with his predecessor, nor does he possess the same intelligence fitting him for the duties of the office. Moreover, the place where the office is kept—a butcher's shop—is far less suitable for the purpose. A country post-office may seem a small matter beside the New York Postmastership and foreign appointments. The office, however, is but one instance of many, and the principle at stake is the same. Moreover, your country farmer does not much care who dines at the Guildhall, London; but he does care when and in what manner he is to get his letters. I would see a *good* Administration *better*.

Respectfully yours, Subscriber.

Rhinecliff, N. Y., July 20, 1885.

THREE PUBLIC MEASURES.

To the Editor of The Nation:

Sir: At a time when the nation has completed a great struggle, and political parties have no longer any purpose but to occupy office, and know not what purposes to avow, it is fitting that thoughtful citizens take counsel together to determine what measures should be adopted for the benefit of the commonwealth. To the suggestions from many sources which have been made through your columns, please allow me to add a few words.

Three beneficial public measures are: 1. To fill by competitive examination and promotion based on seniority and efficiency the places in the Government service, including those of postmasters and collectors of customs, which are now filled by the patronage of executive and legislative officers. 2. To give representatives of the President seats in both houses of Congress, with power to answer questions for him and to vote and debate. 3. To confer on Congress power to legislate upon all subjects not prohibited to it, and to enumerate the prohibited subjects.

The third measure has the merit of providing a means by which our written law may be made to conform to our practice. We are a people living under a national Government of limited legal powers, which have proved in the past, and are now, unequal to our wants. The paucity of the powers granted to the Government by the Constitution has led a forced construction to be placed upon that document in the past and will again lead to it in the future. This is not an edifying spectacle. It does not tend to increase the people's respect for law, which is hardly what it should be when it is asserted on good authority that more executions take place by lynch law than by the process of the courts, and when trespass and assault-and-battery are practised openly for days together in our principal cities with the assent of a large part of the community, as was the case during the recent strike in Chicago.

The three measures proposed are so related that each would counteract evils which the others, if adopted alone, might bring in their train. The danger from civil-service reform is, that by destroying the spoils it may so weaken the interest taken in elections as to leave them a prey to the rich who can afford to hire workers. Subjecting the personal representatives of the President to public cross-examination, giving them a voice in national legislation and increasing its scope to include all subjects of general interest, would produce live issues, riveting the attention of the people and insuring their interest in elections. The great danger from the latter measures is concentration of power in hands which may abuse it. Civil-service reform, by purifying the Administration and Legislature, would go far to destroy such danger. A danger from merely

giving the President's representatives seats in Congress is, that by strengthening the national Government without increasing its legal powers, usurpation will be produced with accompanying loss of respect for law among the people.

R. H. C.

"LIBERTY AND PROPERTY DEFENCE LEAGUE."

To the Editor of The Nation:

Sir: There is in England a "Liberty and Property Defence League" now three years old. Its purpose is to resist over-legislation, maintain freedom of contract, individualism as opposed to socialism. It is non-political. At its annual meeting a few days ago there was reported an individual and corporate membership of 400,000. The report alluded to daily inquiries for its prospectuses and publications from all parts of the country, and from America, the Continent, and the colonies. Are you aware of any extension of that association to this country more specific than those inquiries? So far, organization has all been one-sided as to these matters in the United States. There are some disadvantages, but also some marked probable advantages, in having an organization of the other side here as in England. It would specialize discussion and make it clear and distinct for a known constituency, whereas both the discussion and the constituency are now vague and indefinite. And there might be a more determinate influence put upon legislation and legislators than now if, instead of placing the Legislature between Greenback and other organized isms on one hand and the lobby of special capital interests on the other, it was confronted and directed by a great non-partisan association of those citizens who have a clear and explicit view of what the rights of the individual and of property are.—S. M.C.

Keokuk, Iowa, July 13, 1885.

THE CHEWING OF GUM AT THE WEST.

To the Editor of The Nation:

Sir: Your correspondent in the *Nation* of July 9, on "Tobacco and Chewing-Gum," must not take it ill if some of us, his fellow-observers in the West, smile good-naturedly at his virtuous and somewhat vehement indignation.

But, seriously, does he really need to be told that the manners which he there describes as those of a whole section are, at most, merely local? Some of your readers in these parts, presumably men of average taste and discrimination, and fairly well acquainted with some representative communities in the West, know that in these communities such manners are only individual. Might not a careful review of his facts, "in a season of calm weather," convince your correspondent that the same is true also of such manners in the communities with which he is acquainted?—Respectfully, J. R. Wilson.

Fairfield, Iowa, July 15, 1885.

To the Editor of The Nation:

Sir: Having been a subscriber and reader of every page of the *Nation* from No. 1, I wish to say that I have never read a more false and calumnious misrepresentation of Western society and manners than that which you publish in No. 1045, over the signature of Werner A. Stille. And it is only because it is published in such a journal as you have the honor of conducting that it ought not to be allowed to pass unchallenged. The animus of the communication is so manifestly that of a very petty sectional prejudice—creating what it is predisposed to find—that you certainly departed from your usual judicial fairness in admitting it to your columns. I have lived fifty-five years in central Illinois—having been twelve years old when I came here from New England. During much of that time my business led me to be a frequent visitor in all the towns extending through the State from Danville to Quincy, but *not* including "Highland, Ill.," which your correspondent hails from. With some knowledge and a fair appreciation of what constitutes good manners, and with observing faculties not below the average, I have never seen or "heard" (?) a lady "chewing gum," either in a street car or on the street, in private house or public assembly. I have seen the practice, to a limited and harmless extent, among school children. But any one may see that anywhere, East or West.—Respectfully,

E. Wolcott.

Jacksonville, Ill., July 14, 1885.

THE *NATION* AND ITS FRIENDS.

To the Editor of The Nation:

Sir: Seventeen years ago in a mining camp in Idaho, the news agent, who happened to be a Yale graduate, called my attention to the *Nation*. I have read and preserved every number since, and have persuaded several friends to become subscribers. The only criticism I have heard, save the spitefulness of Bourbons and "workers," was that of an Englishman to whom I loaned the *Nation* for a year or more in return for the *Spectator*—that "it was so good, it was a pity there was not more of it." I have noticed several political and social movements which reached the heart of true reform suggested by the *Nation* and advocated for years, till the light began to dawn on other periodicals, and they would take the thing up with a hullabaloo, as though it had never been heard of before.

I have often been refreshed by seeing worthless books slashed to pieces, and I have never been disappointed in a literary work heartily commended by the *Nation*.

The following is an extract from a letter recently received from a successful physician, who was a member of my household when he started in life as a teacher:

"By my association with you I learned to value the *Nation*. It has been my companion for ten years, and has had much to do in shaping my methods of thinking. Many of my old pupils take it. I would wish to put it in the hands of every person in this country, if, beforehand, I could change them so that they would appreciate sound truths stripped of all sentimentality and rubbish. I feel grateful to you for having brought me in contact with such a paper. It has made me liberal in politics, and still quite a determined Democrat, in full sympathy with Cleveland in his herculean efforts to reform the civil service."—Yours very truly,

G. D. B. Miller.

Salt Lake City, Utah, July 15, 1885.

To the Editor of The Nation:

Sir: Perhaps a tardy congratulation on the completion of "Twenty Years" may not be out of place, and may be more appreciated because of its tardiness, as in the first week or two after that event so many friends doubtless sent in their commendations that one in the number would hardly make sensible impression.

I can remember almost twenty years ago the depressing effect upon boyish exuberance of a summons from my father to "sit down and read this"—some article from the broad two-columned pages of your paper. It was heavy reading then, and the boy of ten years might be pardoned for finding it less interesting than "Oliver Optic" or a murder trial.

The perusal then begun has continued almost steadily until this time. My thoughts upon political and social topics have been moulded, I suppose to a degree of which I am unconscious, by your weekly lessons, and while I have expressed to you opinions and judgments at variance with your own, I am glad to acknowledge that these are outnumbered very far by those in which I agree with you—many of which I have indeed imbibed from you.

I hope that your useful work will continue through coming years, and that the future will show a fidelity to wholesome political and social truths equal to those of the past.

Yours truly, B.

West Virginia, July 14, 1885.

To the Editor of The Nation:

Sir: Your recent editorial, "Twenty Years Later," and the published correspondence arising from it, have interested me greatly. I have not, however, seen in the letters any special mention of the Notes and Reviews, which are to me, perhaps, the most valuable part of the *Nation*. To one living in the country, away from any educational or literary centre, and desiring some knowledge of what is best in the books of the day, the Notes and Reviews are simply invaluable. I have invariably found it safe to purchase any book, in my field of study and interest, that has been favorably noticed or reviewed by the *Nation*. I cannot say the same of any one of the scientific and literary journals to which I have access.—Yours truly, D. S. Kellogg.

Plattsburgh, N. Y., July 20, 1885.

Notes.

The first two volumes of the publications of the New York Shakespeare Society will appear in September. No. 1 is Mr. Guernsey's 'Ecclesiastical Law in Hamlet,' and No. 2 is a study in Warwickshire dialect, by Appleton Morgan. Brentano is the Society's publishing agent.

'A Handbook of Poetics,' by Francis B. Gummere, head master of the Swain Free School, New Bedford, Mass., is announced by Ginn & Co.

Under the general title of 'Favorite Poems,' by Jean Ingelow, Roberts Bros., Boston, publish in one volume three illustrated books already issued by them separately. The first of the three is the 'Songs of Seven,' first published in this form in 1881; the second is 'The High Tide on the Coast of Lincolnshire,' 1883; and the third 'The Shepherd Lady, and Other Poems,' published in 1875.

Some of the English magazines reprinted by the Leonard Scott Publishing Company, of Philadelphia, are advertised on the covers of the magazines as "authorized editions." From such an announcement, it might at least be expected that the publishers took some care to reproduce the articles as they appeared in the original English editions. But, whether from haste in getting out the magazines, or from carelessness in proof-reading, these reprints are characterized by many gross blunders. In an article on Mr. Swinburne's poetry in the reprint of the May *Fortnightly*, the title of his poem "Atalanta in Calydon" is thrice printed "Atalanta in *Claydon*"; Rizzio appears as *Rizzo;* Wordsworth is spoken of as "the *chosed* poet of Philistianism"; the "unique command of music" becomes the "unique *demand* of music"; and where a Greek word appeared in the original a blank space is left in the reprint. In other articles in the same number of the *Fortnightly*, Canning is printed *Cannon;* the "Conservative party" is called the "*Conservation* party"; Crompton appears as *Compton;* Kendell becomes *Lendell;* and so on through the whole of the magazine. Other magazines of the

series which we have lately had occasion to use exhibit the same carelessness in printing.

Trübner & Co. send us the first (July) number of a *Revue Coloniale Internationale*, published at Amsterdam under the auspices of the Dutch Colonial Association. Curiously enough, not only is it not devoted exclusively to Dutch colonial interests, but apparently the Dutch language will not be employed in editing it. Contributions in English, French, and German are *en règle*. Sir Richard Temple's article on "Imperial Federation," and Commander Cameron's review of Stanley's latest volume, can neither of them be called weighty. M. E. Levasseur writes on the productive forces of British Australasia; Dr. F. Fabri on German Colonial Policy. There are geographical notes, and an extensive bibliography.

Science for July 10 proclaims itself truly a "sanitary number," being mostly occupied with articles on hygiene, on quarantines, yellow fever, river pollution, soils, city wells, house-drainage, etc., etc. A hopeful article on the Tehuantepec ship-railway is accompanied by a map of the route, on which the operation of transporting ships is pictured.

J. T. Headley's 'Darien Exploring Expedition' has been reprinted from *Harper's Magazine* in the Franklin Square Library. It forms an exciting chapter in the ship-canal romance of the Isthmus.

Any magazine might pride itself on offering to its readers an article and a series like that begun in *Outing* for July by Capt. John G. Bourke, U. S. A. Captain Bourke is the author of that already standard work, 'The Snake Dance of the Moquis,' and his present narrative deals with the famous reduction of the Apache stronghold in the Sierra Madre by General Crook, two years ago. His graphic style, his humor, his thorough knowledge of the Indians and of the expedition, in which he took part, make these articles an entertaining and important contribution to current history.

Dr. J. F. Payne writes on 'Old Herbals, German and Italian,' in Cassell's *Magazine of Art* for August, and rightly calls attention to the artistic value of the woodcut illustrations in these botanies of the fifteenth to seventeenth century. Several of those which he reproduces would serve now as examples in linear draughtsmanship, and nearly all are decorative. An engraving after Richmond's portrait of Andrew Lang will also attract attention in this number.

The redemption of Niagara from the manufacturer, the extortioner, and the mountebank has led to two memorial publications. 'Free Niagara' is a pretty and tasteful pamphlet giving a history of the movement to secure the international park, and is ornamented in colors and with marginal designs,and provided with a map. It does credit to the "art-printing works" of Matthews, Northrup & Co., Buffalo. 'Niagara Park Illustrated' (New York: Niagara Publishing Co.) is much inferior typographically, but the illustrations are more pertinent. The editing consists in quotations from Lyell, Tyndall, Dickens, Martineau, Hawthorne, Willis, Charles Mackay, A. Trollope, and sundry poets, which are entertaining enough. Since Captain Webb's last swim is related, one is rather surprised to find no mention of Blondin in these memorials.

F. A. Ringler & Co. have issued a very curious 'Souvenir' of the late season of grand German opera at the Metropolitan Opera-House, under Dr. Leopold Damrosch. It consists of a large number of sheets of Japan paper on which are printed facsimiles of a scrap-book collection of the musical criticisms of the New York press, with sundry ornamental designs enclosing the personnel of the opera management and staff, and with a portrait of Doctor Damrosch, a scene from "Die Walküre," etc. The mounting is in the form of a roll.

From Henry Stevens & Son, London, we have the first part of vol. iii of 'Stevens's Historical Nuggets,' a descriptive account of their collection of books relating to America; and also Part 1 of a 'Catalogue of Rare Books relating to America (A—Cot).' The first of the 'Nuggets' series was published in 1862, in two volumes, and eight more are now in contemplation, the form being the same and the numbering of the several works for sale being continuous. The bibliographical care bestowed on the entries warrants the Messrs. Stevens in inviting subscription to the series as a permanent work of reference. The note on Acosta's 'De Natura Novi Orbis' (1589), for example, fills more than two pages of fine print—an absurd outlay if the sale of a five-pound book were alone the object. The 'Catalogue' is a selection from the 'Nuggets.'

Mr. Quaritch's Catalogue No. 363 is devoted to works on the history, ethnology, and philology of America. Of the quality of its execution it would be superfluous to speak.

A few months ago an enterprising London journalist got himself certified by two qualified physicians as a dangerous lunatic, and locked up at the instance of his friends in a well-known private asylum. He stayed there three days, was then rescued according to a previous arrangement, and wrote several articles upon his adventures and upon the iniquitous condition of the English Lunacy Laws. These articles, appearing in the *Pall Mall Gazette*, attracted a great deal of attention, and led to a Government inquiry into the matter. They were followed by several others of a similar kind—"A Day on a Hansom," "The Burglar's Vade Mecum," and a series of papers illustrating the practical working of the so-called matrimonial newspapers, of which there are three flourishing ones in London. The author of these sketches is Mr. Charles G. Payne, and Messrs. Vizetelly & Co. are about to issue them in a small volume entitled 'Matrimony by Advertisement, and Other Journalistic Adventures.'

Americans in London a few weeks ago were much amused or annoyed, according to their temperament, by meeting all along the Strand and Regent Street men carrying boards upon which was inscribed in large letters, "The Great American Receipt Book, written by Professor Mead, ex-President of Harvard College, U. S. A.," followed by some supposed extracts from the New York *Herald* and a Boston newspaper, expressing highly eulogistic opinions of the value of the book. The principal attraction set forth by the venders was "How to make gin, whiskey, rum, and brandy without alcohol, as good as can be bought at the shops. Original price sixpence, reduced to one penny." Any one who invested a penny secured sixteen pages of miscellaneous recipes, apparently half a century old, giving such valuable information as "To make the Silver Plating," "A Grand Remedy for Liver Disease," "An Excellent Eye-water," "To Create an Appetite," and "To put an Egg into a Bottle."

The use of English in the kitchen in France is as bizarre as the use of French in the kitchen in England or America. We remember having seen the simple ginger-snap set down grandiloquently in the bill of fare of an American summer hotel as *gateaux de gingembre*. And a recent bill of fare at the Grand Hôtel in Paris offered "Irisch-stew à la française" — truly a marvellous dish. In a certain restaurant of the Palais Royal, however, there is a bi-lingual bill of fare which recalls the Portuguese Guide to Conversation if indeed it does not "break the record." In this we are proffered our choice of "barbue dutch manner" (*barbue à la Hollandaise*), or "eel in tartar," or of "a sole at Colbert." We may have "beef at flamande" or "beef at mode" (*bœuf à la mode*), or "beefsteack with haricots." The *cotelette sauté à la minute* appears as "one mutton chop at minute," and a *cotelette de chevreuil* appears as "a chops of kid" (*sic*). We may order, if we will, a "fillet napolitan manner," or a "chicken at Marengo," or a "sweetbread at financière." Hitherto we have held as legendary, only, the translation of *riz de veau à la financière* as "smile of the little cow in the style of the female financier"—but, after this, nothing is impossible.

In 1876 the Paris Société Bibliographique offered a prize for a catalogue of documents, printed or manuscript, relating to the corporations and associations of workingmen. Hippolyte Blanc's 'Bibliographie des corporations ouvrières avant 1789,' Paris, 1885, was adjudged the most complete work offered to the Society. The division of printed books comprises 957 articles. The manuscripts are catalogued under the name of the several depositaries. Certain pieces, such as songs, satires, and facetiæ, which illustrate the subject are included under a special number.

Capt. C. Fernandez Duro, favorably known by his writings on Spanish history, and in this country best known as the author of an account of Peñalosa's expedition to New Mexico, has of late given his attention to researches regarding the Armada. The results of his labors are presented in two large octavo volumes, under the title, 'La armada invencible,' Madrid, 1885. He has brought together documents showing almost conclusively that the popular notion regarding the cause of the defeat of the Armada is erroneous. The incompetence of the Duke of Medina Sidonia, the commander, and not the unfriendly action of the elements, caused the failure of this incomparable fleet.

As a fruit of the present Pope's liberality in throwing open the Vatican Archives to scholars, we have a first volume of the 'Regestum Clementis Papæ V.' (Rome: Spithöver; New York: Christern). The introduction relates the history of the Archives, and among the unpublished documents which see the light in the appendix are the memoirs of Marino Marini, concerning the seizure and restitution of the Archives in the time of Napoleon I.

Hinrich has just published a third edition of the 'Assyrische Lesestücke' of Friedrich Delitzsch. The work has been entirely rewritten, and contains new texts, several pages on grammar, and a valuable glossary.

Mr. Henry F. Waters's genealogical researches in England have clearly an international aspect and value. It is not surprising, therefore, that the Earl of Dufferin should send a significant contribution to the fund which enabled Mr. Waters to pursue his discoveries concerning John Harvard. He writes at the same time to Mr. Charles A. Drew, of Boston, of his hearty sympathy with the movement, and his pride in having a right to recall his connection "with the noble university."

—Our country is so vast, and the belief in its entire homogeneity is so natural, that the accounts which sometimes reach us of the state of society in provincial districts come with a slight shock of surprise. The second paper of Mr. Warner's, in the August *Atlantic*, in which he continues the narrative of his travels on horseback among the northwest mountains of North Carolina, is of this nature. That this was a wild country, we knew; but the veil of humor and picturesqueness which softens the hard lines of human life there does not hide the penury, the barrenness and ugliness, the hideousness, as Arnold would say, of the sight humanity presents in its material coarseness and spiritual poverty.

Man is there very close to the soil. Such a story as that of the woman who gazed curiously at the minister praying with her, to see what he was about, and said, "Why, a man did that when he put my girl in a hole," is in fact a very hideous thing. We are apt to think of "the border" as far off, and so it is, along the line where the central stream of settlement has moved; but north and south of that line are whole tracts of country which are still on "the border" in civilization—and what one of them looks like, Mr. Warner tells very graphically. These counties seem to be now, however, in the beginning of the second stage of "settling up," denoted here, as in the West, by the interest of distant wealth in the resources of the country, and by the first (and effective) temperance raid. The time of the solitary settlers has gone by, and, in view of their life, the coming even of the capitalists is devoutly to be wished, though not as a consummation. The other articles have the usual variety of literary interest—a long and minute study of the Convent of Port Royal in its illustrious time, a notice of Jean Ingelow's work in fiction, and Doctor Holmes's prose and poetry, being the most prominent. The best, both in style and matter, of all the articles is a short essay on collegiate studies and their value in education, by Prof. E. R. Sill: the balance of mind, the openness to all views, the clearness of his own opinion, and the pungency with which he brings it home to the sound, practical sense of men, if they have any, are remarkable; but its fine quality lies in its recognition of education as the spiritualizing agency, and its plea for such administration of schools as shall never forget that it is not the hands or even the brains of youth that are being trained, but the soul that is being set free. This is to say not merely that he is a humanist, but one bold enough to take the high ground of humanism.

—*Harper's* is largely made up of travel-sketches. The river Ottawa, with its new home of the Trappist monks, who were ousted from France a few years ago; a corner of Long Island forgotten and left behind until the summer boarders opened it up in their prospecting and made the old fishermen sigh for the days of quiet; Aix-les-Bains, and the country of the unattractive Druzes, are the subjects of anecdote and sketching pencil and pen. And fairly to be reckoned with these is an elaborate article contrasting the American and English systems of railroad travel, in which the writer seems unwilling to draw conclusions derogatory to the credit of either, but prefers to say amiably that each provides its public with the sort of comfort which that public most prizes. The principal discomforts of the English system—the enforced sitting without change of position, the difficulty of getting light and air except at the corners, and the lack of that privacy which one may always find in a crowd, however mixed—are not mentioned; nor is any notice taken of the fact (which underlies so many of the differences in the systems) that convenience on long journeys is principally thought of here, while short ones are the rule in England. The check system, however, is certainly invading the "luggage" department. The illustrations of this article—such as the train passing through an American city—are not always calculated to give an exactly truthful idea of our customs. The rather loosely constructed account of the "Decoration Instinct in Birds" has some well-selected information, but belongs, by its engravings, really to the pictorial part of the number.

—The steady march of Mr. Leslie Stephen's great 'Dictionary of National Biography' (Macmillan) is very gratifying. Volume iii finishes the Ba's, and takes in a few Be's. The Bakers lead off, and their array of thirty-five is unapproached save by the Barkers, who number thirty-four. Balfe, F. M. Balfour, Sir Joseph Banks, Mrs. Barbauld, Praise-God Barebones (whose "position commercially," we read, "was a stable one," and who was not an altogether ridiculous person), John Barbour, Alexander and Robert Barclay, Bernard Barton, Richard Bathurst (the "very good hater" of Doctor Johnson's proverbial phrase), Richard Baxter, Baretti (the sketch of whom is one of the most entertaining in the book, as might have been expected), Isaac Barrow the mathematician, and Henry Barrow the reputed founder of Congregationalism, Robert Barker the reputed inventor of panoramas, Bartolozzi, Baskerville the printer (another of the notable sketches), Sir Charles Barry the architect—such is a chance selection of names from the present volume. Elizabeth Barrett is to be treated as Mrs. Browning, and we have likewise a reference from Juliana Barnes to Juliana Berners, the better-known name of this literary angler. The origin of the ballad of "Auld Robin Gray" is related under Lady Anne Barnard, the author; and another, older ballad is called to mind under Sir Andrew Barton. The exploits of many of the greatest personages between these covers have done no more for their memory than the song, "I'd be a Butterfly," for Thomas Haynes Bayly's, or his "She wore a Wreath of Roses," or "Oh, no, we never mention her," or "Why don't the Men propose?" Playwrights like Bayly, and actresses like the two Mrs. Barrys, are duly regarded in this catholic Dictionary. Of the violinist Thomas Baltzar (1630-1663), we read that Anthony à Wood, "the greatest judge of music that ever was, did . . . stoop downe to Baltzar's feet to see whether he had a huff on; that is to say, whether he was a devill or not, because he acted beyond the parts of a man."

—Turning now to what we may call the American portion, we remark Colonel Barré, the Parliamentary defender of the revolted colonies, whose name is perpetuated in our town nomenclature, and whose portrait, we are told, is in the group about the dying Wolfe in West's picture; John Barry, a commodore of our navy during the Revolution; Col. Henry Barry, who fought on the other side at Bunker's Hill, Long Island, and White Plains; Mark Baskett, a London printer, whose imprint is alleged to have been misappropriated by Kneeland & Green, Boston, when they brought out in a small quarto the first Bible printed in America in the English language—if they ever did produce such an edition; Alexander Baring (Lord Ashburton); Joshua Bates, etc., etc. We must not omit mention also of Joseph Barker, an eccentric Englishman who, beginning Methodist, ran through the gamut of belief and unbelief on both sides of the Atlantic, living many years in this country, speaking and writing and publishing much, taking part in and against the anti-slavery agitation, farmer at the West and lecturer in the East, and finally dying at Omaha in 1875. The two pages allotted to him are a fair sample of the attention given to middle-class biography in this Dictionary

—The mystery which has hitherto surrounded the personality of the author of 'Underground Russia' is at last removed by the statement, recently made upon good authority, that the prominent Nihilist who writes under the pseudonym of "Stepniak" is Michael Dragomanoff, a prolific writer on historical and political subjects. As he is chiefly known in this country by his later writings, many may be interested to know something of his early career. According to De Gubernatis, he was born in 1841, at Gadiatch in Little Russia, and studied at the gymnasium of Poltava, from which, however, he was expelled before completing the course, on account of his somewhat turbulent spirits. A few months later he was admitted to the University of Kiev, mainly through the favor of the celebrated surgeon Pirogoff, at that time one of the faculty. After completing his studies at the University he obtained employment as a teacher in a gymnasium, and in 1865 was called to give instruction in ancient history in the University of Kiev. Here his radical ideas, and his open sympathy with the agitation in favor of the autonomy of the Ukraine, brought him under the suspicion of the Government and stood in the way of his professional advancement, and it was not until 1873 that he was promoted to the dignity of "ordinary professor," which, however, he was not to be permitted long to retain, for in the following year his resignation was demanded in consequence of some articles he had published in various reviews, attacking the Minister of Public Instruction. Thus deprived of his position, he betook himself to Geneva, where he began the publication of the Ukraine review *Gromada*, in which he advocated the adoption of some form of federal government for Russia, maintaining that federalism alone could solve satisfactorily the problem of government for races so widely different in origin and character as those which compose that vast empire. He also contributed numerous articles on Russian subjects to various European periodicals, besides issuing occasional pamphlets, and seems to have spent some time in Italy, where in 1882 'La Russia Sotterranea,' the first work to appear under his now well-known pseudonym, was published. In this work he describes himself as having been formerly editor of the revolutionary journal *Zemlya i Volya*, secretly printed at St. Petersburg. Since then he seems to have taken up his abode in London, whence his latest writings are dated.

—The reception at the French Academy last month of M. Victor Duruy was rather tame. It was disappointing to those who expected a courteous, semi-political polemic between the ex-Minister of Napoleon III. and Monseigneur Perraud, the type of "the Christian, the apostolical bishop." M. Duruy, who once called the Emperor "the most liberal man of his empire," had fortunately a better claim than the long favor he enjoyed as Minister of Public Instruction to a place among the Immortals. In his long reception speech he confined himself to the praise of his predecessor, the historian Mignet, whose life he recounted and whose works he analyzed in succession in the conventional Academic manner. Mgr. Perraud, Bishop of Autun, presided in his religious robes, and answered the new member. The interest of the occasion was concentrated on the remarks of the prelate, who, in a well-written, well-read speech, in which he never for a moment forgot his sacerdotal character, gave such praise as could be expected from him to the brilliant historian of Mary Stuart and of the French Revolution. Passing on to M. Duruy, he dwelt especially upon the 'Histoire des Romains,' solemnly taking the recipiendary to task on account of the regrets expressed by him at the disappearance of Roman civilization. True to his priestly office, Monseigneur Perraud claims that Christianity, which has "taught men to live and to die," has left no room for regrets concerning the things it has swept away. Monseigneur in this controversy had the advantage over M. Duruy, who by traditional usage was prevented from answering him. He therefore freely indulged in quoting Saint Ambrose and in recalling some of the grandiloquent commonplaces of Bossuet, which in former days he may have heard from the lips of his teacher Duruy, when he sat under him as a disciple by the side of the youths then known as D'Aumale, Augier, and Sardou, now his fellow-Academicians. The next receptions at the French Academy will be those of MM. Joseph Bertrand

and Ludovic Halévy. The election of a successor to Edmond About has been postponed until autumn, as no result could be obtained after voting five times on June 25th, an absolute majority of the members present being required. The candidates were M. Droz, who on the fifth ballot received 10 votes, M. Léon Say receiving 9, M. Manuel 5, and M. de Bornier 5. About had been elected to succeed Jules Sandeau, and as he died before pronouncing the eulogium on his predecessor, the new Academician will have to speak of both Sandeau and About. After this election two more places are to be filled, those of De Noailles and of Victor Hugo.

—The intricacy of the art of railroad administration—we might almost call it a science—is well illustrated by the programme of subjects for discussion at the International Railroad Conference which is to meet at Brussels next month. The project for this conference has been warmly taken up by the Belgian Government, and delegates from a large number of countries, including the United States, have signified their intention to be present. One set of questions deals with the various systems of signalling and the effect of block signals or interlocking switches upon the capacity of a road for handling traffic. There is another set of questions concerning the proper construction of stations for passengers or freight; the means for facilitating interchange of traffic, whether between roads directly connecting or between different stations in the same town. Still another set of problems arises where a section of line is operated by two or more distinct companies—questions as to the organization of service and the distribution of expenses for construction and maintenance. Other sections of the programme deal with the means of diminishing expenses for road, equipment, or train and station service; with arrangements for the safety of passengers or employees, whether by brakes or by improved methods of car construction; with the applications of electricity to railroad service. One highly important section deals with the relative economy of different systems of construction, and with the proper management of narrow-gauge roads, or lines with light traffic. The last section is concerned with railroad statistics, and in particular with the attempt to devise common forms for railroad returns which shall make comparisons between the practice of different nations easier and more fruitful than they are at present.

—The purpose of the conference is a good one, and it is to be hoped that it may succeed. Any really careful attempt to compare the railroad practice of different nations is worth a great deal. Too often each nation insists on learning for itself what the experience of some other nation might have taught it ten years before. Unfortunately the programme, detailed as it is, is not quite comprehensive enough. It hardly touches upon the lines on which American railroad economy has made its most wonderful advances in the last fifteen or twenty years—advances in which Europe is only just beginning to take part. Among these we may mention the increased weight of rolling stock, by which a far greater proportion of "paying load" to "dead weight" is secured; and the system of "backloading," that is to say, of almost absurdly low rates to secure loads for cars which must otherwise be returned empty. While we have a great deal to learn from Europe in the matter of railroad engineering, Europe has at least as much to learn from us in the matter of business activity. Their railroad men carefully adapt themselves to existing conditions. Our railroad men aim to create new conditions to suit themselves. Sometimes they fail and sometimes they injure the community; but, on the whole, they have had an extraordinary degree of success, in which the community has shared.

—The July issue of *Nord und Süd* is No. 100, so the editor (Paul Lindau) celebrates its jubilee by publishing, exclusive of the usual amount of matter, his portrait and a very brief contribution—in many cases only two or three lines—from the contributors to previous numbers. There are 131 of these represented, and the list of the dead is also a long one—for a period of only eight years, a very long one. It includes Auerbach, Dohm, Geibel, Gutzkow, Laube, Schücking, and F. Kürnberger among writers of belles-lettres, while the list of scholars is much longer, including H. von Brandt, A. E. Brehm, H. Hettner, F. von Hiller, J. Huber, J. Hübner, F. Kreyssig, H. Lotz, H. B. Oppenheim, E. Osenbrüggen, Von Rüstow, and A. Woltmann—not to mention numerous eminent professional men whose names are not familiar to the general public. From the start, *Nord und Süd* has been the best edited and, from a literary point of view, the most attractive of German periodicals, while its very tasteful exterior, convenient shape, and the artistic excellence of the etched portraits of living authors, artists, etc., with which each number is adorned, have, we are sure, largely contributed to its success. Its writers are for the most part the same as those of the *Rundschau*, and the topics treated are of the same character. But there is an easily perceptible difference between the two, due in part to the fact that the *Rundschau* has never ceased to suffer from the bonds imposed by itself in claiming to be, and being loudly proclaimed as, an imitation of the *Revue des Deux Mondes*. There perhaps never was a better imitation, both within and without, but the projectors of the *Rundschau* forgot that while they would have no difficulty in getting contributions equal (or superior) in scholarship to those of the *Revue*, they could not provide the grace of style which somewhat relieves the heaviness of the *Revue's* make-up. The dishes on the *Rundschau's* table are wholesome and generally well cooked, but they lack sauce. Whether it is due to more careful editorial pruning, or to greater tact of fitting subject and author, we have no means of knowing, but the result seems to be that the cooking on *Nord und Süd's* table is more uniformly good, and that "sauce" is not always wanting.

CENTRAL ASIA.

Russian Central Asia, including Kuldja, Bokhara, Khiva, and Merv. By Henry Lansdell, D.D. Boston: Houghton, Mifflin & Co. 1885. 2 vols. 8vo.

THE last twelve years have been fertile in books on Central Asia. Of course, the political questions which have come up at various times have had much to do with this. But it was only in 1873 that this region became accessible to the people of the West. In that year there were at least six Anglo-Saxon travellers in Central Asia: Mr. MacGahan, who, as correspondent of the York *Herald*, made a wonderful trip to Khiva, and whose book 'Campaigning on the Oxus,' will always be a classic of travel; Mr. Schuyler, who visited the remaining portions of Russian Central Asia, as well as the then independent Khanates of Bukhara and Khokand; Mr. David Ker, who went as far as Samarkand, and Mr. Ashton Dilke, who performed the same journey in about the same time and travelled in some unknown parts of the province of Kuldja. Mr. Dilke was at that time engaged on a work on the Russian Empire, but he published only articles on Kuldja and the Caucasus. For some reason he became dissatisfied with his book, which was already in type, and suppressed it. Owing to his untimely death we are forever deprived of what, to judge from the portions we have seen, would have been a very valuable addition to our knowledge of Russia. Colonel Valentine Baker and Lieutenant Gill—the latter the same who subsequently explored China and was murdered by the Arabs during the Egyptian war—travelled through the Turkoman districts along the Attrek, and Baker even tried to go to Merv. Captain Hugo Stumm, also, of the German army, was allowed to accompany the Russian expedition to Khiva, of which he wrote an interesting and very detailed account.

Since that time the difficulties placed in the way of travellers have been slight. In 1874 the late Major Herbert Wood, of the English Engineers, made a careful study of the mouths of the Oxus, and in the same year Captain Napier was travelling on the Khorassan frontier, trying to pick up information for his Government and to ascertain how far the Turkomans could be utilized for opposition to Russian advances. There were several of these English officers who "haunted the Turkoman frontier," as the Russian Foreign Minister expressed it—Col. C. M. McGregor, of the Bengal Staff Corps, in 1875, who, four years later, published the narrative of his journey, 'Through Khorassan'; Capt. F. W. H. Butler, who made his first journey in 1876, disguised as a Chinaman, and his second together with Captain Napier in 1878, both at that time sent on secret missions by the Indian Government. Butler did not in all respects carry out his instructions, and, after he had written a letter to the newspapers claiming that he had constructed the fortress of Geok Tepé, which made such a formidable resistance to General Skobelef, although in reality he had not been within a hundred miles of the spot, he was retired without being allowed to obtain the rank of major, to which he would have had a right in a few days. Colonel Stewart, who was sent by the English Government as an agent to reside at Khaf (for the Afghans would not allow him to live at Herat), made several journeys to the Turkoman frontier, in one case disguised as an Armenian horse-dealer. The only account of Colonel Stewart's expeditions that we know was a paper published in the Proceedings of the Royal Geographical Society. His full reports were solely for the use of his Government. In 1875 Captain Burnaby made his famous ride to Khiva, which he reached in January, 1876. To his journey obstacles were indeed placed by the Russian Government, as was very natural under the circumstances, although, if there had not existed a little jealousy on the part of the military attaché at St. Petersburg, Burnaby would probably have been allowed to continue his journey. In 1876 and subsequent years Mr. Ujfalvy-Kövesd, an Hungarian gentleman, made an expedition in Kuldja, Ferghana, Samarkand, and the adjoining provinces, under the auspices of the French Government, chiefly for the purpose of collecting anthropological and ethnological information. He was accompanied by his wife and one or two others. Mme. Ujfalvy's account was published first in the *Tour du Monde*. Two volumes, containing the more general results of his work, have been published by Ujfalvy himself, besides a number of shorter and more exclusively scientific papers. We owe also many valuable short papers to Dr. G. Capus and Mr. G. Bonvalot, whose book, 'En Asie Centrale,' though light, is worth reading. When active operations were begun against the Turkomans, Mr. Edmond O'Donovan went out to that region as correspondent of the *Daily News*, and finally penetrated to Merv, where he was held in captivity for several months. A rollicking, good-natured Irishman, unfortunately addicted to drink, he wrote in an entertaining way, and his book, 'The Merv Oasis,' has permanent value as a picture of a

state of society which has probably forever passed away, for under the Russians Merv can never be the den of brigands which it was before. In 1880 Mr. E. Delmar Morgan visited Kuldja, and in 1882 Doctor Lansdell, whose book we have before us, travelled through the whole of Russian Central Asia. At about the same time two Frenchmen, Baron Bénoist-Méchin and M. de Mailly-Chalou, made an adventurous journey from the shores of the northern Pacific through Mantchuria and Russian Central Asia, and from Khiva to the Caspian, going even to Merv. So far they have published only a few papers in the *Bulletin* of the Paris Société de Géographie. M. Moser, who is apparently an engineer, has also travelled within the last two or three years in the Turkoman Steppe, and has given his impressions in agreeable form in a recent number of the *Revue des Deux Mondes*. Now we hear also of a Dr. Van Orden, an American medical missionary, as writing from Khiva in December, 1884.

Meanwhile, the Russians themselves, the masters of the country, have not been idle. They have scientifically explored the mountain regions south and west of Samarkand, until they are as well known as many parts of Russia; they have measured, sounded, and surveyed the greater part of the Oxus; they have crossed the Pamir in all directions, have investigated a great part of the Tien-shan, and have sent surveying parties in all directions through the Turkoman Steppe. Here they made three important discoveries—one, an easy carriage road from Khiva to the Tsarevitch Gulf, at the northeast end of the Caspian Sea; an easy route for a railway from Krasnovodsk, on the Caspian, to Herat itself, whence it is possible to continue it to the frontier of India. This road has been laid down in part, and the telegraph line has been extended as far as Sarakhs and Merv. They have also at last found out that it is impossible to divert the waters of the Oxus into the Caspian Sea, and that probably at no time was there ever any regular communication between the Oxus and the Caspian. No such communication could be made except by overflowing vast stretches of country and by cutting canals, at an expense of hundreds of millions of dollars. The latest theory is that the Sea of Aral and the lakes Sary-kamysh formed at one time a single basin with two deep depressions. The Oxus ran into the southern portion, now Lake Sary-kamysh, from which it is possible that at times an overflow of water ran down to the Caspian, though what was supposed to be a river-bed is now proved to be the bottom of a dried-up gulf. The remains of animal life found along it all belong to salt-water and not to fresh-water species.

The Russian officers and officials in Central Asia comprise a fair number of specialists. Mushketoff, for example, devotes himself to geology, to the study of glaciers and volcanoes; and his researches about volcanic action are extremely curious. Oshanin is a colector of hemiptera. Even General Komaroff, the Governor of the Trans-Caspian province, is an ardent entomologist. Without forgetting Ivanoff, Severtsoff, Maieff, and others, special mention should be made of Dr. Albert Regel, the son of the well-known director of the botanical garden at St. Petersburg. As district physician, first at Kuldja and then at Tashkent, he familiarized himself with the languages and character of the people, and was therefore able to conduct many botanical expeditions in the Tien-shan and the Pamir, travelling again and again in the little-known Darvaz and Karategin, and finally journeying a year ago to Merv and the Afghan frontier, everywhere finding much that was new to science. Even in adventurous journeys, the Russians yield nothing to Westerners. Mr. Lessar surveyed for a railway route nearly the whole of the Turkoman Steppe, discovered the road to Herat, as well as the falsity of the Oxus-Caspian theory, and knows southern Turkmenia so well that he has been an expert engaged in carrying on the Afghan boundary discussion in London. Major Alikhanoff visited Merv before its capture, in the disguise of a native merchant, which was for him comparatively easy, as he was a Mussulman from the Caucasus. But the palm should be given to Colonel Grodekoff, who in 1878 rode with only two attendants from Samarkand through Bukhara to the Afghan town of Hazret-i-sherif, where he was detained for a fortnight until permission could be obtained from Cabul for his journey; then through the almost unknown regions of Saripul and Maimene to Herat, and thence to Meshed and through Persia to the Caucasus. He did all this in Russian uniform, without the slightest attempt at disguise; and his simple account of his journey, which has been translated by Mr. Marvin, deserves to rank with the book of MacGahan.

Most of the Russian explorers have published accounts of their expeditions in the Bulletin of the Imperial Russian Geographical Society, from which the essential parts have been extracted either in the Proceedings of the Royal Geographical Society or in *Petermann's Mittheilungen*. For two books, both of importance, the Western reader may have to wait for some time: one is the account of the Russian mission to Cabul under General Stolieteff in 1878, written by Dr. Zavorsky, who accompanied the mission as physician, and subsequently made another journey to Afghanistan, where he attended the Amir Shir Ali through his last illness. The other is 'Turkmenia,' by General Grodekoff, which gives not only the account of the campaign against the Turkomans, but a thorough geographical and statistical account of the whole Trans-Caspian region. The works of all these travellers up to date have been thoroughly studied and made use of, so far as they touch on geography, by M. Élisée Réclus, in the remarkable volume, 'Asie russe,' of his great geographical work.

In order to complete this summary, it is necessary now to speak of compilations and political pamphlets. As Russian examples we may cite the various books of Venukoff, Kostenko, Terentief, and Soboleff. In England there is a group of retired Indian officers who see everything through Indian eyes, and to whom anything that may affect in any way the interest of India is of far more importance than all the rest of the British Empire. Of these, one of the greatest offenders, and at the same time the man of by far the greatest learning, is Sir Henry Rawlinson; and although exception may frequently be taken to his statements, as being too much influenced by the Indian feeling, yet we know always that his knowledge and experience are unimpeachable, and that he thoroughly believes everything which he says. After him, in a much lower rank, comes Colonel G. B. Malleson. But Malleson's works are too evidently compilations, written plainly for a political purpose. There are, however, others who wish to obtain social or political position by posing either as geographers or as patriots greatly interested in the future of England and the East; and to attain their objects they feel it necessary to keep themselves continually before the public either by translating with comments the results of Russian work, or by writing pamphlets about each new phase of the Central-Asian question. Such are a number of the inner circle of directing members of the Royal Geographical Society, and such are Mr. Demetrius Boulger, whose books are the merest compilations and practically worthless, and Mr. Charles Marvin, of whom something more should be said. Mr. Marvin has never been nearer Central Asia than Baku, and by the way his book, 'The Region of Eternal Fire,' which treats of the petroleum deposits in the Caucasus, and of the possibility of competition with America, is well worth reading by Americans; but he passed his early life in Russia, knows the Russian language, and is well acquainted with the literature concerning Central Asia, and especially with what appears from time to time in the Russian reviews and newspapers. His books are for the most part made up of translations of some fresh Russian report or pamphlet suited to his purpose, interspersed with a good deal of padding and with theories of his own which do not always hold water. Nevertheless, there is not one of his books that does not contain something worth reading. In his last, 'The Russians at the Gates of Herat,' which is in reality nothing but a political pamphlet, he gives a résumé of all that he has previously written, put, however, from the extreme Anglo-Indian point of view. Although partisan, he attempts to deal fairly by the Russians, and in this respect is an exception to most writers on the subject. Mr. Robert Michell should be classed differently. His work is hardly known; for, with the exception of Russian travels and reports which he has translated for the Royal Geographical Society, nearly all that he has done has been marked "secret and confidential," intended only for his superiors in the India Office. Nevertheless, his work has furnished much information for the greater part of what has recently been written in England about Central Asia. Modest and unassuming, he has asked no credit for himself, except in a volume which he published in connection with his brother, now the English consul at St. Petersburg, 'The Russians in Central Asia.'

We have allowed ourselves little space to speak of Doctor Lansdell's book. The author is an English clergyman who had previously travelled through Siberia for the purpose of seeing with his own eyes the condition of the prisons and hospitals, and of supplying them with translations of the Bible in various languages. Of this journey he published an interesting account called 'Through Siberia.' The success of that work, and the belief that he had done much good, prompted him to travel through Russian Central Asia with a similar purpose. Although he was evidently unacquainted with the country, and was therefore hardly able to judge of all he saw, he carefully worked at his journals after his return, studied the literature of the subject, and, with the assistance of specialists, has made a very creditable work. There is little that is new in it, except his journey down the Oxus to Khiva and thence across the Steppe to the Caspian. It is noticeable, however, that he gives full credit to his predecessors, and, as confirmatory evidence, what he says is valuable. He, however, abstains from all judgment in regard to the political and social condition of the regions that he visited, and has comparatively little to say about foreign politics. Besides many engravings the book is enriched with a very valuable bibliography of Central Asia, compiled chiefly from the work of Mezhoff, and with lists of the fauna and flora of the country. But these, valuable as they are, have not been drawn up with sufficient care, and some prominent plants which are even mentioned in the body of the book, as for example, *Dephinium ochroleucum*, the yellow larkspur, are omitted.

RECENT FRENCH LITERATURE.

M. Anatole France, in 'Le Livre de mon ami' (Calmann Lévy), has written something charming and exquisite. It is not a story, though it is full of attractive and interesting people. It recalls sometimes, but does not resemble, the most deli-

cite and ethereal of the Essays of Elia. It is a book for summer holidays or long winter evening hours of rest; a book to be read slowly and re-read like a poem. It is made up of the scattered recollections of the earliest childhood and boyhood of a dreamer not yet old. This is the first and larger half of the book, and is called 'Le livre de Pierre.' The remainder is 'Le livre de Suzanne,' "tiré tout entier des papiers de mon ami," and composed of all that was found there that was connected in any way with the childhood of his little daughter. Among the most delightful chapters of this delightful book is the one in which Pierre relates how Suzanne, "qui ne s'était pas encore mise à la recherche du beau," applied herself to it with extreme ardor at the age of three months and twenty days. The exquisite grace and charm of these few pages, the subtile and delicate observation, the fine and tender mockery, are characteristic of the author of 'Le Crime de Sylvestre Bonnard,' which revealed to the world five or six years ago that M. Anatole France, besides being a savant, was a poet with a fine and rare fancy, and above all a tender and sympathetic heart. After all, it is not Pierre, nor Suzanne, nor any of the other personages in 'Le Livre de mon ami,' who gives to the book its peculiar charm; it is M. Anatole France himself. The work is probably in no sense an autobiography, any more than the earlier one was; but, like that, it leaves the reader with the feeling that he has penetrated to what is finest and best in the character of a very charming writer, as no memoirs would ever have enabled him to do.

French literature has always been rich in biographies, memoirs, confessions, and souvenirs; but never have more works of this kind been published than within the last few months. Among these have been the 'Souvenirs de Jeunesse' of the dramatic critic M. Francisque Sarcey (Ollendorf), a volume that brings the author only to the threshold of his present career, and makes the reader wish for more. M. Sarcey may not be a great writer—many find fault with his careless style, for the French reader does not pardon an author who takes no pains to polish his language; but what a charming talker he is! There can be no greater pleasure than to read his theatrical feuilleton in the *Temps*—rambling, disconnected notes, full of personal allusions, remote as possible from any attempt at fine writing, and full of rich hints and the very best independent criticism. In the 'Souvenirs' the same qualities are found. The tone rises, however, but only a little, when he gives graphic details of his academic career, both as a pupil of the École Normale and as an instructor in several provincial faculties. Much of what M. Sarcey writes will remain the most truthful and direct statement of the deplorable condition of higher education in provincial France during the early years of the Second Empire. M. Sarcey has lately begun a series of articles in the *Nouvelle Revue*, 'Les Livres.' In his easy way, he talks of the books he has read and of new publications in general. He is evidently not limited as to space, for he rambles along, telling the story of the novel he is reviewing in a very pretty way. His theory of the critic's function is that his reader should believe him when he says, Take this book and read it; or, Don't think of touching it! This, according to him, was the criticism of the eighteenth century. The modern "abstractors of æsthetic quintessence" like to launch out into "vast and lofty generalities"; but Sarcey modestly limits himself to the analysis of a work, and tells his reader whether it is worth purchasing: "not so modest an ambition after all"!

M. Louis Ulbach's 'Misères et Grandeurs littéraires' (Calmann Lévy) has just come to hand. Under this pretentious title the author has collected articles written by him at various periods. Several of the most interesting relate to the stage. They are the reproductions, with additions, of the writer's contributions to the *Gazette des Beaux-Arts* as far back as 1858. There are some very interesting pages upon the personation of Molière's *Tartuffe* by Fechter in 1857. Instead of the traditional gloomy villain, Fechter sought to make of *Tartuffe* a hypocrite of exuberant health and animal spirits, a sanctimonious Don Juan. There are in regard to the stage furniture, to the costumes of the characters in "Tartuffe" and other French plays of the seventeenth century, several pretty hints which are very opportune at the present moment, when so much attention is given to what, for the lack of an English equivalent, must be called the art of the *mise-en-scène*. Other articles in the same volume are worth reading, especially that on Mme. de Lamartine, and the one entitled 'Histoire du *Maudit*,' in which the story of that now almost forgotten book is related. The publication of 'Le Maudit' created some stir in 1863, and M. Ulbach was much annoyed because not it alone, but the whole series signed "L'abbé X.," was wrongly attributed to himself. Although it became known later that the Abbé Michon was the real author, the mistake still continues to be made, and in the present volume M. Ulbach reproduces the articles he wrote at the time, prefaced by a few pages in which he tells how these anti-clerical novels came to be attributed to him.

The life of the "historien national," Henri Martin, who died two years ago, "full of days and full of works," deserved to be written. M. Gabriel Hanotaux has made it the subject of a thoroughly good book—'Henri Martin: sa vie, ses œuvres, son temps' (Léopold Cerf). Henri Martin, born in 1810, belongs to the generation of 1830, of which Victor Hugo is the most illustrious representative. Nor did he any more than his contemporaries, Michelet, Quinet, the two Thierrys, escape the influence of the Romantic movement, and we find him at the age of twenty sending forth his first literary venture, aided by his friend the Bibliophile Jacob—a novel in two volumes, 'Wolfthurm'—with a preface beginning with the words: "L'horrible, . . . nous aimous l'horrible." This was followed by dramas and other novels, mostly historical. In 1833, the future historian conceived the idea of writing a History of France "for the people," thus beginning his historical career as he closed it, for the last volume of 'L'Histoire de France populaire,' of which the first was published in 1879, appeared less than a year ago. Henri Martin is eminently the republican historian of France. He was the first who sought to put within reach of all a true and healthy version of the national life of his country. His biographer, after explaining the original idea of the history, shows us Henri Martin as influenced by the Saint-Simonian movement, from which he soon became a dissident, with his friends Jean Reynaud and Pierre Leroux. The growth of his philosophical and political ideas is exhibited by an analysis of his works. Although M. Hanotaux does not neglect purely personal details, they seem scanty when compared with the space occupied in the exposition of theories.

We close the book, feeling that we know a great deal about Henri Martin's works and very little about the man himself. Even what has been called the *druidism* of Henri Martin is not sufficiently cleared up. But this may be asking for more than M. Hanotaux intended to give. In the multiplicity of biographies, made up of anecdotes and trifles, it is refreshing to find a work of erudition both attractive and well arranged, which makes a whole period live before us. The best pages are devoted to the great work of Henri Martin, 'L'Histoire de France,' in nineteen volumes, which was only finished after seventeen years of assiduous labor. The short account of the historians who preceded him, and the parallel drawn between Henri Martin and Michelet, form an excellent chapter of criticism. After showing that the 'Histoire de France' has now become the basis for the teaching of history in France, that it is the great receptacle of French historical research up to this time, M. Hanotaux says: "Indeed, everything that ought to be known is found there; what may be neglected is only mentioned by the way, and every one may without shame be ignorant of what Henri Martin's 'Histoire de France' does not contain." The biography closes with the political life of Henri Martin, his connection with the Commune, his Parliamentary career. It is a solid, well-written book, and will repay careful study.

Equally serious in purpose, but of less general interest, is M. Léonce de Piépape's 'Charles de Bernard, sa vie, ses œuvres' (Paris: Calmann Lévy; Boston: Schoenhof). Charles de Bernard, little read by the present generation, held a high place as a novelist by the side of Balzac, George Sand, and Eugène Sue, in the last years of the reign of Louis Philippe. Born in 1804, he died in 1850. A native of Besançon, and a royalist at heart, he was in sympathy with few of his Paris contemporaries, while a certain provincial reserve, not to say boorishness, did much to prevent the full development of his powers. All this his biographer has well brought out in the friendly, almost partial, spirit of a fellow-Franc-Comtois—for M. de Piépape shows upon every occasion his love for the province about which he has written several works, the last of which, 'Histoire de la réunion de la Franche-Comté à la France,' was crowned by the French Academy. Charles de Bernard's shorter stories deserve to be read now, as they show well the apparent calm concealing the real uneasiness that preceded the revolution of 1848. One of these, not the best, 'Le Gendre,' was adapted and disfigured in the English comedy "Still Waters Run Deep." His best novels, 'Gerfaut' and 'La Femme de quarante ans,' recall Balzac, who was really Bernard's master; but the disciple has not the force of the teacher: the impression left is not so durable, although his novels can be read with more pleasure. It is to the credit of Charles de Bernard that he never followed Balzac into the lower regions of society. He is a precursor of Feuillet and Ohnet, not of Zola and Guy de Maupassant. The biography closes with some remarkable pages written in 1838, at the time of Talleyrand's death. In these Charles de Bernard reveals himself as a vigorous writer and thinker. His biography was well worth writing, and M. de Piépape has done it creditably.

The second volume of Andrieux's 'Souvenirs d'un Préfet de Police' (Paris: Jules Rouff; New York: Christern) does not keep the promises held out by the first. It becomes too personal and aggressive; much of the matter is unsavory, and even repulsive. The author takes every occasion to air his political opinions and to hold up his enemies to ridicule. He complacently develops his theories of government in a long chapter, "La République parlementaire." This second volume is even more loosely put together than the first.

To one who likes light, very light, literary chitchat, M. Charles Monselet's new book will be acceptable. It is true to its unambitious title, 'Petits mémoires littéraires' (Paris: Charpentier; Boston: Schoenhof). As the author says, speaking of the now almost-forgotten celebrities Marc Fournier and Mme. de Girardin (p. 90), "Tout est révélation au bout de trente ans." So he indulges himself in calling up the past, giving his

personal recollections, always fragmentary, of the writers of the generation just past or passing away—Victor Hugo, George Sand, Thiers, Jules Sandeau, etc. It is all done simply and gracefully. The volume may serve as a light document for the future historian of French literature. But M. Monselet remembers many things almost too well. He treats us to long conversations that occurred thirty or forty years ago, probably as faithful and often as interesting as those in Dumas's historical novels. On the whole, while the book is amusing, the reading of it might mystify one who had not some knowledge of men and things in France.

M. Émile Montégut has just published a volume entitled 'Écrivains modernes de l'Angleterre: Première série' (Paris: Hachette; New York: Christern). It is a collection of articles that have appeared in the *Revue des Deux Mondes* at various times upon George Eliot and Charlotte Brontë. Those upon Miss Brontë are dated 1857, those on George Eliot 1859 and 1883. At the close of the book is a chapter which appeared in 1859: 'Un roman de la vie mondaine,' viz., the novel of 'Guy Livingstone.' Written more than a quarter of a century ago in great part, these criticisms or rather appreciations of English writers have a surprising interest and freshness. They have, too, a depth of insight entirely unexpected in a writer whose literary tastes and sympathies would seem likely to be so alien. M. Émile Montégut never offends by intruding his own ideals; he does not write for the purpose of maintaining a literary theory or of crushing his adversaries. This method furnishes little occasion for brilliant writing, but it is much more successful in giving a true impression of the writers and the books he talks about.

Under the title 'Fleurs, Fruits et Légumes' (Dreyfous), the Marquis de Cherville publishes the third part of his 'Vie à la campagne,' a series of well-written papers contributed weekly to the *Temps* upon country life in France. Hunting, fishing, the acclimatization of new breeds, gardening, and the weather occupy a large space, and there is scarcely a subject that would interest the amateur farmer which is not touched upon gracefully.

THE REVISED OLD TESTAMENT.—III.

The greatest difficulty under which the Revisers—like their predecessors, the Translators—labored was the lack of space for explanatory remarks. There was, it is true, the margin; but that was barely sufficient for hints at the different renderings alone, and could not be utilized for elucidations. Here and there, also, a word or two could be inserted in the text in italics, but only in order to make the sentence grammatical or verbally intelligible. For remarks explaining the choice of words, justifying startling innovations, or throwing light upon inherent or incidental obscurities, only the wide notes of a commentary offer room, and a Bible with ample comments cannot be put in the hands of the millions. The very marginal notes—which unconquerable uncertainties and scrupulous doubt render indispensable—are often calculated only to perplex the more devout than learned Bible reader, by abruptly and successively introducing a variety of views, always unexplained, and sometimes strangely conflicting. One quotation may suffice as an illustration of what we have just been saying. The choice of it has been determined by a letter from an American lady, now in Munich, containing remarks on the special interest attaching to the discussion of the verses concerned, and enclosing two new renderings—one Italian, one French. We give the text of the Revised Version, with its marginal notes inserted in parentheses:

Job xix.

23 Oh that my words were now written!
Oh that they were inscribed in a book!
24 That with an iron pen and lead
They were graven in the rock for ever!
25 But (or, *For*) I know that my redeemer (or, *vindicator*; Heb. *goel*) liveth,
And that he shall stand up at the last upon the earth (Heb. *dust*):
26 And after my skin hath been destroyed,
Yet from (or, *without*) my flesh shall I see God: (Or, *And after my skin hath been destroyed, this* shall be, *even from, etc.* Or, *And* though *after my skin this* body *be destroyed, yet from, etc.*)
27 Whom I shall see for myself (or, *on my side*),
And mine eyes shall behold, and not another (or, as *a stranger*).
My reins are consumed within me.
28 If ye say, How we will persecute him! . . .

What the sense of these ejaculations of Job is, only comments can reveal. As they stand, they present little more than incoherent verbiage. The marginal notes make the confusion worse confounded. A freer rendering might have shown some palpable connection, and made the meaning intelligible; but neither the Authorized Version nor the Revised was intended to be a free translation. Does Job comfort himself—in the sense in which theologians, and chiefly preachers at funerals, use his words—with the hope of ultimate redemption in or without the flesh? of immortality or resurrection? If so, why all his attacks on the justice of Providence? And why is he not silenced by his opponents with this his own confidence in the living Redeemer and in the eternal bliss that is to follow the destruction of the skin? The revisers are unable or unwilling to indicate clearly their view in this regard, and make no attempt whatever to be the "vindicators" of the good sense of Job's words, which are "inscribed in a book," and immortal, as if "graven in the rock for ever." And yet the Hebrew Prometheus is not presented to us as incoherently raving, and what we clearly understand of the book convinces us that *all* its words had, and all may possibly still be discovered to have, an excellent meaning. What disfigures the book in translations is in part the insufficiency of our understanding of its rich vocabulary and peculiar constructions, and in part the fatal obscurity of unexplained literal renderings. Our correspondent finds excellent poetical sense in the verses quoted, as translated by Signor Beniamino Consolo, a Hebraist of Florence, the gist of whose translation she thus condenses:

"Oh, that my words were written in a book, that they were engraved upon a rock! For I know that by and by, long after I am dead, perhaps, some one will rise up who will say successfully what I am now saying in vain. That man will be my vindicator, and posterity will reverse the sentence of my persecutors. I am sure of this, although for me nothing remains but death and corruption."

The Florentine Jewish scholar's translation is too bold in some of its features; the French, from Segond's Bible, deserves to be copied:

"Oh! je voudrais que mes paroles fussent écrites,
Qu'elles fussent écrites dans un livre,
Je voudrais qu'avec un burin de fer et avec du plomb
Elles fussent pour toujours gravées dans le roc.
Mais je sais que mon vengeur est vivant,
Et qu'il se lèvera le dernier sur la terre.
Quand ma peau sera détruite, il se lèvera.
Quand je n'aurai plus de chair, je verrai Dieu.
Je le verrai, et il ne sera favorable;
Mes yeux le verront et non ceux d'un autre.
Mon âme languit d'attente au dedans de moi.
Vous direz alors: Pourquoi le poursuivions-nous? . . ."

Almost exactly the same meaning is expressed (though with some variations in expounding a few subordinate parts of the original) in an English translation communicated to a journal of Baltimore by Rabbi Benjamin Szold, of that city—the author of an extensive commentary on Job, in Hebrew, just going through the press, parts of which we have had an opportunity to read in proof and admire. According to him, Job, solemnly protesting against the unjust charges of his friends, the self-constituted defenders of Providence, expresses the wish that his words in self-defence may descend to remote ages and ultimately rouse a vindicator of his memory. But even this does not satisfy him; he would like to live to see how God, through that "avenger" of the righteous cause, would proclaim his innocence. The sufferer mournfully exclaims:

"Still, this will be when my skin they [who torture me with accusations] have cut down;
But that I may see God while in my flesh—
That I myself may behold,
My eyes, and not another's, shall see—
Thereafter do my reins within me yearn;
So that you would say, Why do we persecute him? . . ."

Hunting Trips of a Ranchman. By Theodore Roosevelt. Illustrated by R. Swain Gifford, J. C. Beard, Fannie E. Gifford, and Henry Sandham. "Medora Edition." G. P. Putnam's Sons. 1885.

With primitive man, it was a struggle for existence between himself and wild animals. He slaughtered them not only to provide food for himself and his family, but also as a means of self-protection against the more ferocious of them. His first step in the progress toward civilization was the taming and herding of the more gentle of these animals, so that his supply of food might be more certain and involve less labor. From the pastoral condition the next stage was the development of agriculture, and after that of commerce, which gradually brought about the complicated social system of the present day. In his present stage of development, the man whom circumstances have placed above the need of constant labor for his support, loves to return as far as possible to the condition of his primitive ancestor, and cope with the wild beast in his native lair, or, in other words, put himself in the condition of killing as a necessity for the immediate supply of food; and looks down with lofty contempt upon those less favorably situated in a pecuniary point of view, who kill game for the sake of selling the meat or hides to others—the much-despised "pot hunters." Whatever be the reason of this sportsman's instinct—whether it be a harking back to the savage ancestor, or an unconscious desire to prove that the physical power of the race to endure hardship has not deteriorated by civilization—it is nevertheless very real, and one which is apt to characterize the best type of modern man.

Mr. Roosevelt's ambition is evidently a many-sided one. Having obtained an extraordinary prominence in politics for one of his age, and in a field where his social position and instincts would seem to be a bar to preferment, he boldly asserts himself to belong to the politically unpopular classes of "literary fellows," cattle kings, and noble sportsmen, whose extreme type is found in the much-dreaded titled nobility of Europe; and publishes, with all the luxury the bookmaker's art is capable of, a ponderous volume of his hunting experiences during his life as a Montana ranchman. The malicious might say that his object in so doing is to reply to the inuendoes of those who considered his retirement to Montana, after the Chicago Republican Convention, a convenient escape from the dilemma of supporting a candidate whom he did not approve of, or of being untrue to his party. Be this as it may, the volume itself not only bears internal evidence of the reality of his ranch life and of personal participation in all the hardships which it involves, but leads one to wonder how, during the years he has devoted to it, he has also found time to attend to his New York constituents.

His descriptions of the game animals of Montana are evidently the result of close personal observation, and his counsels to other hunters, though somewhat diffuse at times, are extremely practical and read as if written on the ground, as

do certain words of Western origin, such as *slews* for sloughs, which have not yet found their way into the dictionaries. His style is simple and devoid of pretence of fine writing, yet his descriptions of scenery are often almost eloquent in the love and appreciation they show of the peculiar scenery of the Plains and "bad lands," which to many present nothing but forbidding aspects. In spite of a certain incongruity in the magnificence of its make-up of broad margins, ragged edged paper, and Japan-proof engravings, the whole volume breathes the freedom and simplicity of the herdsman's life on the Western Plains. The illustrations, instead of being, as is too often the case, poor reproductions of photographs or drawings by men who have never visited the country, are the work of artists of reputation who have evidently themselves seen the scenes they portray. Nothing could be better than the two etchings by Swain Gifford on pages 218 and 264, the one representing the ranchman riding into one of those terrific thunderstorms which spring up so suddenly on the Plains; the other, his lonely bed on the ground with a saddle for his pillow, his horse picketed by his side, startled at every weird sound that breaks the stillness of the approaching dawn, and the prairie wolf searching cautiously for anything eatable that he may steal. Only those who have lived through such scenes can thoroughly appreciate the vividness of these sketches, but even to the uninitiated they suggest the wild loneliness of life on the ocean-like Plains.

The edition is of only 500 copies, and its price limits its circulation to bibliophiles; for such it is a most creditable specimen of American *éditions de luxe*. The name Medora is apparently that of the town which the French marquis and ranchman named after his courageous and devoted New York wife.

The Mahdi, Past and Present. London: T. Fisher Unwin; New York: Harpers.

In this little brochure Prof. James Darmesteter, of the College of France, who is probably the best European authority on the subject, sketches the origin and strength of the belief in the Mussulman leader who has been giving so much trouble of late. At the outset the Professor corrects the newspaper interpretation of the word *Mahdi*, which does not mean "He who leads," but "He who is led," or the "well-guided one," whose frail and ignorant personality is dictated to by God. In a hundred clearly and concisely-written pages he traces the history of the Mahdi, from the first year of the Mahommedan era (622 A. D.) to the year 1885—1302 of the Hegira—showing how, after the great schism which divided the camp of Islam into the Turkish Sunnites and the Persian Shiites, the latter put forth the doctrine that the destroyer of the infidel would arise from the Prophet's family, though there is no reliable indication that the principle of heredity was recognized by the early Mussulman Arabs. Touching upon the myth, imported by the conquered Zoroastrians into the Moslem faith, that the hero, who is apparently dead, but really only hidden or asleep, awaits the ordained time of his return, the author passes in review the rise and decline of various Mahdis in Persia, Turkey, Egypt, Tripoli, and the Sudan. Many of these potentates seem to have equalled or surpassed in audacity and cunning the present Mahdi. Thus Mohammed ibn Tumert, a mediæval aspirant, persuaded the Berbers of Morocco, by the austerity and chastity of his habits, that he belonged to a better species. As usual, he began by calling himself a saint, and subsequently announced the coming of the Mahdi. Next he affirmed that he himself was the Mahdi; and on being required to perform miracles, he made angels speak from the bottom of a well and pronounce sentence of death upon his enemies. Then, says Professor Darmesteter, with the touch of humor which is frequent in his writing, he had the well filled up to guard its sanctity from possible pollution, "and to prevent any indiscretion on the part of his angels." In 1799 a Mahdi awoke in Egypt, but was soon put to sleep again by Napoleon's cannon. Each successive Mahdi appears to have been firmly believed in until disaster overcame him, when he was relegated either to the hosts of heaven or to the ever-lengthening list of false prophets.

Mohammed Ahmed, whose star seems still to be in the ascendant, has a peculiar claim upon Mohammedan loyalty. He bears out a very ancient tradition, attributed to Mohammed himself, declaring that the Mahdi shall have the same name as the Prophet, and that the father of the Mahdi shall have the same name as the Prophet's father. Not only are these conditions fulfilled in the person of Mohammed Ahmed, but his mother's name is that of the Prophet's mother, and his age is the age of prophecy, for at forty the founder of Islam revealed himself. Moreover, at twelve years of age the Mahdi knew the Koran by heart, and at twenty-five he went to live as a hermit in the Island of Aba, where he remained fifteen years, corresponding to Mohammed's fifteen years of meditation near Mount Harra—fasting and mourning, and becoming venerated by the Beggaras, until, in the fortieth year, he rose up Mahdi, and despatched emissaries to the various tribes announcing that the Turkish dominion was about to end, that the Sudan was to rise, and that he was to proceed to Mecca. In August, 1881, the Governor of Khartum despatched 200 men to seize him, but the troop was cut to pieces by the Arabs. After other minor engagements came the destruction of Hicks's army, and the deplorable events which followed. The destruction of Antichrist, according to tradition, must be accomplished as the beginning of the Mahdi's work, and it seems clear to Professor Darmesteter that the Sudanese regard the death of "Gordon the Impostor" as the realization of this part of the prediction. It is a little awkward for Mohammed Ahmed, however, that the orthodox tradition lays down that the true Mahdi will appear in Arabia, and not in the Sudan; and that he is not to proclaim himself Mahdi, but to be proclaimed in spite of himself at Mecca.

M. Darmesteter, in conclusion, inclines to the opinion that the civilization of the Sudan will be effected through the medium of the Abyssinian people. The work is an excellent précis of some of the principal points of Mohammedan history. It contains explanatory notes and a preface by the translator, Miss Ada S. Ballin, who appears to have done her work well.

The Lenapé Stone, or the Indian and the Mammoth. By H. C. Mercer. G. P. Putnam's Sons. 1885. 8vo, pp. 95. Illustrated.

This thin, flat piece of polished slate, some four inches long by one and a-half broad, belongs to the class of relics known as gorgets, and does not differ from the usual run of such articles except in the fact that it is covered with rudely-scratched figures, which are grouped together in such a way as to give the impression that they might have been intended to represent pictographically the migration legend of the Delawares, and the well-known story of the Big Buffalo. Without stopping to inquire into the truth of these interpretations, it is sufficient to say that among these figures or groups there is one which, stripped of all accessories, may be construed into a rude attempt at representing a mammoth attacked by hunters. Assuming this to have been the intention of the savage artist, the carving at once becomes of importance, since it will, if it prove to be genuine, furnish another link in the chain of argument that points to the contemporaneity of the Indian and the mammoth in the valley of the Delaware. Recognizing the full significance of this fact, Mr. Mercer has inquired into the history of the specimen, and in the present little volume he gives us an account of it, with the reasons why he believes in its authenticity.

Beginning with the peculiar circumstances attending its discovery, he, first of all, satisfies himself of the honesty and good faith of the person who found it and of its present possessor. This, of course, is a step in the right direction; but, unfortunately, in the present state of archæological research, it does not go far enough. Frauds and forgeries have become so common that the presumption is uniformly against the genuineness of any specimen that is "out of the routine average"; and hence it is that, in a case like the present, involving certain far-reaching consequences, it is not only not sufficient that the good faith of the finder should be above suspicion, but it is also necessary that the specimen itself, both in conception and execution, should be of such a character as to leave no doubt as to its origin. Moreover, it must have been found under such circumstances as to preclude the possibility of a fraud or the perpetration of a hoax. These conditions may seem hard, but they are imposed by the necessities of the situation, and as they are evidently not fulfilled in the present instance, Mr. Mercer's theory breaks down in the very place where it ought to be strong. Upon this point there does not seem to be any chance for a difference of opinion. The specialists to whom the specimen was submitted for an examination are in full accord, and either reject it entirely, or, what amounts to the same thing, do not accept it. This decision is believed to be in accordance with the facts, and it will, we think, be generally accepted. Indeed, it cannot well be otherwise, for Mr. Mercer's argument, regarded in the most favorable light, only proves the probable truth of his theory; and this is a case in which archæologists have a right to demand certainty, and in which they cannot afford to be content with less.

New York and the Conscription of 1863. A chapter in the history of the Civil War. By James B. Fry, retired Assistant Adjutant-General. G. P. Putnam's Sons. 1885.

In this thin volume of 85 pages General Fry sums up all that has been said as to the origin of the draft riots in New York in 1863, and finally and effectually disposes of the repeated efforts to justify the course of Governor Seymour and the New York Democracy toward the national Government. Four days of riot in New York, beginning just after the battle of Gettysburg, and clearly traceable to Southern emissaries, who had begun their preparations long before Vicksburg and Gettysburg had strengthened the Union cause, might well have been the turning-point of a Northern resistance fatal to the Administration in Washington. That those scenes were marked by horrors which may well be buried in oblivion, ought to be reason enough for keeping silent or at least being truthful; but this Governor Seymour's authorized biographers did not think sufficient for his credit. They undertook to claim for him immunity from any responsibility for these riots and the credit of having suppressed them. General Fry, who was Provost-Marshal-General, and is the highest living authority on the subject, proves from indubitable evidence of letters exchanged at the time, that Governor Seymour was led into open hostility to the draft, and thus brought on the riots which were suppressed by the strong arm of the Union army stretched over New York. It is

not pleasant reading, this story of one of the most disgraceful outbreaks that ever occurred in any American city; but fortunately General Fry passes lightly over its savage features, only to show that the national Government did everything it could to secure prompt obedience to the laws and a proper enforcement of them. These laws had been enacted by a Congress in which Democrats of as good standing as Governor Seymour took part, and gave their sanction to a measure which had been in force in the Confederacy from the outset. Governor Seymour was the leader and spokesman and the official and partisan representative of those who were opposed to the war and to the right of the Government to carry it on in its own way. He was one of those whose convictions were against the wisdom of trying to force men into the army, if not against the right of the Government to do so. General Fry shows that such Democrats as United States Senators Richardson and McDougal voted for a conscription, and that the officers assigned to enforce it in New York were in the majority war Democrats, as were the majority of the commission appointed at a later date to inquire into the charge of unfairness in the quotas assigned to New York; and that Governor Seymour in 1864 wrote that he did not mean to find fault with the officers who made the enrolment in New York and Brooklyn—a disavowal which was not repeated in the defence made for him in the *Herald* in 1878, in the *Times* in 1879, and in a volume published in 1883, purporting to give his views at present. General Fry does not apologize for the shortcomings and blunders which marked the administration of the draft, but he does show that Governor Seymour's opposition to the law itself invited the armed resistance and the bloody riots which required the interposition of troops from the Army of the Potomac to restore and maintain order in New York. His narrative is wholly devoid of passion, and rests on a series of unimpeachable documents.

The History of Detroit and Michigan. By Silas Farmer, City Historiographer. Detroit: S. Farmer & Co.

IT is early or Territorial Michigan of which the history is here given in connection with that of Detroit. We have no reason to dispute the author's assertion that more light is thrown on the beginnings of the State than can be found in any other work. His industry has been prodigious, and the sub-title of this volume of a thousand pages, small quarto, "A Chronological Cyclopædia of the Past and Present," is more exactly descriptive than the main title. Mr. Farmer has produced a book of reference, filling it with names, dates, and events in great but systematic profusion, and interspersing chapters which are either measurably or wholly readable, with others which are the barest statistical annals. His plan has been to make each section complete itself, and its treatment chronological. His antiquarian tastes, rather than any literary criterion, have determined what should be included. To the same predilection we owe a large number of interesting facsimiles of old maps, seals, wildcat shinplasters, election cuts, and the like. The subdivisions are sometimes a little unexpected, as when fires and engine-houses are placed under "Architectural"; and the temperance movement under "Commercial," because the liquor traffic is there disposed of. But a good table of contents and a double index make this of no consequence. The readable portions *par excellence* are those relating the biography of Cadaillac, the founder of Detroit, concerning whom Mr. Farmer's researches in France have brought to view much that was quite unknown; and the military history generally, embracing the conspiracy of Pontiac, Hull's surrender, and the Patriot War of our neighbors across the northern border. To General Hull a whole chapter is given, and he is unqualifiedly condemned.

Detroit, we are reminded by our author, whose local pride excites sympathy, is older than St. Petersburg, and, pushing his comparisons further, he declares that more tonnage passes up and down the Detroit River than enters the Thames. This is a rather vague and intangible proposition, and we pass it by. But when Mr. Farmer insists that more fresh water is discharged through the Detroit River than through any in the world except the Niagara and the St. Lawrence in the same system, he obviously goes too far. Granting that the discharge amounts to 212,000 cubic feet a second, this is less than half, if not one-third, of what either the Mississippi or the Amazon pours into the Atlantic. On p. 91, the motto *Tuebor* on the State seal is interpreted "I defend" for "I will defend." There is a slight ambiguity on p. 658, where the date of Doctor Duffield's being succeeded as head of the Harper Hospital might be taken, from the context, as the date of his death. But this event occurred eleven days before, as is correctly stated on p. 596.

Russische Leute. Von Friedrich Dernburg, Chefredakteur der *Nationalzeitung*. Berlin. 1885. 347 pp.

THIS belongs to the best variety of books of travel, being a narrative of a vacation tour made by a clever and well-informed man—the editor of a leading Berlin daily—and so avoiding at once the tediousness incident to descriptions of journeys made solely to obtain material for a book, and the flippancy and general artificiality common to those numerous works which appear to have been written with the single object of impressing upon the author's acquaintances the fact that he has been "abroad." Mr. Dernburg remarks that no one ever travels (from Berlin) toward the northeast for pleasure, so that his announcement that he was to spend his holidays in these barren wastes excited as much astonishment among his friends as if he had been starting for Angra Pequena. For though Warsaw is but sixteen hours from Berlin, it is as little known to the Berliner as if it were sixteen days distant.

Mr. Dernburg has a good deal to say, all entertaining as well as instructive, about the relations of Russians and Poles. "They are our ruin," said a Russian to him. "It is not only in Poland, but they are present everywhere; and wherever they are, they undermine the ground we stand on." Then he went to pass the night with a German friend who had married a Polish lady, and lived just out of Warsaw, their only near neighbors being a young Russian civil-servant and his wife. When the husbands each day had gone to town by train, the wives were very lonely. Personally, the young Russian lady was everything she should be, and was anxious to make friends with the other; but, "though not hard-hearted," the "patriotic bias" was so strong in the latter that she refused to take the least pity on her neighbor's forlorn condition.

Moscow, to which three-fourths of Mr. Dernburg's book is given, is a topic much less fresh, but our author makes up for the triteness of the subject by originality of incident and of point of view. We of course find the inevitable chapters on Nihilism, the Kremlin and its countless historical associations, official society, the courts, and, incidentally, the fair at Nizhni Novgorod. They are all well written and entertaining, but the chapters that have most interested us are those on the university professors and the Germans. Mr. Dernburg was very cordially received and introduced by a certain professor of zoölogy, famous throughout the scientific world for his achievements, but a glowing slavophile, who takes delight in telling his visitor how, in spite of earnest solicitations, he and his brother professors refuse to publish their investigations in what the Germans call a "Cultursprache," in spite of the threat that "otherwise Europe would take no notice of us. But if we progress in our scientific acquirements, Europe will have to seek out our productions in our language, or else fall into the scientific decline of the French, who, from political hatred, have ignored German achievements." But Professor Bogdanoff did not name the day on which Russia was to take the lead among intellectual nations.

Selections from the Prose Writings of Jonathan Swift. With a Preface and Notes by Stanley Lane-Poole. D. Appleton & Co. 1885. (Parchment Library.)

THE editor of these selections, after referring to the great difficulties of his task, which were really insurmountable, frankly states that his main effort has been to present Swift's "power of detailed and minute invention"—the literary quality of which Defoe's work stands as the type; but he has not confined his choice to such passages, and has given some paragraphs from all the great satirist's important writings. There are many reasons why selections from Swift must be unsatisfactory, must fail to represent him. The great mass of his work goes to show that, to adopt Swinburne's convenient classification, he belongs to the giants and not the gods of literature, and in the labors of the giants an incident or two gives no more impression of their might than a splinter of rock gives of Gibraltar. It is the continuity of his scorn of man, the spontaneity, the inexhaustible originality of his misanthropy, the flood and bulk of the streams loosed from his vials of wrath, that make Swift's genius felt; and when is added to this fact the further consideration that what can be included in a book of this description, *pueris virginibusque*, is very narrowly limited, the impossibility of giving an impression of Swift in the totality of his genius must be readily acknowledged. It needs no proof to show what a *pallida imago* of Swift must remain when 'The Tale of the Tub' is disembowelled of all its satire on religious sectaries, and 'Gulliver's Travels' scarcely mention the Yahoos. Filth was as essential an element of life as Swift saw it as rottenness is of carrion; and though the editor seems to think it of no consequence, the delight in the obscene, the cold foulness and monkish impudicity, that belonged to Swift's nature as spots to the leopard, cannot be suppressed without warping his genius, for it was not animalism, but moral deformity.

All this being admitted, the most that can be said of this volume is that it affords examples of Swift's style, and indicates the varied and vehement activity of his mind; but in no sense does it represent his genius in its stern and naked strength, unless that proposal for disposing of the children of Ireland as fat butchers' meat be regarded as sufficient. Even in reading that, however, one needs further insight into his character than the other extracts afford before one can see the dry eyes of the old man as he sat writing it, and feel the tears of pity and silent rage welling up in his heart. In the case of such work as Swift's, which was never meant to be held in such dainty covers, the winnowing of time is better than that of any literary scholar. The whole of the 'Tale of a Tub,' of Gulliver, or of the Drapier's Letters might serve, but not a few torn pages for girls and boys.

BOOKS OF THE WEEK.

Andrieux, L. Souvenirs d'un Préfet de Police. Vol. 2. F. W. Christern.
Arnold, Matthew. Discourses in America. Macmillan & Co. $1.50.
Arnold, E. The Song Celestial; or, Bhagavad-Gîtâ. Translated from the Sanskrit Text. Boston: Roberts Brothers. $1.
Baker, G. M. The Reading Club. No. 14. Boston: Lee & Shepard. 15 cents.

Scribner & Welford's

NEW BOOKS.

Memoirs of the Life of Colonel Hutchinson.

By his Widow, Lucy. Revised and Edited by Charles H. Firth, M.A. With Ten Etched Portraits. In two volumes, fine paper, medium 8vo, and handsome binding. $12.

To understand the history of any period, it must be studied not only in the records of public events, but also in the daily lives of individuals.

Of the many Memoirs and Autobiographies which illustrate the Civil Wars of the seventeenth century, none is more popular or entertaining than the 'Life of Colonel Hutchinson.' But though these Memoirs have passed through many editions, and their value is universally admitted, they have not yet been edited with the care and labor they deserve. In the earlier editions, the irregular and unfamiliar spelling of the original renders the book difficult for the general reader to enjoy. In the later ones the text has been modernized with more freedom than fidelity. In the present edition the spelling alone will be modernized, while the phraseology and grammatical peculiarities of the original will be carefully preserved. The most valuable of the annotations of the Rev. Julius Hutchinson will be retained, and a large number of new explanatory and illustrative notes will be added. Letters written by Colonel Hutchinson during his government of Nottingham, and other documents of interest, will be for the first time collected. A full and accurate index to the Memoirs will complete the work.

Ten newly-etched portraits of persons of whom mention is made in the text will help to render this a worthy edition of an English classic.

Lord Salisbury.

The Life and Speeches of the Marquis of Salisbury, K.G. By F. S. Pulling, M.A., Exeter College, Oxford. 2 vols., with Photogravure Portrait. Cloth, $8.40.

MOLIERE'S DRAMATIC WORKS. A new Translation in English Prose, by C. H. Wall. With a short Life and a Portrait. 3 vols. $4.20.

FOR

YACHTSMEN, TENNIS PLAYERS, WHEELMEN.

The America's Cup:

How It Was Won by the Yacht *America* in 1851, and How It Has Been Since Defended. By Capt. Roland F. Coffin, author of 'Sailors' Yarns,' 'Archibald the Cat,' 'How Old Wiggins Wore Ship,' etc., etc. 1 vol., 12mo. With Illustrations. Paper, 50 cents; cloth, $1.00.

A history of all the races since 1851 for the possession of the trophy, the emblem of the yachting supremacy of the world—commonly called the Queen's Cup—with an account of the English yachts *Genesta* and *Galatea*, entered for the races to be sailed in September, 1885, for this coveted prize. Also, descriptions of the yachts *Priscilla* and *Puritan*. There are twelve full-page illustrations from drawings by Frederick S. Cozzens, an engraving of the cup, and a reproduction of John Leech's cartoon published in London *Punch* after the remarkable victory of the *America* in 1851.

Lawn Tennis as a Game of Skill.

With the Latest Revised Rules, as played by the best Clubs. By Lieut. S. C. F. Peile, B.S.C. Edited by Richard D. Sears. 1 vol., 12mo, flexible cloth, 75 cents.

There has hitherto been no book treating lawn tennis as a game of skill, showing its possibilities, and giving practical advice for the cultivation of scientific play. Mr. Peile's little volume appeals directly to that large class of tennis players who are anxious to become proficient in the sport. Mr. R. D. Sears, who holds the championship of America, has added much that will interest American readers: his notes are always practical, and cannot fail to be of service even to experts in the game. The London *Saturday Review*, in a long review of the book, says:

"Mr. Peile has more than usual insight into the game of lawn tennis, and has some valuable teachings to bestow. His little book tells players what they ought to do and what they ought not to do. . . . The book is, in fact, a compendium of the game of lawn tennis, and should be in every player's hands."

A Canterbury Pilgrimage.

Ridden, Written, and Illustrated by Joseph and Elizabeth Robins Pennell. 1 vol., square 8vo, paper, 50 cents.

Mr. and Mrs. Pennell furnish an exceedingly entertaining story of an unconventional journey from London to Canterbury. They made the pilgrimage, not by rail, as the latter-day pilgrims usually travel, but on a tricycle. It was a merry spin through a glorious country, following the road of the famous company of bygone days. The history of the ride is most charmingly told, and the illustrations which crowd every page are in Mr. Pennell's happiest vein.

*** *The above books will be sent upon receipt of advertised price. Catalogues of our regular stock, also one devoted to Music and Musical Literature, will be mailed, if desired, to those interested. NEW CATALOGUE OF SPORTING BOOKS, ALSO OF CHOICE, RARE, AND SECOND-HAND BOOKS READY.*

SCRIBNER & WELFORD, 743–745 Broadway, N. Y.

*** *Any of these books will be sent, post-paid, on receipt of price, or they may be found at all booksellers everywhere.*

743-745 Broadway, New York.

The Nation.

NEW YORK, THURSDAY, JULY 30, 1885.

The Week.

THE death of General Grant has not come upon the people as a surprise or even as a grief. Public feeling has been harrowed many weary months by the tale of his sufferings, and new admiration has been stirred by the heroic patience with which he has borne the tortures of an incurable malady, and by the characteristic perseverance with which he has labored, during intervals of pain and weakness, upon his personal memoirs. The general sorrow has been deepened by the knowledge that physical torture was aggravated by mental torture, if indeed the one was not the exciting cause of the other. That the curtain should fall upon such a scene—that the picture of a great man's distress should be withdrawn from the common gaze and its place flooded with the light of his true glory, to be undimmed forevermore, is alike a mercy to him, to his family, and to his countrymen. All the tears that could fall for him have been shed. The hearts that have bled for him as the daily bulletins have come from his sick chamber will be comforted by the thought that he can suffer no more.

The last message which General Grant addressed to the people of the United States—for he obviously had the whole public in mind when he wrote the words which General Buckner very properly gave to the press—was an expression of his joy that he had witnessed since his sickness just what he had wished to see ever since the war—"harmony and good feeling between the sections." His death has emphasized what his sickness had illustrated. The reunion of the country is certainly complete when so representative a Southern newspaper as the Mobile (Ala.) *Register* uses such language as this:

> "The South unites with the North in paying tribute to his memory. He saved the Union. For this triumph—and time has shown it to be a triumph for the South as well as the North—he is entitled to and will receive the grateful tribute of the millions who in the course of time will crowd this continent with a hundred imperial States, and spread to the world the blessings of republican freedom."

That Grant's fame has already become a national possession is shown in the no less striking remark of that other representative Southern newspaper, the Montgomery (Ala.) *Advertiser:* "Looking at the life and character of General Grant from the broadest national standpoint, it is true to say that no man since Washington has better illustrated the genius of American institutions or the temper of Americans as a people."

One of the oddest uses made of General Grant's death is perhaps the *Tribune's* proposition that the Republicans of New York "will honor his memory most truly by rededicating themselves to the unselfish service of the Republican party." It would hardly be possible to discover a more solemn admonition than General Grant's career in civil life, to be very careful how we "rededicate" ourselves to any party. There could be no better reminder that a party is not a church or a religious organization of any kind charged with the custody of a body of truth. It is an instrument created every now and then by free peoples for meeting what seem to be the wants of the time, with appropriate legislation. It has no more claim than a horse and buggy on anybody's reverence for other things than its utility. "Dedicating" one's self to it, without regard to the quality of the men who manage it, or the uses to which it is put, is not rational. Parties being made up of frail and erring mortals like ourselves, dedication to them without regard to their utility is very dangerous, because we might find, and just now should find, that we were dedicating ourselves to Jim Blaine, and Steve Elkins, and Pow Clayton, and Jay Hubbell, and Bill Chandler, and Johnny O'Brien, and Jake Hess, and Barney Biglin—and Mr. George F. Hoar, whom we are loth to put in such company, but he insists upon it. In so far as General Grant's career furnishes people either young or old with a lesson in politics, it is a warning against blind devotion to party, against dedicating one's self to anything but the good of the country. The flaws in his political career, which every one is now lamenting, and the absence of which would have given him a place in the admiration as well as the esteem of the world such as no man since Washington has enjoyed, were due simply to the fact that the Republican party was so strong that it did not need to be good, and that so many people had dedicated themselves to it without regard to the kind of work it was doing.

Some of the more rational Republicans in Massachusetts tried to bring about the election of Mr. James Russell Lowell as Chairman of the forthcoming Republican Convention, as a sort of peace-offering to those who could not swallow James G. Blaine. But the State Committee soon disposed of the matter by giving the nomination to Mr. G. F. Hoar. The party everywhere exhibits all the usual signs of permanent exclusion from power in becoming more hide-bound and more stern about its "discipline," the weaker it becomes in numbers. Mr. Hoar will probably rant for an hour or so about the "principles of the Republican party," without ever mentioning what they are, and for another hour vituperate and misrepresent the President. There is in all the talk and action of these people a likeness to those of the Democrats between 1856 and 1860, which it would well repay some student of politics to reproduce. Their heads are so full of envy, hatred, and malice that they have no room for a single new idea or generous emotion. No; they could not elect Mr. Lowell. His mere appearance in the hall would make a great many of them uneasy in their seats, for did he not write, as the Boston *Advertiser* recalls:

> "New occasions teach new duties; Time makes ancient good uncouth;
> They must upward still, and onward, who would keep abreast of Truth;
> Lo, before us gleam her camp-fires! we ourselves must Pilgrims be,
> Launch our Mayflower, and steer boldly through the desperate winter sea,
> Nor attempt the Future's portal with the Past's blood-rusted key."

Mahone has done his best to ease the strain for the bloody-shirt organs. Only a few weeks ago they were bitterly denouncing the action of the Democratic Legislature in North Carolina in voting money for the relief of disabled ex-Confederate soldiers as disloyal, repugnant to the spirit, if not to the letter, of the Fourteenth Amendment, and an insult to the blacks who were to be taxed for the benefit of men who fought to hold them in bondage. To maintain now, when the Republican party in Virginia has committed itself to similar action in case it carries the next Legislature, that this is a perfectly proper way of spending money raised from Union men as well as secessionists, blacks as well as whites, is a cruel necessity. But see how Mahone smooths the way for the organ-grinders, in explaining the plank in question:

> "No, not pensions, but the means of frugal maintenance for such as sorely need care. This in the line of a high Christian duty, and in conformity with a civilization that cannot fail to command respect everywhere. To care for the dead and the suffering is the pious duty of organized society. The action in this case bears no other meaning."

And there actually are organs which condemned the Tweedledum of North Carolina Democrats as a "rebel yell," that applaud the Tweedledee of the Virginia Republicans as evidence of loyalty!

It is a remarkable fact that, despite all the talk from disappointed politicians about the disfavor with which Democrats regard Mr. Cleveland's course about the offices, we never get an expression of opinion from the people that is not hearty and outspoken in support of the President. We have called attention to some striking illustrations of this truth in Mississippi—especially the passage of a resolution warmly endorsing Mr. Cleveland's course by the Democratic Convention which met in the next county to the scene of the Copiah outrage and the Meade appointment incident. The same state of things evidently exists in Kentucky. Loud-mouthed politicians of the Blackburn school have been insisting that everybody in Kentucky was in favor of a "clean sweep," and that there was widespread indignation at the President's moderation. But although precedent requires no expression of opinion upon national topics in a gathering called to nominate local officers, we observe that the Democrats of Campbell County, one of the largest and most important in the State, adopted this resolution at their recent county convention:

> "Resolved, That we heartily endorse the manly and independent course pursued by our President, Grover Cleveland, since his accession to office, and that we are willing to abide his time in effecting a thorough reformation of the Government in all its departments."

Fortunately Mr. Cleveland has always had so firm a conviction that the people would sustain him that such expressions are not necessary to confirm him in his policy, but they cannot fail to be as gratifying to the President as they are creditable to the party.

The National Executive Committee of Republicans and Independents have published in a neat pamphlet a report of their work in

the Presidential campaign of 1884. It is an interesting and valuable document, giving as it does a concise history of the rise and work of the Mugwumps in that memorable struggle. Exact statements are given of the receipts and expenditures, every dollar being accounted for. We should very much like to see an authentic statement on this model compelled by law from the Campaign Committee of every party at the close of a Presidential struggle. The mystery of "soap" would then be solved, and, what is of more importance, its worst uses in campaigns would be abolished forever. At the end of their report the Independent Committee show, in a carefully prepared table, that in every State in which Independent campaigns were conducted, Blaine's percentage of the total vote was less than Garfield's. In Massachusetts the loss was more than 10 per cent.; in Rhode Island, Iowa, and Wisconsin it was 4 per cent.; in New York, New Jersey, and Connecticut it was 2 per cent.; in Ohio, Illinois, and Indiana it was between 1 and 2 per cent.

The Independent Committee of Indiana have been doing good work by calling the President's attention to the fantastic tricks of Mr. Aquilla Jones, the nominee of Vice-President Hendricks in the Indianapolis Post-office. The result is that a commission has been sent out to examine Jones's performances, and we think the chances are that Jones will have to go. We are assured that after this Mr. Hendricks will declare "war" on the Administration, which will rage during the remaining three years of President Cleveland's term, but is not expected to produce any marked effect on business or seriously affect the credit of the Government.

Some of Jones's performances are really grotesque, particularly when one reflects that he is supposed by some people to be upholding a system to which the bulk of the people of the United States are tenderly attached. He found the Indianapolis Post-office in a state of high efficiency. He at once removed the Assistant Postmaster and Cashier, and put in his place as Assistant Postmaster an old fellow named Dodd, sixty years of age, who had failed in the cement business and then canvassed for a newspaper, but was active in "politics." His means of support previous to his appointment were not visible, and have not been ascertainable. Jones then made the cashiership a separate office, and whom do you think he put in this? Why, his own beloved son Ben. He also removed the stamp clerk in favor of a minister who can get no congregation, the "Rev." Oliver H. Abbett. He also removed the head of the Registry Department and gave it to a young fellow of twenty-two, a clerk in a drug store, known as Bill Morgan. And who is Bill? Why, the nephew of Mrs. Vice-President Hendricks. He turned out the Chief of the Repair Department and put in his place an inspector of pork in a local pork house, named Sheppard. He turned out the engineer, the elevator boy, and the janitor. Who, do you think, was the new janitor? Why, Fred Jones, another son of Aquilla. He found four women in office, as repairers of jute sacks. He could not even pass these by. One was a widow of forty-five, with two daughters to support; another was a soldier's widow, with a decrepit mother to support; another was a widow with a niece to support. The fourth was also a widow, a niece of the late General Burnside, and had a mother and sister to support. They all did their work well, but this was of no consequence to Jones. He wanted their places for three male henchmen of his own. Moreover, he openly expresses his contempt for the Civil-Service Act and the rules made under it, and openly assures applicants that he will not appoint any Republican, no matter how well he passes the examination.

This is the system as administered by Jones—a system for making the public service a refuge for loafers, paupers, tramps, and deadbeats and poor relations—for which, we are assured by some, the Democratic party proposes to fight its own President. It wants to relieve Jones of the support of his sons Ben and Fred, and relieve Vice-President Hendricks of the trouble of supporting Bill Morgan, his wife's nephew, the drug clerk. A nice issue this will be for a great party. Jones says if the election was not intended to enable him to do what he is doing, he does not know what it meant. Well, he will, we trust, find out before long. President Cleveland will remove the scales from his eyes and the props from under him, and down he will come, with Dodd, and the Rev. Abbett, and his sons Ben and Fred, and Bill Morgan, the Vice-Presidential nephew, all on top of him. The United States post-offices, he will then know, are not meant for such little companies as this to snooze and draw pay in.

The President has had an interview with a delegation of the Grand Army about giving offices to soldiers and sailors. He informed it that they have now a preference over other candidates shown by the examinations to be equally well qualified, and would continue to have it, but that places in the public service must be reserved for persons competent to fill them. This is, we believe, all that really honorable, intelligent, and patriotic soldiers ask for. Nothing is more unsoldierly than the doctrine that the best man ought *not* to win, or that, as a reward for having been a good soldier, a man ought to be allowed to become a bad letter carrier, or bad weigher or clerk. Having fought well in war entitles a man to reward, but not to every kind of reward. The notion that an old soldier ought to get a place in the public service whether he is fitted to fill it or not, is a relic of the old spoils rule which made it the duty of appointing officers to find good places for the men. The rule now is, however, to find good men for the places, and men who have seen service in the field ought to be the first to rejoice over it. The Grand Army is making similar attempts to get the civil-service rules let down in this State, but we trust they will not succeed. It must not be forgotten, in considering the applications of this organization on this subject, that the total number of veterans in New York is estimated at 300,000, including 100,000 in this city and Brooklyn, and that only 33,000 of them are to be found in the Grand Army of the Republic in the whole State, and only 9,000 in this city and Brooklyn. It is therefore in no proper sense representative of the men who served in the war by land or sea, or authorized to speak for them on any subject, and least of all on office-seeking.

Looking about for some vital principle and live Republican issue, we can perceive only one at the present time. This is the doctrine that John Roach's failure was caused by the Democrats and the free-traders. The *Tribune* has proclaimed it repeatedly, and with the zeal of one who has been long in want of an issue. The Cincinnati *Commercial Gazette* has seized it in its usual headlong way, charging the Democratic party with the crime of "closing, by their unjust assaults, the last great shipyard in the United States." It is probably a Republican principle that the Cramps, the Harlans & Hollingsworths, and the five other ship-building firms that have not failed, built all their ships at Mr. Roach's yard, and that with the closing of that establishment they are all out of employment. Mr. Matt Quay, too, being hard up for principles, has availed himself of the new find. At Beaver the other day, according to the Philadelphia *Times*, he declined to talk on any political question except the failure of Mr. Roach. Upon this issue he had very clear views. "Mr. Roach," he said, "is an active and liberal Republican, and is said to have raised $100,000 for the Garfield campaign. It was well understood in political circles that if Garfield failed, he was to be made the first victim of the British policy of free ships and free trade; but Garfield won. Mr. Roach did likewise for Blaine. Blaine failed, and Roach's failure is the result of Blaine's failure." He added that what has happened now was threatened last fall by leading Democrats. The resolve was made a year ago that John Roach should bite the dust, but not, according to Mr. Quay, because he was a shipbuilder, not because he raised $100,000 for the Garfield campaign, but because he is an Irishman. We have heard of the efforts to raise money for the Garfield campaign among the shipping interest, and also for the Blaine campaign, and that these efforts were not confined to American shipowners, but extended to foreign companies as well; but we never heard that Mr. Roach's doom was sealed because he was born in Ireland. Indeed, we think that the fact of his being of Irish birth was not generally known until after the failure, when it became apparent that the Blaine Irish contingent would be likely to claim a share in his martyrdom if proper stress were laid upon the fact.

Secretary Whitney's letter to one of John Roach's assignees puts the whole controversy between Mr. Roach and the Navy Department upon a practical business basis. The Secretary's proposition is for a consultation between Mr. Roach's assignees and their counsel on the one hand and Mr. Whitney and the Attorney-General on the other, with a view to a settlement which shall be fair and just to both. There is no politics in the Secretary's statement that ordinary business methods should be followed at this consultation, "first, to become satisfied that the assignment was made in good faith, and then consider the best method, from a business standpoint, of bringing about a settle-

ment of current and incomplete contracts upon a fair and just basis for both parties." This will give Mr. Roach an admirable opportunity to show the precise cause of his failure. If the course pursued by Mr. Whitney was the cause, he can make it so plain that everybody can see it, and can thus justify the assertions of his champions that he is the victim of political persecution. What the public desires in the matter is the truth, and as Mr. Whitney has requested Mr. Roach to tell it, we trust that he will hasten to avail himself of the privilege.

It is evident from the Secretary's letter that he is not able to see at present how his course could have caused the failure. He shows from the records of the Department that, instead of being illiberal with Mr. Roach, the Government has been, through the kindness of the late Secretary, Mr. Chandler, very generous. The contract with Mr. Roach provided that 10 per cent. should be retained from his bills as they became due and held as security for the completion of the work. Up to the present time these reservations would have amounted to $210,710, had they been made in accordance with the contract; but with the exception of $26,670 they have all been paid over to Mr. Roach. He has received therefore $184,000 more than was due him, and cannot complain of harsh treatment upon that score. There was certainly no "politics" in Secretary Whitney's refusal to pay over to him the remaining $26,270, but only the most ordinary business principles.

The *Tribune* desires to have proper credit given to itself for certain statements imputing the causes of Mr. Roach's failure to the action of the Government—which statements, copying from the *Tribune*, we ascribed to Mr. Weed, the assignee of the failed firm. We perceive, upon a second examination, that the quotation marks appertaining to the interview with Mr. Weed ceased just where those unjustifiable statements began. We therefore award to the *Tribune* the discredit which it claims, and exonerate Mr. Weed to the same extent.

One way in which the Government has been swindled in the Indian business is clearly shown by the enrolment of the Cheyennes and Arapahoes at Fort Reno, in the Indian Territory, which was concluded on Wednesday week. No count had been made before since 1874, when the Cheyennes numbered 3,905 and the Arapahoes 2,366, and rations have been issued ever since upon that basis, although it now appears that there are but 3,169 Cheyennes, and 1,300 Arapahoes—only 4,469 in all, or little more than two-thirds of the 6,271 on the old rolls. The amount out of which the Treasury has been defrauded for years, by the refusal to take a new census, is placed as high as $92,000. The agent has resigned, and a "clean sweep" of all parties to the fraud is expected. A thorough overhauling of the agency system will doubtless show that this is not the only place where such swindles have been perpetrated. Mr. Dyer doubtless feels bitterly that "the Confederacy is again in the saddle," and that there is no protection of colored voters in the old slave States.

It seems that the advocates of a system of universal pensions to Union soldiers are not disheartened by the rebuff which the Grand Army of the Republic administered at the national encampment in Portland, Me., last month. They have already resumed their campaign, and declare that they will keep on until they succeed. A Boston post is the headquarters of the movement, and the project is advocated with all the usual appliances of demagogism. In the first place, the number of men who would receive the proposed $8 a month is absurdly underestimated. It is even claimed that there are now only about 600,000 survivors of the Union army in all, although as a matter of fact there are almost a quarter of a million already upon the pension roll, and there is every reason to believe that the number not on the roll reaches nearly or quite a million. In the second place, the expenditure is advocated upon the ground that it would help business. As a champion of the scheme puts it: "If the bill should go through this winter, that would mean an expenditure of $57,600,000 a year. That signifies $14,400,000 put into circulation in the quick channels of trade every quarter. Every veteran all over the land will have his $24 to spend once in three months and he will spend it—not hoard it. The butcher and the baker and the farmer and the shoemaker will get this $57,000,000. It will not be hoarded. The effect will be a financial irrigation of the land. When the business men come to see this they will be on our side." This is the familiar old argument that the short road to national wealth is by voting everybody something out of the national Treasury, which, of course, if carried to its logical conclusion, would demand an appropriation not only for old soldiers but for citizens of every class. We have too much respect for the men who fought to save the Union to believe that they either want to become mendicants, or can be bamboozled by such balderdash.

Some of the New England papers are having an interesting discussion as to the future of agriculture in that part of the country. The number of farms was reported by the census of 1880 as 207,232, against 180,649 in 1870, but it seems to be doubtful whether the salable value of the farming land is as great now as it was fifteen years ago. A Rhode Island paper says that in that State farm lands, as a whole, would not sell for as much as they were worth forty years ago; but, on the other hand, the farming is higher, the cattle are better, the farm-houses are better kept up, and the social life is broader, the improvement having been especially marked within the last twenty years. This is probably true of other parts of New England, but there are also regions, especially among the hill towns, which have undoubtedly retrograded during the last generation. The future of the hill towns in those States is a serious problem, which is brought home to any traveller who observes the too manifest signs of their present decay. The Providence *Journal* takes a hopeful view of the situation. It regards the present as a transition period, in which the manufacturing and commercial interests are robbing the farms of their best blood, but it predicts that the deserters will return gradually to the rural districts with both money and a higher ideal of life.

The published programme of the settlement of the great West Shore and New York Central dispute will be received with satisfaction by most of the parties immediately concerned, that is, by the stock and bondholders and creditors of the two corporations. If there is a dissatisfied minority in the West Shore interest, it is not in a position to make much trouble, since the opposition, if any, must be prepared to bid in the property at a foreclosure sale, pay off three or four millions of receiver's certificates, and put up more money to carry on the war, foregoing in the meantime any return on their capital. Of course no considerable number of bondholders will elect to pursue this course when the alternative presented is an immediate return of something over 4 per cent. interest on the present market value of their bonds, abundantly secured. The stockholders of the North River Construction Company are equally unprepared to continue the fight, since they are also loaded down with debts and in the hands of a receiver. Anybody who can pay their debts, or buy up the claims against them, can bring them in, *nolentes volentes*. Of course the New York Central's plan of settlement would not have been published until it was certain to be executed. Every door of escape has apparently been closed, every stumbling-block got out of the way. The New York Central Company take the West Shore property at a maximum rental of $2,000,000 per year. As $65,000,000 in cash has been spent upon the property, they get it at the rate of a little more than 3 per cent. per annum on the original cost.

The French have revived an old Revolutionary law which makes the State take charge of every seventh child of a family in necessitous circumstances, from the age of six. An attempt to establish scholarships in all the colleges for the benefit of this child, whether necessitous or not, was, however, voted down. The object of this legislation is to diminish the French reluctance to having children. It is in vain that statistics are laid before parents almost every week in every periodical in the country showing that the population of France is stationary or declining; that as a consequence thereof she is threatened with the permanent loss of her present place among the nations; that colonization is made impossible, and the country flooded with foreign immigrants. Nothing makes any impression on them. They evidently have children for their own comfort and not for the public good. The assumption on which the new law is based is that people will willingly incur the care and expense of bringing up six children in order at last to have another which they can impose on the State. But this is probably chimerical. Three is now the usual number of children which French parents are willing to have without a State bounty, and wise statesmanship seems to us to suggest offering the bounty for the fourth and not for the seventh. As a measure of protection—as it undoubtedly is—it seems very droll.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, July 22, to TUESDAY, July 28, 1885, inclusive.]

DOMESTIC.

GENERAL GRANT died at Mt. McGregor on Thursday morning at 8:08 o'clock. His end was peaceful and painless. Throughout Wednesday afternoon he failed rapidly, and his family were all with him expecting his death. After midnight the chill at his extremities rapidly increased, and local applications were made to restore warmth, but with little effect. Hypodermic injections of brandy were frequently given. The General lay upon a cot-bed in the parlor supported by two pillows and surrounded by his friends. At 3 o'clock Colonel Fred Grant asked: "Do you want anything, father?" and the General whispered huskily, "Water." This was his last articulate utterance, though he seemed to retain consciousness for some time afterward. Later in the morning hours some members of the family and his physicians left his room for a short time. A few minutes after 8 o'clock they were hastily summoned back to the chamber of death.

The news was immediately telegraphed throughout the land. Bells were tolled everywhere, mourning symbols were displayed along the streets, and flags in all cities were at half-mast. Everywhere expressions of sorrow were visible. Telegrams of sympathy from President Cleveland, Governor Hill, and many distinguished men poured in upon the bereaved family at Mt. McGregor. The President immediately issued a proclamation in which he said: "The destined end has come at last, and his spirit has returned to the Creator who sent it forth. The great heart of the nation that followed him, when living, with love and pride, bows now in sorrow above him dead, tenderly mindful of his virtues, his great patriotic services, and of the loss occasioned by his death." Governor Hill issued a similar proclamation.

In London the news created a profound impression. Mr. Gladstone and John Bright were both much affected. The former wrote the following message of sympathy: "Mr. Gladstone has heard with regret the sad news of General Grant's death. He ventures to assure the bereaved family of the sympathy he feels with them in their affliction at the loss of one who had rendered his country such signal services as a General and a statesman." Memorial services will be held in Westminster Abbey on August 4.

The London *Times* on Friday said: "With all his faults General Grant loomed larger in the people's eye than any of his rivals or contemporaries. If his nature was of metal of far more mixed alloy than that of the founder of the Republic, as even his warmest admirers must admit, it may be fairly pleaded that he was in this only the creature of his time. If his faults were those of his age and country, the military qualities on which the fortunes of his country at the critical moment depended were his own."

On Friday afternoon General Grant's family accepted the offer of the Mayor and Aldermen of New York city to afford a final resting-place for the dead General in Central Park. Before his death General Grant had indicated New York, Illinois, or West Point as places where he would like to be buried, his one condition being that provision was to be made that Mrs. Grant, at the last, should be buried by his side. This has been agreed to by the New York authorities. It has been arranged that the following shall be the programme of the obsequies: The body on Tuesday, August 4, will be taken to Albany, and will lie in state until noon the next day, when it will be taken to New York. From the time of arrival in New York on Wednesday afternoon until Saturday, August 8, the body will lie in state at the City Hall. The public services will take place on Saturday, at such time as the civic authorities may arrange, and the interment will then follow in Central Park.

Mayor Grace on Friday appointed a committee of prominent citizens of New York city to initiate a movement to provide for the erection of a national monument to the memory of the great soldier.

President Cleveland was on Saturday morning requested by the family to name the pall-bearers to act at the closing ceremonies. He will attend to that matter. The funeral will be a military one, and General Hancock has been designated by the Secretary of War to superintend the pageant.

Col. Frederick Grant, Jesse Grant, and Gen. Horace Porter arrived in this city on Monday, and consulted with Mayor Grace and the Park Commissioners in regard to the final resting-place of General Grant. The result was that when Colonel Grant returned to Mt. McGregor on Tuesday morning he expressed the opinion to the family that the Riverside Park, in this city, was preferable to Central Park as a place for the General's tomb. Mrs. Grant then decided in accordance with that opinion. The decision was immediately telegraphed to Mayor Grace.

The burial place of General Grant will be near the site of the old St. Clare homestead, now known as the Claremont House. This building stands on a high plateau at the upper end of Riverside Park. The building was the homestead of the St. Clare family, and when the grounds about it were acquired by the city, the old building, which has stood for more than 120 years on the present site, was remodelled and transformed into a house for refreshments, under the control of the Park Department. From this point a fine view up the North River as far north as the Tappan Zee is afforded. Across the Manhattan Valley and the low lands bordering on the Harlem River, the visitor can see both shores of the Sound. It is probable that the name of Riverside Park will be changed to Grant Park.

Doctor Douglas has made public another of General Grant's notes, written on July 2, as an expression on the sectional question, and as testimony of his appreciation of the universal sympathy with him. In it he says: "I would say, therefore, to you and your colleagues to make me as comfortable as you can. If it is within God's providence that I should go now, I am ready to obey His call without a murmur. I should prefer going now to enduring my present suffering for a single day without hope of recovery. As I have stated, I am thankful for the providential extension of my time to enable me to continue my work. I am further thankful, and in a much greater degree thanktul, because it has enabled me to see for myself the happy harmony which has so suddenly sprung up between those engaged but a few short years ago in deadly conflict. It has been an inestimable blessing to me to hear the kind expression toward me in person from all parts of our country, from people of all nationalities, of all religions, and of no religion; of Confederates and of national troops alike; of soldiers' organizations; of mechanical, scientific, religious, and other societies, embracing almost every citizen in the land. They have brought joy to my heart, if they have not effected a cure. So to you and your colleagues I acknowledge my indebtedness for having brought me through the valley of the shadow of death to enable me to witness these things."

The President and Cabinet have reached the conclusion that the leases of lands in the Indian Territory held by cattle-men are invalid, and it has been determined to have them set aside. A proclamation has been issued vacating them within forty days. They have also decided to turn over to the War Department the complete control of the Cheyenne and Arapahoe reservation in the Indian Territory. Capt. J. M. Lee, of the Ninth Infantry, has been appointed Indian Agent at the Cheyenne reservation.

There is a feeling of universal satisfaction among the Cheyenne Indians at the action of the President in appointing a new agent from the army to take charge of their affairs, and his proclamation ordering the removal of the cattle-men has practically removed the discontent.

On Tuesday the President refused to extend the time for the removal of cattle from the Indian Territory ranches from 40 to 100 days.

President Cleveland has detailed Commissioner Thoman and Chief Examiner Lyman to visit Indianapolis, and investigate the charges against Postmaster Jones of violating the spirit and letter of the Civil-Service Law in his administration of the office. This may involve an inquiry not only into his methods, but indirectly into the conduct of the Vice-President of the United States. Indiana politicians say that it is well understood that Postmaster Jones has acted after consultation with Mr. Hendricks, and that it has generally been understood in Indiana that Democrats, in any event, were to be appointed to all offices in the Indianapolis Post-office, and that Mr. Hendricks would welcome the dismissal of Jones if the dismissal should turn upon the civil-service-reform issue.

On the recommendation of Judge Chenoweth, First Auditor of the Treasury, Secretary Manning has suspended Professor Hilgard, Superintendent of the Coast and Geodetic Survey; C. O. Boutelle, Assistant Superintendent; Mr. Morgan, Disbursing Agent; Mr. Saegmuller, Chief Mechanician, and Mr. Zambrock, Electrotypist of that bureau, pending an investigation into certain irregularities said to exist in the accounts of that branch of the service.

The Secretary of the Navy has addressed a letter to Mr. John Roach's assignees, suggesting a meeting between them and the Attorney-General and himself. He calls attention to the fact that the Government only owes to Mr. Roach $83,000, mostly in dispute, and adds: "As against this, four ships are in your hands, upon which over $2,000,000 has been paid, which must be completed to be valuable, liable to greater deterioration by neglect than all the moneys unpaid and in dispute would repay. It is of the utmost consequence to the Government, as it is to yourselves, that a just settlement of past transactions should be had and a new departure made."

Rear-Admiral English, U. S. N., who has recently visited the Congo country, has reported to the Navy Department adversely to establishing a United States coaling depot in that region. Admiral English quotes from a letter from Tisdell, a United States commercial agent, in which he says: "The reputed wealth of the Congo Valley has been greatly exaggerated, and it will be an undesirable and unprofitable country for an American to make his home or to embark in any business enterprise. Between Vivi and Stanley Pool I saw on all sides misery, want, sickness, and death, particularly among the employees of the International Association." Commander Bridgman, after personal investigation, has made a similar report.

In Hartford, Conn., on Thursday, the telegraph contest was compromised. The Bankers' and Merchants' will surrender to the Western Union the use of four wires between Cleveland and Chicago, and the Western Union will give up six wires between the same points. The Western Union also abandons the wires west of Pittsburgh. The Bankers' and Merchants' gives to the Western Union the use of two additional wires between New York and Boston.

A commission has declared that John McCullough, the actor, is suffering from mental aberration, and has recommended that the Court appoint a committee to take charge of his estate.

Peter H. Watson died in this city on Thursday at the age of sixty-eight. He was born in Canada, but settled in Rockford, Ill., before attaining his majority. There he practised law. The first celebrated case that fell to his charge was that of Obed Hussey against C. H. McCormick for the infringement of the former's patent for the cutter of the reaping machine. He won the case and thereafter distinguished himself in similar cases. When Mr. Stanton

was made Secretary of War he invited Mr. Watson to take the place of Assistant Secretary, the duties of which office he discharged with zeal and fidelity. Upon the overthrow of the Fisk-Gould régime in the Erie Railway, Mr. Watson was elected President of that company, and set on foot the examinations which led to the restitution by Gould of $9,000,000, or securities valued at that sum, to the company's treasury. Since his retirement from the Erie Mr. Watson has resided partly in Ashtabula and partly in New York.

Mr. Martin Van Buren, son of Col. Abraham Van Buren, and a grandson of President Martin Van Buren, died on Tuesday in this city. He was a prominent society man.

Judge James Walker, of Bellefontaine, O., is dead at the age of sixty-two. He was one of the prominent Republican political leaders of that State, and was an untiring worker in the anti-slavery movement, and several times had to defend himself from personal attacks on account of his outspoken advocacy of human liberty.

The Rev. Oliver Stearns, D. D., a former dean of the Harvard Theological School, died recently in Cambridge, Mass., aged seventy-eight years. He was graduated from Harvard in 1826, and was Parkman Professor at the Harvard Divinity School. Later he was President of the Meadville (Pa.) Theological Seminary.

FOREIGN.

The Conservative Government was defeated in the House of Commons on Thursday evening by a vote of 180 to 130 on a clause of the Medical Relief Bill. The Parnellites opposed the Government. Sir Michael Hicks-Beach announced that the Government relinquished responsibility for the bill. Sir William Harcourt immediately accepted the responsibility on behalf of the Opposition. The discussion of the bill was then continued. The Cabinet on Friday decided not to interfere with the passage of the bill. The House of Lords on Friday evening passed the Land Purchase Bill and the Housing of the Working Classes Bill. The Medical Relief Bill and the Secretary for Scotland Bill passed their third readings in the House of Commons.

The Irish Land Purchase Bill will be dropped for the present session of Parliament, as there will be no time to discuss it before the prorogation. The Medical Relief Bill was read the first time in the House of Lords on Monday afternoon. The House of Lords in the evening, after an animated passage-at-arms between Earl Granville and the Earl of Milltown in regard to precedence in moving the second reading of the Medical Relief Bill, voted in favor of the Earl of Milltown. The Liberals were indignant, believing that the Lords intended to shelve the question. The bill, however, passed its second reading on Tuesday.

The marriage of Princess Beatrice, the youngest daughter of Queen Victoria, to Prince Henry of Battenberg, took place on Thursday at St. Mildred's Church, Whippingham, six miles from Osborne, Isle of Wight. The weather was lovely. At sunrise thousands of flags were run up on the Venetian masts that line the route to be taken by the marriage procession. The river and bay were full of yachts, brilliant with bunting, and presenting from the land an enchanting appearance. The bridal procession started from the palace at fifteen minutes after one. Loyal and enthusiastic cheering greeted the pageant as it emerged from the gates, and the demonstration was taken up and continued by the people along the whole route to the church. The ceremony was most impressive. The Archbishop of Canterbury, the Dean of Windsor, and other clergymen took part. Queen Victoria gave the bride away. The Queen's eldest daughter, Crown Princess of Germany, was not present, and it is said that the German Court disapproves of the match.

The Bank of Ireland on Tuesday refused to loan money to the Munster Bank to assist the latter in its present embarrassment. A panic ensued in Cork and Dublin. It is not believed that the Munster Bank can be reorganized.

A dinner was given in London on Friday evening to Earl Spencer, late Lord Lieutenant of Ireland. Two hundred members of the House of Commons were present. The Marquis of Hartington presided. He proposed the health of Earl Spencer in a eulogistic speech. Earl Spencer said he had tried to do his duty to his sovereign and his country fearlessly in the sight of the world. He said that the Crimes Act was justified when passed by the presence in Ireland of 30,000 Fenians, who were aided by members of Parliament from England and Scotland and by funds from America in resisting the laws of the land.

Rumors have recently been put in circulation in Dublin that the Duke of Connaught has arranged to reside in Ireland in the near future. He will, it is said, live in Ireland in his private capacity, and in no way interfere with the official action of the Earl of Carnarvon, the Viceroy.

Sir Charles Gavan Duffy has written an open letter to the Earl of Carnarvon, the Lord Lieutenant of Ireland. The letter is one of congratulation to the Viceroy for his adoption of an admirable and upright policy toward the Queen's subjects in Ireland. Sir Charles submits to the Lord Lieutenant that if the Marquis of Salisbury's Cabinet undertake to restore Ireland's control of her own local interests and to accord her the same kind of independence as that enjoyed by the British colonies, not a single Irish member in the next Parliament will refuse to support the programme of his Government.

The British Government, distrusting the result of the proposals made to Rasalula for the relief of Kassala on the condition of a subsidy of £100,000 and a donation of arms, has reopened negotiations with Italy for an advance on Kassala early in the autumn. Italy has received the overture favorably, but has asked English coöperation in the expedition if undertaken.

It is asserted in London that the British Foreign Office has received incontestable proofs of El Mahdi's death. Osman Digna and his court have gone into mourning for him. Khalifa Abdoola has assumed the leadership of El Mahdi's forces.

The Lauderdale peerage case has been decided by the House of Lords in favor of Major Maitland. There were two claimants to the peerage—Major Maitland and Sir James Maitland. Major Maitland contended that he was the heir of the fourth son of the sixth Earl of Lauderdale, who married Mary McAdam in New York in 1772, two days before his death. Mary McAdam had borne three sons to this fourth son of the sixth Earl, and the petitioner held that this marriage legitimated the offspring. Sir James Maitland, a descendant of the fifth son of the sixth Earl of Lauderdale, contested the claim of Major Maitland. This is the case in which Senator Edmunds and Minister Phelps appeared as witnesses.

Sir Moses Montefiore, the well-known Hebrew philanthropist, who on October 24 last celebrated the 100th anniversary of his birthday, died at Ramsgate, England, at 4:30 o'clock on Tuesday afternoon. The Baronet's earlier years were passed in Italy. In 1812 he married a sister-in-law of Nathan Meyer Rothschild, the founder of the London branch of the great banking establishment. In 1827 he made his first trip to Palestine to make a personal investigation of the abject state of his brethren in that land. The Palestine Fund was established for their relief. He was appointed Sheriff of London and Middlesex in 1837, and during the same year was knighted by the Queen at Guildhall, and in 1846, as a recognition of his services in behalf of his race, both at home and abroad, he was created a baronet. His influence with the Pasha of Egypt and the Sultan of Turkey in 1840, after the massacre at Damascus; his untiring efforts with the Czar Nicholas in behalf of the Russian Jews in 1846; his successful labors with Louis Phillippe, King of France, in reference to the persecution of 1847; and his pleadings with the Spanish authorities in 1863, are all remembered with gratitude by the down-trodden of his race. His life-long dream was to see Palestine the seat of a Jewish empire and Jerusalem its capital.

Prof. John Veitch, the distinguished Scotch scholar and author, is dead, at the age of fifty-six. Among his published works are Memoirs of Sir William Hamilton and Dugald Stewart, 'The History and Poetry of the Scottish Border,' and 'Lucretius and the Atomic Theory.'

M. de Giers has repeated to the Marquis of Salisbury the proposal to refer the dispute touching the Zulfikar Pass to a joint commission. The negotiations with Russia are reported to be closing on an agreement that, until the Joint Boundary Commission reports, the part of Zulfikar Pass which Russia claims shall be neutral.

An article in the Moscow *Gazette* of Sunday, reported to have been inspired by the Czar, declares that Russia has reached the furthest limits to which she desires to go, and that the Government considers its ventures in Central Asia at an end. The Czar is anxious to secure a solid frontier within which progressive works of civilization may be carried on. Lord Salisbury has renewed the proposal that Russia should withdraw her troops from the advanced positions in the Zulfikar Pass in order to avoid a possible conflict with the Afghans. Russia will agree to the proposal on the condition that the Afghans be restrained from occupying the positions evacuated by the Russian troops.

The St. Petersburg *Gazette* said on Monday semi-officially that the Marquis of Salisbury on July 22 requested M. de Giers, the Russian Foreign Minister, to withdraw the claims of Russia to the disputed territory east of Zulfikar Pass, and that M. de Giers refused point-blank. London advices admit that little progress is making in the negotiations.

The debate on the Madagascar credit was resumed in the French Chamber of Deputies on Monday. M. de Freycinet said it was not a question of the conquest of Madagascar, because the season for military operations was now over. The adoption of the proposed credit would be a pledge of future legislative action, while its rejection would increase the arrogance of the Hovas. "Our immediate duty," declared the speaker, "is to protect the rights of our countrymen. The rights of France over Madagascar form a part of the national patrimony." If the Chamber voted the credit, that act would not prevent the Government from seeking an amicable settlement. The negotiations were still in progress, but the Hovas' offers had hitherto been inadequate, and they had used scornful and haughty language. It would be a saddening spectacle if France should pursue a hesitating policy. Continuing the debate on Tuesday, ex-Prime-Minister Ferry defended his colonial policy, amid a great uproar.

The Panama Canal directors have asked the French Government to sanction a new issue of 500,000,000 francs worth of bonds. Premier Brisson opposes the demand, on the ground that there is a deficit in the budget.

The *Herald's* Paris correspondent denies that the negotiations for an American commercial treaty with Spain have been abandoned. The adjournment of the Cortes was the signal for renewed activity in the negotiations.

Prince Hohenlohe, now German Ambassador to France, has been formally appointed Governor of Alsace-Lorraine.

At the funeral of the Socialist Hiller on Wednesday at Frankfort-on-the-Main, inflammatory speeches were made denouncing God, the Kaiser, and the Government. The police forbade speeches, and the Socialists, refusing to obey, were attacked. About fifty were wounded in the affray. Order was quickly restored.

THE EBBING TIDE OF IMMIGRATION.

THE statement regarding immigration into the United States during the last fiscal year, just issued from the Bureau of Statistics, shows that the tide is ebbing more and more rapidly from the high-water mark of 1882. The arrivals at the ten principal customs districts (which receive more than 98 per cent. of the arrivals at all points), from July 1, 1884, to June 30, 1885, aggregate 387,821, which indicates a total of about 396,500 when the full returns are compiled. During the fiscal year of 1884 the total was 518,592, which fell nearly 85,000 short of the 603,322 recorded in 1883, and this in turn was more than 185,000 below the unprecedented figures for 1882, when no less than 788,992 immigrants arrived in the United States.

The history of immigration to this country is really the history of the country, since everybody is either an immigrant or the descendant of an immigrant, more or less remote. During the first century the movement was chiefly from England, but even then the English immigrants encountered the rivalry of adventurous bands from other countries, especially the Dutch on the Hudson and the Swedes on the Delaware. Almost from the first, Germany has been the most liberal contributor, of all the Continental nations. Pennsylvania was the most attractive colony to the Germans, and they flocked to it in such numbers that in 1729 an English official sounded a note of alarm in his prediction that "the crowds of Germans will soon found a German State," while in 1755 another, after referring to the arrival of more than 5,000 during the previous year, wrote: "I do not see why they will not soon be in a condition to make our laws for us and determine our language." It did not go quite so far as this, but German actually became the official language in a number of counties, and a long line of German names in the list of Governors of the State shows the influence which this element has always wielded.

The Revolution virtually put an embargo upon immigration for seven years, and the European wars which immediately followed, and continued almost without interruption until 1815, checked for a whole generation the movement across the Atlantic. Scattered notices from shipping lists furnish the only basis for judgment as to the number arriving previous to 1820, and investigators differ considerably in their estimates. As shrewd a guess as any seems to be that of 250,000 immigrants from 1775 to 1820, which was made by Dr. Loring, of the United States Statistical Bureau, some years ago. From 1820 to 1856 the record gave the whole number of aliens arriving, instead of those coming to settle, but for a long while after the change of system was made the two columns very nearly agreed, so that comparisons can be fairly made for the past sixty-five years. Beginning with 8,385 in 1820 and hovering about those figures for half-a-dozen years, the total grew rapidly from 10,837 in 1826 to 79,340 in 1837. The financial crisis of the latter year was reflected in the sharp fall to 38,914 in 1838, but the loss was more than recovered by 1840, and no serious break occurred in the rapid rise for the next fifteen years. A series of bad crops and political troubles in Europe gave a strong impetus to the movement early in the fifties, which culminated in a total of 427,833 for 1854. The next year the aggregate fell off more than one-half, to 200,877, and it had hardly begun to recover before the crisis of 1857 sent it down still lower, to 118,616 in 1859, while the outbreak of the war reduced it yet further, not quite 90,000 arriving in either 1861 or 1862. As confidence in the preservation of the Union was restored, immigration revived, and after the restoration of peace it increased rapidly to the then unprecedented total of 459,803 in the fiscal year 1873 (July 1, 1872, to June 30, 1873). The crisis of 1873 arrested the movement, and it again dwindled, year by year, until 1878, when it reached only 138,469. Another corner was turned in 1879, when the total was 177,826, and then it proceeded by leaps and bounds—457,257 in 1880, 669,431 in 1881, and 788,992 in 1882—by far the largest total on record.

For a long while Ireland sent us more people than came from any other European country, and often more than all the rest put together, especially in the period following the great potato famine, 221,213 Irish immigrants being reported in 1851 out of 379,466 in all. But of late years the Irish contingent has fallen off very rapidly, both relatively and actually, only 51,567 of last year's total, or less than one-seventh, coming from that country. Germany has taken Ireland's old place, sending us 123,293 people last year, or nearly a third of the whole number, and in the aggregate Germany has contributed to the United States since 1820, 4,022,947, as against 3,485,820 from Ireland. England stands third, with 1,287,571, and Sweden and Norway, counted together, fourth, with 696,358. Italy's contingent, long unimportant, began to grow rapidly a few years ago, and reached 32,159 in 1882, but has fallen again to 13,587 for the past year.

The most remarkable fact shown by an inspection of the records is that the immigration during the past five years—2,968,158—exceeds the total for the whole decade from 1870 to 1880, viz., 2,812,191, which was the largest for any decade in our history. This has an important bearing upon any estimate of the country's present population. Between 1870 and 1880 the number of inhabitants increased 30 per cent., from 38,558,371 to 50,155,783. An increase during the five years since 1880 at the rate of 30 per cent. in ten years would make the present population 57,679,150; but as the immigration of a whole decade has been compressed into these five years, the gain must obviously have been more rapid than 3 per cent. a year. The great excess of growth from this outside source would apparently justify an estimate of 59,000,000 at the present time, and the next Fourth of July orator may safely boast about a nation with 60,000,000 of people.

THE TORIES AND THE IRISH.

THE Salisbury Government has sustained a severe defeat on an amendment to the Medical Relief Bill, which provides that a man shall not be disqualified for voting by reason of his having during the previous year accepted gratuitous medical treatment from a public dispensary. To this bill the Tories were a few months ago violently opposed, as an admission of paupers to the franchise, but since they got into power they have accepted and taken charge of it without winking. What is the precise nature of the amendment on which they have sustained their defeat, the cable does not inform us. But this is a matter of small consequence. The important feature in the incident is, that the Parnellites voted against the Ministry, who were actually worsted by a majority of fifty in a tolerably full House. The immediate result of this was that they dropped the bill on the spot, leaving the Opposition, led by Sir William Harcourt, to take charge of it. It would appear from this that there is about as much foundation for the stories of a permanent alliance between the Tories and the Parnellites as there used to be for stories of permanent alliance between the Liberals and the Parnellites. Whenever, during the late contest between Parnell and the Liberals, any concession was made on either side, such as the liberation of Parnell from prison, it was always stoutly affirmed by the Conservatives that a secret agreement, such as "the treaty of Kilmainham," had been reached between Gladstone and Parnell, by which the Liberal Cabinet was to have the support of the Irish vote in the House of Commons.

Not one of these stories ever proved true. There is nothing to show that Parnell ever promised anything to the Liberals beyond certain action in a particular case. He has undoubtedly agreed more than once to support, or not to oppose, a particular bill or vote, in consideration of some concession made to him on the other side; but there has not been in his policy in the House of Commons the slightest trace of a settled alliance between the Irish and either of the parties. This, too, has really been the secret of Parnell's strength and success. All Irish parties in the House which have preceded his were Irish only occasionally, and Liberals as a rule, and the leaders were in the habit of disappearing every now and then into the ranks of the Government office-holders. Parnell was the first to change all that. He initiated the plan of forming an Irish party which should never be anything else than Irish, and which should on all occasions, and not on some only, deal with the business of the House from the Irish point of view, and vote on every question solely with reference to the effect it would be likely to have on Irish business. It is the extraordinary and unprecedented tenacity with which he has adhered to this policy that has given him the remarkable hold he now has on the Irish people, and has made him successful finally in grasping the balance of power in the House of Commons. He was evidently wiser than nearly all his critics, in believing that, if he held on firmly, so far from uniting the two English parties against him, he would finally make them competitors for his support, and would hold whichever was in power, to a certain extent, at his mercy. Each in turn now compliments and tries to placate him, and every time he concedes something it is reported that he has at last signed a treaty. But there is no reason to believe that he is any less independent than ever, or that either Liberals or Conservatives have anything to expect from him of which the world does not know.

What Mr. John Morley, one of the ablest

writers and shrewdest observers on the Liberal side, says on this subject in the last number of *Macmillan's Magazine*, is well worth quoting:

"A second point that cannot escape attention in the crisis, is the peremptory dissipation of favorite illusions as to the Irish vote 'not counting.' The notion that the two English parties should establish an agreement that, if either of them should chance to be beaten by a majority due to Irish auxiliaries, the victors should act as if they had lost the division, has been cherished by some who are not exactly simpletons in politics. We now see what such a notion is worth. It has proved to be worth just as much as might have been expected by any onlooker who knows the excitement of the players, the fierceness of the game, and the irresistible glitter of the prizes. When it suits their own purpose, the two English parties will unite to baffle or to crush the Irish, but neither of them will ever scruple to use the Irish in order to baffle or to crush their own rivals. This fancy must be banished to the same limbo as the similar dream that Ireland could be disfranchised and reduced to the rank of a crown colony. Three years ago, when Ireland was violently disturbed, and the Irish members were extremely troublesome, this fine project of governing Ireland like India was a favorite consolation, even to some Liberals who might have been expected to know better. The absurdity of the design, and the shallowness of those who were captivated by it, were swiftly exposed. A few months after they had been consoling themselves with the idea of taking away the franchise from Ireland, they all voted for a measure which extended the franchise to several hundreds of thousands of the inhabitants of Ireland who had not possessed it before, and who are not at all likely to employ their new power in the direction of crown colonies or martial law or any of the other random panaceas of thoughtless and incontinent politicians. As for the new Government, sharp critics—and some of the sharpest are to be found on their own benches—do not shrink from declaring that they come into power as Mr. Parnell's lieutenants. His vote has installed them, it can displace them; it has its price, and the price will be paid. In the whole transaction, the Irish not only count—they almost count for everything."

GENERAL GRANT.

THE career of Ulysses S. Grant has been in every way so closely identified with the history of the country for nearly five-and-twenty years that no citizen of the United States, no intelligent citizen of the civilized world, will hear of his death with indifference. His great military services are so universally appreciated by his countrymen that he has become, by a natural and beautiful operation of popular faith, the very embodiment of the idea of successful assertion of the national unity against disunion. The popular instinct is right in assuming that great achievements imply great character. The popular faith which sprang from Grant's first great success at Fort Donelson became stronger from day to day, until the confidence of a whole nation in the national existence centred in and hung upon the unfaltering faith, the unbending will, and the undismayed courage of one quiet man "fighting it out" on the line of the Potomac and the James not only through the summer of 1864, but the autumn and the following winter too. As President of the United States he disappointed and grieved a large part of the best element of his fellow-citizens; but the memory of the war-time was so strong and deep that they were ready with excuses for his political mistakes and condonation for his political faults. To them he remained the General, and their sincere and even tender respect made them seek to ignore everything which displeased them, and to prove, by a spontaneous and disinterested impulse of generous gratitude, how far from true it is that republics are ungrateful.

The best tribute we can pay his memory is to be as sincere and direct in trying to estimate him as he was in his effort to bring our great struggle to a successful end. The wish to understand him, to know his strength and his weakness, the inward springs of his successes and his failures, will far outlast our time. It will be an historical problem which will be studied in generations to come. He already belongs to history.

His early youth was spent in the severe discipline of comparative poverty in a new country. When he was appointed a cadet at the Military Academy, the law required no preparation beyond what the education of the common school of the country district would give, and it is probable that he had no more. He was not specially gifted as a student. It was the physical rather than the intellectual life of the army which attracted him. In physical accomplishments, especially in horsemanship, he soon became noted. In his studies he never reached the medium line of his class. Quiet, resolute, undemonstrative, shy, singularly lacking in ordinary conversational power, he yet had strong common sense and practical judgment, and toward his intimates was kind and considerate.

His early army life, though including honorable service in the Mexican war, was not satisfactory to him, and it was at one time widely believed that he had ruined his career by fixed habits of intemperance. He resigned from the army under this cloud, to go through several years of depression, of want, of disappointment, and of neglect. His ventures in private business did not prosper; he had little talent that way. Among his old army acquaintances, and particularly in the staff corps, the impression was prevalent that his life was hopelessly wrecked. The events of the earlier part of his new military career can only be understood by frankly facing this fact. The distrust of him which was manifested in powerful quarters was traceable directly to this. He had to reconquer confidence, a much sorer task than to win it for the first time. The influence of that period of suffering went even further. It probably exaggerated, in his judgment, the disadvantages of poverty and the value of wealth, and increased a natural paternal shrinking from the thought that his family should ever be in danger of repeating his experiences.

At forty years of age, the outbreak of the civil war so plainly opened anew to him the gates of hope that we cannot doubt his whole nature was roused to a new assertion of itself, and his invincible will was set on regaining at least what he had lost. His patriotic zeal was a thing he held in common with Logan, with McClernand, with Oglesby, with Palmer, and his other early comrades from Illinois; his terrible resolution, his calm judgment in peril, his strong grasp of great forces were all his own. The unhappy retrospect made the determination to date a new career from that time far more than ordinary resolves even of resolute men. It was for life or death. Nor was the self-discipline he aimed at gained at a bound. As to his habits, it was a gradual conquest, which perhaps showed more plainly the quality of his nerve than any other fact in his history. A defeat was only a signal for a more stubborn effort.

Appointed Colonel of an Illinois regiment, he proved useful to Governor Yates in the organization of the contingent from that State, and was appointed a Brigadier-General of volunteers before he had seen any active field service. He then reported to Fremont, and was assigned to a brigade with headquarters at Cairo. He was not averse, in later life, to telling, with dashes of real humor, his experience in trying to break through the barrier of the wonderful and polyglot staff about the St. Louis headquarters, and of his failure to secure a personal interview with the Commandant of the Department. But he showed even then the faculty of taking his rebuffs with patience, and continuing to do with steady energy the work that was at hand. The affair at Belmont showed him equal to a "stand-up" fight, and capable of withdrawing a command from a dangerous position with credit.

With the assignment of Halleck and Buell to the two principal departments of the West, the systematic prosecution of the war there may be said to have begun. For the first time the forces were somewhat commensurate to the work, and Sherman's estimates, which had seemed so absurd to Cameron, were found by Stanton not to be unreasonable. Halleck saw that the Tennessee River was the line by which to break the Confederate centre, and was glad to make use of Grant's eagerness to make an expedition against Forts Henry and Donelson, and thus to take the initiative in the campaign from Buell, who was methodically perfecting his arrangements for an advance. The audacity of the movement suited Grant's qualities as a soldier, and was itself in no small measure the cause of its success. Fort Henry's capture was, as to the fighting, a naval engagement; but the surrender of Donelson remains a striking proof of the moral effect of a daring initiative. Grant's confidence seemed to the Confederate generals to indicate an army at his back double what it really was, and they took him at his word when his demand for "unconditional surrender" implied an overwhelming force to execute his threat. This really important victory came at a time (February, 1862) when the fame it gave was multiplied in public estimation by the universal impatience at the delay in opening the campaign on the Potomac, and Grant reaped the full benefit of it in glory and in promotion.

He was immediately made to feel, however, that his military superiors were predisposed to unfriendly views of his conduct. Halleck based severe reflections on his conduct after the battle upon some irregularities, which were reported, among the troops at Donelson, and upon what seem to have been accidental interruptions of mail and telegraphic communications between them. With a want of frankness, Halleck represented complaints as originating at Washington which were merely the echo of his own despatches sent to McClellan. Grant interpreted these things as evidence that in old army circles the past was to be inexorably remembered against him; and when he was ordered to turn over the command of his active column to General C. F. Smith and remain himself at Fort Henry, he felt driven to ask to be relieved from service in Halleck's department. But this victory had given him a popular strength which enabled such friends at Washington as Elihu Washburne to counteract these hostilities, and Halleck felt obliged to be contented with Grant's very brief explanations and to restore him to command. The battle of Shiloh followed quickly (April 6, 7, 1862), and the result tended to intensify the debate whether military good conduct or the blind favors of fortune were to be thanked for his success. That the two-days' battle had ended in a national victory no one denied, but there was a loud outcry that Grant's own army had been routed when Buell's arrival on the field turned disaster into victory. Halleck himself took the field, and, by announcing Grant as second in command without immediate control of troops, practically retired him.

Grant never forgave this, and would again have insisted upon being relieved of service in that department if Sherman, with warm friendliness, had not urged patience and the awaiting of the varying chances of the campaign. It was, no doubt, true that Grant had been over-confident before the battle of Shiloh, and had believed that the enemy, who had just made the retreat from central Kentucky to Corinth in Mississippi, would not dare take the offensive against the victorious divisions he had brought from Donelson. His troops did not encamp upon a continuous or intrenched line, but were echeloned in separate camps by divisions. The enemy's advance was covered by the forest, and Grant was practically without cavalry to give him information. When, then, his divisions were attacked, though each was able to form in front of its own camp, each in turn was outflanked and driven back before the necessary manœuvres could be made to bring them into united action. Such was the situation when Grant reached the field, and it was with great difficulty that the successful advance of the Confederates was checked after a most bitter fight, which had lasted the whole day. That Grant himself was undismayed was shown by his making immediate dispositions to resume the offensive when Buell's troops arrived, and by his delivering the return blow early the next day with resistless effect.

His patient endurance of his half disgrace brought its reward. Halleck would seem to have gained confidence in him and to have had his prejudices removed; for when he became General-in-Chief he gave Grant most earnest support in the Vicksburg campaign, and served loyally under him when the latter became Lieutenant-General. The campaign of Vicksburg at first seemed fated to keep open the question of Grant's capacity, though there was now no question of his fighting qualities. His abandonment of the inland

route for that of the Mississippi River cannot be defended on military principles; and intrigues connected with the assignment of McClernand to an independent command had probably more to do with it than any distinctly military reasons. But when he finally broke loose from the trammels in which he had placed himself, and, crossing the Mississippi again at Bruinsburg, divided and beat in detail the enemy's forces, then, turning upon Pemberton, drove him into Vicksburg, and invested him there, resuming his own communications in doing so, the most sceptical were forced to admit his possession of military talents of the highest order. Pemberton's surrender on the 4th of July, 1863, came with the victory at Gettysburg to give assurance that a permanent turn in the tide of war had been reached.

Grant's fame was now secure and his military preëminence was scarcely disputable; but when in November of that year he redeemed the disaster of Chickamauga by the dramatic victory of Mission Ridge, his promotion to the Lieutenant-Generalship may be said to have been made by acclamation. If the hard hammering of the Virginia campaign which followed had little of the brilliancy of his former exploits, it perhaps consolidated all the more his reputation for tenacity, and for power to infuse his own unconquerable determination into a great army. If we shuddered at the fearful cost of life at which that campaign was carried on, the steadily defensive policy of an army which had made the dashing campaigns Lee had before that time conducted, was sufficient proof of the conviction he felt of Grant's ability to deliver a fatal thrust if the guard should for a moment be lowered. The surrender at Appomattox was made more imposing by the unaffected modesty of the victor, and the nation's gratitude was intensified by the perfect subordination to the civil authorities of his country, which removed every fear that the war had raised up any soldiers too proud or too powerful to be peaceful citizens.

His personal bearing had been in thorough keeping with the modesty of his public utterances. He was never violent or abusive. He was scrupulously courteous to the humblest, and never allowed arrogance or profanity about him. To his faithful subordinates he showed himself a faithful friend, and never grudged to these the opportunity to reap their full share of glory. To those whom he suspected of covert enmity or intrigue he was implacable, though undemonstrative, and to all such he effectually barred the way to important commands. In both likes and dislikes he was sometimes wrong, but the virtue of close sticking to his friends was so popular a one that the abuses of it were easily forgiven. No man of the century had a juster claim to be called happy, few had so just a claim to be called great when the civil war closed.

When he was elected President he had evidently formed the purpose to conduct his Administration with independence, confining the executive departments to the proper discharge of their public business, and resisting the temptation to use the appointing power to increase the Presidential influence over Congress. His first choice of Cabinet officers was made without listening to managing politicians, and was a sincere effort to apply business principles to his work. Even in the case of those appointments which were most criticised—Mr. Stewart's to the Treasury and Mr. Borie's to the Navy Department—it was plain that he had used his own judgment, and had concluded that those departments could be well administered by business men who had made a success of great domestic and foreign commercial transactions.

The discovery that Mr. Stewart was ineligible by law was a disappointment to him. He was now subjected to the ordinary political pressure which tests the administrative principles of a President in office, and the appointment of Mr. Boutwell was received by all friends of reform as discouraging evidence that his predilection in favor of business principles in administration was no deep and decided conviction. In yielding to those who claimed to be party leaders in Congress, he went at one step the whole length of filling the most important and most distinctively business place in the Administration by a typical political appointment. It soon became apparent, also, that it was his misfortune to have no standard of fitness for civil employment, such as actual service under his own eye had given him for military office. As he had himself been advanced to the highest civil duties without special training in affairs, he was modestly inclined to assume that other important positions could be creditably filled by men who lacked both experience and learning. His natural reticence made it difficult even for those who were his proper advisers to hold with him the free conversational conferences which are the soul of administrative coöperation. His military habits led him to think it was for the Executive to decide, and for all other administrative officers simply to obey. He was ready to leave a large latitude to subordinates upon condition that they should uncomplainingly accept his will when, even without conference with them, other influences had persuaded him to give direction to any special matter.

His love of discipline made him listen favorably to the arguments of the "Machine," who likened party organization to that of an army, and preached unquestioning obedience to the word of command as a merit in a party man as in a soldier. It is easy to see how mischiefs would flow from such a habit of mind. In the absence of full discussion and conference with the great officers of State, irregular influences were pretty sure to have undue weight, and "kitchen cabinets" were pretty sure to be formed. The President would be committed to some wrong purpose or mistaken conclusion before those with whom he should have consulted were aware of it, and even if he were convinced of the necessity of reconsidering, the ungracious task of presenting objections against a declared intention gradually produced irritation.

For a year, however, these things were annoyances to those immediately concerned, rather than matters of serious moment, though they impressed with vague fears all who became aware of them and who earnestly desired that the best tendencies in the Republican party should prevail. Then came the negotiations of the San Domingo treaty, one of the most astounding events which ever occurred in the history of a constitutional government. The constitutional power of annexation by treaty has been as gravely questioned as any which the national Government has ever exercised, and even among those who regard it as settled by precedent, it is felt that no public act should be more carefully guarded by all the forms of diplomacy and all the checks of public Congressional discussion. But General Babcock, the President's aide-de-camp, sent ostensibly to make an engineer's reconnoissance of a bay recommended by naval officers as a coaling station, brought back a treaty for the cession and annexation of the domain of a foreign nation, and the incorporation of such foreign people into our own nationality. This treaty he had negotiated not only without authority of law, but without the authority, consent, or knowledge of the State Department of the United States or of the Cabinet. That the motive was the enriching of a ring of private persons upon concessions from the then Government of San Domingo, was more than suspected. What might have passed as an absurd if not insane usurpation of power by a subordinate officer, became a source of public danger when the President adopted the act of his aide, directed the treaty to be *pro forma* signed by a consular agent, submitted it to the Senate, and entered personally into a vigorous effort to secure its ratification. The decline and fall of the Republican party properly dates from that event, though the consequences were delayed and other things added to the downward impetus.

Mr. Sumner was Chairman of the Committee on Foreign Relations in the Senate, and so earnestly opposed the treaty, both upon the principle contained in it and upon the methods of procuring it, that a permanent breach between him and the President was made. It was believed by well-informed persons that Mr. Fish had sought to retire from the Secretaryship of State, but had yielded to the insistence of the President, and to a general wish of his party friends that he should not abandon the direction of our foreign affairs at so critical a time; for the Geneva arbitration, the Cuban insurrection, and other matters were making our relations to foreign Powers very delicate. But by remaining in office, even upon the most binding pledge that no further interference with the duties of his department should be permitted, he was still obliged to assume the *ex-post-facto* responsibility for the treaty. Mr. Sumner believed he had the most distinct assurances during Babcock's absence that no treaty of annexation was dreamed of, and so far as the Government was concerned, such assurances could have been given with the sincerest honesty; but when the Secretary was induced, from a sense of public duty, to accept the burden of the treaty, his mouth was closed so that he could not explain his own previous relations to it, and Mr. Sumner, thinking he had been deceived, broke the long and cordial friendship which had existed between them. Mr. Schurz shared the objections of Mr. Sumner to the treaty, and was equally startled by what they suspected of the unconstitutional method of negotiating it. The two Senators made vigorous and uncompromising war upon the project, and the treaty was defeated, but not till other political evils had resulted.

In the effort to procure votes for its ratification the President was brought into unwontedly close contact with the most demoralized and demoralizing element in his party—the "carpet-bag" politicians of the South. Intimating that they could ill afford to antagonize the influence of Mr. Sumner among the freedmen, they still held out promises of assistance if their wishes in other respects might be regarded. They wished the removal of the Attorney-General and the substitution of a Southern Republican. Mr. Hoar was summarily dismissed, the manner of it being as far removed from the custom of civilized governments in that respect as was the original negotiation of the treaty.

The opportunity was well improved by the leaders of the Republican "Machine." They adopted the habit of appearing before the President and urging their views in the form of earnest harangues, neither asking nor expecting immediate response, but content to await the effect of reiterated assertion upon his mind. His unwillingness to yield his own purpose made him quick to see the advantages of coöperation, his singular reticence deprived him in the main of the suggestions or criticisms of his constitutional advisers, the absence of well-defined convictions as to public policy made him more easily yield to the methods of such a coalition, and before the midsummer recess was reached he was practically "solid" with Conkling and Chandler.

Mr. Motley was next recalled from England as a punishment of his friend Mr. Sumner, upon pretexts so flimsy as only to make more demonstrably evident the fact that it was done without just cause. It was done against the general sentiment of the Republican party and against the most earnest protest of many of the first men of the land "outside of politics." Before Congress met again in December there had been a practical reconstruction of the Administration. Belknap was now in the War Department, Robeson in that of the Navy, and Delano in the Interior. The power of Babcock and his associates near the person of the President was not diminished, and if they had been warned off the domain of the State Department, their activity and their malign influence were chronicled in the quick succession of scandals concerning the bonded warehouses, the sales of public lands, the army tradership contracts, the naval contracts, and the whiskey frauds.

The public, with a generosity born of true gratitude, refused to connect the personal character of the President with the notorious profligacy in office which could not be concealed; yet a respectable portion of his party refused to support him for a second term, and a convention met at Cincinnati to nominate an independent candidate. The loose organization of a mass convention gave the opportunity for its capture by a few expert "workers," and the absurdity of the Greeley nomination made the reëlection of Grant a foregone conclusion. The despotic control of the party by the "Machine" leaders, the charitable hope of hosts of grateful citizens that there would be a reform within the Administration, and the distrust of the Democratic party, combined to make victory easy.

The hoped-for reform did not come. The President refused to believe evil of his personal friends and dependents; his tenacity of purpose and of affection was successfully appealed to to prevent his abandoning them "under fire," and the scandals only grew in number and in proportions. The appointment of Mr. Bristow to the Treasury Department was, however, accepted as proof that thorough work was meant with the suspected irregularities there. When prosecutions were begun, and Babcock was indicted, the President's words, "Let no guilty man escape," were again hailed with delight by all who wished well to the country. Yet Babcock was not convicted, and the Secretary found his position intolerable. The managers of the whiskey ring had the effrontery to claim that they levied their assessments upon distillers and cheated the Treasury to raise a fund to insure a third term to the President, and that the end justified the means. When some of them were convicted and sent to the penitentiary, they even alleged an understanding that they were to be pardoned out.

The injury done the President by these things was undoubtedly great, but the willingness, nay, the eager desire, of the nation to interpret all things consistently with the honor of their hero, was a better protection to him than the most skilful arguments of party advocates. They believed that he had been abused by those who owed everything to him, and that his own purposes had remained as pure and as patriotic as when he was conducting the weary campaign of the Wilderness. The second term closed with a pervading opinion, nevertheless, that his power to discriminate character was not such as is needed in one to whom hundreds of thousands of appointments are intrusted, and that the country must find some way of requiting his military services that should place a third term of the Presidency beyond expectation or faintest hope.

In our foreign relations, when once the San Domingo scandal had passed by, there was nothing to regret. Our attitude toward the Cuban insurrection was that of dignity and steady repression of filibustering. The Geneva arbitration was skilfully and happily conducted to an end. Fenianism was squelched when it took the form of invasion, and if the representatives of the nation abroad were not always such as should have been chosen, a careful supervision of their official acts prevented mischievous consequences. The public debt was greatly reduced, and the material prosperity of the country was marvellously increased.

General Grant's tour of the world after he became again a private citizen filled to the full the wildest imagination of the people as to the place to which the nation had grown in the world's estimation, and as to the connection of it all with the triumphant conclusion of the civil war and with the really great qualities of the man who had conducted our armies. Many things in his career had given them sorrow, but the strong impulse of a grateful people has been to attribute to himself the deeds which have given him and the country imperishable glory, and to lay at the door of others or to impute to amiable weaknesses the things that have diminished his fame. With heartfelt earnestness the American people unite in the prayer, May he rest in peace!

THE *PALL MALL GAZETTE* AND THE CRIMINAL LAW AMENDMENT BILL.

LONDON, July 16.

THE sensation produced in England by the publication in the *Pall Mall Gazette* of the series of articles which your readers have already heard of, has been quite without precedent in recent years. It was all the greater because the safety-valve of the press generally did not act. While hardly any other subject was talked of for some days among men, these revelations were absolutely ignored by the rest of the London newspapers. As the evidence on the faith of which they were made is now being privately submitted to a small volunteer committee, I need not discuss the question of their accuracy, but shall endeavor to describe, while the matter is still fresh, the way in which public opinion in London received them.

The first impulse was one of condemnation. People were shocked beyond description at seeing these horrible stories sold everywhere, read by boys in the streets, by domestic servants in families where the newspaper was taken in. Some called aloud for a prosecution of the journal under the statute which punishes obscene publications. The proprietor and editor of the paper were accused of having sought, by creating a sensation, to increase its sale, in forgetfulness of the enormous risk which they ran of finding it thrown over by the respectable public, and themselves visited with social penalties. Many persons of irreproachable life, who entirely agreed with and approved the object of the articles, were shocked by the manner of the thing. They treated the articles as an unusually violent development of the passion for "sensation effects" which has been visible in our press for some time past, and in which this particular journal is charged with having led the way. Severe censure was passed upon the language in which the narratives were couched. "Either a burning indignation, or a dry and passionless statement of the most salient facts, would have been," they said, "fitter for the occasion than the dramatically colored descriptions, clever bits of phrasing, and touches of cynical humor with which the writer worked." "Or why not," others asked, "have been content with printing these narratives for private distribution among members of the legislature, magistrates, clergymen, and other persons whose opinion would influence legislation? Why sow them broadcast in a soil where they may do much incidental mischief?" Nor did the passages in which the rich are charged with ruining the children of the poor pass uncensured. It was urged that there is really no class question involved; that the daughters of the lower middle class suffer nearly as much as those of workingmen; that poor parents are just as ready to sacrifice their offspring as wealthy profligates to corrupt them; and that, if it is the wealthy who do the evil, it is also among the wealthy that many of the most strenuous reformers and apostles of social purity have been and are still found.

Such were the comments which one heard from the vast majority of the upper classes during the first four or five days after the publication began. Since then there has, I think, been a sensible change of view. A few of our best public men, a good many leading clergymen, a still larger number of religious laymen, declared that an evil so foul must be fought by all possible weapons. Those who personally knew the editor of the newspaper were convinced of the purity and elevation of his motives, and their defence of him from the odious imputation of seeking to gain circulation in this way told upon the public mind. Many had from the first said that although nothing but success—success in raising a wave of popular feeling—could justify the publication of the articles, success would justify it; and it became plain that such a wave was rising. If it continues to rise, if it rises high enough to secure the passing of the Criminal Law Amendment Bill (now before Parliament) in a satisfactory form, a substantial result will have been gained which will compensate for the evil of familiarizing people's minds with horrors which, however much they may repel all pure minds, have a deplorable attraction for those already inclined to be morbid. It is still too soon to attempt to weigh the loss and gain by these disclosures, nor will the best and wisest men ever agree on a point which depends on the extent to which one is influenced by emotion and sentiment, on the one hand, and on the other by a fastidious taste and a distrust in the power of legislation to check evils rooted in human nature. But for the present the tide is running more strongly in favor of the *Pall Mall Gazette* than it did last week, and if the law is vigorously amended this session—nor does any one deny that it needs amendment—the credit will be largely due to the courage of that paper. Those who approve its conduct and refuse to criticise the manner of its articles because they feel grateful to it for the boldness with which it has attacked the evil, are among our best leaders of opinion.

That the crime and wickedness which it has described do exist is unquestionable. I need hardly, however, caution your readers against supposing that they exist to any great extent, or indicate a general rottenness in English society. No one who knows the other countries of Europe will think that England stands below them. In fact, the very indignation and astonishment which these disclosures have excited prove that the enormous majority of our people have had no notion that such things went on, or that the law was inadequate to deal with them.

It may be said, and it will no doubt be said, by those French and German journalists who represent us as a people of Pharisees, caring only for whitening the outside of the sepulchre, that the best evidence of our sincerity in the promotion of moral purity and repression of crime would have been to deliberately amend our criminal law years ago, instead of leaving a newspaper to shame us suddenly into it. It is true enough that this very Criminal Law Amendment Bill came before Parliament in the two last sessions, and in both sessions failed to pass. But the reason is to be sought not in indifference to existing evils, but partly in our habitual reserve on these topics—a reserve which left nearly everybody in ignorance of the true state of things—and partly in the defects of our legislative machinery. This question is only one of many social questions which have urgently called for the attention of Parliament for years past, but which Parliament has wanted the leisure to deal with. The housing of the poor, the reconstruction of local government, the reform of charities, the improvement of the education of the middle classes, the codification of the criminal law, the cheapening of all legal procedure, the recognition of the rights of mothers to the guardianship of their children, the simplification of the land laws—these are only a few out of the many subjects on which legislation has long been needed, but which the House of Commons has failed to overtake. So much of its time is spent in debates on foreign affairs, so much is wasted in allowing vain and garrulous men to protract debates upon all questions, so many opportunities for obstruction are afforded by its antiquated rules of procedure, that the Ministry of the day is able to pass comparatively few measures each session, and chooses those behind which it finds the greatest popular pressure, and by the passing of which it hopes to earn the greatest popular favor. However important other matters may be, however much it may itself desire to deal with them, the opposition of a small knot of obstructive members defeats its efforts simply by wasting time. There are every year some bills which must be passed because political capital is to be made out of them. There are others for which a sudden temporary need has arisen—such as those relating to Ireland which have figured so largely during the last five years. Add to these two classes the debates on votes of censure directed against the foreign and colonial administration of the Government, and very little time remains. Hence those changes in the law which a wise and benevolent despotism, like that of the Roman Empire under the Antonines, would devote its first attention to, are apt to come last

and fare worst under our parliamentary system. Every instance which brings this unfortunate position home to the minds of the people, adds to the strength of the case for a sweeping reform in parliamentary procedure, and for the relieving of Parliament from all such parts of its present work as can be properly delegated to local representative bodies. Y.

Correspondence.

ORTHOEPY AMONG THE PHILOLOGISTS.

To the Editor of The Nation:

Sir: One would think that at the meetings of an association of professed linguists like that of the American Philological Association, one would be entitled at least to hear the English language correctly articulated and pronounced with approximate care. At the meetings of this assemblage of distinguished scholars, if anywhere, the lover of good English would naturally expect pure intonation, distinct utterance of vowels and consonants according to their current values, and an absence of vulgarity, carelessness, and ignorance on the part of our teachers. True, most of these gentlemen have devoted their lives and substance to the appropriation and assimilation of Latin and Greek only, and can hardly be expected to have turned their attention to so paltry a matter as the pronunciation of English. They have fought a lifetime over the Continental *versus* the English pronunciation of the classical tongues, or the vexed question of modern Greek *versus* ancient Greek pronunciation, but as to the *English* pronunciation of *English*—heaven save the mark!—that never seems to have entered the minds of the majority of the paper-reading members of the Association.

This is a hard saying, but it is nevertheless true. How shocked were one's ears on hearing, at the recent meeting of the Association at New Haven, man after man, scholar after scholar, get up and read important and edifying papers in every variety of harsh, nasalized, twangy, unmelodious pronunciation, converting all the *u's* and *ew's* into double *o's* (institootion, nooze, dooze), and *ou's* into *ow's* (*owt*, house), twisting the final *r's* into such hideous forms as may be represented by father-*r-r*, omitting the *h's* after the *w's*, turning *o's* into *u's* (wun't, dun't, stun, hull [whole]), and similar vagaries and eccentricities. There were, of course, exceptions to this manner of pronunciation, but in general the sounds above given were heard in the preponderance. The Western men had their twang, the Eastern and Southern men had theirs: there was no uniformity of pronunciation. The Bostonian could be recognized by his shibboleth—the pronunciation of the word *always;* the New Yorker showed his early associations with the Irish nurse by a certain something which can only be defined as a sort of Hibernianism of pronunciation; the Westerner was perilously near some of the pronunciations which we have learned to characterize as "Hoosier"; and the Southerner was sing-songy. The most elementary knowledge of elocution was often absent in the reading of articles which interested and instructed the audience by their learning, research, or ingenuity. One could not help wishing that these accomplished linguists had cast a pitying glance at their own tongues (if such a physiological antic is possible) and given them half a chance in their youth. One cannot help wishing even now that the rising generation of younger scholars in the multitude of their languages will cease to ignore their own.

PHILOLOGUS.

New York, July 21, 1885.

CABINET IRRESPONSIBILITY.

To the Editor of The Nation:

Sir: I have read with pleasure the complimentary letters upon your twentieth anniversary, and, for obvious reasons, no one can echo their sentiments more heartily than myself. Having been a continuous subscriber and reader from the first number, I hope that its fiftieth and its hundredth year may find the *Nation* still prosperous in the promotion of high and noble ends.

The highest compliment I can pay to your liberality is to ask you to print this letter; but you will believe that I approach the subject from the administrative point of view, without the slightest bias either toward person or party. It seems to me that the Secretary of the Navy has incurred a grave responsibility in his action toward the firm of John Roach & Son. Of course that action is beyond suspicion of personal interest, and it may be both conscientious and wise, but it is of a kind which he ought to be called upon to justify publicly before Congress and the country.

The facts, as I understand them, are these: In the early part of Garfield's Administration Congress directed the building of certain ships-of-war, under the supervision of a Naval Advisory Board, to be appointed by the Secretary of the Navy. That Board, besides two civilians, included six naval officers, whose character and professional standing would do honor to any service in the world. The name of Admiral Simpson alone is a guarantee that there will be no fraud to which he is a party. The Board, after studying the latest improvements at home and abroad, made their plans, and Mr. Roach—by whatever means and on whatever terms—got the contract. The *Dolphin* was completed, was approved by the Naval Board, and paid for within $15,000, while three other steel cruisers are still in process. Upon the change of Administration, Mr. Whitney calls another Advisory Board, against the composition of which, it may be presumed, there is nothing to be said, and this Board reports against the *Dolphin*, which ship, moreover, upon trial, failed in certain requirements of speed. Upon this Mr. Whitney declines to accept her, or to pay the $15,000; and, having secured the opinion of the Attorney-General, declares that he will call upon the bondsmen of Mr. Roach, and that the contracts for the other three cruisers are null and void. Mr. Roach's investment is said to amount to some fifteen or twenty millions, implying, of course, a very large indebtedness. The decision of the Government has destroyed his credit and brought him to failure and probable ruin—certainly to enormous loss—while some 4,000 men have been thrown out of work in this time of depression. If these details are not correct, so much the more reason is there for what I shall have to say presently.

Several considerations here present themselves. First. Of more importance than any ship or any amount of money is this, that the faith of the Government should be kept inviolate. The very fact that the Government can crush any individual or corporation, should make it scrupulous to excess in keeping even any fairly implied agreement. I remember that early in the war the Government had made large contracts for supplies on an assumed cash basis. After keeping its creditors waiting for several months, it compelled them to take certificates of indebtedness, then selling at 80 to 90 cents. The natural result was that for everything bought afterward it had to pay two prices, and to deal not with responsible and honorable merchants, but with speculators, who were prepared to meet the Treasury in a game of trickery. Even from a money point of view it would be better for the Government to pay the cost of the *Dolphin* and sink her in the ocean than to give ground for a charge of violation of contract. Whether this has been done is, of course, a question.

Second. It is equally important that the action of the Government should be continuous. The Democrats have come into power on the ground of maladministration by the Republicans. They may protest as much as they please, but they are bound to carry out in spirit as well as in letter all agreements, good or bad, which have been made in legal and constitutional form. To repudiate them on technical grounds may discredit the Republicans, but it will also discredit the whole Government, and be fatal to any dealings in the future which may depend on a continuance of administration. Even Lord Randolph Churchill admits that he is bound to carry out the engagements of Mr. Gladstone's Government.

Third. It is curious to see how, with all our morbid dread of one-man power, we slide into it. Probably there never was a contract drawn yet in which a hostile lawyer, if it was left to his discretion, could not find reasons satisfactory to himself for declaring it invalid. Mr. Garland may be the greatest jurist and the purest patriot in the United States, but he is a human being, and as such liable to prejudice and error. No one man, perfectly shielded from public responsibility, ought to have such enormous power over private fortunes. I say shielded from responsibility, because he can be reached only by a resolution of inquiry or an investigating committee appointed by a majority of the houses, both of which can be evaded with perfect ease.

Let us now turn to Mr. Roach's position. We will suppose, for the sake of argument (and as far as I know it is a pure supposition), that Mr. Roach took the contract below actual cost, trusting either to get relief from Congress or to "scamp" his work; and further, that if the Naval Advisory Board could not be bought, there were others who could be, and that the transaction reeked with corruption from beginning to end. Still I say it is less the fault of Mr. Roach than of the mode in which our Government is carried on. Everything is secret and everything irresponsible. The various committees of Congress which have to do with the navy work under cover and impersonally, with no cohesion or concert of action. The House votes under cast-iron rules and with suppression of all debate. If the Senate, which does debate, differs, the whole matter is settled by half-a-dozen men in a conference committee. The Navy Department, from the Secretary down, works in absolute secrecy, except so far as the gossip of party newspapers is concerned, and has, moreover, no power to modify any action of Congress. Even the Naval Advisory Board, however high in professional standing, may not possess business qualities, and there is nobody responsible for its action.

In such a chaos of authorities, lobbying and intrigue are the only means of getting anything done. Without them nothing is possible; with them, almost anything. How does it happen that the only firm with which the Government does business is tainted with such suspicions? Simply because no firm can get the business that will not do the things which the Government methods require. The technical requirements of the contract appear to have been the approval of the Naval Board, and a certain degree of speed. To require the approval of another Naval Board, appointed by another Secretary, after the ship was built, hardly seems consistent with the conditions originally prescribed by Congress. The required rate of speed may not have been possible with the plans prescribed by the Naval Board, and which Mr. Roach was obliged to accept. In

view of the doubt, a deduction from the price would seem to be a sufficient penalty. It is said —and, as it is impossible to get authentic information, we must rely upon rumor—that Mr. Whitney states the difference between himself and Mr. Roach to be only $15,000 or $20,000 ; but to take such severe methods of enforcing his own view is hardly to make Government contracts in favor with responsible merchants.

The conclusion is the same which forces itself on the mind whatever branch of the Administration you take up—the inevitable necessity of Cabinet responsibility. Publicity in advance is the only safeguard against fraud on the one side or hasty tampering with the faith of the Government on the other. If they had been subject to daily public cross-examination by individual members of Congress, the deeds of Robeson and Belknap would have been impossible—that is, if they did what they were charged with doing, which has never been very clearly proved. If Secretaries Hunt and Chandler had been constantly held to public account of their actions, the terms of the contract, the doings of the Advisory Board, and the exact extent of the Government obligation would have been known in advance, and if a contractor made bids below cost, expecting to indemnify himself by cheating, it would not have been necessary to wait till an immense fortune was embarked in the enterprise before the hand of authority descended upon him. G. B.

Boston, June 25, 1885.

EFFICIENCY OF THE GOVERNMENT CLERKS.

To the Editor of The Nation:

Sir: In No. 1036 you assert that "there has never been any doubt among well-informed people that the average amount of work turned off every day by a Government clerk fell far below not only what he should accomplish, but also what the employee of any private establishment would have to render on penalty of dismissal for inefficiency."

There is no doubt that people considered well-informed have exactly this opinion of the industry of Government clerks ; but I venture to say that it is not based upon observation or the sifting of testimony, but is arrived at deductively. For so many years the basis of their selection has been so unbusinesslike, the usual incentives to industry so obviously wanting, that it might seem entirely safe to conclude that the great majority of clerks in the departments are inefficients who have "failed on earth," and officious political meddlers who neglect their proper work.

But are not the "well-informed" apt to overlook certain considerations which partially counteract the pernicious tendencies inherent in the spoils system? It must be remembered that there is a vast amount of work to be done every day in the departments ; that each clerk has his part of it to do; that he is responsible for its being well done, and that this responsibility is perfectly clear and indivisible. I mean to say that his initials are placed on every claim examined, account adjusted, and letter written. Inasmuch as his work passes through other offices where it is carefully reviewed, and inasmuch as any error therein can be easily traced to him, he is, unquestionably, prompted to be careful. But this is not all. Reports of the amount of work done by each clerk during the month are submitted to the heads of bureaus, who submit a printed report annually to the Secretary of the amount of work done in their respective offices. This causes competition between clerks and between offices. There is, moreover, to be taken into consideration the force of what may be termed departmental opinion. Shirkers are soon detected and despised not only because they are shirkers, but because (and this is not generally known) they lay burdens too grievous to be borne upon the rest of the clerks, who must needs despatch a disproportionate share of the work; for the work *must* be done. The evil of the spoils system in this respect was not that it led to public work being slighted or badly done, but that it cast its performance upon a part only of the force. The labor of these was simply prodigious.

About eighteen months ago, having passed an examination before the Civil-Service Commission, I was chosen by one of the bureau officers of the Treasury. I shared at that time the opinions of the "well-informed" concerning the general inefficiency of Government clerks. I had for several years earned my own living, and had seen the earnestness of the strife which marks those who try to "get on in the world." Belonging to a political party in opposition to that of nearly all of those by whom I found myself surrounded, it must be admitted that my observations of them were most likely searching, and that my testimony now given possesses not a few of the elements which constitute satisfactory evidence. I soon learned that the average intelligence, industry, and efficiency of each office with which I had to deal was astonishingly high. I have in my possession, and I am ready to furnish whenever occasion calls for it, statistics of the amount of work done in some of them that will seem incredible to "employees of any private establishment."

The ignorance of the real character of the great body of Government clerks is illustrated every time a new secretary or bureau officer is installed. He is almost always convinced that the clerks are a lazy set of routine workers, and forms the very best intentions to make many changes and removals. In a short time he discovers and owns, as Mr. Manning is alleged recently to have owned, that very much to his surprise they are ready, apt, and wonderfully skilled in their particular work. All of the eulogistic utterances of the late Comptroller of the Currency, Mr. Knox, and of many others whose testimony should be considered valuable, have been, it would seem, taken as mere graceful compliments to Government clerks, paid by late superior officers who did not mean any real weight to be attached to them.

The evil result of this popular ignorance is twofold. It encourages pressure for office, and it tends to keep up the "factory system" in the departments. If the real facts were known—that Government clerks, and especially chiefs of division (who are not within the protection of civil-service rules, and whose places are, therefore, expected by the "friends" of the Administration), have to perform intellectual labor demanding in many instances the strenuous exertions of a well-drilled mind, that they must be possessed of no little stock of general information, and that they must know intimately (if they expect the esteem of their co-workers and subordinates) the many details of the vast machinery of Government, there would be less solicitation for office, less condemnation of the Administration for retaining men who have acquired peculiar skill and knowledge. At the same time public opinion would approve of, if it did not demand, a revocation of many of those regulations which now injure the self-respect of a set of people containing a great number whose intelligence and devotion to duty cannot be too highly extolled.

Will not the *Nation*, instead of reasoning *à priori*, secure evidence from the most trustworthy sources concerning both the amount and the character of the work performed by Government clerks in each of the departments? R.

Washington, D. C., July 26, 1885.

A PRIMER OF REVENGE.

To the Editor of The Nation :

Sir : Your correspondent Mr. Josiah W. Leeds, in No. 1042 of the *Nation*, quotes the following words of Herr Herman Molkenboer, of Bonn : "The imperfect demonstration of the injustice and the immorality of war, by the legally appointed teacher, is the chief reason that wars continue to be carried on."

Those of the *Nation's* readers who are interested in the project for a "Permanent International Council of Education—one of the principal prospective duties of which shall be that the educators of the different countries represented therein shall press upon their legislators the need there is for settling international disputes by other and better means than war"—will, I am sure, find nutritive food for further reflection in a fact which I beg leave to cite. It would appear that an important school textbook, greatly in use in the communal schools of France at the present time, so far from urging that the rising generation "should regard war in general as a divergence from the true course of a nation's history," distinctly incites the pupil to revenge the recent German invasion of France —teaching the young idea to "shoot," as one might say, with a vengeance. Paul Bert, the distinguished author of the text-book, 'L'Instruction civique,' makes bold to teach young French boys : ". . . vous avez tous entendu parler de ce terrible temps où Paris était entouré par les Prussiens. Si l'on n'a pu avoir la victoire, s'il a fallu laisser jusqu'à nouvel ordre entre les mains de l'ennemi les Français d'Alsace et de Lorraine, du moins on a sauvé l'honneur, et c'est le principal. . . ."

A friskily free translation of this warlike paragraph might easily read : "Just you wait a bit, boys, and we'll smash the Prussians yet—you bet!" The survivors of the Commune, certainly, would take issue with those of us who see wisdom in peace congresses. Their very schoolbooks proclaim that they are waiting for an ultimate "sweet by and by" of settlement by the sword—for a day of revenge upon Prussia. The French—almost to a man—would, so far as Herr Molkenboer's country is concerned, throw diplomacy to the winds and pin no shred of faith to international arbitration.—Yours with great respect, Charles William Woolsey.

St. Moritz, Switzerland, July 9, 1885.

DRAGOMANOFF AND STEPNIAK.

To the Editor of The Nation :

Sir: Some time ago, when a German periodical in this country printed a statement that Professor Dragomanoff was the editor of the revolutionary journal, *Obshtcheye Dyelo* (The Common Cause), printed in Geneva, he requested me as a personal favor to him to correct the error, adding that he wished it known that he always signs his full name to everything he publishes. The single exception I have known him to make to that rule was in the case of some articles in *Volnoye Slovo* (The Free Word), signed only by his initials, "M. D." As he was then editor of that periodical, this fact cannot be considered inconsistent with his statement in his letter to me.

I have before me over twenty pamphlets published by Mr. Dragomanoff, as well as every number of *Volnoye Slovo* from its foundation up to its suspension, and am at a loss to understand how *his* name could have been thought of in connection with the authorship of "Stepniak's" works. The most superficial comparison of Mr. Dragomanoff's voluminous writings with "Stepniak's" attitude toward terrorism could not fail to convince the reader of the impossibility of the identity of Dragomanoff with "Stepniak."

Dragomanoff has been for years the most determined opponent of the terrorists. *Volnoye Slovo* itself reviewed "Stepniak's" 'Underground Russia' most mercilessly, being especially offended by the tone of adoration with which the author seemed to treat Ossinsky, Lizogub, and the Helfman. I know enough of both Professor Dragomanoff and "Stepniak" to be able to assure you that neither of them is capable of acting such a double part.

Volnoye Slovo has again and again been charged by the Geneva terrorists with having been founded, *under Ignatieff's auspices*, for the express purpose of fighting terrorism abroad. In such discredit is Mr. Dragomanoff held by the terrorists that, when it became known that I was corresponding with him about the theoretical grounds of his differences with those whose *natural* ally he is, I was remonstrated with by a friend in Geneva in the most serious terms: "I was thunderstruck (*menya kak gromom porazilo*) to learn that you are in communication with *him!*" In justice to Professor Dragomanoff, I must add that, in spite of the violence with which his integrity has been called in question, I, personally, never had any reason to doubt his sincerity in lending his powerful talents to opposing a cause he once supported, though I could not but regret his opposition.

I have no doubt that a denial of the authorship of "Stepniak's" works will not be long in forthcoming from the pen of Mr. Dragomanoff himself.—Respectfully, IVAN PANIN.

GRAFTON, MASS., July 25, 1885.

[We have received a communication to the same effect from another Russian among our readers, who styles Dragomanoff a mere separatist "Ukrainophil."—ED. NATION.]

OFFENSIVE PARTISANS IN ANCIENT ROME.

TO THE EDITOR OF THE NATION:

SIR: Tacitus has expressed with a graphic touch the unhappy state of mind of the "offensive partisan" who is anticipating removal. The species, it seems, was not unknown to the early Empire:

"Exauctorati per eos dies tribuni, e prætorio Antonius Taurus et Antonius Naso, ex urbanis cohortibus Æmilius Pacensis, e vigiliis Julius Fronto. Nec remedium in ceteros fuit, sed metus initium, tanquam per artem et formidinem singuli pellerentur, omnibus suspectis." (Histories, ch. xx, bk. i.) E. M. BROWN.

ANN ARBOR, MICH., July 21, 1885.

Notes.

CUPPLES, UPHAM & CO., Boston, announce 'Thackeray's London: His Haunts, and the Scenes of His Novels,' by Wm. H. Rideing. An original etched portrait of Thackeray and a facsimile of the original MS. of 'The Newcomes' form the illustrations. A special limited edition of finer quality will also be offered to the public.

'The *America's* Cup: How it was won by the yacht *America* in 1851, and how it has since been defended,' by Capt. Roland F. Coffin; and 'A Canterbury Pilgrimage,' ridden, written, and illustrated by Joseph and Elizabeth Robins Pennell, are in the press of Chas. Scribner's Sons.

Ticknor & Co., who succeed to the late firm of J. R. Osgood & Co., consist of Messrs. Benj. H. Ticknor, Thomas B. Ticknor, and George F. Godfrey. Their announcements include 'The Haunted Adjutant, and Other Stories,' by the late Edmund Quincy; 'A Narrative of Military Services,' by Gen. W. B. Hazen; 'In Camp and Battle with the Washington Artillery of New Orleans,' by Adj. William Miller Owen; 'Japanese Homes and their Surroundings,' by Prof. Edward S. Morse; 'Social Silhouettes,' by Edgar Fawcett; Howells's 'Rise of Silas Lapham,' and James's 'Bostonians.'

Macmillan & Co. have in press a new and revised edition of Pater's 'Marius the Epicurean,' expressly designed for the American market, and to that end forming one volume instead of two.

Among English announcements we notice a new volume by Sir Henry Maine on 'Popular Government,' four essays on the following topics: The Progress of Popular Government, the Nature of Democracy, the Age of Progress, and the Constitution of the United States; also, a 'History of the United States from the Foundation of Virginia to the Reconstruction of the United States,' by Percy Greg. Both these works will be published by John Murray.

'The Housewife's Library,' just published by B. F. Johnson & Co., of Richmond, Va., is a book with a history. No intimation is given in it that it has been issued before. It was, however, published in 1883, by Hubbard Brothers, of Philadelphia, with the title now borne by the new issue. Then, in 1884, two books appeared with the imprint of the Cottage Library Publishing-house, of Philadelphia, and entitled 'The Latest and Best Cook Book,' and 'How to Make Home Happy.' These two books were respectively the first and last halves of 'The Housewife's Library.' The book as it now reappears has an appendix called "Self-Supporting Employment for Southern Ladies."

Cupples, Upham & Co., of Boston, have just published 'Cupples Howe, Mariner; a Tale of the Sea,' by George Cupples. This is an old friend with a new name. It was published by Shepard & Gill, of Boston, in 1873, with the title, 'The Deserted Ship; a Story of the Atlantic: being adventures in the early life of Cupples Howe, Mariner.' The new issue is printed from the old plates, but the headlines of the pages, which in the old edition read 'The Deserted Ship,' have been carefully removed. No intimation is given in the book of this fact of previous publication under a different title.

The third volume of the Works of Alexander Hamilton, edited by Mr. Henry Cabot Lodge (G. P. Putnam's Sons), is capable of interesting in a high degree any student of the history of our national political economy, and most partisans of one or other of the present conflicting systems. It is mainly devoted to discussions of taxation and finance, a national bank, coinage and the mint, a report on industry and commerce. Mr. Lodge's notes are perceptibly tinged, in this volume, by his party affiliations, and have a sitting-on-the-fence quality which is instructive. Thus, of Hamilton's report on coinage and the mint, he says the chief interest "centres in the discussion of the comparative merits of a double or single standard. Hamilton decides in favor of the former, and his argument has a very present and immediate value. It is needless to say," he adds, "that he, of course, did not favor the overvaluationof one metal"—*i. e.*, in the slang of the present day, was not "unfriendly to silver," or was not a "gold-bug." Again, Mr. Lodge points with pride to Hamilton as the father of protection to American industry, yet leaves a loophole for a change in the national policy. "The business sense of the American people is unsurpassed: they have protection because they think it pays, and when they are convinced that free trade will pay better they will have it instead, and not before."

Mr. N. Ponce de Leon's 'Diccionario Tecnológico Ingles-Español' reaches in its thirteenth part the word socket.

The Concord Summer School of Philosophy appears as an incentive to bibliography in the July Bulletin of the Mercantile Library of Philadelphia. The fact that the School is chiefly occupying itself this season with Goethe's genius and work has led Mr. John Edmands to provide for his patrons in the Quaker City some reading notes on Goethe, referring solely to works in the Mercantile Library.

Bartlett's 'Bibliography of Rhode Island' (1864) is sharply reviewed in *Book Notes*, July 18 (Providence). Mr. Rider plainly charges the Providence *Journal's* genial criticism with the encouragement of this and similar historical works in which Rhode Island has been prolific during the past thirty-five years.

J. H. Bufford's Sons send us a large lithographic portrait of General Grant, which is a fairly good superficial presentation of the man; and a lithographic group, President Cleveland and his Cabinet. The latter picture cannot escape the charge of woodenness, yet, so far as we can judge, is successful in mere likeness.

The full-length portrait of Grant engraved on steel in line and stipple, and published by J. C. Buttre, is for the essential particulars—the head, expression, and general bearing—a very satisfactory performance. A more artistic sense in the designer would have put more beauty in the accessories, as in the case of the Cleveland group; but the interest in the face preponderates, as it ought.

Still a third likeness of Grant, a bust portrait of large size engraved on steel, has been isiued by R. Dudensing & Son. Without being an heroic design, it is calculated to give general satisfaction as a memorial.

Better than any of the foregoing in execution is the steel engraving by H. Gugler published by Leonard Watson in 1871 and now reissued. It represents General Grant in military costume and in the prime of manhood, whereas it is the older and less vigorous man who is depicted in the portraits just named. The expression, however, seems to us to leave something to be desired. As regards the size of face, this ranks third on our list, but is still large, being a bust portrait.

The English theatrical year-book, 'Dramatic Notes,' after a year's suspension, has now appeared with a double number, covering the years 1883 and 1884. It does not compare favorably with its French rivals, the 'Almanach des Spectacles' or the 'Annales du Théâtre,' for it is shabby in its criticism and slovenly in its style. Mr. Austin Brereton, who is now responsible for it, does not understand the duties of his position as well as his predecessors, Mr. C. E. Pascoe and Mr. William H. Rideing: in their hands 'Dramatic Notes' was more exact and less flippantly personal. Nor are the illustrations as good as in the earlier issues: then they were pen-and-ink sketches skilfully reproduced, and now they are cheap process copies of harsh photographs.

One of the more promising of the many minor English monthly magazines is *Time*, now edited by a lady, Miss E. M. Abdy-Williams, who is credited with the desire of making *Time* "a shilling *Nineteenth Century*." To the July number Mr. G. P. O'Connor, M.P., and Mr. H. D. Traill both contribute prognostications as to the immediate future of English politics. There are other papers by Professor Lewis Campbell, by Mr. John Addington Symonds, and by Mr. John Dennis. We notice also an essay on "The American Stage" by "Frederic Daly" *alias* Mr. Louis F. Austin, the private secretary of Mr. Henry Irving, during his recent American travels. It is much what might have been expected.

We noticed M. Paul Bourget's 'Cruelle Énigme' not long ago. It is now in its tenth edition. It may interest some of its readers to know that in conversation recently M. Taine pronounced it the strongest French novel of the past ten years.

In the number of the *Revue des Deux Mondes*

for June 15th there is an excellent essay by M. Gustave Larroumet on "La Femme de Molière." Its conclusions are on the whole favorable to Armande; and the sanity of its criticism is most welcome.

—*Lippincott's*, with all its seeming humbleness in comparison with its more favored rivals, maintains a remarkable excellence. If it seldom wears the advertisement of any popular name in its list of authors, it has many a good article; in each issue there may be more than one. The August number has, for instance, a very intelligent and clear account of the Scottish Crofters, their troubles, and the remedies in behalf of which the present agitation is being carried on; and it is interesting to note how in this case, as in the Irish land-law reform, socialistic legislation—by which we mean an increasing and defined state-protection of the poor and weak against their economical masters—differs in England and in other countries. The Irish land-law was suggested, and its development directed, by the Ulster tenant-right; and if the Scotch law is much narrower and less disturbing, it is because the body of past usage and custom which it takes up and recognizes and protects, is itself less developed than was the case in Ireland. The English have a starting-point for their new measures in old use and wont. But Bismarck's laws seem wholly novel and experimental, the adoption of an idea instead of the evolution of a practice, and thus socialism is truly revolutionary under the absolutism of the Empire; whereas in the new democracy of England the movement which is parallel to Continental socialism is evolutionary only. The second article worth notice in this issue is that on the pioneer history of the Carolina border—an attractive study of a region of our past of which it would be well for us to know more. The colonial or coast history of our origins is, perhaps, well enough learned by the public; but of the companion movement, our pioneer or border history, how very little is to be found in school books or in the minds of intelligent men! Cooper's novels have done something for the North, but of the settlement and custom-growth of the southwestern States next to nothing is really familiar. If the series of books called "American Commonwealths" should contain thoroughly informed and digested opening chapters when dealing with that portion of the country, a great service would be done. Meanwhile, we are thankful for such brief excerpts from our time of wandering in the wilderness as this little article. A third article is the good story of the number—in this magazine the stories are always far better than the serials. This one—"My Friend, George Randall"—has in plot only a common and worn motive; but in telling it the author has, perhaps unconsciously, given a character rather than a story effect, and has impressed on us the peculiar and diverse utilities of friendliness in his friend, George Randall. He has done this, too, with a style so sweet and strong and kindly—he has written with such unborrowed charm—that the faults of diction, of colloquial phrase, and rude jointing of clause, into which he falls, have a disfiguring power far greater and more annoying than should attach to them in their own right. This style and temper in the story, so unusual in the minor literature that grows up beneath the vulgarizing influences of Roe or the realistic type of Howells and James, has drawn our special attention.

—The seventh volume of Collections of the Rhode Island Historical Society is readable, and rich in documents of permanent interest. Stephen Hopkins, Governor of the State and tremulous signer of the Declaration of Independence, began in 1762 to publish a history of the colony in the Providence *Gazette*. The work was interrupted by the war, and was never finished, and Governor Hopkins made over his materials to Senator Theodore Foster, who in turn failed to produce a complete and elaborated narrative. Hopkins's portion has already been reprinted in the Collections of the Mass. Historical Society, but it is copied once more in the volume before us, in order that Foster's continuation may be placed beside it. Mr. W. E. Foster, of the Public Library, has edited and annotated both authors, and has also furnished a sketch of Mr. Foster's life, in which the point of greatest interest is perhaps genealogical. He was a descendant in the sixth generation of Reginald Foster, of Ipswich, Mass., from whom were also descended Rufus Choate and George Peabody. On the side of his mother, who was a Dwight, he was a kinsman of the Rev. William Hubbard, of Ipswich, author of a standard history of New England in the seventeenth century. A long and important paper on the Narragansetts, by Henry C. Dorr, involves much of the earliest history of the State, and depicts Roger Williams laboring faithfully but hopelessly with the tribe to civilize and Christianize it. Neither he nor any other, says Mr. Dorr, "has recorded the fact that a single Rhode Island Indian was a convert to Christianity." Williams reproached the followers of George Fox with "telling the Indians that the Quakers only know God, and therefore would sell them Powder and Liquors cheaper, and they would not mix water with Rhum as others did." As regards land transfers between the Indians and the whites, Mr. Dorr asserts that the former "seem to have intended to convey only a present and usufructory right—a mere *user*, or a right of common, and not a permanent, exclusive, and individual title and estate." Such of them as were made slaves were appraised at one-fifth or one-sixth the price of negroes. The existing remnant of the tribe is a mixture of these two races, the negro element steadily gaining upon the other. We can only enumerate the other papers in this volume: "Early Votaries of Science in Rhode Island," by Dr. Charles W. Parsons; "The First Commencement of Rhode Island College," with the disputation as to the policy of independence, by Reuben A. Guild; the "British Fleet in Rhode Island" and "Nicholas Easton *vs.* the Town of Newport," by Geo. C. Mason.

—A. J. Johnson & Co. have just published their new cyclopædia entitled 'Johnson's New General Cyclopædia and Copper-Plate Hand-Atlas of the World.' It consists of two large octavo volumes printed with small type and in double columns. It is not merely an abridgment of 'Johnson's Universal Cyclopædia,' published in four volumes in 1878, though many of the articles are condensed from it. A work of this kind cannot be printed entirely free from mistakes, but a short examination in certain directions shows an unexpected amount of error. James Mill is stated to have gone to London from Scotland in 1800, and the date of his death is given as 3d June, 1836; he went to London in 1802, and died 23d June, 1836. Frederick D. Maurice is said to have died at Cambridge, and the year of his birth is given as 1806; he died at the house of his nieces, the Misses Sterling, Bolton Row, London, and was born 29th August, 1805. It is stated that Carlyle translated 'Faust,' and that he was elected Lord Rector of Edinburgh University in 1866; 'Wilhelm Meister' should be inserted instead of 'Faust,' and his election to the Rectorship took place 11th November, 1865. The date of Lord Lytton's birth is given as May, 1805; he was born 25th May, 1803. Emory Upton was born 27th August, 1839, and not, as stated, in 1840. The date of Charles Kingsley's death is given as 24th January, 1875; he died 23d January. In the notice of Charles Reade no mention is made of his death. It is stated that George Eliot "was the daughter of a poor curate, but was adopted by a wealthy clergyman, who gave her a careful education." Such a statement is unpardonable since the publication of Mr. Cross's 'Life of George Eliot.' Her birth is put as about 1820, when the exact date, 23d November, 1819, could easily have been given. Sir John Bowring died 23d November, 1872, and not, as given, on 22d November. George M. Robeson was not elected to the Forty-eighth Congress. In the article on Shelley the name of his friend Trelawny is printed "Trelawney." The date of John Leech's death is given as 30th October, 1864; the true date is 29th October. Robert J. Ingersoll should be Robert G. Ingersoll. The population of Paisley, Scotland, is given as 50,123; in 1881 the population was 55,642. The University of Glasgow is said to stand close by the Cathedral; since 1870 the University has been situated in one of the western suburbs of the city, three miles from the Cathedral. In the notice of François Mignet, the French historian, no mention is made of his death, which took place 24th March, 1884.

—For the fifth time M. Albert Bataille has issued his yearly abstract of the most interesting French trials, 'Causes criminelles et mondaines en 1884.' The French are rich in the literature of crime. There is no lack of reports of current trials in our own country, but at least we do not yet gather the most piquant together and preserve them in an annual. Dispersed through the year, single trials make less impression. France, too, has a whole library of fiction devoted to the history of crime, both the detective school and the naturalist school doing their best to lower the reputation of their country. Perhaps the number of cases here related is too small to justify any inference with regard to the character of French crime. We have analyzed them, however, and find that except three political trials, a libel case, one in which a foolish desire for notoriety and six in which revenge was the moving cause, all the fifty crimes had for motive either the sexual passion or the desire for money, or both. In two-thirds of the cases a woman was so evidently concerned that there was no need to obey Talleyrand's famous maxim and search for her. The troubles were caused in part by love pure and simple, in part by love complicated with marriage. There were fourteen cases of adultery. The Frenchman, as he appears in these trials, is rarely contented with one wife or one mistress, and the Frenchwoman, in one case, showed a curious inclination not merely to leave her first love for a second, but to leave her second for the first, repeating the change several times. A fault of M. Bataille's book is that there often seems to be slight connection between the evidence quoted and the verdict. Perhaps, however, this is the fault of the juries. M. A. Bataille, who is an advocate, blames them repeatedly for their absurd acquittals, and President Grévy for his weak commutations. Of eleven capital sentences, six were commuted to hard labor for life. It may be doubted whether this habit of President Grévy can be called merciful. Regarded as a punishment, perpetual imprisonment with hard labor is worse than death, and commutation is no mercy to the criminal. Regarded as a deterrent, imprisonment, however long it is to be, has fewer terrors than the guillotine, and so commutation is not merciful to society.

—The two most interesting trials related by M. Bataille were the assassination by Campi, who so obstinately and successfully concealed his real name as to merit a place beside the Man of the Iron Mask, and the affair of the Abbé Galien. This latter was a great scandal for the Church.

It appears that popular city parishes which have more masses offered to them than the priests can say, hire less fortunate rural curates to relieve them of the work, of course at a discount. To facilitate matters, commission-houses, so to speak, are established which take the masses in large lots from the Parisian churches, and distribute them through the country. The poor curé to whom the mass at last comes burdened with two commissions has to work very cheap. In the case that was tried, there were three middlemen. M. ——, for instance, orders 500 masses for the soul of a relative, to be said at the Madeleine, paying two francs apiece. These would be assumed at one and a half francs by the Abbé Galien, who had founded at Pacy a workshop of girls f r the manufacture of sacerdotal vestments. When his friend, the Abbé Aviat, ordered a supply of these garments, he would pay for them by taking masses to say at one franc each. The vestments he found a market for among the priests of his neighborhood, who paid for them by saying the masses, this time reckoned at half a franc. Thus M. —— got his masses, though not where he supposed he did, the two Abbés made their little profit, by which in time one of them became a millionaire, and the curés got their vestments without paying out any money. One cannot help thinking that it would have been much simpler and quite as efficacious for the soul of M. ——'s relative if the priests at the Madeleine had kept the two francs and no one had said the masses.

—Among the many projects presented to the Committee intrusted with the organization of the Paris Exposition of 1889, that of M. Colibert is assuredly one of the most attractive. M. Colibert was a pupil of Viollet-Le-Duc, and his collaborator in the restoration of several historical monuments. The principal feature of his project, as described in the *Temps*, July 9, is the reconstruction of the Rue Saint-Antoine and the Bastille, such as they were in 1789. The Committee has already chosen as the site of the Exposition the Champ-de-Mars, to which it has added the Palais d'Industrie, together with the Pont des Invalides and the Quai d'Orsay. M. Colibert's plan would be that on crossing the bridge the visitor should find himself abruptly transported into the eighteenth century. On his right would be the Hôtel de Mayenne, with the two separate pavilions that adorned it in 1789, and the little church of Sainte-Marie; on his left, the high houses with pointed gables, the tower at the corner and the pepper-box turrets, such as are shown in the engravings of the time, while the view would be closed by the impressive mass of the Bastille, its walls pierced with loopholes, its eight heavy towers, its battlements, its sentry-turrets on the platforms, and the four cannons that were fired on the people on the 14th of July. The shops of the various tradesmen of the period will be reproduced, with the workmen plying their trade according to the usages of the time: here a hatter, there a locksmith, further on a printer distributing facsimiles of old newspapers printed on the now almost legendary hand-press. At night the street will be lighted, a little more brilliantly, it is to be hoped, than the Rue Saint-Antoine was in the eighteenth century, and the wretched resin tapers employed by the poorer classes will present a most striking contrast with the electric lights used in the other parts of the Exposition. The interior of the Bastille and its vast court will be occupied by a retrospective museum of the Revolution. The Church of Sainte-Marie, which in the last years of the eighteenth century was used for a concert hall, will be devoted to the same purpose, the music of Méhul, Grétry, and other composers of the time being performed there. The rows of houses, twenty-five on each side, will not present the monotonous straight line of a modern street, as the façade of each will stand out entirely independent of its neighbor. The only drawback to the certainly original and picturesque project of M. Colibert is that it would cost two millions of francs to carry it into execution.

—We learn that the city authorities have placed the following inscription on the house, No. 50 Lung' Arno Nuovo, occupied by the late Professor Hillebrand:

CARLO HILLEBRAND
negli idiomi di Germania Francia Inghilterra
lodato scrittore
bene merito del popolo Italiano
illustrandone con sagaci studi
le antiche lettere
e accrescendogli favore
nei nuovi tempi
tra le altre nazioni

qui dove
Fiorentino per affetto
visse quattordici anni
e morì il 18 d'ottobre del 1884
il comune
Q. M. P.

—Carlos von Gagern—presumably a relative of Heinrich von Gagern, "der edle Gagern" of the Frankfort and Erfurt Parliaments of 1848-50—relates, in the June number of the *Deutsche Rundschau für Geographie und Statistik* (Vienna), a correspondence which recently took place between the late President of the Republic of Honduras, Don Marcos O. Soto, and the Guatemalan historian Don José Milla, concerning the question whether Columbus ever set foot on the shores of the American continent. Shortly before the expiration of his Presidential term (1877-83), Soto had the intention of forming a new district on the coastland of Trujillo, and naming it Colon, in commemoration of the fact recorded in Milla's 'History of Central America,' that on the 14th of August, 1502, the little squadron of the discoverer of America, then on his fourth and last voyage, touched the mainland at a spot named Caxinas, where the present seaport of Trujillo was subsequently founded, and "the admiral, landing with a few of his companions, attended at a mass, the first celebrated on Central American soil." This statement he found confirmed by a remark in Squier's 'Notes on Central America.' But when he turned to the original reports on the voyage, his confidence was shaken. Columbus himself made no allusion to the landing. Diego de Porras (1504) mentioned the naming of Caxinas by Columbus, but not his going on shore: the admiral was at the time sick abed. Antonio de Herrera, in his history of the Spanish discoveries, says: "On the 14th of August the adelantado [Christopher's brother Bartholomew, the second in command] went ashore with a number of sailors, to hear mass." The same is repeated by Irving, while Roselly de Lorgues states that "the admiral, who was still tied to his couch, ordered the adelantado, the general staff, and the crew" to attend on shore at the service of Father Alexander, but that the elements prevented the taking possession of the land, which was effected three days later, at another spot, by order of Columbus. Don José Milla, having his attention called to these facts, made a new search in the documents of the time of the discovery, and acknowledged that he had confounded the adelantado with the admiral in the statements concerning the landing of August 14, but reiterated his belief that Columbus did tread the soil of Central America. This took place, he thinks, at the Mosquito Coast, then called Cariay, where Columbus (writing from Jamaica) reports having beheld a large tomb, poultry, deer, and lions. Herr von Gagern does not think the quotation from the report to be conclusive, as the admiral may have "beheld" the tomb and the animals from on board his ship—a point hardly to be settled by discussion at this date.

—We have taken frequent occasion to note the development of meteorology as derived from the work of high-level stations, and particularly that on Ben Nevis, which is very favorably situated for the investigation of one of the great problems of meteorology, viz., the vertical movements of the atmosphere. This institution, under the direction of the Scottish Meteorological Society, has already been in successful operation through two winters. The complete discussion of the observations for this period is in the hands of Mr. Buchan, who has already established many interesting points from the barometric and thermometric readings. The daily variation in the average velocity of the wind is found to be greater at night than in the day—exactly the reverse of what holds good at the sea-level. The observed differences between the direction of the wind on Ben Nevis and at low-level stations appear to give indication whether storm-centres will pass to the north or south of Ben Nevis—a point which, if definitely made out, will obviously be of immense value in forecasting the weather. The hygrometric observations indicate that, during ordinary weather, the atmosphere on the Ben shows a state of persistent saturation, usually accompanied by fog or mist; but occasionally an extraordinary and sudden drought sets in, the temperature rises, and the sky clears, not merely of fog, but often of every vestige of cloud, while at the same time the valleys and lower hills are often shrouded in mist. This is interpreted as showing that the dryness, coming from above, is not able to penetrate downward to the sea-level. The thorough investigation of these phenomena is one of the most important pieces of work connected with the Observatory, and may be expected to throw much light on the question of atmospheric circulation. The rainfall at Ben Nevis is greatly in excess of that indicated by the theories of rain-distribution.

PARKER'S NATURE OF THE FINE ARTS.

The Nature of the Fine Arts. By H. Parker, Fellow of Oriel College, Oxford. Macmillan & Co. 1885.

MR. RUSKIN, in his introduction of a French critic to the English public, has said that the French language is better adapted to art criticism than the English; a saying which, like many suggestive dicta of the critic, gives incisively one side of a truth. The reason of this better adaptation is not, however, in any superiority in the language or deficiency in the English speech, but in the fact that the French have been long in the habit of thinking closely and writing logically on art. It follows from this that their terminology is more precise than ours. Until, therefore, we have a clearer understanding and a more definite nomenclature of the elements of art, our art literature must remain inferior to that of France, although the English intellect is, as we believe, capable of deeper insight into the roots and reasons of art than the French, simply because it has a stronger hold of the moralities with which some of the motives of art production are more intimately connected than the French writers have ever been willing to admit or perhaps understand.

'The Nature of the Fine Arts' is throughout, in spite of its great erudition and really profound thought, rendered fallacious as argument and unsatisfactory as treatise by the want of a distinct and unvarying term for its starting point. It is of no use to discuss the notions of the Greek philosophers or the Latin poets as to what Fine

Art was, when we do not know what view they had of Art in the aggregate; and Mr. Parker would have rendered a most material service to art studies if he had with the same scholarly research set himself to determine what *Art* is, for, strange as it may seem, we have no sound definition of that term, whose meaning affects all the theories and reasonings we may construct on it. The Greek conception of Art might be of the highest interest as matter of psychology or archæology, but clearly no more authoritative as intellectual statement than the science of Aristotle, if even so much be allowed. The Greeks knew one form of Art alone; and although that form contains the suggestion of all that is most vital in all art, no definition of the complex were possible from the knowledge of the isolated form which it took in Greece. The parallels which Mr. Parker draws between the views of Plato and some of the moderns in regard to Art are interesting as intellectual history, but of no value as art study; for neither Plato nor the moderns he mentions had any known capacity to deal with Art as a phenomenon; nor have the opinions of any of the ancients a satisfactory relation to the question, as seen from the modern point of view.

Mr. Parker undertakes to establish that there is no scientific element in taste, therefore no theory, and therefore practically no teaching of Art. A single quotation will suffice to show on how flimsy a basis his demonstration rests, so far as it applies to technical instruction:

"A revolution in the system of teaching drawing which has recently taken place in this country, shows how rash it is to rely on such an assumption [' that there are some principles from which the true practice may be deduced']. Less than twenty years ago a student of our Royal Academy would have hardly found words strong enough to express the contempt which he would have felt for a *crayon study* shaded with a *stump* (!); but at the present day a visitor to the British Museum may see students copying the antique statues, and shading them with paper stumps, ignorant, apparently, that they can be accused of an artistic crime. This change of method has been the result of an experience which some English artists have had of the superiority of the French method, and theory must always have remained, as it always had been, impotent to touch the question. . . . French artists, however, have always maintained that France produces better draughtsmen than England, and that their superiority can be traced to the employment of a true system of shading. Perhaps some Englishmen will be found to deny the excellence which Frenchmen claim for themselves; but no Frenchman, and indeed no foreign artist of any kind, will be found to defend the old English method of shading with the point of the crayon."

It is useless to follow the train of reasoning of an author who confounds the principles of drawing with the use of stump or crayon-point, or who imagines that the superiority of French draughtsmanship —contested by no school whatever—is due to the former. Our author does not seem to know that the French artists are not even agreed on the use of the stump, and that the ablest use either indifferently; and in most cases where the stump is used, it is so simply because it is a more rapid method of getting over the ground, and giving the requisite delicacy of gradation, than using a crayon-point would be. It would be quite as relevant to say that American writers are inferior to French in style because the former use stylographic pens and the latter quills. And this is an argument put forth to show the futility of theoretical instruction in Art!

Again, Mr. Parker says: "It is time the tree [theoretical instruction] should have borne some fruit, or that its sterility should be explained. We should be told why Phidias or Titian, who owed nothing to theoretical instruction, have not been eclipsed, and how their styles were formed, if theories are a *sine qud non*. The art teacher, in truth, bears testimony against himself." But who can assure him that either Phidias or Titian had no theories? All we know on the subject is that their art was the result of centuries of growth; but of the kind or extent of teaching involved, we know nothing. We see that in general each generation of artists surpassed the preceding, and that when the summit of excellence was reached there came a decline; but the causes of this decline are as completely unknown as those of the rise. These are questions the study of which is useless except as speculation, and the query might just as well have been "how their styles were formed" without theories. Instruction implies theory, rather than the total absence of it. The whole chapter on Theory and Practice is full of evidences that the author is utterly incompetent, from his mental organization or training, to judge technical questions in the arts of design. He has no distinct comprehension either of the artistic faculties or the technique of those arts, and he seems to base his discussion mainly on them. He writes of an "academical system" of drawing from the solid (*i. e.*, casts) and the life, and an "anti-academical system," which begins by setting the pupil to copy drawings, etc., etc.; and Professor Ruskin, against whose system he seems to have a profound antipathy, is made the impersonation of anti-academicism. The conclusion is:

"There are, therefore, two questions. If the academical method can be justified, it must be shown that solid things are as models more instructive than things in two dimensions; and it must also be shown that of things in three dimensions the forms of the human body are preferable to all others. Both these questions can be examined without any intrusion of technicalities."

But it would seem the very A B C of drawing that these two systems, so called, are not systems at all, that no such distinction exists, and that copying prints, etc., is the first step in training the eye and hand simply because it is easier than drawing from the round; but this stage is generally supposed to have been got through before the academical instruction commences. Drawing from the life is the most difficult form of study, and the most useful and final. The whole chapter on Theory and Practice is marked by this kind of error, due to fallacious distinctions reasoned on as if they were rules of art. A very elementary technical knowledge of art learned by a sound system would have prevented the writing of a great portion of this book, and perhaps have enabled the author to get down to deeper veins of thought, where his erudition and extensive research into what has been written would have enabled him to discover some things of real value to the student of art, instead of writing a treatise antiquated before it is published.

The chapter on Taste contains even more fallacies than any other. Taste is denied any positive basis, and the science of the æsthetic is derided as the last invention of German fantasy. The arguments are, that as taste may be affected by habit or utility there is no such thing as abstract taste, and that—

"Likes or dislikes are called tastes and distastes because the preferences and aversions which are connected with food are stronger, more diverse, and more constantly experienced than others. As these preferences are inexplicable, taste is the name of an inexplicable preference. It is no answer to this to say that science has explained some and may perhaps ultimately explain all. Undoubtedly it may. But the meanings of words are fixed by the opinions of those who use them [by authors, that is, and not lexicographers], and 'taste,' with its equivalents in other languages, has been defined without any thought of physiological theories. The term *science of taste* is therefore a self-contradiction."

It would be difficult to find in the literature of æsthetics so illogical a statement as this, in which scarcely an assertion is sound or an inference just. Likes are called tastes for no other reason than that in the formation of language the vocabulary of the physical categories is the first to be formed; when the mental categories follow, the development of mental study (not to use the disputed term *science*), the analogy between physical and mental "likes"—an analogy which lies at the basis of our dual constitution—led to the analogical use of a word already known. The fact that science has already explained some of these physical tastes, and probably, therefore, will explain all, points to the ultimate entire explanation of the analogical mental likes; so much our author admits. But he dissents from a positive conclusion thence by the absurd *non-sequitur* that, as the meaning of words is *fixed* by opinion, and "taste" has been defined without any thought of physiological theories, therefore the term "science of taste is a self-contradiction." Firstly, we have seen that the meaning of words is not fixed, but changes continually, and that those in question have come, from meaning physical likes and dislikes, to be applied to mental preferences. None of the primary words in any language have been formed or given their definition "on physiological theories," because language arose before any theory or science. As science expands its field, we require new uses for words, and these are at first found in analogical significations, but finally, for definiteness, in new words. But as science has explained some tastes, and may all, it is clear that the science of taste has already a foundation and a future, slight as the one, and remote as the other, may be. "But," continues the author, "class preferences of which there are *no apparent explanations* are called tastes," thereby assuming the question at issue, and importing into his definition terms which have no business there. The want of an explanation has nothing whatever to do with the definition of a taste, which is simply an habitual liking, explained or not explained. The continuance of the argument, while it is even more absurd, goes to show why the author persists in this perverse logic: "The true meaning of the assertion that there is a science of taste is, *accordingly*, that there ought to be *no tastes* (!); and as a whole series of inconvenient facts intrudes when this is said, it is not surprising that the world should have eagerly adopted the use of the word æsthetic, which it owes to Germany. No one knows what the term means, and it can be employed without too plain an implication that there are no tastes or ought to be no tastes." The author has a right to say that he himself does not know what "æsthetic" means, but further than this he has no right of assertion. He might, however, easily have learned that it is the word employed to designate those mental likings which have from the want of it been included with the likings whose *raison d'être* lies in the physical nature of man. Taste is too general for scientific use, and, as in all other sciences, a term—æsthetic—was borrowed to distinguish one class of impressions from another when the question of their nature came up for examination.

We have gone at some length into the examination of Mr. Parker's book, because his careful and thorough reading of the authorities on the subject he has treated entitle him to a thoughtful consideration; but it is clear that he has approached the question with a *parti pris* which has only enabled him to see the negative side of the subject. We may be thankful for his thorough exposure of the weaknesses in the arguments of his predecessors in the study, but we owe him no new light—his positive contribution is nil. He does, indeed, put forward Helmholtz as sufficient for all hypotheses, but Helmholtz's explanations of the nature of any form of the beau-

tiful are worth no more than Doctor Liebreich's of the color of Turner and Mulready—that it was due to defects in their vision. Professor Ruskin's second volume of 'Modern Painters' contains many and good arguments on the subject of beauty which Mr. Parker seems not to have known, and certainly has not refuted.

THE LATEST YEAR BOOKS.

Year Books of the Reign of King Edward the Third. Years XII and XIII. Edited and translated by Luke Owen Pike, M.A., of Lincoln's Inn, Barrister at law, author of 'A History of Crime in England.' London: Longman & Co. 1885.

FOR nearly thirty years the British Government has been carrying forward, under the direction of the Master of the Rolls, in a noble and worthy fashion, the publication of "The Chronicles and Memorials of Great Britain and Ireland during the Middle Ages." As a part of their project several manuscript volumes of the Year Books, the early law reports, have been published since 1863. Five volumes of the reign of Edward I., earlier than any before printed, were issued under the editorship of Mr. A. J. Horwood. Then, two years ago, appeared a volume containing the Year Books of 11 and 12 Edward III., prepared by Mr. Horwood, but published after his death by his successor, Mr. Luke Owen Pike. Mr. Pike's labors in that volume were limited to the preparation of the preface and the index. Now we have a volume wholly prepared and edited by him, the 12 and 13 Edward III. And an admirable piece of work it is.

It is well known that the old volumes of the Year Books began with the reign of Edward II. and covered a period of over two hundred years, down to near the end of the reign of Henry VIII. There were, however, many gaps, and among them the period between the tenth and seventeenth years of Edward III. It is the filling of these gaps which the editor now has in hand: and it is a satisfaction to know that materials exist for supplying them all. The old Year Books are a crabbed set of volumes, in abbreviated and often misprinted Norman French; some of them were printed in the fifteenth century, among the earliest books ever printed in England. But there were other sources of difficulty. The student who has floundered among their pages will find comfort in Mr. Pike's quotation from Serjeant Manning, who left a manuscript translation of parts of the unpublished Year Books of Edward III., now in the library of the Inner Temple. "Opposite one report," says Mr. Pike, . . . "Mr. Serjeant Manning, with a frankness not less admirable than his legal skill and his grasp of the ancient law, has written in pencil the following note: 'I cannot understand this case, partly, perhaps, because it is not clearly reported; but probably it is more owing to my not being acquainted with the nature of the subjects in contention.'" But in these fair volumes of the "Rolls Series," not only is the reader furnished with a translation opposite the clear and unabbreviated original text, but this text is itself presented only after it has been dealt with in the careful methods of modern scholarship. Each volume is accompanied by a valuable introduction and a full index. There is, we believe, reason to hope that the recommendation of the record commissioners of some years ago may one day be carried out, and a new edition and translation of the published Year Books be presented as part of the present series.

The style of Mr. Pike's editing is of the best. Those who have examined his 'History of Crime in England' will not be surprised at that. With grave faults in point of construction, that book is one which deserves the praise given it in these columns in 1874 (*Nation*, No 473, p. 60): "It is a mine from which succeeding writers will draw abundantly and safely, for it has the impress of the conscientious student who takes nothing for granted, and who states no fact without solid proof." What distinguished that book was the circumstance which appeared upon its title-page: it was "written from the Public Records and other contemporary evidence." And it is this same search through the original records and collation of various early documents which distinguishes Mr. Pike's work upon the Year Books. As a result of these researches we already have contributions which will seriously affect the conclusions of scholars upon certain contested points in the early law.

In settling his text the editor has collated four manuscripts and has referred to whatever the old abridgments contain. In some cases he has preserved more than one version of a case. Best of all, however, is his comparison of these reports, in various instances, with the authentic "records" of the cases as preserved in that enormous and wonderful collection of judicial rolls in the Public Record Office in Fetter Lane. That is a labor requiring great skill and patience, and one not heretofore attempted in the editing of the Year Books; indeed, nothing but the enthusiasm of a true scholar would carry a man through it. In speaking of one of the cases where this was done, Mr. Pike says: "The search was thus attended with less difficulty than commonly attends searches of a like nature, though there was no escape from the labor of turning over and examining a roll which consists of 475 skins of parchment, about 33 inches long by 10 broad, closely written on both sides, and without any guide to the contents except the names of the counties occurring in the margin, and those not in alphabetical or other systematic arrangement." Few persons know what such an examination means; it must be remembered that the writing is not merely in a close and ancient hand, but it is in the abbreviated and technical Latin of the period, and it relates to matters whose obscurity in many cases is such as Serjeant Manning intimates in the passage above quoted. A hint of the sort of thing these rolls contain may be seen in the two volumes of the earliest of the judicial rolls (6 Rich. I.—I. John inclusive) published in 1835 and edited by Palgrave—the 'Rotuli Curiæ Regis.' Palgrave's volumes are very curious, for they present the text with all its contractions and quaintnesses of form. But the ordinary reader will find something more intelligible in Maitland's admirable edition of the 'Pleas of the Crown for the County of Gloucester' (Macmillan & Co., 1884), in which portions of two rolls of the year 1221 are presented in readable Latin, with an excellent introduction and notes. It was by the exploration of the treasures hidden away in these rolls that Sir Matthew Hale and Selden and Madox enriched their writings—to say nothing of Coke, whose ostentatious pedantry so hampered any profitable use of his learning by himself or others. The history of English law can never be thoroughly written until these rolls are explored. Enormous as the task would be, it may be hoped that the British Government will see its way some day to printing the whole mass of them—down, say, to the nineteenth century: "these are imperial arts." A great service was done in 1811, when a condensed selection of them, from the beginning (6 Rich. I.) down through Edward the Second's reign, was printed under the name of 'Placitorum Abbreviatio.' This abridgment was mainly prepared in Elizabeth's time by the Keeper of the Records of that period. Valuable as it is, however, it was truly said by Palgrave, in publishing the 'Rotuli Curiæ Regis,' that "it will be found by comparing the text now given with the 'Abbreviatio Placitorum' that the latter presents only a very imperfect and mutilated view of the originals, the records contained in this volume [large octavo, 453 pp.] occupying but twelve pages of the folio."

We have space only to mention one or two of the subjects upon which Mr. Pike's introduction to the new volume throws light. One of these is the relative import of the terms *assisa* and *jurata*, and, in particular, the meaning of the phrase *assisa vertitur in juratam*. Mr. Pike seems to have placed this much-canvassed matter in its true light. By referring to the unpublished rolls, contemporaneous with Bracton, to see what, in point of fact, was done in his day in cases where Bracton says that *assisa vertitur in juratam*, and by a careful consideration and comparison of other authorities, he has brought plainly out the fact that not only was *assisa* an equivocal word, but *jurata* also. Each of them indicated a mode of procedure as well as a jury. For example, what happened in 1260 in the actual case of Lodnes v. The Prior of Lewes, cited by Mr. Pike from the rolls, was that in an assise of Darrein Presentment in the Common Pleas, the assise came; that the pleadings then went on, and ended in an issue which was out of the "point of assise," *i. e.*, aside from the one upon which the twelve men had come to speak; that upon this issue the parties put themselves on "the country"; and that a judicial writ of *venire facias* issued summoning twelve other men to try this new issue. "Here, then," says Mr. Pike, "we have a case in which we know from the old writers that the *assisa* was turned into a *jurata*, and in which it is perfectly clear that the change effected was not a change in the functions of the jurors originally summoned, but a change which had the effect of sending them back to their homes and causing others to come, by a wholly different process, to decide a question newly put in issue."

As regards the application of these two phrases as an expression for the twelve men, Mr. Pike refers to the learned inquiries of writers like Biener and Brunner into "the history of the Norman modes of trial, in order to illustrate the origin of the English *assisa* as distinguished from the English *jurata*"; but he declares that "it may be clearly shown that in the earliest English records no distinction between the two terms was recognized, and that, whatever effect Norman influence may have had after the reign of Richard I., the words *assisa* and *jurata* were in that reign only different modes of expressing the same thing, and were interchanged at the pleasure of the officers of the King's court." Mr. Pike, of course, does not fail to recognize that the new issue was sometimes put directly to the assize-men, instead of summoning new jurors; they were themselves jurors—a *jurata*. There was an increasing tendency to do this, and, indeed, "it is most probable that in course of time, and as the system of trial by jury was developed, all questions of fact in proceedings by assize were put to the jurors summoned by virtue of the original writ of assize, except foreign issues."

His point is, that the import of the phrase under discussion is not fully grasped unless it be recognized that *jurata* is there used in the sense of a mode of trial—the mode which was practised under the writs of *Præcipe quod reddat*, where the jury, instead of coming by the summons of the original writ, were called in (if it turned out that a jury was needed) by *judicial* jury process, and where the jury, instead of certifying the facts absolutely—having had a view and having come *parati recognoscere*—certified *ex credulitate*, to the best of their belief, and so not subject to the attaint. When the *assisa* was

turned into a *jurata* the procedure in dealing with the twelve men (sometimes a new jury and sometimes the old one) was the *jurata* procedure and not the *assisa* procedure.

Another matter upon which Mr. Pike presents and illustrates certain valuable new material, is that of early proceedings in Chancery. We cannot enlarge upon this; but we especially commend to the attention of scholars interested in this subject that part of the Introduction from p. xciii to p. cxi; and, in particular, the exposition at p. ci of a case of Scire Facias in this Year Book (p. 96), and a statement, at p. cviii, of a hitherto unpublished case from the County Placita, of the time of Henry V.—"remarkable as being one of the very first, perhaps absolutely the first, in which procee lings by Bill addressed to the Chancellor may be traced from the presentation of the Bill, through the subpœna, and through the pleadings, to the final decision."

The Year Books have much in them to interest others besides legal scholars, especially as regards their language. They are "sources of philological information quite *sui generis*. They are not only a great storehouse of the French language as used in England, but (subject to the errors made by the various transcribers) they also exhibit the language as employed in every-day speech by the most highly educated Englishmen of the period. They are thus, in their diction alone, of inestimable value for two distinct purposes—for comparison with the French language of the Continent, on the one hand; for the illustration of English language and history, on the other." Upon this point the present volume of the Year Books is not especially distinguished from others. But it is distinguished in other respects—by a certain scholarly neatness and accuracy in the translations; by the professional learning and the familiarity with the rolls which enables the editor to perceive and to point out the bearing of these old materials upon important questions; and by that thorough and altogether admirable style of editing to which we have already referred, and which makes it rank with such a book as Nichols's Britton. The editor has well heeded his own purpose: "The end which has been kept in view in editing and translating the reports in the present volume has been to render them accurate, by deriving as much aid as possible from every source of information connected with them."

THE NARRATIVE OF THE *CHALLENGER*.

Reports on the Scientific Results of the Voyage of H. M. S. Challenger, during the Years 1873-76. Narrative. Vol. I. London: Printed for Her Majesty's Stationery Office. 1885. 4to, pp. 1110.

The Narrative of the cruise of the *Challenger*, sketched out by the late Sir Wyville Thomson soon after his return to England, has just been issued by other hands. Commander Tizard, Professor Moseley, Messrs. Buchanan and Murray, members of the expedition, have jointly undertaken to give as far as possible a general account of its scientific results. Mr. Murray, as editor, has had access to the official journals of several of the officers and other members of the *Challenger* Commission. The Narrative is partly illustrated by woodcuts from the drawings and sketches of Dr. J. J. Wild, who accompanied the expedition as artist and private secretary of Sir Wyville Thomson, the Director of the Civilian Scientific Staff.

Free use has been made of the charming volumes published by Sir Wyville Thomson, giving an account of the "Atlantic" voyage of the *Challenger*. In the same way a considerable part of Professor Moseley's contribution to the Narrative appears in the form of revised and modified extracts from his interesting 'Notes by a Naturalist on the *Challenger*,' published in 1877. The introductory chapters are devoted to a résumé of our increasing knowledge of the physical and biological conditions of the ocean up to 1872. It was, of course, natural that in an account of the causes which led to the despatch of the *Challenger* on her momentous voyage, great prominence should be given to the work of British investigators, and considerable emphasis laid on the beginnings of the various enterprises rather than on their subsequent development.

The expeditious of the *Lightning* and *Porcupine* and of the *Shearwater*, in the years 1868-1871, for the pursuit of deep-sea investigations had such interesting results that the Royal Society of London recommended the British Government to fit out an expedition for the examination of the physical and biological conditions of the deep sea throughout the great ocean basins. These recommendations led to the equipment of the *Challenger*, a steam corvette of over 2,300 tons, and in December, 1872, she left Portsmouth, to return, after her matchless explorations, on the 24th of May, 1876. During that time the *Challenger* traversed nearly 69,000 nautical miles, and established 362 observing stations. An influential committee was appointed by the Royal Society of London to draw up instructions to the naval officers and the scientific civilian staff, and nothing which could further the success of the expedition was omitted. Physicists, chemists, biologists, and hydrographers considered most carefully the problems which the *Challenger* expedition might help to solve. And while the principal object of the expedition, the exploration of the oceanic basins, was always kept in view, the solution of many interesting secondary problems has been greatly advanced by the investigations of the *Challenger*.

The route of the *Challenger* is laid out on the Physical Chart of the World which accompanies the Narrative. For the sake of convenience subsidiary charts of limited areas are scattered throughout the volumes. We must confess to a certain degree of disappointment at the execution and details of the general chart. The contour lines given do not in any way represent our knowledge of the configuration of the bottom of the oceanic basins, nor does the chart give more than a very rough sketch of the topography of the oceanic floors, although the scale is large enough to have included many additional contour lines and something at least of the nature of the bottom.

A chapter is devoted to a minute description of the arrangement of the *Challenger's* decks, of the workrooms, and of the geological and chemical laboratories, fitted up for the special work of the expedition. This is followed by a full account of the methods of observation at sea, including the apparatus employed and the mode of sounding. The Hydra and Baillie sounding machines were both used by the *Challenger*—the Baillie machine after leaving Cape Verde Islands. But all the soundings of the *Challenger* were made with rope: neither the Thomson wire machine nor the Siemens electric thermometer was employed. The dredging of the *Challenger* was carried on by dredges of the usual shape, modified, however, by having the tangles of Captain Calver, which were dragged from a bar attached behind the bag. The ordinary beam trawl was used by the *Challenger* most effectively in very deep water. Finally, the pelagic animals were everywhere collected by means of the common tow net, and during the last part of the cruise they were frequently attached to the dredge lines, the dredges, and trawls.

The collection of information regarding the distribution of temperature in the waters of the ocean was of course one of the chief objects of the expedition. The instrument used to obtain the temperature of the bottom and of intermediate layers was the Miller-Casella thermometer, a self-registering instrument, protected against great pressure, but not possessing the necessary degree of accuracy or delicacy. The Negretti and Zambra thermometer, modified by Mr. Ferguson, of the *Challenger*, promises to supersede the Miller-Casella in deep-sea work. Great care was taken on board the *Challenger* to collect specimens of water from different depths, and to observe their specific gravity and salinity. Mr. Buchanan made a large number of analyses during the voyage to ascertain the gases and the amount of air contained in the water. One of the most interesting chapters of the Narrative is the account by Mr. Buchanan of the result of his own and Professor Ditmar's work in regard to the composition of sea-water and its physical and chemical properties.

It would lead us too far to follow the route of the *Challenger* in detail; suffice it to say, that the Atlantic was crossed and recrossed from east to west and from north to south. The Azores, Cape Verde Islands, St. Thomas, Halifax, New York, the Bermudas, and St. Paul's Rocks, were visited in the North Atlantic. To the facile pen of Sir Wyville Thomson we owe an interesting account of the geology and botany of the Bermudas. The oceanic islands everywhere furnished an interesting field for the naturalist of the expedition, and no more captivating study could be found than the geology of St. Paul's Rocks, of Fernando Noronha, or of Ascension, or Juan Fernandez, as interpreted by Messrs. Murray and the Abbé Renard. Equally interesting to the biologist are the descriptions by Professor Moseley of the penguin rookeries of Inaccessible Island, of the botany of the Kerguelen Islands, and his chapter on the ethnology of the Admiralty Islands, or the discussions of Murray on coral reefs, on the surface fauna, the characteristics of oceanic basins and the nature of the deposits brought up from their floor. The experience of the *Challenger* in the Southern Ocean while forcing its way for a time into the Antarctic pack, and exposed not only to the fury of the gales of those regions, but to the risks of collision with Antarctic icebergs, was one not easy to be forgotten by the ship's company. It must have been a very great relief when the ship was turned toward the more hospitable shores of Australia.

Scattered though the volumes are short résumés written by the specialists who have prepared the different Reports on the scientific results of the expedition. They are accompanied by figures of the more interesting and striking animals of each group. Those who care for greater detail will find in the Reports thus far published a full account of each group. Eleven large quarto volumes containing no less than fifty-six separate memoirs have thus far appeared. They are all profusely illustrated, and have been prepared by the most eminent specialists in each department. Not less than forty additional memoirs are yet to be published before the scientific results can be fully discussed by Mr. Murray, the editor of the Reports, who has had the charge of this gigantic undertaking since the death of Sir Wyville Thomson in 1882.

The great value of the Reports of the *Challenger* lies in the fact that it is really the first great scientific expedition of which the materials have been given for elaboration to the best equipped specialists. As a natural consequence, each investigator has been able to draw from his materials deductions and far-reaching generalizations which it would have been impossible to obtain in a less special way. We may be allowed to mention here as examples of what can be done the Reports on corals by Moseley, on the Foraminifera by Brady, on the Crinoidea by P. H. Carpenter, and on Echinoidea by Agassiz.

During the passage on the 13th of December,

the expedition had the misfortune to lose Dr. Von Willemœs Suhm, a most promising young naturalist, a pupil of Von Siebold, who had joined the *Challenger* expedition at the invitation of Professor Thomson. His early death was felt as a great loss to the expedition by Sir Wyville Thomson, who followed him only a few years later, while in the midst of the discharge of the duties connected with the expedition, leaving a name which will always be connected with deep-sea explorations.

Military Manners and Customs. By James Anson Farrer, author of 'Primitive Manners and Customs,' etc. Henry Holt & Co. 1885.

THE object of this book is to prove the brutality and utter barbarity of war; to show by copious examples that the words "soldier, thief, and murderer" are nearly if not quite synonymous terms; to prove that mediæval chivalry is a myth, and modern military honor and humanity a delusion existing only in books and the finer imaginations of a few; to "show that there is no real progress in war," the wars of the present generation being in every way as brutal and debasing as those of Alexander and Cæsar—in short, to make war upon the very idea of war, as it is understood to-day and as it was understood in past ages. "We clearly drive militarism to its last defences if we deprive it of every period and of almost every name on which it is wont to rely as entitling it to our admiration and esteem."

An indictment of this character is little less than an arraignment of the history of mankind, in which force in some form has always been the ultimate argument. This is certainly a large subject to be disposed of in a duodecimo, and it is therefore not a serious reflection upon the author to say that, considered as a well-digested argument against an existing system for which he proposes a proper remedy and substitute, his book is painfully inadequate. His indiscriminate abuse of everything connected with the military profession detracts from the confidence which would otherwise be reposed in his judgment by reason of his great erudition in military history; while his desire to destroy war by attacking it at every period of its history makes him blind to the logic of his own examples. He relates instance after instance of cruelty and suffering in the successive periods, and then states that they are all equally bad; yet an examination of his own citations shows at once that the greatest number and the most flagrant cases are from the wars of the Middle Ages; and this leads to the conclusion that the manner in which war is conducted is a mere reflex of the civilization of the period.

In its main purpose, therefore, of proving the absurdity of war, the book is not altogether successful; but as a scrapbook of curious and quaint bits of information concerning military matters, the origin of various military customs, the practice of different nations, ancient and modern, civilized and barbaric, the book is full of interest. For instance, it is interesting to know that in the fourteenth century several bishops contracted to furnish a stated number of men-at-arms for a fixed percentage of the Parliamentary grant; and there is a charming ferocity about the extracts from the 'Treatise on Tactics' by Emperor Leo VI., in which he recommends "cranes, to let fall on the enemy's decks caltrops, with iron spikes, to wound his feet; jars full of quicklime, to suffocate him; jars containing combustibles, to burn him; jars containing poisonous reptiles, to bite him; and Greek fire, with its noise like thunder, to frighten as well as burn him." We are also entertained by knowing that the Chevalier Bayard made a considerable fortune from ransoms, and again by reading Montluc's lament over the invention of the musket, which enabled cowards to kill brave men, while they "would not so much as dare look at the man whom they knock down from a distance with their accursed balls."

All this and much more of the same sort is as diverting as a chapter from Froissart, but it is far from being the main purpose of the book, which is to prove that war is a needless crime, the source of nearly every other evil, and "the main cause and sustenance of pauperism and disease." The author believes that war will cease as soon as people appreciate its absurdity and its criminal character. He arraigns the Church—and with great justice—because during "the miserable days of chivalry," when its power was at its height, it threw its great influence in favor of war rather than against it; and he argues that if a small part of the ingenuity that has been wasted in sophistical apologies for war had been expended in discountenancing it, and in contriving other expedients of a more rational character to take its place, it would long since have fallen into disuse. It is evident that the lines of a review afford no space for the argument of so fundamental a question.

Essays and Speeches of Jeremiah S. Black. With a Biographical Sketch. By Chauncey F. Black. D. Appleton & Co. 1885.

THE character of Judge Black is a striking example of the inconsistencies of human nature. If we were to reconstruct him from these speeches, we should say that he was a bigoted, violent, and even savage partisan, furious in his hatred of those who differed with him politically, and incapable of seeing any side of a matter but his own. Yet we know from other sources, as well as this biographical sketch, that he was sincerely religious, incorruptibly honest, generous to a fault, a genial companion, a sturdy patriot, and a devoted friend. Such characters relieve human nature of insipidity. They impart the variety that gives its spice to life. It is probably true that when one is the object of the animosity of a good hater, the excellences of that character are not very conspicuous; nevertheless it has its charm. There is nothing hypocritical about it; it is impulsive, genuine, hearty. A good hater Judge Black certainly was, but much can be forgiven to him, for he also loved much.

As we have intimated, there is little in this volume to show the genial side of the man. With the exception of some addresses before agricultural societies and the like, the great bulk of the matter is controversial. We cannot say that its literary merit is high—"that his diction was richer than Macaulay's and more brilliant than that of Junius," in the enthusiastic words of one of the author's eulogists. He is said to have committed Horace to memory before he was fifteen, and to have translated it into both prose and verse; but his schooling ceased when he was seventeen, and the demands of active life doubtless prevented him from devoting much attention to the perfection of his style. Hence his culture seems superficial; he stuffs his writings with hackneyed quotations and trite classical allusions. Those hard-worked celebrities, Cæsar, Herod, Nero, the Roman proconsuls, the Goths and Vandals, and a hundred others that figure in schoolboys' compositions, are kept unsparingly at labor in illustrating the events of modern political life. This kind of writing being easy, the reading of it is correspondingly hard, and even when the matter is in itself of high interest, the intolerable diffuseness of treatment renders it wearisome. The events that Judge Black beheld, and of which he was a part, were highly dramatic; but his fatal facility and facundity seem to have prevented him from leaving us a single vivid description.

It is in his forensic efforts that he appears to the best advantage, although even there his passionate nature chafes and struggles under the restraints of professional propriety. Yet when held within bounds this *sæva indignatio* elevates his style to passages of genuine eloquence, for the feeling of the man upon certain subjects was so intense as to burn the dross out of his diction. It is easy to believe that when he was thoroughly in earnest his oratory was of commanding power. Thus in the great Milligan case his soul was stirred to its very depths. That case, it will be remembered, involved the right of a military commission, sitting in a State in which war did not exist, and where the courts of the United States were in regular session, to seize and put to death citizens unconnected with the land or naval forces. Such a violation of the liberties of freemen roused both the lawyer and the man, and stimulated him to flights almost equal to those of Erskine. Nothing could be more characteristic, however, than this illustration of his conception of charity:

"The commissioners are not on trial; they are absent and undefended; and they are entitled to the benefit of that charity which presumes them to be wholly unacquainted with the first principles of natural justice, and quite unable to comprehend either the law or the facts of a criminal cause."

Like Andrew Jackson, whom he greatly admired and greatly resembled, Mr. Black was of Scotch-Irish descent. We know not whether the theology of this people inclined them to accept the tenets of the old Democratic party, but it is easy to see that Calvinistic doctrines would prepare them to hold firmly to apparently irreconcilable political theories. During the period before the civil war, a Democrat had to maintain at once that every subject was a freeman and that the negroes must remain slaves. The Constitution of the United States, which was politically what the Divine Decrees were in theology, ordained liberty to the whites and slavery to the blacks. The Constitution could not be changed; *Fiat lex, ruat justitia*, as old Justice Maule said. Slavery might be morally objectionable, but it could not be constitutionally disturbed, and that ought to be an end of the matter, according to Democratic feeling. Hence their bitter hatred of the abolitionists, for the abolitionists could not succeed without destroying the Constitution. Fortunately the secessionists made a beginning, *solvitur ambulando*, and the Democrats were free to fight the rebels and denounce the Black Republicans with consistency and vigor. We believe that Judge Black was sincerely loyal; but the disturbance of the Constitution was to him an intellectual, almost a religious, shock, and he was never quite coherent about it. It is pleasanter to follow him when, animated by a generous sympathy for the poor and helpless, he exposes the corruption of the Legislature of his own State, and denounces the oppressive monopolies that have governed it so long and so cruelly. With all his faults, he was an honest man, fearless in his devotion to what he believed to be the truth; and herein lies his chief claim to the honor of his countrymen.

Discourses in America. By Matthew Arnold. Macmillan & Co. 1885.

THE three lay-sermons which Mr. Arnold delivered in America were at the time the text of criticisms innumerable, though rather of the author than of his matter; and he would truly lack pity who should make the present publication of them in a book an excuse for stretching out longer the Rhadamanthus of Emerson on the tough rack of ordinary mortal opinion. Lay-sermons we call them because they deal so exclusively with universal truths. The first, that on Numbers, enun-

ciates a truth confessedly from "the sages and saints," Greek and Jew, and declares it applicable to every nation and every age indifferently; to wit, that wisdom and virtue belong to an aristocracy which is the leaven of the state, and if they fail, then, to speak after the vulgar, your bread is dough. In the second lecture, an academical polemic with Huxley, this same addiction to generalities—in the main, the assertion that education should by preference include knowledge operating intimately and directly on conduct—was so complete that audiences as a rule were as little interested in it as in a discussion of lunar optics. In the case of the last lecture, too—that on Emerson, which has been a puzzle to many and an offence to more—an explanation of its effect may be found in that same remoteness which in the others had caused their neglect. Emerson was treated as if he were already a classic, known only through his books, and the criticism applied to him rested on what may be called the universals of literature; but at Concord and Boston Bay Emerson is not a book, but a man—not a classic, an utterer of universal and time-dissociated truth, but the utterer of truth that had a special propriety to the hour's need, a particular applicability and force at a stage of New England thought. To his audience his words had often the magical power of releasing vague aspiration into the form of intellectual light; by others, who only apprehend his meaning as thought without at the same time experiencing it as a mode of seemingly miraculous power, the very same words may be very differently rated. The critic reads *Open Sesame* quite plainly, and says they are pretty syllables enough; but when they were spoken, what a treasure they revealed! That treasure Mr. Arnold could not see, just as Prince Posterity and his Regent, Time, will have no eyes for it. Mr. Arnold wrote of his subject like one born in the next century, and he suffers only the common fate of men who insist on being in advance of their age. He used in his analysis only the materials open in the case of all classics who are a voice and no more, and thus was obliged to restrict himself to the universals of literature, as has been said; whether his conclusions are sound, it would be premature to inquire while the Funeral Oration is still proceeding through the long hour that hushes every voice within audible reach of Concord.

One word more, one little question that we cannot forbear to ask. When one has reread these pages, is it the sense of irony that leads him to turn back to the preface, where the preacher, contemplating "the House of Lords a danger, and the House of Commons a scandal," and the middle class that exalts "the Rhetorician," Gladstone, and submits to him with "the formula of that submissive animal which carried the Prophet Balaam"—is it the sense of irony, we wonder, which leads one to reperuse the words in which this preacher finds his consolation, not in the maxims of Greece or the exhortations of Judæa or the note-book of Marcus Aurelius even, but in the very mundane, particular, and true Briton fact that, though the leaders are rhetoricians and the masses unyoked to the will of "the Remnant," yet "the individual Englishman, whenever and wherever called on to do his duty, does it almost invariably with the old energy, courage, virtue"?

The Rise of Intellectual Liberty, from Thales to Copernicus. By Frederick May Holland. Henry Holt & Co. 1885.

THIS title is unfortunate, for it seems to imply that the history of free thought in ancient and in Christian times presents a continuous development. The story itself, however, is truly told, its parts judiciously proportioned, and the relations of the different events and phenomena ably brought out. Moreover, all that tediousness which is apt to belong to comprehensive sketches of history is entirely avoided; the book is decidedly one to sit up late over. The most original part of the work is the concluding chapter, in which the author undertakes, by an inductive examination of history, to settle such questions as whether rationalism is favorable to morality, whether Christianity tends to the development of women's minds, whether the world's best work is done by book-men, etc. Mr. Holland claims special credit for having kept his mind free from prejudice in this investigation. He even goes so far as to say, "I did not start with the intention of proving anything; and it was only when I was ready to write the last chapter, that I found myself justified in drawing the conclusions set forth." And again, "In this narrative . . . I have not had a single specific proposition before me, as desirable or possible to be proved. It was not until I had finished the previous chapters, that I inquired what I had found out. In the final revision, I saw that some general principles had been well enough established to be worth mentioning."

These sentences seem to betray a want of acquaintance with the true rules of scientific induction. The choice of the instances upon which an induction is to be based must not be influenced by any foregone opinion upon the question to be tested by those instances. Such influence may be guarded against in various ways: by selecting only instances concerning which it is not known which side of the question they will favor; by choosing them by the mechanical action of chance; or by taking all the instances known. But it is so far from being hurtful to have settled upon definite hypotheses which the instances are taken to put to the test, that, without so much prejudice as that, the induction is radically faulty. Pure historical induction, without any preconceptions, could never yield any general truths concerning human nature. How were the principles of physics established? The famous third dialogue of Galileo is not a purely inductive inquiry. It is guided, as all other physical investigations have been, by the conviction that the true law is a simple one: that is to say, one natural and easy for the human mind to conceive. In short, physical science has been attained by the development and correction of our natural instincts about forces, space, time, and matter. In like manner, anthropological science must proceed by the development and correction of our natural instincts about our fellow-beings. We know enough about human nature to answer all the questions in Mr. Holland's concluding chapter with a considerable degree of probability, quite independent of history. If we put our opinions so formed to the test of historical induction, we may have good hopes of making valuable additions to our knowledge. Though Mr. Holland does not seem to be aware of it, this is the course which he has himself pursued in great measure. His readers can see, if he cannot, his prepossession in favor of rationalists and of women, in reference to every possible advantage of head and heart. But his logical procedure would have been much stronger if he had himself fully understood what its nature really was.

A Companion to the Revised Old Testament. By Talbot W. Chambers. Funk & Wagnalls. 1885.

HAVING laid before our readers, in our notices of the Revised Old Testament, our own view and estimation of the work done or left undone by the Revisers, we should have to be guilty of not a little repetition were we to enter upon a critical analysis of the volume before us. We can, however, unhesitatingly recommend Doctor Chambers's 'Companion' as a book containing a large amount of valuable information, pleasantly presented, on the origin, execution, and merits of the Revision, and on various other topics of Biblical interest more or less closely connected with the subject. Doctor Chambers writes with the warmth, earnestness, and knowledge of a colaborer, and is, at the same time, free from all personal assumption. He writes for the public at large, and, though often explaining points of linguistic import, avoids the least display of Hebrew erudition. No word in Hebrew or Greek letters disturbs the even flow of his popular exposition. He is in unqualified sympathy with the Revision, and, for this reason, as well as through avoidance of learned details, occasionally wrongs the Authorized Version. Thus, for instance, when speaking of "Uniformity" (p. 47), he says: "In this respect the Authorized is sadly deficient. In many cases the same Hebrew word is variously rendered, when there is no reason, rhetorical or logical, for the variation. . . . For example, in Numb. xxxv. the same Hebrew word is translated in v. 11, the *slayer*; in v. 12, the *man-slayer;* and in v. 16, the *murderer*." No explanation accompanying this statement, the reader is led to infer that King James's translators sometimes put down their renderings with frivolous disregard of consistency. The renderings in question prove the very opposite. V. 11 speaks of "the slayer . . . which killeth any person"; as the Hebrew word translated *slayer* is not compounded with a word meaning *man*, it was certainly unnecessary to add this word, in English, before "person." V. 12 does not contain "person"; hence the rendering, in explicit form, "manslayer." These two verses speak of killing with unproved murderous intent; but this is not the case with v. 16, which means to say, The full guilt is proved; the killer "is a murderer: the murderer shall surely be put to death," as the Authorized has it. The Septuagint, too, uses three different renderings of the same Hebrew word, though with less consistency—ὁ φονεύων, ὁ φονεύσας, and ὁ φονευτής (*cf.* vv. 11, 12, 16-19, 21). Whether the translators of 1611 had a right to improve upon the original text by altering its wording, which—as the Revised preserves it—says that not every manslayer is a manslayer, but certain manslayers are manslayers, and consequently punishable with death, into words meaning that not every slayer of a person, or manslayer, is a murderer, and that only a real murderer shall be put to death—is another question, upon which opinions may be fairly divided. King James's translators believed they were bound to express the obvious *meaning* of the original text; the Revisers deemed it their duty to restore it *literally* with its imperfections, derived from a limited vocabulary. The former had certainly excellent reasons, both rhetorical and logical—though perhaps not decisive—for their course. Doctor Chambers's specifications of the changes introduced by the Revisers are very numerous. They occupy four out of the ten chapters of his book. Five chapters treat of "The Need of a Revision," "The Method of a Revision," "The Text of the Old Testament," "The American Appendix," and "The Importance of the Old Testament"; and the last presents "The Names of the Revisers, British and American," with brief biographical notices.

Justice and Police. By F. W. Maitland. Macmillan & Co. 1885.

THIS fourth volume of the excellent "English Citizen" series is devoted to an account of the administration of justice in England. It is not within its scope to describe English law in gene-

ral, but merely to show how that law is practically applied. In the words of the author, "By the *Justice and Police* of a country are meant those institutions and processes whereby that country's law is enforced; whereby, for example, those who are wronged obtain their legal remedies, and those who commit crimes are brought to their legal punishments." It can hardly be said that this is a fascinating subject. It would have been easy to compile a descriptive manual of this kind that should have been so heavy as to be unreadable, and we were prepared, upon taking up the book, to brace our sinews for a shrewd tussle with arid statistics. We confess to a most agreeable disappointment. The style of the author is so clear, his mastery of the subject so perfect, his arrangement so systematic, and his sense of perspective so just, that we are led along as by a narrative, and find ourselves at the end of an agreeable entertainment possessed of an amount and kind of knowledge that is most satisfactory. The only drawback to our pleasure is the feeling that it is impossible that the matters here treated can be so simple as Mr. Maitland makes them seem. We are so used to regard English institutions as too complicated for explanation that we are suspicious of the actual production of order out of chaos. But we must admit that we have only *a priori* grounds for such hesitancy, and that we have failed to discover a single inaccuracy of statement in the whole treatise.

We can best give an idea of the contents of this book by quoting the t tles of some of its chapters. After indicating the domain of English justice, and showing with admirable skill the distinction and lack of distinction between civil and criminal justice, the author proceeds to describe the County Courts, the High Court and Court of Appeal, the House of Lords and the Chancellor, the various orders of the Magistracy and the Constabulary. There is a valuable chapter on Law and Equity, a brief account of civil execution and bankruptcy, and a series of chapters upon the arrest, examination, and prosecution of criminals, the criminal courts, and the procedure in criminal trials. These latter chapters seem to us to be the most masterly, and we should suppose from them that the author must be himself versed in criminal practice, although he is careful to acknowledge in the preface his indebtedness to Mr. Justice Stephen.

We do not hesitate to commend this book to American readers who wish to understand the system of justice under which they live. The information here given is not interesting to lawyers alone. It is knowledge that is essential not only to a proper understanding of a great deal of English history, but also to the full comprehension of our own institutions. There is, so far as we know, nothing like this book for the use of "the American citizen," but even if there were, this book would serve an excellent purpose as an introduction. As it is, we should say that whoever will read it will find many dark things in our administration of justice made clear to him, and in fact, without the knowledge here contained, many things in our system cannot be explained at all. We took over the English system almost bodily, and we have not yet eliminated certain features that arose solely from the peculiarities of English development, and that have no logical *raison d'être* in this country.

BOOKS OF THE WEEK.

Allerton, Ellen P. Annabel and Other Poems. John B. Alden. 70 cents.

Bishop, W. H. Fish and Men in the Maine Islands. Illustrated. Harper's Handy Series. 25 cents.

De Muldor, C. The Philosophy of Art in America. W. R. Jenkins. 50 cents.

D'Haussonville, Viscount. The Salon of Madam Necker. Harper's Franklin Square Library. 20 cents.

Douglas, E. The Queen of the Hid Isle. A Drama. Tribner & Co.

Fort, G. F. An Historical Treatise on Early Builders' Marks. Illustrated. Philadelphia: McCalla & Stavely.

Holst, Dr. H. von. The Constitutional and Political History of the United States, 1854-1856. Kansas-Nebraska Bill—Buchanan's Election. Chicago: Callaghan & Co.

Walpole, A. S. Phædrus. Select Fables. Macmillan & Co. 40 cents.

Welch-Duffield. Eutropius. Macmillan & Co. 40 cents.

Welch-Duffield. Cæsar's Invasion of Britain. Macmillan & Co. 40 cents.

Waters of Hercules. A Novel. Harper's Handy Series.

Wilson, A. The Abode of Snow. [Travellers' Series.] G. P. Putnam's Sons. 50 cents.

Wright, W. A. Shakespeare Select Plays. Twelfth Night or, What You Will. Oxford: Clarendon Press.

HENRY HOLT & CO., 29 West 23d St., N. Y., have now ready a new descriptive catalogue of their Educational Publications and will send it to any one who applies, referring to this advertisement.

Johns Hopkins University,
BALTIMORE.

Studies from the Biological Laboratory.

Vol. III., No. 3 (72 pages, 4 plates), now ready.

CONTENTS:

The Cranial Muscles of Amia Calva (L), with a consideration of the Relations of the Post-Occipital and Hypoglossal Nerves in the Various Vertebrate Groups. By J. PLAYFAIR McMURRICH.

On the Endings of the Motor Nerves in the Voluntary Muscles of the Frog. By CHR. SIHLER.

Marine Larvæ, and their Relation to Adults. By H. W. CONN.

Price 70 cents. Subscription for the volume, of about 500 pages, $5.00.

HARVARD UNIVERSITY.

The QUINQUENNIAL CATALOGUE of 1885 and the ANNUAL CATALOGUE of 1884-85 are for sale by Charles W. Sever, University Bookstore, Cambridge, Mass. Prices, postage prepaid: Quinquennial, $1.10; Annual, 60 cents.

SCHOOL BOOKS IN FOREIGN LANguages. Miscellaneous Books in Foreign Languages. Catalogues on application. Foreign Periodicals. CARL SCHOENHOF, Importer, 144 Tremont St., Boston.

CATALOGUE NO. 19, Miscellaneous in its character, ready. A. S. CLARK, 34 Park Row, New York.

Standard Classic Atlas,
WITH INDEX,

Containing complete and authoritative maps of places mentioned in Ancient History and the Classics, engraved on steel, with tinted boundaries. The Index gives the latitude and longitude of places mentioned in the maps, with both their ancient and modern names.

Price by Mail, $2.50.

Webster's Condensed Dictionary.

800 Pages. 1,500 Illustrations.

An entirely new compilation. It treats about 60,000 words, and in its etymologies and definitions is more thorough and accurate than any other abridged dictionary. A Pronouncing Vocabulary of 24,000 Proper Names is given in the Appendix. *For sale by all booksellers.*

Price by Mail, $1.80.

Handy Atlas of the World.

Contains, among many other valuable features, Maps showing Standard Time, Railway Maps of all the States, Commercial Map of the United States, Maps of the Principal Cities of the Union, Recent Polar Explorations, Central Africa, Egypt and the Soudan, Alaska, etc., etc.—in all, 38 maps and valuable statistics. *For sale by all booksellers.*

Price by Mail, 50 Cents.

The Nation

VOL. XLI.—NO. 1049. THURSDAY, AUGUST 6, 1885. PRICE 10 CENTS.

D. APPLETON & CO.

PUBLISHED JULY 31:

I.

COMPLETION OF OWEN MEREDITH'S NEW POEM.

Glenaveril; or, the Metamorphoses.

A POEM IN SIX BOOKS. By the Earl of Lytton, author of 'Lucile.' Books IV., V., and VI. in One Part. 12mo, paper. Price, 50 cents. Completing the work.

BOOK I. THE ORPHANS.
BOOK II. FATALITY.
BOOK III. THE ALPS.
BOOK IV. THE GUARDIANS.
BOOK V. THE LOVERS.
BOOK VI. CORDELIA.

I may say at once that this strikes me as the freshest, the strongest, the most varied, and entertaining volume of new verse I have ever had occasion to review. The poem has the discursive freshness and force of extremely brilliant conversation. It may possibly prove an epoch-making book. It is almost certain to have many imitators.—*Academy.*

☞ The work complete in one volume, cloth, will be published next week.

II.

School Edition of Hodgson's Errors in the Use of English.

A CLASS BOOK FOR USE IN SCHOOLS BASED ON HODGSON'S WORK. Compiled and edited by J. Douglas Christie, B. A., Master of Modern Languages, Collegiate Institute, St. Catharines, Ontario. 12mo, vii.—135 pages, cloth. Price, 75 cents.

The subject matter has been entirely rearranged, and by thorough subdivision made more serviceable for both teacher and pupil.—*From Prefatory Note.*

III.

The Guardsman's Hand-Book.

COMPILED AND ARRANGED FOR THE USE OF THE RANK AND FILE (INFANTRY) OF THE MILITIA FORCES OF THE UNITED STATES. By N. Hershler. 18mo, 136 pages, cloth. Price, 60 cents.

This little work was undertaken with the view of presenting in a convenient shape, for the use of the *rank and file* of the National Guard, such principal and practical details of instruction as are necessary to every soldier in his duties, the compiler believing it highly necessary that the guardsman should not be *wholly* dependent upon the instruction which he can obtain, only at long intervals, in the company drill-room, but be enabled by study *in his own time* to perfect himself in his duties.—*From the Preface.*

IV.

The Maurice Mystery.

A NOVEL. By J. Esten Cooke, author of 'The Virginia Comedians,' &c. 12mo, paper, Price 25 cents.

The mysterious has always been one of the most attractive elements in fictitious literature. Mr. J. Esten Cooke has thrown his whole strength into developing the singular mystery that overshadowed the Maurice family from its origin to its final startling disclosure.

V.

Cattle-Raising on the Plains of North America.

By W[illegible]on von Richthofen. 12mo, 102 pages, cl[illegible]e 75 cents.

Having lived in[illegible]do for many years, and being engaged in [illegible]stock, I have become fully acquainted with [illegible]e business. There being no book of which [illegible]heard that treats of cattle raising in the We[illegible]and systematically, I hope this publicatio[illegible]be of use to those of my readers who conte[illegible]ate embarking in this great industry.—*Author's Note.*

VI.

Appleton's Dictionary of New York and Vicinity, 1885.

An alphabetically arranged Index to all Places, Societies, Institutions, Amusements, and other features of the Metropolis and Neighborhood, upon which information is needed by the Stranger or the Citizen. Revised and corrected for 1885. With Maps of New York and Vicinity. Paper. Price 30 cents.

VII.

Elements of Modern Medicine.

INCLUDING PRINCIPLES OF PATHOLOGY AND THERAPEUTICS, WITH MANY USEFUL MEMORANDA AND VALUABLE TABLES FOR REFERENCE. Designed for the Use of Students and Practitioners of Medicine. By R. French Stone, M. D., Professor of Materia Medica, Therapeutics, and Clinical Medicine in the Central College of Physicians and Surgeons, Indianapolis, &c. 12mo, xii.—369 pages, leather, with pocket and tuck. Price, $2 50.

It has been suggested that an abridged work presenting the more advanced views of leading authorities throughout the world, with reference to *general pathology and therapeutics*, considered in connection with certain other points of practical importance, if arranged for convenient and ready reference (and of suitable form to be carried in the pocket), might prove of infinitely more value to a busy practitioner than many larger and more cumbrous volumes which fill the shelves of our libraries.—*From the Preface.*

*** *For sale by all booksellers; or sent by mail postpaid, on receipt of price.*

D. APPLETON & CO., Publishers, 1, 3, & 5 Bond St., N. Y.

G. P. Putnam's Sons,

27 and 29 W. 23d St., New York,

HAVE LATELY PUBLISHED:

I. NEW YORK AND THE CONscription of 1863. A Chapter from the History of the Civil War. By James B. Fry, Asst. Adjt.-Genl. and Bvt. Major-Genl., U. S. A., late Provost-Marshal-General of the United States. Letter-press edition, limited to 500 copies. 8vo, cloth, 75 cts.

II. THE TRAVELLER'S SERIES. Sketches of People and Places. 6 vols., 16mo, paper, per volume, 50 cts. Comprise 'The Great Fur Land,' 'Italian Rambles,' 'Studies of Paris,' 'The Abode of Snow,' 'A Lady's Life in the Rocky Mountains,' 'Tent Life in Siberia.'

*III. HOW SHOULD I PRO*nounce? or, The Art of Correct Pronunciation. By W. H. P. Phyfe. 16mo, cloth, $1.25.

"There is no book upon this subject, whether popular or profound, that considers the question of pronunciation in its most general sense—no work sufficiently simple and brief, on the one hand, to meet the wants of ordinary people, and yet sufficiently complete and accurate, on the other, to satisfy those of more scholarly attainments. Such a book I have endeavored to prepare."—*Author's Preface.*

"I appreciate its value, and endorse your work as a most serviceable aid to all who wish to speak our language correctly."—*Edwin Booth.*

RECENT NOVELS.

IV. A NEW ENGLAND CONscience. By Belle C. Greene. Uniform with Litchfield's 'Only an Incident.' 16mo, cloth, 75 cts.

V. ONLY AN INCIDENT. A Story of a Country Town. Second Edition. By Grace D. Litchfield. 16mo, cloth extra, 75 cts.

"The literary style is excellent, nor is the author wanting in a keen appreciation of what is humorous in provincial life."—*New York Times.*

VI. THE KNIGHT OF THE Black Forest. By Grace D. Litchfield, author of 'Only an Incident.' Illustrated. 16mo, cloth, 75 cts.

"The author to her literary skill adds an appreciative expression of the spirit of comedy that is exceptionally good. It is a clever performance that ranks the author's ability somewhat higher."—*Globe, Boston.*

READY NEXT WEEK.

VII. A SOCIAL EXPERIMENT. By A. E. P. Searing. Uniform with Litchfield's 'Only an Incident.' 16mo, cloth, 75 cts.

BOOKS OF THE WEEK 121

TERMS OF SUBSCRIPTION.

Three Dollars per year, in advance, postpaid to any part of the United States or Canada; to foreign countries comprised in Postal Union, Four Dollars.

The date when the subscription expires is on the Address-Label of each paper, the change of which to a subsequent date becomes a receipt for remittance. No other receipt is sent unless requested.

The paper is stopped at expiration of the subscription, unless previously renewed.

Remittances at the risk of the subscriber, unless made by registered letter or by check or postal order payable to Publisher of the NATION.

When a change of address is desired, both the old and new addresses should be given.

Address THE NATION, Box 794, *New York.*
Publication Office, 210 Broadway.

TERMS OF ADVERTISING.

[No deviation.]

On any page not specified, 15 cents per line each insertion; with choice of page, 20 cents.

A column (140 lines), $20 each insertion; with choice of page, $27.

A page (3 columns), $60 each insertion; with choice of position, $80.

Twenty per cent. advance for top of column or other preferred position, when specified; where positions are not specified, advertisements are classified as far as possible and arranged in order of size, the largest at the top.

Twenty per cent. advance for cuts, fancy or other letters not comprised in THE NATION fonts, and all other special typography. (Subject to approval.) Cuts are inserted only on inside pages of cover or fly-leaves, not on outside of cover, nor on pages numbered for binding.

Marriage and Death Notices, 50 cents each.

DISCOUNT on yearly accounts amounting to $250, 10 per cent.; $500, 15 per cent.; $750, 20 per cent.; $1,000, 25 per cent. Credits are made December 31. On a yearly account amounting to 52 pages the discount is one-third.

Advertisements must be acceptable in every respect. Copy received until Tuesday, 5 P. M.

THE NATION is sent free to those who advertise in it, as long as advertisement continues.

The EDITION of THE NATION this week is 8,700 copies. The Subscription List is always open to inspection.

Scale of Agate lines. — 5 — 10 — 15

*** Copies of THE NATION may be procured in London of B. F. Stevens, 4 Trafalgar Square; George Street, 30 Cornhill, E. C.; H. F. Gillig & Co., 449 Strand; and American News Reading Room, 8 Haymarket.

R. W. TUNSTALL, B.A. }

VIRGINIA, Petersburg.

*UNIVERSITY SCHOOL.—TWENTY-*first annual session begins first Monday in October. Thorough preparation for University of Virginia, colleges of highest grade, and U. S. Naval and Military Academies. Full staff; climate mild, yet bracing; location very healthy; pupils uniformly successful. For catalogues address W. GORDON MCCABE, Head Master.

References: Chas. M. Fry, President Bank of New York; Jos. W. Harper, Jr., of Harper & Bros.; and Geo. H. Byrd (patrons of the school); Professors B. L. Gildersleeve (Johns Hopkins University), Charlton T. Lewis (New York city), C. H. Toy and Charles R. Lanman (Harvard), and the Faculty of the University of Virginia.

VIRGINIA, Salem.

*ROANOKE COLLEGE.—IN THE VIR-*ginia mountains. Two courses for degrees. French and German spoken. Library, 16,000 volumes. Best influences. Expenses for nine months (tuition, board, etc.), $149, $176, or $204. Thirty-third session begins Sept. 16. Catalogue free. Address JULIUS D. DREHER, President.

VIRGINIA, P. O. University of Virginia.

UNIVERSITY OF VIRGINIA.—THE Sixty-second session begins October 1st, 1885. Thorough instruction in *Literary, Scientific,* and *Professional Departments,* including *Law, Medicine, Engineering,* and *Agriculture.* For Catalogue apply (P. O. University of Va.) to
JAMES F. HARRISON,
Chairman of the Faculty.

VIRGINIA, Winchester.

SHENANDOAH VALLEY ACADEMY. —Prepares for University, Army, Navy, or Business. For catalogue address
C. L. C. MINOR, M.A. (Univ. Va.), LL.D.

WISCONSIN, Milwaukee.

*MARKHAM ACADEMY.—A THO-*roughly reliable college-preparatory school for boys and young men. Twenty-second annual session begins Sept. 7. A. MARKHAM, Principal.

CANADA, Quebec, 8 Hébert St.

THE MISSES MACHIN'S SCHOOL for the Board and Education of Young Ladies will reopen Sept. 7, 1885. Circulars sent on application.

JAMAICA, West Indies, Malvern P. O.

POTSDAM ENDOWED SCHOOL, on Santa Cruz Mts., 2,560 feet above the sea, presents unsurpassed opportunities for the education of boys who cannot work in a variable climate. Apply to Rev. W. D. PEARMAN, M.A., late Scholar of St. Peter's, and Editor of *Somnium Scipionis* for the Syndics of University Press, Cambridge, England. Address as above.

School Agencies.

The Union Teachers' Agency.

1. Provides School Boards and Principals with Teachers. 2. Aids Teachers in obtaining positions.

Apply to A. LOVELL & CO., Managers,
16 Astor Place, New York.

Colleges, Schools, and Families

promptly provided without charge with best American or Foreign Teachers. Positions secured for Governesses, Tutors, Grade Teachers, Specialists, and Principals. Information of good schools free to parents. *School property sold and rented.*
J. RANSOM BRIDGE & CO.,
Eastern Teachers' Institute, 110 Tremont St., Boston, Mass.

BROCKWAY TEACHERS' AGENCY, *Times* Building, Chicago, will supply superintendents, grade teachers, specialists with positions in Central, Western, and Southern States for ensuing year.

SCHOOL AGENCY.—OLDEST AND best known in the United States.
J. W. SCHERMERHORN & CO., 7 East 14th St., N. Y.

Teachers.

A MASTER OF ARTS, WHO HAS studied history, general political science, and political economy for six semesters in Munich, Berlin, and Heidelberg, where he hopes to take the degree of Ph.D. this summer, desires a position. Address
JAMES CHRISTIE, Room 14, Domestic Building.

*A DOCTOR OF PHILOSOPHY OF HAR-*vard, who has studied in Germany, desires a position as instructor in Greek, Latin, or Sanskrit; also offers German. College situation preferred. Best of references. Address "G. L. S.," 481 Franklin Ave., Brooklyn, N. Y.

A LADY WHO HAS TAUGHT FOUR years in a graded school desires a position in high, union, or private school. French, Latin, and mathematics preferred. Reliable references furnished. Address Box 425, Plattsburg, New York.

C. M. CLARK, WILLIAMS, '84, Φ, B, K, and honor man in classics, desires a position as teacher of classics or other branches this fall. Best references. Address "U. S." Hotel, Saratoga, N. Y.

CHARLES W. STONE, Tutor for Harvard, 68 Chestnut Street, Boston.

GERMANY.—Prof. A. FLEISCHMANN, late of Mrs. Platt's Seminary, Utica, N. Y., will receive a limited number of persons wishing to study German, &c., in his family at his present home in Arnstadt, in Thüringen, Germany. For particulars address
PROF. J. M. CROW, Ph.D., Grinnell, Iowa.

TO PARENTS AND GUARDIANS.—A lady who has had large experience in the care of the young, wishes to receive into her home, in a pleasant suburban town of Boston, a little girl, of whom she may have the entire charge. For the most careful training and education in all branches, a liberal compensation will be required. Address "Faithful,"
129 West Chester Park, Boston.

TO COLLEGE OFFICERS WHO ARE looking for an instructor in Latin. Please communicate with L. D., care of the *Nation.*

TUTORING IN ALL BRANCHES FOR Harvard and other Colleges by GAMALIEL BRADFORD, JR., Cambridge, Mass.

WANTED FOR CENTRAL AMERICA. —Professor of Nat. Philos., Chem., Bot., Min., Geol., and Zoöl., experienced. $1,200. Professor of French, English, Drawing, and Bookkeeping—Music desirable—$800. Governess for 3 children, $500; able to teach in Spanish a requisite.
Passages will be paid.
J. W. SCHERMERHORN & CO., 7 East 14th St., N. Y.

WANTED.—A SITUATION IN A College or private Academy by a French graduate of the "Chaptal University, Paris. 15 years' experience. Best of references. Address Prof. ALEXANDRE GUILLET, M. V. Summer Institute, Cottage City, Mass.

*WANTED.—A GENTLEMAN OF EX-*perience in the care and instruction of boys would like to take two or three into his family for the coming school year; references given. Address
M., Quincy, Mass.

Wants.

EXPERIENCED SCIENCE TEACHER wanted to instruct children how to observe and draw out of doors. Must know plants and birds or insects, and give a known naturalist as reference. Compensation, a pleasant home for the vacation.
Box 298, Newburgh, N. Y.

*WANTED.—BY A HARVARD GRA-*duate, a partner in a good paying business, established four years, in the best city in the West. Harvard graduate preferred. Address E. S. WESTON, care *Nation.*

Huckins' Soups.

Green Turtle, Tomato, Mock Turtle, Ox Tail, Chicken, Mullagatawney, Julienne, Okra or Gumbo, Pea, Beef, Consomme, Macaroni, Vermicelli, Soup and Bouilli, Terrapin.

RICH AND PERFECTLY SEASONED. Require only to be heated and are then ready to serve. Put up in quart cans only. Prepared with great care from only the best material. Also,

Huckins' Sandwich Meats.

Sandwich Ham, Sandwich Tongue, Sandwich Chicken. Sandwich Turkey. These meats make *perfect* Sandwiches.

SOLD BY ALL LEADING GROCERS.

J. H. W. HUCKINS & CO.,
Sole Manufacturers, Boston, Mass.

SPENCERIAN STEEL PENS.

DOUBLE ELASTIC ACTION

Sample Card, **26** different styles of PENS for trial, postpaid, on receipt of 25 cents.

IVISON, BLAKEMAN, TAYLOR & CO.,
753 and 755 Broadway, New York.

The Nation.

NEW YORK, THURSDAY, AUGUST 6, 1885.

The Week.

JUDGING from the letters we receive, it is not too soon to remind many of our contemporaries in the press, and a great many worthy people among the public, that extravagance of language and behavior are, on solemn occasions, however good the motive which prompts them, rather unseemly; that violent, grotesque, and ingenious modes of expressing sorrow over a death are barbarous, and belong to an earlier civilization than ours; that, in brief,

"Passions are likened best to floods and streams:
The shallow murmur, but the deep are dumb."

The honor paid to General Grant's memory is not in the direct ratio of the "fuss" some people are making about his funeral. What with the newspapers trying to outdo each other in lamentation, and private individuals trying to become conspicuous by theirs, there is danger of his obsequies being turned into a strong resemblance to an Irish "wake," with "keeners," and all other appurtenances.

All this demonstrativeness, too, is singularly out of place as a tribute to one of the most silent, undemonstrative, and simple of men, who could not bear to do anything in a theatrical or sensational way. The greatest honor a great people can pay to a great soldier is to be sober in talk and behavior around his grave. The proposal to change the name of Riverside Drive to "Grant Drive," because his grave is to be at the end of it, is one of those little tributes which, offered to such a man, are simply contemptible from their pettiness, and which usually suggest themselves to persons in a somewhat hysterical state of mind. It would be a great thing for a successful dry-goods man to have a street named after him. As a compliment to a successful soldier or statesman it is like presenting Bismarck with a dozen marked pocket-handkerchiefs as a national tribute. Let us have done with all this childishness. We must remember that it was as true of Grant as Artemus Ward says it was of Washington, that "he never slopped over." Let us all imitate him, at least in this.

Apropos of this, we must protest most earnestly, in the name of the city and State, against Mr. Squire's putting verses of his own composition on the City Hall. The production of verses on any occasion is no part of the duties of a Commissioner of Public Works; and sticking them on the walls of a public building under his control ought to be a misdemeanor, punishable with fine or imprisonment, or both. It is all very well for Mr. Squire to think it is "poetry" to say: "He bore aloft our sword of fire, a world-watched, envied nation, where Victory sang while trembling Kings bespoke our desolation." The fact is that this is nonsensical doggerel and ought to come down. There was no "sword of fire" in the late war; the swords were all steel. Moreover, the world watched, but did not envy us in the least during the conflict; nor were there any "trembling Kings" at that period, "bespeaking desolation." They were bespeaking good dinners and suppers, and military reviews. We may say much the same thing of Mr. Squire's other verse: "No faltering marked the Titan's task, no shrinking from the trial, he faced the foe ere Freedom's hand fell shattered from Time's dial." Freedom's hand, Mr. Squire ought to know, never was on Time's dial, and would never be put there except to set the clock, which it is no part of Freedom's business to do. Time always sets his own clock, Freedom having a separate and distinct sphere of duty. Moreover, no "shattering" is allowed on Time's dial either of hands or anything else. In fact, it is one of the peculiarities of Time that he goes on no matter what happens. It may be very well for Mr. Squire to inflict this wretched stuff upon his family, but to inflict it on the people of a great city is scandalous.

The Boston *Herald* makes the singular suggestion that Mr. Conkling should come home to deliver the funeral oration over General Grant, and suppo rts it by recalling the great ability of the speech in which he proposed him for the third term at Chicago. A more unsuitable person for the purpose, however, could hardly be thought of. That he is capable of delivering an eloquent eulogy on General Grant there is no doubt; but no one who listened to it could forget for one moment that it was largely owing to Mr. Conkling's counsels and inspiration and influence that General Grant's civil administration was so great a failure. It would sound, in fact, to many like a eulogy from Lord North over the remains of George III. When Mr. Conkling, too, nominated General Grant for a third term at Chicago, nobody in or out of the Convention for one moment supposed that he wanted to have him reëlected so that he might have an opportunity of correcting his former errors, and showing the country the kind of President he would have made had he not fallen into the hands of evil counsellors. On the contrary, nobody doubted that Mr. Conkling's desire was that he should have a chance of repeating the mistakes which, by 1875, had lost nearly every Northern State to the Republicans in Congress, and, but for successful cheating, would have lost them the Presidency in 1876.

The man of all men in the country, it seems to us, who ought to say the last word at General Grant's grave on behalf of the country is General Sherman. Nobody who is so well gifted as an orator or writer knows so much about General Grant's military career, about the difficulties he had to contend with, and the way in which he overcame them. Nobody can so well describe the kind of demand which the art of war makes on the human faculties. General Sherman, too, knows thoroughly the dangers of politics to a soldier, and he would make no hollow or fallacious attempt to convert General Grant's efforts in that field into fresh titles to fame. In other words, his address would be strictly truthful, and there is no occasion on which truth is so needed and so appropriate as the funeral of a great soldier. Over the remains of a successful financier or politician, a little lying, and a little flattery not far removed from lying, may pass muster, but it would be almost an insult to the memory of a soldier who has filled the world with the fame of his deeds, to say one word by his grave which either those present or those who were to come after, might question or gainsay.

The Virginia Democrats have nominated Fitzhugh Lee for Governor, and as the Republicans have made John S. Wise their candidate, representatives of two of the oldest and most influential families are arrayed against each other in a State where family influence counts for more than anywhere else in the Union. Both candidates were Confederate officers during the war, Lee having been a dashing cavalry leader, while Wise's youth prevented his obtaining the high rank he would doubtless otherwise have reached. The radical difference between them is that Wise represents a political boss of the most odious type, while Lee has behind him a party which, despite its Bourbonish tendencies, contains the bulk of the character and intelligence of the commonwealth. Mahone has so thoroughly demoralized public sentiment on the debt question that there is now little to choose between the two parties so far as this matter is concerned. There are men in Virginia who would gladly support a movement for honest payment of the whole debt, however hopeless success might at first appear; but unhappily they can get no hearing from either party. The issue, therefore, is practically only whether or not Mahoneism shall be fastened upon the State, and on such an issue there can be no question which side the friends of good politics will favor.

Mr. Solon Thatcher, of Kansas, a member of the South American Commission whose searching investigation of the commercial needs of the Argentine Republic was accomplished in the space of thirty-five hours, reached Washington city *via* London on Tuesday week, and had an interview with the newspaper reporters, taking a firm stand in favor of subsidies. "That," said he, "is the solution of the commercial problem between this country and South America. We must have ships. France, England, and Germany all have lines; Spain has recently subsidized a company, and so has even Italy. Of forty or fifty vessels leaving Buenos Ayres every month, not one carries the American flag. Now, all the South American companies favor direct communication with the United States. They, in the majority of cases, will render pecuniary assistance. Peru and the Argentine Republic, Uruguay, and even Chili said they would give financial aid; Ecuador wants communication, but can give no money, owing to her heavy debt. She will open her coastwise trade, however, to the United States. These countries are in favor of subsidies, and express the opinion that, until they are given, the commercial interests cannot be improved." These are

also the views of Mr. John Roach, who ascribes his failure to the Democrats and the "mendacious free-trade press," who, by defeating subsidies and frightening American merchants, have produced all the trouble.

To Mr. Thatcher and Mr. Roach, and all like-minded statesmen, the free-trade press have this short answer: You have built up a commercial system which ignores and contemns foreign trade. You have piled duties and taxes mountain high on imported articles both manufactured and raw. You have labored to the extent of your ability to discourage commerce, and to put obstacles in the way of the exchange of our products for the products of other countries. Now that your system has broken down of its own weight and rottenness, you go to the public treasury and ask for money to make good the losses you would sustain under your precious tariff if you should engage in foreign trade. You want to sell high-tariffed goods in a low-priced market, and tax the American people for the difference. You will not be allowed to show your new-born love for foreign trade in that way. You must begin at the other end of the problem. You cannot be permitted to sell goods to the Argentines at less prices than you charge American consumers for the same articles, and recoup yourselves from the national treasury. When you are ready to take a rational step toward the promotion of foreign trade, by removing the self-imposed obstacles and burdens under which it groans, you will have a better title to be heard on the subject of steamship lines. Until then you must be content to take your own medicine, to lie in your own bed, to "stew in your own grease."

The Boston *Herald* is now publishing a series of letters from Mr. Rowland Hazard on the wool duties. Mr. Hazard is the well-known manufacturer and publicist of Peacedale, Rhode Island. In his last communication he proves by statistics that the wool tariff, while hurtful to the manufacturer, is of no real benefit to the wool-grower. This fact has been so often demonstrated before by Mr. Hazard and others that a mere citation of the facts ought to be sufficient to convince every fair-minded man that the unholy alliance between the wool-growers and the manufacturers has been disastrous to both. It has been shown from the yearly reports that immediately after the tariff of 1867 went into effect, the number of sheep in the great wool-growing States began to decline, and that in 1877 there were less than half as many sheep in the States east of the Mississippi as there were in 1867. The figures showed that there were actually fewer sheep in the whole United States in 1877 than there were in 1867. Mr. Hazard pointed out that immediately after the tariff law of 1867 was passed there was a large falling off in the wool product of the whole country. The lowest depression was reached in 1871. Thereafter a process of recovery began, but the figures of 1868, notwithstanding the immense increase in California, Texas, and the Territories, were not reached until 1874, and the decline for the States east of the Mississippi River was not made good until 1881, although the country had made enormous strides in that interval in all other branches of agricultural industry.

The recent exhibition in detail of the evidence tending to show a most startling neglect and failure on the part of the State Department, the Treasury Department, and the Department of Justice to execute the tariff law, cannot fail to arrest and fix the attention of the mercantile community. The most essential and critical point in a high protective tariff levying ad-valorem rates is the dutiable value, which depends on the fidelity of the consular, the appraising, and the law officers. But the evidence seems to show a conspiracy among those departments of the Government in the past to evade and neutralize the tariff law, by reducing dutiable *values*, while deluding American manufacturers with high protective *rates*. Of course it would be of little avail to raise, or maintain, the rate on silks of 50 per cent., if the dutiable value were silently dropped by as much as 25 per cent. As much benefit would flow to American industry by a rate of 37½ per cent. on a dutiable value of $1, as by 50 per cent. on a dutiable value of only 75 cents. What can be the explanation of this neglect and failure in the Executive Department to enforce the high-tariff law? Will not some of our ex-Secretaries of State explain why and how the false invoices were certified as correct by the consular officers, and why the consular reports sent to the Department of State bore no fruit? What became of those consular reports? Is the Chief of the Consular Bureau, who had them in charge, now in office in the State Department? How happened it that the same consular officer certified the invoice as correct, and then told the State Department that it was incorrect? Did the Consul certify in order to get his fee, which, in the London Consulate, should only be ten English shillings, but which, under some hocus-pocus, has been raised to fifteen shillings? And, more extraordinary still, why were those who presented these false invoices not indicted, or otherwise proceeded against, in court? Of the false intent of the maker of the invoice there can be no question, if the statement of a special agent, dated September 6, 1882, is true, when he says that a Zurich manufacturer confessed to him that he, the manufacturer, under-invoiced by 20 per cent., and "justified this practice on the ground that the United States tariff is iniquitous and contrary to public policy and international comity, and that he could not ship to the United States if he declared his goods at the true value; that this practice had become established both at Zurich and Lyons."

Can anybody explain why the consignee who presented those knowingly false invoices at the Custom-house has not been indicted and tried? The American Consul at Horgen, Switzerland, wrote to the Department of State on November 1, 1883:

"Almost all the dollar-price system manufacturers of silk goods in Crefeld state that they have been for years enabled to export their goods to the United States in immense quantities without revealing to the Custom-house authorities the actual market prices at which their products are really sold, and which form the basis of consular invoices and dutiable values. By such means honest importations are made practically impossible, and the customs revenue of the United States is systematically robbed of vast sums of money. Probably five-sixths of all the silk goods imported into the United States are consigned. Of this vast amount of consigned silk it is estimated that nearly all are undervalued from 15 to 40 per cent. below their market values in Europe, and the average of this undervaluation cannot be less than 25 per cent."

What do the records of the State Department disclose concerning that report? When does the index volume show that it was received? who seems to have read it? what action was taken on it? and is the chief of the consular bureau who received it now in office, or where is he? And so with the reports made by Consul-General Packard. Were these reports sent by the State Department to the Treasury Department, and by the latter to Collector Robertson? Unless the statements and reports made by the special agents and certain consular officers are pure fictions, the frauds upon the revenue and the evasions of a high protective tariff tolerated and winked at by eminent Republican leaders then in office were simply colossal. Will any high-tariff man in office or out of office explain this mystery?

The first returns of the new census in Massachusetts are from the small towns in the hill region of the western counties, and they show that the drift away from this region to the manufacturing towns and cities is losing none of its force. With very few exceptions these places report fewer inhabitants than in 1880, and where there has been any gain, it has been due to the introduction of some new industry rather than to an increase of the farming element. The change which has come over this part of the State during the last quarter of a century is very striking. A dozen towns in Berkshire and Franklin Counties, which contained 7,128 inhabitants in 1860, have only 5,929 in 1885. Eliminating the one where manufacturing has of recent years brought a large increase, the loss in the purely agricultural places is about 25 per cent., while one little town sustains but 160 people now, against 319 before the war. In not a few of these hill towns emigration has carried off an even larger proportion of the enterprise and public spirit than of the population, and the signs of retrograding in every direction are painfully apparent.

The growth of Nebraska during the decade between 1870 and 1880 was more rapid than that of any other State in the Union, with the single exception of Colorado; and, considering how much smaller the population of Colorado was than that of Nebraska in 1870, the increase of 267 per cent. in the latter State was quite as remarkable as the 887 per cent. in the former. The census just taken shows that Nebraska still continues to grow at a wonderful pace, almost complete returns indicating a population of nearly 700,000 in 1885, against 452,402 in 1880—a gain of about 50 per cent. in five years. At the outbreak of the war Nebraska and Nevada had not far from the same population, and later they came into the Union within three years of each other, but for some time past Nevada has been retrograding, until it now has proba

bly only about 50,000 people, while Nebraska has nearly 700,000.

A Western correspondent invites our attention to a card recently signed by forty-seven Iowa editors who were on an excursion to Oregon, that the prohibitory law is well enforced through their State, as a sufficient answer to our summary of the evidence of its flagrant violation in all the leading cities. We had already seen the card of which he writes, and had observed the significant fact that nearly all the signers were the editors of rural papers, who know nothing by observation of the operation of the law in the large centres. The opinion of such men is of no more importance than would be the opinion of a St. Lawrence County weekly regarding the treatment of the liquor question in New York and Brooklyn. We have never doubted that prohibition is enforced in many, perhaps most, of the country villages in Iowa. But prohibition was enforced in those places before there was any prohibitory law. It was and is enforced because public sentiment is strong enough to suppress the liquor traffic. But in the cities no such sentiment exists, and the consequence is that the traffic goes on practically unchecked there, while the sellers escape paying the revenue formerly demanded of them, and respect for all law is destroyed by the flagrant violation of the law most talked about. The simple fact about this business is that restraints upon intemperance are chiefly needed in the cities, and that the evidence is overwhelming that in the cities of Iowa the prohibitory law has rather increased than checked the facilities for getting drunk.

The divines and philanthropists who have been sitting as a committee of investigation on the *Pall Mall Gazette*'s revelations, have reported that the *Gazette*'s statements with regard to a certain "system of criminal vice" "are on the whole substantially true"; "without guaranteeing the accuracy of every particular," and "excluding inquiry into charges against particular men, or classes of men, or against the police." In other words, what the Commission finds "substantially true," may be found in the main in the evidence taken by the House of Lords in 1882-3, on which the Criminal Amendment Bill was founded. What the *Pall Mall Gazette* has added is a great deal of tawdry rhetoric and "good motives." The motives, however, would be, if not more respectable, certainly more respected, if they had not resulted in such enormous sales. On the really important question of a remedy the *Gazette* has not thrown one particle of light. The difficulty of cure is very great, as in all fields of crime or vice in which there is no angry victim to pursue the wrong-doer before the law. Usually when a crime or offence is committed, there is a sufferer ready and eager to put the law in motion. In the case of offences against sexual morality, this personage is generally wanting—in other words, there is no prosecutor. The work of suppression has to be left to the police. Now here is the rub. No city police force has yet been organized which has not become rapidly demoralized by arming them with powers of supervision over vicious persons. Either they get into the way of taking hush money, or they persecute people who will not pay it, or they annoy perfectly innocent people in ways that may entail social ruin.

The savage article in the London *Standard* on Lord Randolph Churchill contains simply what everybody on both sides has been saying about him ever since he made his appearance in politics—that his bad temper would unfit him for any position of responsibility, even if his general ignorance and incapacity did not. The *Standard*, too, does not speak lightly. It is not too much to say that it stands not only at the head of the Conservative press in England, but at the head of the whole English press, both in the quality of its editorial writing, and in the ability and energy of its news-gathering, and in the excellence of its tone. We could hardly recommend a better illustration of what a newspaper ought to be, to a "professor of journalism" in a small college. But the article on Churchill does not reveal the secret of his greatness, or tell how he came to get a prominent Cabinet position, and be able, in conjunction with Sir Michael Beach, to switch Sir Stafford Northcote off to the House of Lords without a word of warning or apology. It could not do this without admitting that Churchill, such as he is, is a perfectly natural product of Tory politics during the last six years. The chief, if not the only contribution of Tory statesmen to politics, during that period at least, both in the House of Commons and in their houses, has been abuse of Gladstone. Nearly all the young men in London society who have grown up during the past ten years, have been taught to think that calling Gladstone names, and accusing him of monstrous crimes, was discussing public affairs. It has long been a favorite amusement of such of them as had got seats in the House of Commons to go down after dinner to the House simply to "draw Gladstone," or, as the boys say here, to "put up a job" on him—that is, irritate him by foolish questions or downright insults, or interrupt him by unseemly noises. It is through these tactics that such men as Churchill and Ashmead Bartlett have come to be known and talked of, and finally recognized as serious politicians. They have both got office by a long course of personal insult to a man whom neither of them is worthy to serve as a valet.

Some of the Liberal Ministers in England, now that they are out of office, are making curious confessions about the government of Ireland. We quoted what Mr. Chamberlain said the other day. Now comes Mr. Trevelyan, the late Secretary for Ireland, and talks, in a recent speech, as follows:

"Three years ago Lord Spencer and I found ourselves in a position as abstruse and difficult as often falls to the lot of public men. The administrative and social systems of Ireland were full of abuses. The affairs of the counties were administered by privileged, and not by representative bodies. The justices of the peace were, to a most preponderating extent, drawn from men whose religion and political opinions were not those of the country at large. The Parliamentary and municipal franchises and the registration system were a caricature of popular representation. These evils we hoped, in conjunction with the Irish members, to correct in time; and our expectation has in some important respects not been disappointed."

Taken in connection with Mr. Chamberlain's admissions, this is substantially a confession that Ireland is to-day the worst governed country in the civilized world, or, in other words, that Irish discontent is more than justified, but that the Irish do not show this discontent nicely. It has been held that being well represented in the British Parliament, and treated in every way as equals, they ought to be more patient and well-mannered. The Irish answer to this is a perfectly good one—that the possession of a small minority in an alien assembly is for practical purposes of no value whatever; that if there were full equality, the idea of the Irish helping to govern England would seem no more repulsive to Englishmen than the idea of the English governing Ireland.

An observation of the London *Times* on Mr. Trevelyan's speech shows that the doctrine of Irish political equality is not really held by Englishmen at all. It says:

"The position of the local-government question is such that in certain circumstances Mr. Parnell would apparently wield a great deal of power. Both parties are in fact pledged to measures not yet exactly defined, but certainly coinciding to a great extent with the aims of the Home Rulers, and until these measures were settled the Irish party would have the air of driving the coach. But any attempt to go beyond this would be defeated by the circumstance that there is no sound working distinction between the two English parties. They are separated by names and traditions, not by genuine differences of creed and method. Any risk of domination by *an alien party* would simply precipitate that reconstruction of parties which cannot, in any case, be very much longer postponed. People are very much mistaken who imagine that two or three effete nicknames and tattered party banners are going to hand this country over to the domination of Mr. Parnell and his followers. If events give Mr. Parnell for a time an apparently dominant influence, they will only hasten a rearrangement of political atoms which will speedily reduce him to his true position."

This is really an admission of all that Parnell has ever contended for, that he and his followers are simply sitting as aliens in a hostile assembly, and are therefore in that position of little use to their constituencies.

M. Clémenceau, the French doctor-statesman, is fond of "working a raw." He never touched a sorer spot in the Legislative chamber than when last week he opened the subject of the comparative loss and gain of French colonial exploitation. We recently cited the statistics published in the *Journal des Débats* showing that each French agricultural producer settled in Algeria required, or at all events was allowed, two soldiers for his protection—and this at the end of fifty years of hard fighting and colonizing. A more recent "trial balance" of the net results of colonial enterprise is supplied by a report, made at the instance of the Chamber of Commerce of Lyons upon the trade of Tonquin, by a merchant sent specially to inquire into it. He reported that the imports of Tonquin consisted of cotton goods and hardware from England and Germany, oil and soap from the United States, a few miscellaneous articles from Switzerland, and from France nothing except brandy, and very little of that. The report made a great stir when brought into comparison with the cost of the war in Tonquin, and the supporters of the war can think of nothing better than the enactment of differential duties in order to compel the natives to trade with France.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, July 29, to TUESDAY, August 4, 1885, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND, having been requested by Mrs. Grant to name the pall-bearers for General Grant's funeral, appointed on Thursday the following: Gen. William T. Sherman, U. S. A.; Lieut.-Gen. Philip H. Sheridan, U. S. A.; Admiral David D. Porter, U. S. N.; Vice-Admiral Stephen C. Rowan, U. S. N.; Gen. Joseph E. Johnston, of Virginia; Gen. Simon B. Buckner, of Kentucky; Hamilton Fish, of New York; George S. Boutwell, of Massachusetts; George W. Childs, of Pennsylvania; John A. Logan, of Illinois; George Jones, of New York; Oliver Hoyt, of New York.

General Hancock and his staff arrived at Mt. McGregor on Monday to take charge of the Grant funeral ceremonies after the private services on Tuesday.

Tuesday morning at Mt. McGregor dawned heavy with fog, but by 9 o'clock the sky was clear and a beautiful day was promised. At half-past 8 o'clock the doors of the Grant cottage had been thrown open, and a stream of visitors poured in steadily for over an hour. About 9 o'clock the head of a long line of wagons and various other kinds of vehicles appeared climbing up the steep incline near the eastern outlook, and soon the area in the vicinity of the cottage was thronged with vehicles and people. At 9:30 a train of two cars brought General Hancock and a number of other distinguished visitors. The two companies of regulars were drawn up to receive them. At 10 o'clock the funeral services were held at the cottage in the presence of about 1,000 people. The ceremonies opened with the reading of Psalm No. 90, which was followed by an impressive prayer by the Rt. Rev. Bishop Harris. The hymn "My Faith Looks Up to Thee" was joined in by the whole assemblage. Dr. Newman then delivered the sermon. It was a long eulogy of the dead as a soldier, as a civil officer, as a husband and father, and as a Christian. After another hymn the services were ended with a benediction. U. S. Grant Post 327, of Brooklyn, bore the remains from the cottage to the heavily-draped funeral train shortly before one o'clock. The military were drawn up and a salute was paid the remains as they passed to the depot. Soon after, the train started on its journey to Saratoga and Albany, and in the evening the body lay in state in the Capitol at the latter place, where it was viewed by thousands.

The special Committee of the Grant Monument Committee of this city held a meeting at noon on Wednesday. The Committee agreed upon a report for the formation of a permanent organization, in which ex-President Arthur was named as permanent Chairman, Mayor Grace and Hamilton Fish Vice-Chairmen, Drexel, Morgan & Co. Treasurers, and Professor Greener permanent Secretary. The General Committee was increased by the addition of more than 100 names, bringing the total membership up to between 150 and 175. A resolution was passed in favor of the establishment of organizations in every part of the United States for the collection of money for a national monument over the grave of General Grant. The name of the "Grant Monument Association" was adopted.

The Executive Committee of Fifteen of the Monument Committee, Chester A. Arthur, Chairman, on Thursday adopted an appeal to the people of the United States inviting them to contribute to a great national monument for General Grant, and adding: "All newspapers, railway, telegraph, and express companies, postmasters, banks, bankers, churches, and municipal authorities, commercial bodies and exchanges, manufacturing and business establishments are respectfully requested to cooperate in the immediate collection of contributions, to be forwarded to Drexel, Morgan & Co., New York, for this Committee, or to the Mayor of New York, so that our entire people may have an opportunity of uniting in this last tribute to the memory of the illustrious dead."

As an index of the President's civil-service reform policy, it is pointed out that on March 4 there were in the Treasury seventy-two chiefs of division appointed under Republican Administrations, a majority of whom had attained their places by long service and gradual promotion, but some of whom had been appointed through political or social influence. After nearly five months of contest over these places, the record shows that of the seventy-two chiefs, seventeen have given place to Democratic successors, and the resignations of eleven more are in the hands of the Secretary, with some question as to whether all will be acted upon. Of the chiefs of division displaced with the consent of their chiefs of bureau, seven were subsequently reinstated in clerical positions. Of the chiefs displaced, some of the oldest Republican Treasury officers concede that not more than five or six were good officers, and some of these have been appointed to lower positions. The most efficient chiefs remain secure in their places.

Secretary Manning says that no change will be made in the office of the Appointment Division, and that it was never contemplated that Mr. Albright should succeed Mr. Higgins.

First Auditor Chenoweth, of the Treasury Department, has entered upon a detailed examination of the expenditures in the Coast Survey. He claims to have discovered that a professor in Johns Hopkins University in the service of the Coast Survey within the last few years has expended $150,000 while performing the scientific work of "swinging the pendulum," and that in the course of these investigations he has nearly journeyed around the world. The First Auditor is of opinion that the expenditure of this amount is extravagant, and that the vouchers for it should not be audited.

Five American steamship companies—the Pacific Mail (San Francisco to Australia), the Red "D" (New York to Venezuela), the Clyde (New York to Turk's Island), the New York, Havana and Mexico, and the New York and Cuba Lines—declined to carry the United States mails after August 1. The Postmaster-General has directed that the following changes be made in the despatch of correspondence for foreign countries: "Mails for Cuba to be forwarded to Key West, Fla., via Tampa, Fla., for despatch from Key West to Havana by steamer which leaves Key West for Havana every Wednesday and Friday. Correspondence for New Zealand and the Australian colonies to be forwarded exclusively via Great Britain in mails made up at New York as well as San Francisco. There being only one despatch during August next (on the 1st prox.) from San Francisco for China and Japan direct, correspondence for China, Japan, and the East Indies to be also forwarded, until the 20th of August, via Great Britain, in mails made up at New York as well as at San Francisco."

The Virginia Democratic State Convention met on Wednesday. It was a fine body of men, and enthusiastically nominated Gen. Fitzhugh Lee for Governor. On Thursday John E. Massey was nominated for Lieutenant-Governor. A platform was adopted which pledges opposition to any increase of taxation, opposes all further agitation of the debt question, and reiterates the acceptance as a final settlement of the "Riddleberger Bill," renews the pledge of continued support of the public-school system, recommends a change in the revenue laws which will require a speedy settlement by the collecting officer, recommends supervision by the Legislature of the operation of the railroads of the State so as to prevent unjust or discriminating charges, advocates liberal support to insane asylums and continued aid to needy and disabled Confederate soldiers; commends the Administration of President Cleveland, and especially the President's action in removing offensive Federal officers in Virginia, spurns the charges brought against the Democratic party in the document purporting to be a platform of the Republicans of the State, and concludes with a severe arraignment of the Republican party.

The Bankers' and Merchants' Telegraph Company was purchased at auction in this city on Friday, by Edward S. Stokes, for $500,000.

A terrible storm on the Delaware River near Philadelphia and Camden, on Monday afternoon, took the form of a tornado, and seriously damaged a steamboat and a ferryboat, killing a pilot. Many buildings in Camden and Port Richmond were damaged. Five people are known to have been killed. The storm was very severe throughout New York, New Jersey, Pennsylvania, Delaware, and New England.

Maud S. beat her record of 2:09¼ at Cleveland on Thursday by trotting a mile in 2:08¾.

Charles R. Train, Attorney-General of Massachusetts in 1879, died on Wednesday at the age of sixty-eight. He had been a member of Congress and United States District-Attorney for Northern Massachusetts.

FOREIGN.

The Grant memorial service in Westminster Abbey, London, on Tuesday afternoon was an imposing event. The edifice was crowded with a congregation nearly every member of which was a distinguished person, among them Mr. and Mrs. Gladstone, the Earl of Iddesleigh, Earl Cranbrook, Mr. Forster, Sir Lyon Playfair, and a great number of peers and members of the House of Commons, Prime Minister Salisbury, the Duke of Cambridge, Commander-in-Chief of the British Army, the Marquis of Lorne, Gen. Lord Wolseley, Chief-Justice Waite, ex-Attorney-General Benjamin H. Brewster, Senator Edmunds, Senator Hawley, and other prominent Americans. Queen Victoria was represented at the service by her equerry. Canon Farrar delivered a most impressive address, in which he said: "What verdict history will pronounce upon Grant as a politician and a man I know not; but here and now the voice of censure, deserved or undeserved, is silent. We leave his faults to the mercy of the merciful. Let us write his virtues on brass for men's example. Let his faults, whatever they may have been, be written on water. Who can tell if his closing hours of torture and misery were not blessings in disguise—God purging the gold from dross until the strong man was utterly purified by his strong agony? Could we be gathered in a more fitting place to honor General Grant? There is no lack of American memorials here. We add another to-day. Whatever there be between the two nations to forget and forgive is forgotten and forgiven. If the two peoples which are one be true to their duty, who can doubt that the destinies of the world are in their hands? Let America and England march in the van of freedom and progress, showing the world not only a magnificent spectacle of human happiness, but a still more magnificent spectacle of two peoples united, loving righteousness and hating iniquity, inflexibly faithful to the principles of eternal justice, which are the unchanging law of God."

The Salvation Army marched on Thursday afternoon with much parade to the Parliament buildings to present to the House of Commons a monster petition urging the immediate passage of the Criminal Act Amendment raising the age of consent in girls from thirteen years, the present period, to eighteen. The petition contains 500,000 signatures, and is one mile and a half long. It was borne in a special carriage. A member of Parliament presented it impressively to the House. The amendment was debated for six hours that evening in Parliament. Mr. Gladstone has written a letter advocating raising the protected age to eighteen.

Replying on Thursday night in the House of Commons to questions in regard to the Egyptian loan, Sir Michael Hicks-Beach, Chancellor

of the Exchequer, said that the houses of Bleichroder and Rothschild had floated the loan in Paris and Berlin, owing to the international questions arising out of the entire transaction. The Government, he said, would place before the House the entire correspondence relating to the loan.

In the House of Commons on Friday night, an amendment to the Criminal Bill providing for the flogging of persons convicted of assaulting children was rejected by a vote of 125 to 91. An amendment raising the age of protection of girls to sixteen years was carried by a vote of 179 to 71. The Sixpenny Telegram Bill passed its third reading.

The Criminal Amendment Bill was passed in Committee by the House of Commons on Monday evening.

At the Lord Mayor's banquet in London on Wednesday night, Lord Salisbury replied to the toast to the Ministers. He admitted that Mr. Gladstone's assurances had been honorably adhered to. He defended the Government against the charge of adopting a Liberal policy, and contended that the extended franchise in Ireland necessitated a change of policy in the direction adopted. In regard to foreign affairs, he said it was necessary for the honor of the nation that the Government should continue the policy of the late Government, even though it was opposed to the Conservative policy; but they regretted their inability to continue the threads of the policy left by Lord Beaconsfield. The Government would, however, devote themselves to domestic affairs and the promotion of such a condition of things in countries in Africa and the East dependent upon England as would restore a cordial feeling among the European Powers, which was essential for the prosperity of the world.

A split in the Tory camp, which threatens to become serious, was made public in London on Wednesday evening, when Lord Randolph Churchill declined, at the last moment, to attend a great Tory meeting at Liverpool, at which he had been advertised as one of the chief speakers. He based his refusal upon the fact that the two Tory members of the House for the city of Liverpool had declined to support him, owing to the Irish policy of the Cabinet.

The *Standard* (Tory organ) on Friday morning bitterly attacked Lord Randolph Churchill. It denounced him for refusing to speak at Liverpool because the borough members were displeased with his Irish policy, and described him as a much overrated, impudent, overgrown schoolboy. It said that he was only good at insulting his superiors, and that his very ordinary talents are lauded by an interested clique. The article continued, "It is time to speak out. We will not be imposed upon by this overgrown schoolboy verging on middle age, but without a man's sense. Lord Salisbury must decide quickly, or Churchill, having already worked irreparable harm, will ruin the Conservative party." The parting shot described Lord Randolph as a miserable, absurd imitation of Disraeli, without the one-fiftieth part of his ability. The *Standard* congratulated the Liverpool Commoners on their courage, and said their action had won the approval of every Conservative worthy of the name. The article made a great political sensation. It is thought that the breach may be healed and Lord Randolph speak in Liverpool later. A well-informed London correspondent says: "Tory opinion is divided. The younger and more progressive members feel that they can accomplish nothing by the policy of Churchill's opponents. The older and more cautious ones see certain danger and possible disruption in their party as a result of Churchill's recklessness. The *Standard* received an inspired hint from high quarters to attack Churchill."

It is expected that Mr. Gladstone will visit Midlothian in October to take the stump if his health permits. The general election will be held in the third week in November.

The Marquis of Salisbury has agreed to the request of Baron de Staal, the Russian Ambassador, to suspend the negotiations in relation to the Afghan boundary question until M. de Giers, Russian Foreign Minister, obtains a report of the topographic survey which has been ordered of Zulfikar Pass. It is also said that England has agreed to Russia's proposal to leave the Zulfikar question to be settled by the Joint Boundary Commission.

The Marquis of Salisbury has opened negotiations with the Porte for a Sudan expedition. Mr. White, the British Minister ad interim at Constantinople, reports that the Sultan is willing to occupy the eastern Sudan on the condition that a part of the cost of the occupation shall be defrayed by Egypt, and the Porte be left with free hands in the settlement of the occupied provinces. Sir Henry Drummond Wolff's mission to the Sultan has reference solely to the question of administrative control in Egypt. The Sultan keenly opposes an international control. Lord Salisbury is shaping a policy to maintain English predominance in the administration of Egyptian affairs. Sir Henry Drummond Wolff is charged to obtain the Sultan's consent to a scheme of administrative reform which shall place power in the hands of the English or of English nominees.

The Khedive of Egypt has issued a decree explaining the charges to be paid out of the new Egyptian loan of $45,000,000. He says the claims for indemnity arising out of the bombardment and pillage of Alexandria and the losses resulting from the British occupation will constitute the first charge on the loan. Five million dollars of the loan, it is intended, the decree states, shall be expended in irrigation works for the benefit of the fellaheen engaged in agricultural pursuits. It is rumored that the Egyptian Deputies have resolved to investigate the whole list of indemnity awards, with a view to ascertaining the exact truth about the reiterated charges that a large proportion of the awards are of a fraudulent nature. The subscriptions to the loan were closed in London on Thursday. They aggregated four times the amount of the loan.

The British Government has appointed a commission to inquire into and report upon the condition and education of the blind in England. Mr. Campbell, one of the members of the Commission, will come to the United States for the purpose of examining the methods used here to enable sightless persons to acquire literary and mechanical knowledge.

The chairman of the committee appointed some time ago to inquire into and report upon the condition of the Irish industries has presented an informal report to Parliament. In this it is stated that all Irish industries, with the single exception of linen manufacture, are at present in a deplorable condition. The report recommends the improvement of the railway facilities of Ireland, the introduction of a course of teaching of the sciences relating to industrial work in all the national schools, and a comprehensive system of arterial drainage, without which, the report declares, proper cultivation of the soil in Ireland on a sufficiently extensive plan is impossible.

Renewed excitement in the Munster Bank affair has been caused by the sudden disappearance of Robert Farquharson, the recent joint manager. His books have been examined, and so far show an embezzlement of $350,000. A reward has been offered for his apprehension. The missing man is about forty years of age, and was a director in several companies. The highest confidence was reposed in him. The accountant's balance sheet of the bank shows liabilities of £2,148,012, and assets of £2,187,447. It is believed that the reserves, amounting to £225,000, will suffice to cover all risks. The shareholders have approved the plan of petitioning the Court of Chancery to appoint a provisional liquidator of the bank's affairs pending the organization of a new bank, with a capital of $3,750,000, of which $1,500,000 shall be called.

The committee to inquire into the statements of the *Pall Mall Gazette* in regard to London vice has made the following report: "Having been requested to inquire as to the truth of statements printed in the *Pall Mall Gazette* from July 6 to July 10, we decided from the first to exclude inquiry into charges against particular men or classes of men, or against the police. We strictly confined ourselves to an inquiry into the system of criminal vice described. After carefully sifting the evidence of witnesses and materials before us, without guaranteeing the accuracy of every particular, we are satisfied that on the whole the statements of the *Pall Mall Gazette* are substantially true." Signed by the Archbishop of Canterbury, the Bishop of London, Cardinal Manning, and Messrs. Morley and Reid.

Cholera has made its appearance at Marseilles and Paris. In Spain on Monday there were reported 3,718 new cases, and 1,501 deaths.

The Madagascar debate was continued in the French Chamber of Deputies on Thursday with much violence, M. Clémenceau making a severe attack on M. Ferry's policy. M. Brisson said that the Cabinet aimed at uniting the forces of the republic and preserving national property. He appealed to the Chambers to vote the credit, and promised that the Government would do its utmost to arrange that the colonies should cost less and contribute more than at present. The credit was then voted—291 to 142.

The annual meeting of the Panama Canal Company was held in Paris on Wednesday. M. de Lesseps read the annual report, which was received with applause. The Chairman thought that the Canal Company had nothing to fear from the United States. The Monroe doctrine, he declared, was perfectly consistent with the company's enterprise. One of the bondholders present questioned the figures in the report, and demanded that a committee of inquiry be appointed. M. Charles de Lesseps opposed the motion, and the report was unanimously adopted. The old Board of Directors was reëlected. The meeting unanimously authorized the Board to persist in its application to the French Government to permit a lottery loan of 600,000,000 francs.

Dr. Henri Milne Edwards, the well-known French naturalist, died in Paris on Wednesday.

The Mahdi before his death selected Abdullah for the Southern Sudan, Osman Digna for the Northern Sudan, Senussi for Egypt, and Mollah Abdullahman for Kordofan and Darfur, to continue the war, and appropriated 20,000,000 piastres therefor.

In the trial of Riel at Regina on Thursday the case for the defence was opened. Two physicians testified that Riel was insane. Riel protested against this line of defence, and quarrelled with his counsel. He wanted to conduct the case himself. The counsel practically abandoned the case, resting it on the plea of insanity. Riel made a remarkable speech in his own defence at the close of the trial, asserting that he was acting in accordance with a divinely appointed mission.

The jury on Saturday brought in a verdict of guilty. The foreman, while crying like a child, asked on behalf of his fellow-jurors that the prisoner be recommended to the mercy of the Crown. Riel was sentenced to be hanged on September 18. There is much feeling among the French Canadians over the subject, and they will use every effort to have the sentence commuted.

A fire in Toronto on Monday morning destroyed property along the Esplanade and wharves to the amount of $1,000,000.

Pedro Prestan, the rebel who burned Colon on March 28, has been captured by the Government forces at Cartagena, and will be hanged. It is reported that the Government troops have taken Baranquilla, Savanilla, and Salgar.

POLITICAL SHIPBUILDING.

SECRETARY WHITNEY'S remarks to the members of the Advisory Board, who are to report upon the plans for the four new cruisers which are still to be built, should be read carefully by the late Secretary, Mr. Chandler, before he writes any more defences of his client, John Roach. It is evident that Mr. Whitney is endeavoring to secure a different kind of shipbuilding from that which his predecessors have been encouraging. Nothing in the controversy over Mr. Roach's failure has been more curious than the constant assumption of his friends that in Government shipbuilding there must be "politics" to a greater or less degree. Mr. Chandler is so thoroughly convinced of this that he can see nothing but political motives in Secretary Whitney's conduct, though all that the latter has done is to decline, in behalf of the Government, whose servant he is, to accept a vessel which does not come up to the specifications of the contract. The remarkable list of defects which the Examining Board discovered in her construction stands not only unrefuted but unexplained, and the only answer which the contractor's friends—including Mr. Chandler—make is, that Mr. Whitney is actuated by political motives, and the examiners were not friendly to Mr. Chandler. In his last published letter, Mr. Chandler goes over the ground again, and asks, with comical pathos, at the close, if the friends of Mr. Whitney "are willing to see the Republican press manifest the same disposition toward the four additional ships which the Democratic press have shown toward the *Dolphin*, *Chicago*, *Boston*, and *Atlanta?*"

This moving question is best answered by Mr. Whitney's remarks to his Advisory Board. He tells them that Congress has put upon him the responsibility of building four ships "of the best modern design," "having the highest attainable speed," and then adds:

> "It is desirable to proceed with great caution in this matter, and to take no step without its being absolutely a sure one; and in order to do this it is necessary that the Department should be possessed of all the information possible to be gathered in regard to what other people have done. No private individual would set out to spend $3,000,000 in construction without first, for his own advisement, becoming acquainted with the best things that had been done by others in the same direction. Therefore, if it should appear to you desirable, before making the decision which I ask of you, that further and more detailed information should be had of the doings of other countries, I consider that the Department has the power to expend money therefor; and I consider it very wise and judicious to expend it. I have already, for the last three months, been expending money in that direction, and a good deal of evidence will be found to have been already accumulated. I think it possible for me to say these things without reflecting at all upon the Department. It is only with the greatest effort that any nation is able to keep up with the improvements in shipbuilding, and, of course, it has been impossible in a department where no new ships of modern design have been built until those recently undertaken. Therefore it is desirable that we should proceed modestly and deliberately, taking all necessary time to inform ourselves that the thing which we adopt is the wisest and best, after we have examined thoroughly, and with knowledge of what others have done. Until that time comes I do not propose to take any step. The portion of the complete ship requiring the longest time is the armament, and that not having been appropriated for in this instance, gives all necessary time to proceed deliberately and wisely. After the decision has been made what the ship shall be, what her size, horse-power, weight of engines, space for engines, what her armament and armor and so on shall be, then comes the second stage, which is putting this general design into the hands of technical men to prepare in detail the plans and specifications on which the work is to be done. That step I do not at present desire advice upon. It will be the second stage in the work."

To realize what a radical change in Government shipbuilding this foreshadows, we have only to recall some of the methods pursued by Mr. Roach and his defender, Mr. Chandler. When a description of the still uncompleted cruiser *Chicago* was made public in January, 1883, it was discovered that the engines adopted for her use were of a type which had been tried for propellers twenty-five or thirty years ago, and abandoned. The only one existing outside the *Chicago* is somewhere in Scotland, where a propeller-beam engine, designed about 1830, is preserved and kept on exhibition as a means of illustrating the progress made in marine engineering during the last half century. This ancient type was, we believe, adopted because Mr. Roach had the drawings and patterns already on hand, and could build more cheaply than if a new type were used. The weight of the boilers and machinery, which promised a speed of only fourteen knots an hour, was nearly equal to that of the newer type in modern British cruisers, which give a speed of eighteen knots an hour. The saving in weight between the new type and the old would increase the "coal endurance" of the cruiser, a most important quality, at least 50 per cent. It was also discovered that this ancient machinery of the *Chicago* called for a consumption of coal more than double that of the best modern Brazilian ironclad, and that if the engines of the Brazilian vessel were to be substituted for those of the *Chicago*, the latter would have a maximum speed of 17.6 knots per hour instead of 15, and would have additional room enough to carry coal sufficient to steam at 15 knots' speed 6,000 miles instead of 3,000. In other words, had she been fitted with the latest modern machinery, instead of John Roach's old type, her efficiency would have been doubled. This, in an unarmored cruiser, a vessel in which speed and endurance are the prime requisites, would have been the precise thing which Congress desired when it authorized the construction of a "coal-protected steam cruiser containing the latest improvements in naval construction."

Congress undoubtedly supposed, when it called for the building of such vessels, that a contractor could be found capable of constructing them. Mr. Roach himself had informed a committee of Congress that there was no doubt about getting the speed and other elements desired, and that the way to do it was to throw the full responsibility upon the contractor, and treat him precisely as if he were dealing with a merchant instead of the Government. Yet Mr. Roach and Chandler put their heads together and began to build vessels which contained antiquated machinery, and were so full of defects of all kinds that little defence or explanation of their workmanship has ever been attempted; and when Secretary Whitney takes Mr. Roach at his word and treats him as a merchant would under such circumstances, Mr. Roach fails, says he is the "victim of political persecution," and Mr. Chandler says that Mr. Whitney's conduct is dishonest.

Mr. Whitney gives his Advisory Board notice that he is not a political shipbuilder, and we have not the slightest doubt that he means what he says. We trust that the Republican press will treat his work precisely as the Democratic and Independent press has treated Roach's and Chandler's. Let them insist that when a contract is made for a vessel to have a sea speed of fifteen knots, a clause shall not be put in attempting to make the Government accept her whether she be able to develop it or not, or whether she be able to keep under headway at all away from her dock. If Mr. Roach, as the Great Republican Shipbuilder, be succeeded by somebody else as the Great Democratic Shipbuilder, let the whole Republican press, led by Mr. Chandler, lay on the lash and spare not. We promise them the heartiest possible coöperation.

PARTY DISINTEGRATION.

Two eminent citizens of Connecticut, a Blaine Republican and a Democrat, were recently talking over the political situation. Both are astute politicians and close observers. Said the Democrat, who is an earnest civil-service reformer: "If an important election were to be held in Connecticut to-morrow, 50 per cent. of the Democratic voters would stay away from the polls because of dissatisfaction with the way in which the Cleveland Administration has distributed the offices." Said the Republican, who has been a working politician for years: "At the same election 50 per cent. of the Republican voters would stay away from the polls because they would not be willing to disapprove the course of the Cleveland Administration." "What does it all mean?" asked the Democrat. "It means," replied the Republican, "that the old parties are going to pieces, and I for one am ready for it."

No close observer can doubt that there is a similar condition of affairs in nearly every other State in the Union. The estimate which the Connecticut authorities quoted above give of the dissatisfied in each party strikes us as excessive, but that there is a large number of such voters in both organizations cannot be questioned. The feeling that since the Republicans have had all the offices for a quarter of a century it is no more than fair that the Democrats should have a chance at them now, is very general in the Democratic party. Every Democrat who has been seeking an office and has not got it, is doing his best to aggravate this feeling. He represents the workers of the party—the men whose business it is to get out the sluggish voters on election day. If these workers were to refrain from all exertions at an election because of their personal disappointment, there would undoubtedly be a great falling off in the Democratic vote. We doubt, however, if the loss would amount to one-half of the whole. It is notorious that Democrats are very reluctant to desert their party. They growl all through a campaign, and then vote solidly the party ticket when election day arrives. That many of them are growling now everybody knows, but when it comes to the question of deserting their party because the President of their choice is keeping his pledges and giving the country an honest, non-partisan Administration, we do not believe that more than 10 per cent. of them at most will be

equal to the emergency. It is noticeable of all the growling that it is done in private. No important Democratic journal has yet ventured to oppose the President's course, and no Democratic Convention has adopted a platform openly disapproving it. We hazard the prediction that in the campaigns of this autumn there will not be a Democratic stump speaker who will venture to speak anything but praise of the President. That is the perplexing thing about the Democratic discontent. It must be borne in silence. To formulate it is to show its absolute unworthiness.

On the Republican side the situation is no less interesting. The party is really divided already into two sections. Upon one side are the Bourbons, who are determined to cling to the old superstition that the Democratic party is made up mainly of unscrupulous men who are bent upon the ruin of the country. They will not admit that anything good has been done or will be done by the present Administration. They have completely changed ground on the question of civil-service reform. They declared all through last year's campaign that Cleveland would never be able to keep his pledges if elected, and that no matter how well disposed he might be personally, his party would inevitably control him. Now that this prophecy has failed of fulfilment, they turn about and say that civil-service reform is a humbug any way, that the offices belong to politics, and that of all Pharisaical and hypocritical pretences ever adopted, that of the present Administration, that it is giving the country non-partisan rule, is the most contemptible. Rather than praise the President they are willing to return to the old doctrine of spoils. They have been forced into this position by the growling of the Democrats, which has made it useless to assert that the President is not sincerely carrying out his professed reform policy.

But the Bourbon section of the Republican party is dwindling every day, and the other section, which thinks well of the President and believes in supporting him in every worthy act, is increasing. The steady, straightforward, simple, honest, business-like course of the Administration is sapping the life of every Bourbon principle. It cannot be said any longer that the "country is in peril" whenever the Democrats are likely to come into power. That "principle" was the bulwark which saved the Republican party in many a conflict, but it is gone forever. If was summed up in the "sectional issue," and how completely that has been buried the solemn exercises of the present week will bear most emphatic testimony. The final words of General Grant upon that subject, together with the spectacle of Northern and Southern soldiers walking together beside his bier, will be sufficient to silence even the Bourbons. As Horace Greeley said of them years ago: "Your attempt to found a great enduring party upon the hatred and wrath necessarily engendered by a bloody civil war, is as though you had founded a colony on an iceberg which had somehow drifted into a tropical ocean." That their attempt has failed is clear enough for all men to see. Even Simon Cameron, one of the most devoted of its adherents, sees it, for he has telegraphed to the son of General Grant a hearty commendation of the selection of two ex-Confederate generals for pall-bearers at the General's funeral, adding: "Your father's prayer for peace to his country has been answered, and the last bitterness of the war wiped out forever."

The growling of disappointed Democrats and the bitter denunciations of Bourbon Republicans proceed from the same kind of men in both parties—the men, namely, who love the old methods and do not wish to see them done away with. These men may be able to control one-half of the voters in each of the old parties, but we do not believe it. Sooner or later they will come together in a party of their own, and opposed to them will be the men who approve the course of President Cleveland and are determined to uphold him in it. It is our firm belief that the latter class at present contains a clear majority of the American people, and that their attachment to old party names is weakened daily.

STATISTICS OF MARRIAGE.

A CHANGE in the public sentiment of a nation regarding matrimony is a social fact of the first magnitude. There is abundant evidence that such a change has during the last quarter of a century been coming over the American people, and especially that portion of it which lays special claim to the title American by descent from the stock which came earliest to this country.

The newer States of the Union for obvious reasons furnish no basis for comparisons, and few of the older States have for a long period collected data regarding marriage worthy of confidence. But statistics sufficiently complete to warrant a conclusion have been gathered in some parts of New England. Massachusetts has long been conspicuous for the accuracy of her vital statistics, a full report regarding the number of births, marriages, and deaths having been prepared annually for more than forty years. We have thus the data for a comparison of the number of marriages during the decade preceding the war with the number during the decade just closed, covering a period a quarter of a century later. Examination shows that the average number of marriages per year for the ten years beginning with 1850 was 11,873, while the average number for the ten years beginning with 1875 was 15,138. The population of Massachusetts in 1850 was 994,514, while in 1875 it was 1,651,912, and the percentage of increase was about the same during the last ten years as in the ten years following 1850. The population of 1875 was 66 per cent. greater than that of 1850, and the same ratio will hold for the whole decade following 1875 as compared with that following 1850. It thus appears that, while there have been 66 per cent. more people capable of getting married during the last ten years than there were between 1850 and 1860, less than 28 per cent. more have actually done so. Population has increased two-thirds, and marriages less than one-third. To put it in another way, out of every thousand people in the State twenty-one used to be married each year, while now the number reaches only seventeen.

The vital statistics of Connecticut have been collected ever since 1848, although not so carefully as in Massachusetts. The number of marriages reported in Connecticut during the ten years beginning with 1850 averaged 3,477, while the number during the last ten years has averaged 4,677. The population of the State in 1850 was 370,792, and in 1875 about 580,000. In other words, the number of inhabitants during the last decade has been 56 per cent. greater than in the earlier period, but the number of marriages has been only 34 per cent. greater. There is reason to believe that the discrepancy is in reality even larger, for it is well known that there has been more accuracy in registration of late years than formerly, so that the number of marriages actually contracted between 1850 and 1860 must have exceeded the number reported in greater measure than was the case during the last ten years. Making allowance for this consideration, it seems fair to conclude that the disparity between the increase of marriageable people and the increase of marriages is about as marked in Connecticut as in Massachusetts.

Dr. Edwin M. Snow, of Providence, R. I., has for thirty years compiled a careful and complete annual report in relation to the births, marriages, and deaths in that city, and the body of statistics which he has thus collected furnish a better basis for conclusions than can be found in the case of any other large city in the country. From these figures it appears that the number of marriages in Providence in the period before the war averaged 619 per year, while during the past ten years the average has been 1,099. The population of the city was 47,785 at the beginning of the earlier period, and 100,675 at the beginning of the later. That is to say, the number of people who might get married was 115 per cent. larger during the last ten years than in the decade before the war, while the number who did get married was only 77 per cent. greater.

The population of Ohio has always been largely recruited from New England, and it is evident that the same influences are at work among the descendants of the Yankees in the Western State as among those who remain in the land of their ancestors. Before the war the number of marriages in Ohio averaged about 23,000 a year, the total for 1860 being 23,106, while for five years past the number has averaged 29,255. The population of the State in 1860 was 2,339,511, and in 1880, 3,198,062. The number of inhabitants had increased about 37 per cent., and the number of marriages only 26 per cent.

These statistics only confirm the conclusions which any observing person of wide acquaintance who has considered the subject is sure to have reached. It can hardly be questioned that the average standard of comfort in such States as Massachusetts, Connecticut, and Ohio is higher than it was a generation ago; or that the proportion of young men capable of providing good homes is fully as large as it was thirty years ago. Indeed, the old bachelor of the present day is more likely to be a man who could support a family in comfort than was the case in the days before the war. Yet the old bachelor is constantly becoming a more numerous class of the community, and thereby swelling in equal measure the ranks of the old maids.

The most potent reason for this change is undoubtedly the economical one. The change is most marked among the well-to-do class. Young men of this class grow up with luxurious habits, which a bachelor's income will sustain, but which are incompatible with the support of a wife and children. The cost of maintaining a family in good style and of giving children a liberal education increases more rapidly than the earnings of the husband and father. A man sees that if he marries, he must abandon modes of life which have become essential to his comfort, and he fears that the more restricted plane of expenditure would be as disagreeable to the woman as to himself. He therefore hesitates to marry—finally concludes not to try the experiment—or if he does marry, he has few children, for the statistics show with equal clearness that the birth-rate is diminishing even more rapidly than the marriage-rate among the higher classes.

THE OPENING OF THE GOETHE ARCHIVES AT WEIMAR.

EVER since the life of Goethe began to be studied in a scientific spirit, students of him have been looking forward with interest to the time when the archives of the Goethe family at Weimar should be thrown open to the scrutiny of scholars. Hitherto this most valuable source of information has been practically closed to all comers. The current story is that the poet's heirs refused the liberal offer made for the house and its contents by the German Government, in the hope of getting a still larger price from foreign sources. Whether this be true, or whether the heirs may have had other and better reasons for denying all access during half a century to Goethe's private documents, we do not profess to know. That any service has been done thereby to the memory of the poet, is not apparent; and as to the market value of his property, that would have been increased rather than diminished if the public had been allowed to know just what the collection contained, and if reputable scholars had been permitted to make scientific use of it. So far as we can see, the owners of the property have gained nothing by their conduct except possibly the barbarous satisfaction of reading, in almost every biography of their great ancestor, frequent statements to the effect that this, that, or the other point will never be cleared up so long as the archive at Weimar remains closed. At last, however, the wish of scholars and of the educated public is to be gratified; the Goethe house, bequeathed by Walter von Goethe to the present Grand Duchess of Saxe-Weimar, has been by her quite recently thrown open to the uses of science. It is also announced that the Grand Duchess will immediately cause two important works to be undertaken, both of which will be greatly facilitated by the collections now in her possession. These are, first, a complete and authentic edition of the works of Goethe, and, secondly, a compendious biography to be prepared conjointly by various different specialists. There is thus good prospect that the world will soon be in possession of whatever light the Goethe house in Weimar can throw upon the career of its illustrious founder.

Meanwhile, pending the thorough sifting of the material by those charged with the work, the public has been favored with a provisional statement of what the archive contains. On June 20 and 21 a German Goethe society was organized at Weimar. At this meeting Herr von Loeper, the well known editor of Goethe, and Professor Scherer, of Berlin, who had been rummaging for several days in the newly-opened archive, made a partial report of their findings. This report has been published in a communication by Ludwig Geiger, editor of the Goethe *Jahrbuch*, to the *Deutsche Litteraturzeitung*. It is from Geiger mainly that we have derived the facts here stated. Von Loeper had examined two cabinets of the archive (there being six in all), and reported the discovery (if such a term be proper) of valuable documents of three different kinds, viz., first, original manuscripts of the works of Goethe; secondly, letters from correspondents; and lastly, the poet's journals. These last, of which hitherto only scanty extracts have been made public, begin in 1776, shortly after Goethe's arrival in Weimar, and end March 16, 1832, six days previous to their author's death. One break of considerable length occurs, namely, between 1782 and 1796, there being during these years only two short entries. The journals are said to increase in fulness with the writer's years, and to average four thick volumes per annum. It is interesting to note that in one of these, for the year 1805, a number of white leaves had been left; it was the year of the death of Schiller. Here, in this journal, Herr von Loeper remarked, would be the firm ground for future biographers of Goethe. As to the letters, they too cover about fifty years, and are both to and from Goethe. Of the latter kind the most valuable will be a long series written by the poet to his wife between 1792 and 1816. Von Loeper seemed to think that these letters will help to clear up a much misunderstood aspect of Goethe's life, his character as a husband and father. Of letters to Goethe, most importance will attach to those from his mother, and to some (rather late ones, to be sure) from Frau von Stein.

The manuscripts discovered will not in any sense revolutionize the familiar aspect of Goethe's text, but will be of great value in the preparation of future critical editions; for much of the text of Goethe is still in a bad condition. They begin with the only known copy of the 'Höllenfahrt Christi' of 1766, and end with the second part of "Faust" of 1832. Unfortunately, the one manuscript from Goethe's hand which students of him would give most to get sight of, does not yet turn up. This is the original draft of the early scenes of "Faust," the roll of paper from which the poet used to read to his admiring friends from 1774 on, and which he took with him to Italy in 1786. It has been believed, though perhaps on insufficient grounds, that this manuscript would settle certain perplexing questions regarding the first conception and plan of the drama, as, for example, whether there was ever a prose "Faust"; whether the play grew up from the beginning around two nuclei—namely, the character of *Faust* and the tragedy of *Margaret;* and also how *Mephistopheles* was originally conceived, both in his own character and in his relation to *Faust* and to the *Earth Spirit*. But although this manuscript was not found, other material was found which will, it is thought, be of great assistance in the elucidation of Goethe's masterpiece, particularly the second part of it.

Finally, it may be added that a somewhat detailed and very enthusiastic report was made to the nascent Goethe Society upon the character and the value of their hero's famous art collection. The fact was deemed worthy of special emphasis that Goethe founded a collection upon really scientific principles, at a time when most of his contemporaries had not got beyond the point of curiosity-hunting. Evidently the new society will set its face sternly against that popular heresy into which many innocent travellers have fallen, and which was tersely formulated in 1854 by George Eliot as follows: "This collection is utterly insignificant, except as having belonged to him." Be that as it may, the opening of the archive at Weimar is certainly a literary event of genuine importance, the remote consequences of which cannot now be foreseen. It is an event which, taken in connection with numerous signs of the time, goes far to indicate that Herman Grimm was not simply patriotic, but also entirely correct, when he said at Berlin, a few years ago: "For thousands of years there has been a science called Homer; for some centuries there has been one bearing the name of Dante, of Shakspere; henceforth there will be a science to be known as Goethe."

EXTENSION OF THE CIVIL-SERVICE SYSTEM.

WASHINGTON, D. C., July 21.

THE establishment of a system of appointments based upon competitive examinations is now accepted as an accomplished fact. The value of this achievement is variously estimated, even by its friends. It is not, however, merely a new experiment; it has been put to the practical test of trial, and it is pretty well known what it will and what it will not do. It will hardly be questioned that it will secure a more intelligent and efficient class of minor officers, give greater permanence to their tenure, and, even as at present restricted, diminish in some measure the demoralizing effects of the spoils system upon the elections. Its application is at present, however, very limited. Out of a total number of public offices and positions of over one hundred thousand, it embraces about fifteen thousand. Its domain is thus relatively small. All the higher offices and many inferior places are beyond the scope and beneficent effect of the system. It is, in fact, restricted to the mere crumbs and drippings of patronage. Evidently this was not intended to be the final result; it was avowedly only the first step.

This first step was taken under a Republican administration, and it was honestly and fairly maintained. It was felt, however, that the nomination made by that party in 1884 presaged no further step in the extension of the system. The party in opposition availed itself of this distrust, and, upon the faith which was reposed in its leader, won the last election. It is now nearly five months since he took the reins of Government, and during these busy months he has given some definite intimations of his purpose concerning civil-service reform. Rebuking the eager haste and indiscriminate greed of the clamorous horde of office-seekers that swept down upon him during the first weeks of his Administration, he has manifested a moderation, an independence of political dictation, and a disregard of mere partisan services, which has caused deep mutterings among the party workers. And in several instances, such as the reappointment of Postmaster Pearson, and in the promotion of Mr. Graves to the Bureau of Engraving and Printing, he has met the highest expectations of the most intelligent and liberal men in both parties. He has thus taken an advanced position in the conduct of his Administration in respect to appointments.

This position, however, is one which is dependent upon high personal qualities, which require to be firmly maintained, and vigorously and unflinchingly exercised, or it is liable to be swept away at any moment. Such qualities are the pride and glory of the State, but upon their permanent possession and undaunted energy communities cannot safely rely. It is for this reason that laws are enacted, systems of government established, and constitutions ordained. And for this reason any advance in methods of appointment to public office, to have a lasting value and become an enduring heritage, must be

reflected in and stamped upon the laws and regulations of the service. A forward movement, therefore, to be on permanent lines, should rest on the base of written law. For such a movement the aid of Congress is necessary; but without such aid the President may lead the way by a broader interpretation and wider application of the present statute, and by a progressive modification of existing rules.

Applying this test to recent events, it might be urged by a cynical observer that, while the column has been headed toward the enemy, and the standard erected on higher ground, the actual line of movement has been retrogressive. It is true this movement has been small, but the direction gives it importance; a single backward step is often perilous. The retrograde step which is here referred to is the interpretation which has been given to that clause in the civil-service rules which excepts chiefs of division in the departments at Washington from examination.

It has heretofore been the practice in the various departments, with perhaps one or two exceptions, to fill all vacancies occurring in those positions by promotion from the lower grades; thus securing in general chiefs of division having a knowledge of their duties gathered from a long and valuable experience. It is to be presumed that the exception made by the rules in respect to this class of officers was made in the interests of the public service, and that it was intended to provide for cases in which suitable persons for those positions could not be found in the lower grades. The determination of such fact in each case is left to the heads of the respective departments. But it cannot be reasonably maintained that the rules authorize the heads of departments to avail themselves of this exception for political purposes, or that they are justified in expanding it into a general rule. The purpose of an exception is to provide for particular cases, and *not* to abrogate the rule itself.

When the new Administration came into power this door was open, although it had not been used. This gave an opportunity either to amend the rules so as to insure a more extended operation of the law, or to take advantage of this serious mistake and bestow those important positions upon inexperienced and untrained men for partisan reasons. In view of the fact that the new Administration had deemed it expedient in nearly all cases to place inexperienced men at the head of the various bureaus, its course in this matter was especially important. What would be thought of a new and inexperienced superintendent of a machine shop who should remove all or nearly all the skilled foremen employed therein, and place men who had not learned the trade in charge of the workmen? Yet the experience and special training which are necessary to the proper discharge of the duties of chiefs of division in the public offices, are quite as necessary and important as the skill which is regarded by all as indispensable in the case of a foreman of mechanics; and the interests involved are in many cases far more extensive.

Among the clerks in every Government office there are a few intelligent men who, even under the spoils system, have by chance found their way into public employment. By diligent application and study these men have especially fitted themselves for the various functions of official duty in their respective offices. To accomplish this they have often gone outside of and beyond official requirements, and have made themselves masters of the principles and details of every branch of their work. To these clerks the positions of chiefs of division are the goal of official life, the highest places to which, without political influence or exceptional circumstances, they can reasonably hope to attain. To them in every sense those positions are justly due. They are qualified for them by their unrivalled fitness, acquired by special and generally self-imposed training; and the public interest in the correct, proper, and intelligent performance of the business of the departments requires their services. Some consideration is also due to the fact that the special knowledge acquired through long years of service in the public employment is in all but a few instances of no value outside of a Government office, and that by the severance of all relations with the business classes of the community the clerks and chiefs of division in the departments become in great measure disqualified for private employment, and lose the usual means of obtaining it.

Under the present Administration these facts and considerations seem to be non-existent, and these pivotal positions in the various public offices are being spoliated by the disappointed politicians whom the President has turned away. The exception of this important class of minor offices from examination was in itself a grave mistake; but the interpretation which has been given to it, which practically takes these offices out of the classified service, must be regarded by all who are interested in the extension of the system as a serious reverse.

The inadequacy of the existing Civil-Service Law (restricted as it now is to clerks and employees), to the purpose of removing the corrupting tendencies of political patronage from the public service, is apparent from every point of view. To survey the whole field within the limited space which can be given to the subject is impracticable. The need of a further extension of the system, however, may be illustrated by a single branch of one of the executive departments. The branch referred to is that which embraces the accounting offices of the Treasury, the principal officers of which are the six auditors and the three controllers. These officers are the main safeguard provided by law against illegal and fraudulent depredations upon the Treasury. They audit the total revenues and disbursements of the Government. All claims against the United States, and all accounts of public officers and agents, are adjusted and settled by them. During the ten years ending with 1884 the net ordinary expenditures of the Government exceeded an average of $170,000,000 a year. The items comprised in the vast aggregate of claims and accounts submitted to the accounting officers for allowance are supported solely by *ex-parte* evidence. Those officers decide upon the sufficiency of that evidence, construe the law relating to each case, and allow or reject any item, upon the presentation made by the officers and claimants, or their attorneys, without the aid of opposing counsel, and in general without any means of securing evidence of adverse facts. Moreover, their decisions, when *against* the United States, are final and conclusive. A claimant against whom a decision is made may bring an action in the Court of Claims, or he may apply to Congress for relief. But if an excessive or illegal demand against the United States is allowed, even though supported by no evidence whatever, there is no provision for repeal or practical mode of revision.

Such is the unmeasured power which is vested in those officers. Their public duty is equally great. They are charged with the responsibility of executing this trust with fidelity to the United States and with justice to its citizens. While not obstructing any just and valid demand, it is their undoubted duty to protect the Treasury by rejecting all illegal and doubtful claims, and by disallowing all items of expenditure which are not clearly authorized by law and supported by proper and sufficient evidence. Yet the keys of the Treasury vaults are in their hands, and they may turn them carelessly. Many of these claims and demands are urged upon the accounting officers by Senators and Representatives (who act as general claim-agents for their constituents), and by other public men. This is more likely to be the case with claims of a doubtful character, for such alone need extraneous aid. Yet, under the patronage system, it is at the will of members of Congress, or at least in dread of their power, that the accounting officers hold their positions and draw their salaries. Thus the promptings of personal interest tacitly urge them to secure the aid of those powerful allies, and of those who are supposed to have influence with them. Is it wise to establish such relations? Is it right to subject public officers to such perilous conditions? The corrupting tendencies of such a system are manifest; a few officers, independent, self-reliant, unyielding, resist their encroachment, but the strain is too great for the average product of a political campaign.

It is not intended to imply that the accounting officers have in general been venal or mercenary; on the contrary, the cases in which fraud has been perpetrated upon the Treasury by means of collusion with or bribery of those officers have been of rare occurrence. It has been in the lax and latitudinarian construction of law in favor of pressing claimants, and in the non-enforcement of provisions enacted for the purpose of protecting the Treasury and preventing the misapplication and illegal expenditure of the public moneys, that their administration has been open to censure. The prevailing evil which has vitiated their functions has been simply the want of moral strength and courage to withstand the powerful extraneous pressure to which they have been subjected. The persistent force of those influences has heretofore gradually encroached upon the judicial functions of those officers, until the barriers provided by law for the protection of the Treasury have been in great measure broken down.

The time will come, ought to have come now, when the interference of members of Congress with the duties of those *and other* executive officers will be resented as an affront. But this will not be till such officers hold their positions by a tenure which does not extinguish their independence, sense of honor, self-respect, and manhood.

In dealing with the civil-service problem it must be borne in mind that whatever course is adopted will be open to strong objections. Ideal perfection is not to be attained in practical affairs. On the one hand, there is the objection that any restriction of the appointing power will sometimes prevent the selection of those possessing the highest and best qualifications; on the other, if appointments are left to the unrestrained discretion of the appointing power, there is danger that it will become corrupted and vitiated by abuse. This is, in fact, the condition which meets us now. No perfect elimination of both of these objections appears possible. The best practical result which can be hoped for is one which avoids these evils in the greater measure. This a carefully devised competitive system ought to do. In what respect the present law fails to accomplish this result may be briefly indicated.

As contended above, the application of the present law is too greatly restricted. To secure its benefits where they are most needed, heads of bureaus and chiefs of divisions should be placed within its protection; and to accomplish the broad and general results at which the system aims, the classified service should embrace all executive officers and employees above the grade of messengers and below the Cabinet and foreign ministers. Some special exceptions, as of confidential and fiduciary officers, would be necessary and proper. In such an extension of the

system it is not proposed that the higher officers, such for example as heads of bureaus, should be selected by competitive examination. Such a method is obviously inadequate for the ascertainment of the higher qualifications which are appropriate to those positions. It is expedient, however, that such examinations should be applied to all grades below that of chiefs of division in the departments at Washington, and to corresponding grades in other branches of the service; and that original appointments should be restricted to the lowest grade in each group of positions. To complete this system, selections for the higher offices should be made only from those branches of the classified service within which they are respectively classed, and all recommendations for promotion, except of an official character, should be prohibited under penalty. To adapt the examinations to such an object their character would probably need to be raised to a higher standard, the subjects of examination extended, a higher minimum of rating fixed for admission to the service, and the probationary test more carefully and thoroughly applied.

It is not claimed that under such a system of appointment the best qualified officers would always be secured for every position. But it is believed that egregious unfitness would never enter; that the average attainments and efficiency of public officers would be higher; that experienced and trained men, having a special knowledge of their duties, would always be secured; and that the corrupting and degenerating influences which now infest the public service in every quarter, with their endless train of evils, would be almost entirely eliminated.

N. H. Thompson.

THE TORY POLICY.

London, July 25.

The Tory Ministry has now had about three weeks of Parliament to show the quality of its principles and its men. As that period has been mainly occupied by getting the estimates voted in Committee of Supply, and as the discussion of these raises few questions of wide political interest, and gives little opportunity for the display of statesmanlike or oratorical ability, the data for judging of the personal gifts of our new officials are still incomplete. But there are several large questions of policy on which the Cabinet has had to declare itself. Some of these relate to foreign affairs. The Tories in opposition were never tired of denouncing the weakness and vacillation of Mr. Gladstone's Cabinet in Egypt and Sudan, and they condemned it scarcely less for yielding to Russia in the question of the Afghan frontier. Their own line on these matters has therefore been looked for with curiosity. So far it has been one of prudent reticence. They have asked for time to confer with their representatives at the different courts of Europe and in Egypt itself on the Egyptian problem before expressing their intention, and this reasonable request could not be refused. They have given no sign of an intention to resume the offensive on the Upper Nile or the Red Sea Coast; and if it be true, as we now hear, that the Mahdi is dead, there will be the less reason for spending money on a forward movement which would be unpopular in England. As regards Russia, it is understood that Lord Salisbury proposes to carry out the arrangement settled in outline by Lord Granville before he quitted office. The violence of his language, and that of Lord R. Churchill, regarding the Russian Government, has naturally made the relations of the Czar with the present Ministry less friendly than they were with Mr. Gladstone's Ministry; but Lord Salisbury may be expected to wish to remove these grounds of coldness. There is no wish in England for a quarrel. The Tories doubtless dislike and suspect Russia, but their strong language about her lately was even more due to their dislike of Mr. Gladstone; and being now on their good behavior, being a Ministry on sufferance, tolerated by a hostile majority in Parliament, and most anxious to deserve success at the general election, they are unlikely to venture on a course which would unloose all the tongues whose invective drove Lord Beaconsfield from power in 1880. A Liberal Government is now more likely to be tempted to make war than a Tory one, because the people, believing that the former wish to avoid war, are disposed to believe that any war they engage in must be just and necessary, whereas the Tories, who have a bellicose record, are suspected of seeking opportunities to fight whether or no justice and necessity are on their side. Hence, the present Cabinet, which realizes the view the country takes of it, is not likely to deliberately pick a quarrel with Russia or any one else. If it does get into hostilities, which at present we do not expect, the blame will be either with Russia, where the war party is still strong, or with that precipitancy which marks Lord Salisbury's character, and which may betray him into some step whence an honorable retreat will be difficult.

On the whole, therefore, it may be said that the transfer of power from Liberals to Tories has not yet openly told on the foreign policy of England. In domestic affairs, however, we have witnessed an interesting development. The late Government was, when it fell, on the point of breaking up over the question of coercive measures in Ireland. It had earned the bitter hatred of the Nationalists, first by Mr. Forster's Coercion Act of 1881, next by Sir William Harcourt's Crimes Act of 1882. The Tory party had, through its representatives in Parliament, in the press, in society, called loudly for both these measures, and indeed went far beyond the Government in seeking to press them through in the most drastic form. During the earlier part of this session all the Irish Tories, and the great majority of the English Tories, too, held the same language, insisting that Mr. Gladstone's Cabinet should renew the expiring Crimes Act, taunting it with fearing Mr. Parnell, and warning it that if disorder reappeared in Ireland, on its shoulders would lie the blame. Partly under this pressure, but chiefly in deference to Lord Spencer's views, the majority of the Gladstone Cabinet had resolved to propose the reënactment of a part of the Crimes Act, though when the fatal 8th of June turned that Cabinet out, some of its members had not yet assented.

When Lord Salisbury undertook to form a Ministry, and asked assurances from Mr. Gladstone as to support in carrying through the remaining business of the session, it was generally supposed that he would ask to be supported in passing an Irish Crimes Act. However, he did not do so. This startled the Tory party. But how much greater was their astonishment when, so far from excusing themselves for not bringing in a Crimes Act because the session was far advanced, and it would have been difficult to pass it against Irish obstruction, the Tory Ministry denounced coercive measures in a high and righteous tone, declaring that this was not the way to treat Ireland, and that they would avoid instead of imitating the policy of their predecessors—that very policy which they had heretofore complained of for being too weak and lenient.

People had scarcely recovered from the shock of this splendid audacity when another display of it came upon them. Just a week ago Mr. Parnell moved for an inquiry into a number of criminal trials in Ireland, seeking to reopen the question whether certain persons convicted under Lord Spencer's Government had been rightly convicted. When a similar motion was made some months ago, the Tories, and especially Messrs. Gibson and Plunket, the two able leaders of the Irish Tories, joined the then Liberal Government in resisting it, and joined also in the Ministerial declaration that nothing could do more to shake the administration of justice in Ireland than the granting of such inquiries, which would be practically informal retrials of cases already tried and determined in the regular way of law. Now, however, the Chancellor of the Exchequer, Sir M. Hicks-Beach, while not openly conceding Mr. Parnell's demand, suggested that the present Lord Lieutenant, Lord Carnarvon, should be applied to on the subject, while Lord R. Churchill, now Secretary of State for India, absolutely repudiated Lord Spencer's policy, and declared that the present Ministry would take a new line of their own, and not defend anything done by their predecessors. This conduct has made perfectly clear to the country, what was long ago known by those who have watched the House of Commons, that an understanding subsists between certain leaders of the Tory party and the Irish Nationalists. It was by Nationalist as well as by Tory votes that Mr. Gladstone's Ministry was defeated on the Bradlaugh question, left with a majority of fourteen only last February in the debate on the Egyptian vote of censure, and finally and fatally overthrown on the 8th of June. Lord R. Churchill is credited with having chiefly created and worked this understanding, and is now believed to be the person in whose hands the *ménagment* of the Irish party is left. It is not easy to maintain, for some of the demands of the Nationalists are such as no Government, not to say a Tory Government, can well grant. But apparently the present compact or understanding, whatever one is to call it, will last till and over the general election.

It might be supposed that, whatever the Tory Ministry may gain from the help of Nationalist members, it would lose as much or more by the alienation of its English and Irish supporters. Some few of these have spoken out their minds pretty freely. But there is an extraordinary cohesiveness in the Tory party. Shocks which would split the Liberals do not affect its solid mass. It murmurs, but it does not revolt. And the class of Conservatives which most dislikes this coquetting with Mr. Parnell is also the class which most hates Mr. Gladstone, so that when the pinch comes it is sure to vote against him.

Hardly less significant than their treatment of the Irish question has been the conduct of the present Ministry in the removal of the rule which disqualifies from the electoral suffrage persons in receipt of medical relief. In a former letter I referred to the earlier phases of this question, in itself a small matter, but one which has figured largely in the present session. When a Liberal member proposed in May last that this disqualification should be removed, the Liberal Government opposed him, and the then Attorney-General insisted on the necessity for maintaining a provision of such wholesome economic effect. The proposal was defeated, but being again brought on some days later, was carried against the Government. In the House of Lords, however, the Tory party threw it out, and, the House of Commons having assented, it was believed that the matter was disposed of. However, some prominent Radicals, who feared that a good many agricultural laborers would be disqualified by the rule, and who saw in the action of the House of Lords a good ground for attacking that chamber, began to agitate the question, and when the Tory Ministry

came in, assailed it with demands that facilities should be given for a new bill they had brought in to extinguish the disqualification. To the equal astonishment of the Radicals and of their own followers, the Salisbury Cabinet declared they would take up the question themselves, and they brought in a bill accordingly which went much further than the Radicals' bill, since it removed the disqualification forever (the Radicals' bill had done so for two years only), and removed it as respects school-board and municipal as well as Parliamentary elections. Here indeed was a bid for popularity, an attempt to overtrump the Radical cards. But the ex-Liberal Ministers were not behind their opponents. The ex-Attorney-General, who had strongly opposed the proposition in May last, now went right round and advocated it; the ex-Home Secretary blessed it, argued for it, and tried to push it further, although the Gladstone Cabinet had resisted it so lately. The rank and file on both sides followed their leaders (though many on the Tory side mistrust the consequences), and the only opposition came from Mr. Pell, the old and doughty champion of strict poor-law administration, and a mere handful of members, economic Liberals and recalcitrant Tories. Nothing could show more clearly how much the sense of responsibility deserts a dying Parliament and its leaders, than the readiness of these leaders to throw over their past votes and speeches if by so doing they can win a little more popular favor at the elections.

Y.

A BULL IN A CHINA SHOP.

LONDON, July 23, 1885.

THE recent revelations of London morality by the *Pall Mall Gazette* have, apparently, excited sufficient attention in America to make a more comprehensive statement of the recent doings and position of that journal interesting to your American readers, the more as the revolutionary attitude it has taken may be more or less directly attributed to the example and influence of American journalism. This revolt from all the traditions of the English press, and the introduction of the sensational resources of the transatlantic press into a daily journal possessed of all the prestige of the highest degree of respectability, the quondam organ of the clubs, and journal of the gentlemen of the metropolis, dates from the entry into the functions of editor-in-chief of Mr. Stead, who, when the *Gazette* became the property of the present owner, Mr. Thompson (son-in-law of one of the firm which formerly owned the paper, Smith, Elder & Co.), came to London from the North of England, where he had acquired a distinct reputation as editor of a fiery Radical and outspoken little daily, the *Northern Echo*, to assume under John Morley the sub-editorship of the *Gazette*, which then became distinctly a Radical organ. Mr. Morley's direction brought the paper (*me judice*, and speaking from a fifteen years' or more knowledge of it) to its highest point of ability and literary dignity; and when he left it to take his Parliamentary work in entire earnest, Mr. Stead came, by a natural and merited recognition, to the chair of editor-in-chief. The paper at once became more Radical, more refractory, and more audacious in its insistance on the privileges of the press and its agitating initiative. The solidity and decorum of the London press were for the first time broken by the introduction of the interviewer, and the opinions of all the social and artistic and literary personalities on all agitating and attractive topics, among the official utterances of the paper. Everybody whose ideas and sayings could be of interest to the public on every side of every exciting question, was brought into the service of the paper in signed or anonymous communications, and the tone of the paper became that of vigorous and quite independent, sometimes irresponsible, personality. This was the very antithesis of the system by which, modelling itself always on the *Times*, the London daily press has made itself a mystery of grave, respectable, and inscrutable anonymousness—a quality which makes the *Times*, with its prestige and antiquity, a power in the State, but which in its imitators resulted in a generally dull and often pointless partisanship, unindividual, indestructive, except as labelled Tory, Liberal, etc., etc.

This press was shocked and scandalized by the new departure of the *Pall Mall Gazette*, whose absolute independence of any official or party control soon made it *persona ingrata* to the greater part of the official, semi-official, and social-official world of London. The paper was in various quiet ways tabooed, and the principal news agency in England, that of Mr. Smith, Conservative Minister in this and the former Conservative Administrations, followed a persistent scheme of pushing it in the background in practice, by putting it on sale at all his stands somewhat later than the other evening journals. (Since its last sensational enterprise this has been followed by absolute exclusion from the service of all Mr. Smith's stalls and agencies.) The *Pall Mall Gazette* became a journal too lively for the quiet of English conservatism, and it has been meeting a gradually increasing open hostility, at bottom I believe partisan, but carrying the colors of morality and patriotism. The campaign of the *Gazette* on the state of the navy found too many supporters in the solid men of both parties to permit effective attack on that score; that in behalf of Gordon found abundant justification in popular sympathy, and was above all justified by success; but the open advocacy of the Russian side in the early Afghan complication was so unpopular and so unflinching that the paper was for a certain time considered to have ruined itself. Its circulation sank to a fraction of what it had previously been, and its popularity was at the lowest possible point. The general public in England admit no question of the country being always right; and even if not so in the abstract, it is so in the sense that it must be supported, and that no patriotic Englishman can ever admit any qualification to this end. To maintain that the other side in any international dispute cannot be right, is a form of patriotism not peculiar to England, but the *Pall Mall Gazette* faced this feeling with a steadiness and courage rare in journalism, and I believe that now reasonable people in England generally admit that it was right, and that the Russians were not the wanton aggressors which most people (myself included) believed them to be. The animosity shown the *Gazette* during this crisis surpassed anything I know in English politics—not in intensity, in which respect the fervor of the Conservatives against Gladstone in the Bulgarian times somewhat surpassed it—but in extent. It was generally asserted, and believed, that the editor and owner of the paper were sold to the Russian Government, and the sum paid was even mentioned—£10,000 had been given in a lump sum to Mr. Thompson, and practically M. Lessar and Mme. Novikoff edited the paper. Of course no one who knew Mr. Thompson credited it for one honest moment, or that he was a man to derive any advantage from an unpatriotic action; but the men who sell arms and powder to the open enemies of England could the least believe in the honesty of the *Pall Mall Gazette*.

Nor is the case of Mr. Stead different. I had in times gone by the pleasure of knowing that gentleman, and, although I often differ widely from him in opinion, and (as he is a little intolerant of differences of that kind) we have not met lately, I have the utmost confidence in saying that he is an absolutely honest and intensely patriotic man, incapable of adopting for any personal advantage a course at variance with what he believes to be for the true interest of England. But ever since I have known anything of his course, he has been a friend of Russia and a believer in the sound policy of a Russo-English understanding on the Eastern question. As the only daily metropolitan paper that dared take that side of the question, it was favored with the most explicit and fullest information of the views of the Russian Government, and if the paper was wrong, it was honestly advocating the course it believed to be the best one for the country. This I now believe to be the opinion of the men whose good opinion is best worth having in politics, if not of the public generally. Except the confirmed Russophobes and the army and navy, I do not believe that there is any considerable number of publicists who now regret the heat of the *Pall Mall Gazette* in combating what, but for its antagonism, might have been a most disastrous drift of public opinion.

As the journal in question and its editor are likely to figure more importantly in the future politics of England, it will be just as well to understand them. The readers of the *Northern Echo* under Mr. Stead will recognize in the *Pall Mall Gazette* the same traits in a wider sphere—a narrow but direct and unflinching view of public questions; a provincial unconventionalism and contempt for the *convenances* of metropolitan journalism; uncompromising adherence to the editor's personal views in despite, or even contempt, of all party considerations or advantages; puritanical vigor in questions of morality, and as nearly inflexible independence of views on all questions as is possible to the editor of a paper owned by another person. Add to this a north-country energy and obstinacy and brusqueness, and a very shrewd eye to business in the function of journalist, a sensational vein, and some other qualities of popular American journalism, and (in the opinion of many critics) a want of responsibility, but which seems to me rather an honest, even if overweening, sense of the importance of his own views, which is more or less the consequence of a provincial career and the want of the broadening effect of metropolitan life and labor—and you have what I think enough to explain all the evolutions of the *Pall Mall Gazette* under its present management. Inflexible honesty, sincere patriotism, puritanical morality, and extreme obstinacy, I am entirely convinced, lie at the bottom of any mistakes the present editor of the *Gazette* may have committed.

These traits will explain the late crusade against sexual crime which the *Nation* seems to me to misjudge, although I was, to be honest, of the same opinion at first, as well as disposed to believe that the *Gazette* had ruined itself. Public opinion was aghast, shocked, and utterly disconcerted; even moral and crusading people were dismayed at the sensational way in which the matter was opened, and enormous evil was predicted as the consequence of such brutally frank exposures. Many still remain of the opinion that, in form, the articles were unfortunately realistic, and likely to do great harm by exciting vicious tendencies. I was of this opinion, but I cannot maintain it. The object of the *Gazette* was to effect a reform in monstrous abuses well known to exist, but which this very fear of shocking public propriety has hitherto prevented the right-minded people who knew of them from agitating against. When we know that the House of Lords had been in possession of the facts for four years, but that the Commons had blocked all interference, we need not have hoped for any

good from the kind of agitation which would have pleased the Lower House and the class it is chosen from. It was necessary to go right to the sense of the masses, and especially the lower middle classes, to produce an agitation which should move the upper strata; and whether it was a sublime sagacity or a lucky hit which led to the result, is of no consequence: the effect is that the nation is moved as it has never been moved in this generation. This is in part due to the vivid and sensational way in which the whole thing has been presented. I am inclined to think that Mr. Stead knew his public perfectly, and made his attack precisely in the most vulnerable point, in entire recognition of the needs of the case, and that a decorous statement of it would have hit nobody who could be moved.

The agitators in our early anti-slavery days would not fail to recognize the proprieties of this juncture, which are not to be confounded with social propriety. I remember some such very plain talking about the abuses of our slavery, and I do not see that it was blamable. I think the event will show the same in this case. I will not say that all the good or pure men of England applaud the *Gazette*, but I have little hesitation in saying that every man who has strongly at heart the morality of the English people is by this time in accord with its action in this campaign. It is impossible for people in America to understand how deeply the really moral heart of England is moved. There is in the lowest class of English people an awful immorality, due to individuals of the upper classes mainly, which weighs on the consciences of all true reformers; and this midday exposé of the broad and thronged road by which this immorality is kept up and the moral sense of the lowest classes destroyed, has set us face to face with an army of skeletons in our own houses. I do not see how any permanent or real harm can have been done by the exposé, any more than in the similar case with American slavery; and the more I examine the evil, the smaller it seems. I feel convinced that it is the beginning of a great and beneficent reform in England, mainly by the strengthening of the various societies for moral reform, which have been keeping up an agitation feeble for want of fuel which the *Gazette* has now given it. One thing I take to be sure—no one who has any discrimination in the signs of the times will openly attack or impede the crusade the *Gazette* has opened. It is now a part of English history, and I cannot respect the judgment or the feelings of the Englishman who sneers at it. I could show on one page of the last crowned book of the French Academy, 'Cruelle Énigme,' more filth and poison than there is in all the *Gazette's* articles. The latter I would not allow my daughters to read simply because I should not like them to know that humanity could be so vile; the former I should put on the Index as superlative and superfluous stimulus to sexual vice. Yet I do not know that the moral W. H. Smith, Rt. Hon. and Minister of her Majesty, has excluded from his stalls at the stations any one of the volumes of corruption which French literature is pouring on us. Prudery is pardonable and may be honest, but not when *doublée* with hypocrisy. W.

TOLSTOI'S NEW NOVEL.

PARIS, June 16.

THE success of Tolstoi's 'Guerre et Paix' has been very great among that class of the public which has not been totally depraved by the coarse vulgarity of some of our novel writers. The great book of the Russian novelist was almost a revelation: not only did it show us a new world, almost unknown—it was the type of a new literary method, which could not be compared to anything we knew. It is not to be wondered at if there was much curiosity felt when 'Anna Karénine' came out in a French translation. Our Russian friends said to us: "You admire 'Guerre et Paix'; wait till you read 'Anna Karénine.'" They consider this novel Tolstoi's masterpiece. I cannot, I may as well say at once, agree with this opinion. Is it because 'Guerre et Paix' was the first I read, and because it gave me sensations and emotions which novelty alone can give? I do not think so. There is in 'Guerre et Paix' a heroic part which is wanting in 'Anna Karénine.' The element of war infuses color into the first of the two novels, and gives it an extraordinary originality. The invasion of Russia—Borodino—the burning of Moscow—the retreat and the destruction of the French army—the quietness of the steppe and of the old châteaux of the Russian nobility disturbed by the roar of cannon, by the tramping of huge armies—Napoleon, Alexander, Kutuzoff, appearing here and there in the midst of their armies—what a *cadre*, as the French say, for a picture of human passions! And the picture is as fine as the *cadre* itself. There is no discordance, no incongruity felt; a human heart, full of passion, is a world in itself, and its tempests are comparable to the greatest tempests of nature, or those other tempests which we call wars. History must always be summed up in the struggle of a few individual wills; and these wills are more often led by instinct, by blind forces, than by reason and fixed purpose. The element of fatality is found in history as it is in the development of a woman or of a child—the terrible curse, the weight of past ages, the law of heredity. Religion as well as science struggles incessantly with the awful problems which are hidden in the enigmatic phrase "original sin."

'Anna Karénine' is purely a novel, and a Russian novel. But it is not a novel in the ordinary sense of the word; there is, so to speak, no story. It is not the development of a certain plot, with a beginning, a middle, and an end; it is rather a succession of pictures, of scenes, some of which seem hardly to have any connection with the principal scenes. Such is Tolstoi's manner, so far as he has a manner. He paints life such as it is, sometimes solemn and sometimes dull; tragical and commonplace—light and shadow constantly intermingled. His actors are numerous, their name is legion. The heroes and heroines are not always alone on the stage; they are constantly drawn among people who care nothing or who care little for their passions, their preoccupations. They move in a real atmosphere of dulness, of banality, of vulgarity, of levity, of indifference. It would seem as if the interest we took in them would be diminished by this juxtaposition or interposition; it is not so. On the contrary, the contrast between the tragical elements of life and the comical or dull elements increases our interest. Tolstoi shows us life as it really is, with its complexities, its necessary tedium, its frivolities. He does not deceive us: his finest characters have their weak points; he knows that perfection is not human. It would be an impossible task to give a suitable account of 'Anna Karénine,' considered as a novel. We must go a little beneath the surface, and try to find out if Tolstoi had an object in this extraordinary delineation of human life. He does not belong to the school of writers who let you know at once what their aim is, and where they are leading you; still, it seems as if he had been thinking of contrasting love, considered in its domestic aspects—legal love, if I may say so—observed in the family life, under common, ordinary, provincial circumstances; and love, as an uncontrollable passion—wild, lawless, destructive of the family affections and ties, of all social rules.

We have in 'Anna Karénine' two couples. One is Lévine and his wife Kitty, who married for love, and the husband remains a lover. Kitty is very charming, very feminine, very pure; Lévine is very good, very ordinary, very weak, jealous when he has not the slightest occasion to be jealous. He is an honest gentleman-farmer, timid, awkward; he detests St. Petersburg and society; he is fond of his country-house, his peasants, his dogs, his horses. He writes a book on agriculture which he will never finish. He is a warm friend, a good neighbor, a capital shot. Tolstoi makes you positively see him, and you feel at the end of the book as if you had always known him, and gone with him after woodcock, and heard him and Kitty discuss small domestic matters. They are happy, and their troubles are only like the small clouds that float a moment in a summer's sky and are soon absorbed by the warm rays of the sun.

It is not so with Anna Karénine. She is married to a high functionary, a slave of official duties, respectable, hard-working, a rising statesman, a type of the class which is produced by the Russian *tchinn*. But Anna is lawless: she is one of the born rebels of the world. She admires, she even likes her husband—she cannot love him; and she loves another man, a handsome, spirited, fashionable young officer named Vronsky. Fatality draws her to him, and he belongs to that class of men who may be said to recognize no duties except to themselves, no obedience except to their own desires and passions. He is a man without a conscience. He has principles, or says that he has; but these principles are totally at variance with those of Lévine. They allow him, I would almost say they force him, to despise the laws of matrimony, the bonds of friendship. He only submits to the world; but *his* world allows much, and he is determined to profit largely by its indulgence. He is not exactly the bold villain, the bandit, the outlaw, who has long been made prominent in literature. He is the correct man of the world, who pays his gambling debts at the appointed time; he is a brave, even a brilliant soldier, an accomplished courtier; but his code of morals is not inspired by any higher law. He is eminently and essentially selfish, and knows no God but his own will.

Anna Karénine is above him: she has a soul; she can feel commiseration and pity. She was made for good, not for evil; but her fate has tied her to a husband who does not satisfy the cravings of her imagination and her heart. She falls into the hands of Vronsky, like a bird fascinated by a serpent. When she feels herself, to her surprise and almost to her horror, in love, she tries to escape. The description of her feelings in the train which takes her away is very admirable: the tortures of a diseased mind have never been painted with more truth. She feels so agitated that, at one of the stations on the road, she goes out on the platform, though the night is cold and tempestuous:

"The wind was blowing with rage through the wheels, round the axles, covering carriages and men with snow. People were running here and there, opening and shutting the great doors, talking gayly, while the snow cracked under their feet. . . . 'Send the despatch,' said an irritated voice from the other side of the railway. Two gentlemen, with cigarettes in their mouths, passed by Anna. She was on the point of remounting into the carriage, after having breathed a vast supply of fresh air. She had already taken her hand out of her muff, when the vacillating light from the lamp-post was cut off from her by a man in a military coat who approached her. It was Vronsky; she knew him at once. . . .

"It was useless to ask why he was there; she knew as well as if he had said he was only there to see her.

"'I did not know that you were on the way to Petersburg. Why do you go there?' she asked, letting her hand fall, while an irrepressible joy lighted her visage.

"'Why do I go?' said he, looking fixedly at

her. 'You know I go only in order to be where you are; I cannot do otherwise.'

"At this moment the wind, as if it had conquered all obstacles, blew the snow off the roof of the carriages and shook triumphantly a piece of sheet-iron which it had detached; the engine uttered a plaintive sound. Never had the horror of the tempest seemed so fine to Anna. She had just heard the words which her reason had feared and her heart desired."

This passage is not a bad specimen of Tolstoi's manner. Anna is drawn by degrees into the vortex of passion. She is not a hypocrite; she has not the quiet assurance of a Parisienne, who can go through life leading with the same hand and by the same string husband and lovers. She is a creature of impulse; and when, one fine day, after a steeple-chase in which Vronsky falls with his horse and is thought for a moment to be dead, Anna is reproved by her husband for having shown too violent an interest in him in the presence of too many people, she throws off the mask. "'No, you are not mistaken,' said she to him slowly, casting at the same time a look of despair on the impassive face of her husband. 'You are not mistaken. I have been in despair, and I am still. I hear you, and I think only of him. I love him: I am his mistress. I cannot bear you: I fear you, I hate you. Do with me what you will.'"

As soon as Anna has sinned, the expiation begins. She begins almost at once to hate the cause of her sin. She hates him first unconsciously, and by degrees she is brought to hate him consciously. Vronsky, in his turn, first loves his victim, and then becomes tired of her. They try everything—a palace at Venice, country life on one of Vronsky's estates; they try St. Petersburg again. Alas! nothing will do. The world makes them feel that they must remain everything to each other, and they are no longer everything to each other. What was to be a paradise becomes an inferno. Anna was too bold when she left husband and child and defied society. She is not bold enough to make herself an "æs triplex circum pectus," and to impose herself again on society. She has the Slavic impetuosity and the Slavic weakness. She is bad, but she is not bad enough. She tortures herself; she bears her fatal love like a cross; and when she finally can fathom the selfishness of Vronsky, when she sees through the man who has destroyed the whole equilibrium of her existence, she feels like a child who must escape from some cruel, brutal tyrant. She runs away, hardly knowing where she goes. She met Vronsky on the railway on a fatal night; he is not there now. The dark, brutal engine, more insensible than even the heart of a villain, is there. She throws herself at the feet of the iron monster: she cannot suffer any more; the monster touches her, and she dies.

Correspondence.

WHAT IS THEOSOPHY?

To the Editor of The Nation:

Sir: In your issue of July 23, in an article entitled "The Purpose of Theosophy," quoting Mrs. Sinnett's questions, "What does this Divine wisdom really consist of? whence comes it? by whom has it been taught, and for what purpose?" you say, "It is precisely to these questions that clear and accurate answers are essential."

If the *Nation* really wants "clear and accurate answers" to these questions, such I will engage to give, or will in my official capacity cause to be given by a competent member of the Theosophical Society.

I will tell you beforehand what Theosophy is *not*. It is not a flea that you can put your finger on.—Very truly yours, F. T. S.

1726 N Street, Washington, D. C.

To the Editor of The Nation:

Sir: I enclose a circular which I, and I suppose my fellow-members of the American Society for Psychical Research, have received. The document appears to me equally amusing and impudent, and perhaps worthy to be printed in your columns for the entertainment of your readers. Our Psychical Society has never published anything, nor has the only investigation so far completed yet been printed, the first report being now in press. The supposition that our results need to be "supervised" is a gratuitous assumption made in ignorance. In spite of this (according to the above-mentioned circular), the American Board of Control of the Theosophical Society votes to assume and proceed to exercise supervision of our Society through an officially appointed censor—Dr. Elliott Coues. It then further resolves to send its threats—for such their tone makes its expressions—to every member and associate of our society. I know nothing concerning the Theosophical Society of America, but it is difficult not to connect their resolution with a desire to forestall any discoveries or reports of the Psychical Society which may interfere with the shadowy tenets of the theosophists. This seems the more probable explanation since a recent report of the English Society for Psychical Research has been printed, though not published, which maintains that a large part of the evidence upon which the theosophists had put their faith was fraudulent. Under these circumstances one cannot but suspect that their tone of confident superiority is assumed to conceal a fear of further exposures which might blight their existence.

Of course the Psychical Society will be very glad to have the benefit of any good criticisms upon its work, but it may be fairly doubted whether the Theosophical Society, whose reputation is under a cloud, will afford us much advantage by placing us under the censorship of one gentleman, and moreover one whose work, as far as the public knows it, has been principally in the domain of systematic zoölogy. Psychical research requires profound mathematical knowledge, a mastery of physiology, philosophy, psychology, and physics, and an immense allowance of common-sense. The Society exists to associate for its investigations gentlemen who collectively represent these factors. Can one person adequately criticise all the aspects of such researches? —I remain, dear sir, yours very respectfully,

Charles S. Minot.

25 Mt. Vernon St., Boston, July 27, 1885.

THE CATTLE BUSINESS.

To the Editor of The Nation:

Sir: I was wondering at the correctness of your review, in your issue of July 2, when Mr. Poitevin demurred, in yours of 16th. He makes some statements of the advantages of the "Western plains" to which I demur.

He says "the rainfall is extending gradually, but rapidly," in southwestern Kansas. As he fails to locate southwestern Kansas any more accurately, it is a little difficult to tell just what he means. Dodge City is almost on the 100° of longitude, and is nearly 120 miles, in a direct line, from the west boundary of the State. At this point the United States Government has maintained a signal station, beginning with 1875. The query would not be out of place, What does the record at that station show as to rainfall? The record lies before me, and it shows these facts: For the ten years, 1875 and 1884 inclusive, the average rainfall was 21.1 inches; the years exceeding the average are 1877, 1881, 1883, and 1884, and the greatest fall of any year was in 1881.

The next query which naturally arises is, How does this record compare with that kept elsewhere in eastern Kansas? There lies before me the printed record kept by Professor Snow, of the State University, and from it I find that the average rainfall at Lawrence, forty miles west of Kansas City, has been, for the years 1868 to 1884 inclusive, 35.18 inches. The most disastrous year to the farmer from drought, during this period, was 1874, and that year the rainfall was 28.87 inches, or a little more than 7¾ inches more than the average fall of rain at Dodge City for the past ten years. When it is remembered that less than six inches is the highest increase of rainfall claimed for eastern Kansas during the past thirty years or more, it will be seen that a similar increase for southwestern Kansas will still leave the average rainfall there a little less than the disastrously dry year of 1874 was in eastern Kansas.

These records seem to prove Mr. Poitevin's statement, quoted above, fallacious.

This year, 1885, has been more abundant in rain, or seasonable rains, in southwestern Kansas than last year; but the snowfall in that section last winter was the heaviest by far known to the oldest settlers, and it left the ground in less need of rain this spring. The summer thus far has been cooler, as was the spring, than the average; hence the soil out there has been every way more propitious for the farmer.

Mr. Poitevin builds an argument on the fact that settlers "consider the land and the conditions favorable to agriculture"; but a slight glance at the history of western Kansas raises a doubt of the wisdom of such settlement. The writer has lived in Kansas for twenty-nine years. In 1874 the settlement seceded from western Kansas, to again return in 1877 and 1878. In these years the railways advertised the large crops of 1876 and 1877, and advertised their lands; and, as a result, the tide of settlement rolled up almost to the extreme western boundary of the State. But 1879 and 1880 were dry years out there, the record at Dodge City being for the two years a rainfall of 15.43 and 18.12 inches, and the lands were in the main deserted. Congress was appealed to for relief, and passed a bill, the provisions of which but very few claimed. The Santa Fé Railway passed free hundreds of families out of the southwestern part of the State in 1879, to prevent the outcry, or quiet it, which began to arise against the railways for inducing such immigration.

As the result of that experience, the Santa Fé Railway caused all its lands to be examined, from Dodge City west, and reappraised them, and since then have never offered these lands for sale, except as irrigable or grazing lands.

In 1879 the system of irrigation began at Garden City, fifty miles west of Dodge City, and capital has since invested nearly half a million dollars in irrigating canals, from Dodge City to a point eighty miles west thereof. This is the proof of the faith intelligent capital has in "the rainfall extending . . . rapidly" into that section of the State.

To-day southwestern Kansas has many thousands of inhabitants, the bulk of whom are the usual restless land-speculating frontier class, with very little means of any kind. They have entered the country mostly this year or too late last year to raise a crop—this is their first year's experience. Either the history of the past is no criterion from which to judge the future, or in 1886 or 1887 there will be more of suffering and disappointment from failure of crops in southwestern Kansas than has ever been known, from real cause, before in this State.

As to that part of the State it is no longer a question between "cattle-king" and settler, for the range cattle, whether owned by large or small owners, have been forced from the terri-

tory in question; and none are held there now, unless close-herded and coralled nightly.

I wish to quote and commend one statement by the reviewer. He says, page 16: "It is difficult to see why, if the law were properly framed, the small settler should be in any worse condition than he is now," which is his response to Mr. Nimmo's statement, as a reason against the Government leasing lands for grazing, "that small settlers might be forced to sell their present holdings to large herdsmen."

The writer has been engaged for several years in the cattle business, and is by no means a cattle-king, but one of those possessed of hardly a competence. Furthermore, I have found myself compelled to associate in a corporation and buy a larger herd of cattle than I wished, solely because, under the existing public-land laws of the United States, I was not safe in putting only my own money into cattle on the range. I am quite familiar with a portion of Arizona, a goodly part of New Mexico, eastern Colorado, and southwestern Kansas, and with the cattle-men and their modes of running cattle. When I began I had money enough to buy 300 head of cattle; but I found that to turn my cattle on the range and allow them to run, as was the custom, compelled me in the spring to traverse so large a section of country, or hire men to aid in so doing, that my cattle would be of little profit; while not to attend the various round-ups meant the loss of many cattle. I should very much have preferred to purchase from the Santa Fé Railway the odd sections along the Arkansas River and running back a few miles therefrom, and then the even sections belonging to the Government, which lie between, so as to own and fence my own range, and then raise the proper feed for my cattle; but the land-laws of the United States said nay—you may have just 320 acres of the Government land and no more, in Kansas.

The actual experiences under my observation, extending over a few years, are that Mr. Nimmo is wholly wrong, and the present laws work to the disadvantage of the small cattle-man and the settler with little capital. Only in such sections as the settler enters in full force and occupies all or nearly all the land, is the present law a benefit. The recommendation of the Land Commission of 1879 was eminently wise, and if in error at all, it was that the amount of land to a settler should have been more rather than less.

The cry "Land for the landless" is the demagogue's yelp, in the face of the facts as to the lands now owned by the United States Government in the above territory, and it is high time, unless the people really think high-priced beef a good thing, that some other policy should be begun as to the grazing lands of the Plains proper, than merely yelling "cattle-kings" to every request of cattle-men that the Congress will address itself to this subject.

The hope of the country, at present, is almost wholly in the press at the East giving this subject some little attention. If your reviews can awaken discussion on the subject, we shall rejoice, for we do not fear discussion nor investigation of the whole subject. That some wrongs may have been perpetrated we do not doubt; but I am well persuaded that the true interests of the whole country require that our existing land laws should be overhauled and fitted to the existing facts. It is equally true, I think, that too many trimmers and too many timid men find their way into Congress to hope anything from Congress till the press urge the matter upon them.

CATTLE-MAN.

KANSAS, July 27, 1885.

P.S.—I find on figuring out the average rainfall of Lawrence, from Professor Snow's tables, that if the seventeen years of his record be divided into three periods, the two first into six years each and the last into five years, the result is thus: Average rainfall 1868 to 1873 inclusive is 34.35 inches; from 1874 to 1879 inclusive is 35.68 inches; from 1880 to 1884 inclusive is 35.57 inches. The average for the seventeen years is 35.18 inches. Kansas in 1868 had less than 300,000 population, and now has over 1,000,000. In 1865, at the close of the war, she had probably less than 200,000, and did not reach till 1870 364,399, in 1875 over 528,000. I am strongly inclined to think the popular statement, that settlement has increased the rainfall in eastern Kansas five inches, is a popular humbug. The above figuring doesn't carry it out.

METHODISM IN THE SOUTH.

TO THE EDITOR OF THE NATION:

SIR: The recent review in your columns of Bishop McTyeire's 'History of Methodism' shows plainly that the South has yet to develop an impartial historical or biographical writer. The good Bishop, like most of my fellow-Southerners, has allowed his admiration for his subject to crowd out or obscure many unpleasant truths. It is almost impossible to convey to one not residing in the South an idea of the tremendous influence exerted upon the social, political, and educational institutions of that section by the church of which the Bishop is the virtual head, and I for one Southerner do not believe this influence altogether beneficial. The exceedingly large membership and the well-organized system of church government make it a most powerful instrument for good or evil, and as such it affects nearly every household in the South. Its facilities for speedy control of public opinion are almost incredible in the North, and this control has a most disastrous effect upon the advancement of our educational and material interests. Especially detrimental are its influences upon our Southern colleges, a large number of which are under its direct control, and the others held in subjugation by their competition. Vanderbilt University, for instance, which ere this should have been a Cornell or an Ann Arbor, is now not much more than a large theological seminary, where the free discussion of scientific truth will not be tolerated. The influence of the church in warping the intellectual development of the people at large is also exerted through a large and well-circulated series of religious papers, that seem in places to entirely supersede secular literature. A gigantic publishing house at Nashville has furnished all the book literature for thousands of families for the past thirty years, yet it has never published a single work that has received a place in our national literature.

But the most direful influence of this church upon the Southern character is that resulting from the emotional "revivals of religion," whereby the process of instantaneous conversion is substituted for the calm, sober years of reflection that should logically precede all religious convictions. Every hamlet has its annual revival or camp-meeting, and, amid scenes of most violent and unnatural tumult, thousands, mostly children, are "saved" from the wrath to come. A relapse into ultra atheism often follows these sudden conversions. Enthusiasm bordering on fanaticism thus takes the place of reasoning. President Andrew D. White, in a recent lecture, asserted that an ignorant religion was the curse of the Southern negro; but if he had witnessed one-tenth of the scenes of fanaticism that the writer has seen during a lifetime in the South, he would have included the whites in his statement, for the negro's religion is but a crude imitation of theirs. This emotional religion, in my opinion, is the prime cause of our Southern impulsiveness, that pervades many of the ways of secular life.

In conclusion, I claim that the Bishop's church, as the largest and most influential body in the South, is the bulwark which opposes all liberalizing tendencies of our Southern denominations.

A SOUTHERNER.

CABINET IRRESPONSIBILITY.

TO THE EDITOR OF THE NATION:

SIR: The explanations which the friends of Mr. Roach have offered of the strange spectacle of a man failing in business in a country blessed with a protective tariff, must enable that unfortunate gentleman to pass many a moment in a state of extreme hilarity. He may grow mildly mirthful over the reflections of the journalists of the *Tribune* school, but he will lose all sense of decorum and become a boy again if he will only read "G. B.'s" letter in the current number of the *Nation*. Though so patriotic a citizen as Mr. Roach could hardly persuade himself, under ordinary circumstances, to read a journal entirely given over to the heresies of free trade, as is the *Nation*, yet I am satisfied this good old man will find his reward in borrowing or even purchasing the number referred to. I would, however, advise Mr. Roach to skip the complimentary remarks about the *Nation*, with which "G. B." adroitly seduces one into reading something more on "Cabinet Responsibility." But when Mr. Roach has had his laugh, he will hate Secretary Whitney and Attorney-General Garland with a more deadly hate than ever. Poor old man! he knew that he had *somehow* failed, but little did he dream of attributing his troubles to "Cabinet Irresponsibility." And, I fear, much of Mr. Roach's wrath will fall on "G. B." Mr. Roach will look reproachfully at "G. B." and say:

"Your intentions are doubtless good, but you have failed to see the point Whitney and Garland are making. They want to make not only Cabinet officers but contractors responsible. They say that Cabinet officers have only such authority as the law gives them; that when a Cabinet officer steps beyond the bounds of his legal powers, his acts are null and void, and do not bind the Government. Hence, they argue, the act of Congress authorizing the construction of the *Dolphin* must be looked to in order to ascertain, not what my contract called for, but what it should have called for. They do look at the act of Congress, and find that it requires my *Dolphin* to have a sea speed which it has not. They turn the *dear* old thing back on my hands, and when I protest that the contract I had with the department did not require that sea speed of her, they coolly answer that that makes no difference; that Congress gave the department the only authority it had, and that authority being to contract for the construction of a vessel of a specified sea speed, which my *Dolphin* did not possess, I could not be paid for it. Now, that is what I call 'Cabinet Responsibility' with a vengeance. I don't say, mind you, that this is your English Cabinet responsibility, but it is bad enough without having anything English about it. The fact is, 'G. B.,' your remarks about responsibility pain me greatly. My feelings are more tender than they used to be. That Cabinet responsibility you yearn for is the last thing on earth I desire. I pine for the good old days when The Party was in power. We had, you know, a big majority in Congress. We passed laws authorizing the departments to contract for something which was required, but, when the law reached the department we began to interpret it, and it always came to mean just what we wanted it to mean. Nobody in Congress asked any questions. Congress was Republican, the department was Republican, and I was Republican—and a mighty good contributing one, too.

"In those days nobody was responsible, except the Government—to me. But now see the difference: Whitney and Garland begin prying into things, and, by Jove, they talk about Cabinet responsibility very much as you do, 'G. B.' The only difference I see is, that Whitney and Garland require of the Cabinet a responsibility which the law already imposes upon it, and you are after a kind of responsibility which you can never get without turning the growth of the country back and beginning all over again. And if you could, 'G. B.,' what would become of me? As much as I love the *Dolphin*, I would not have the rebuilding of her for double the contract price. And just as I feared, these new-fangled notions of responsibility are spreading. I see that Garland is at it again. This time he says that neither the Secretary of the Interior nor the President has any power to make, authorize, or approve these Indian leases; that to make such a lease legal, it must be made by treaty or convention, with the consent of Congress. There is more responsibility, and another good thing gone. Ten to one, 'G. B.,' some of my friends out there have got left. No, no, I am for protection and things like that, but detest responsibility. And, for Heaven's sake, 'G. B.,' don't say I was ruined by 'Cabinet Irresponsibility'; that is the only thing which enables me to pay 200 cents on the dollar."—Very respectfully,

ROGER W. CULL.

BALTIMORE, August 3, 1885.

PARLIAMENTARY GOVERNMENT.

TO THE EDITOR OF THE NATION:

SIR: Your able correspondent, "G. B.," earnestly recommends the introduction into the political system of the United States of the English method of Cabinet responsibility, or, as it is more commonly styled, Parliamentary government. His partiality for that method has its origin, I suspect, in the glamour spread over it by the world-wide celebrity of the statesmen who have been engaged in its working, and by the importance of the matters to which it has been applied. Men like Peel, Palmerston, Cobden, Bright, Disraeli, and Gladstone, discussing measures on which the peace and welfare of two hemispheres may hang, cannot fail to attract admiration, which may easily confuse the judgment. If your correspondent wishes to discern the true working of this system, when applied to a country closely resembling the United States, let him turn his eyes northward, and inspect the Dominion of Canada.

The Canadian Confederation was established in 1867, with a Parliamentary system copied from the English form as closely as the circumstances would allow. The American system was considered and deliberately rejected. Let us look now at the results. The annual expenditure of the Confederation (apart from that of the Provinces) was in 1868, in round numbers, $13,500,000. In 1874 it had increased to $23,300,000. In 1885 it is $32,350,000. The public debt of the Confederation was in 1868 $93,000,000, in 1874 $141,000,000, in 1885 $280,000,000.

This enormous increase of public burdens has taken place during a period of profound peace, with no army, navy, or diplomatic service to support, and no treaty liabilities or other outside obligations to discharge. During the same period the people of the United States, after passing through an exhausting and most expensive civil war, have paid off nearly a thousand millions of debt, and now actually owe less, per man, than the people of Canada. In seventeen years Canada, which was the cheapest of English-speaking countries to live in, has become one of the dearest. With a population less than that of the State of New York, it is piling up debt at the rate of $10,000,000 a year, and is staggering wildly and helplessly onward to the brink of a ruinous catastrophe. Such is the fruit of the Parliamentary system.

When a public expenditure of any sort is proposed for the consideration of the American national legislature (and the same may in general be said of any State legislature), the proposal has to pass through five distinct ordeals. There is, first, the proper committee of the House of Representatives, composed of members of both political parties, each side eagerly watching to catch the other tripping. Next it must pass the House. Then the Senate committee, composed of members of the two parties, scrutinizes it. The Senate, strong in public support and jealous of its own rights and reputation, has then to discuss and adopt the measure. And finally it comes before an independent and irremovable President, armed with the veto power, and finding both duty and popularity concerned in checking improper expenditure.

In Canada there is but a single check, and that of the weakest kind. The only committee is the Cabinet, composed of members of the dominant party. The Senate is a nonentity, and the Governor-General a figurehead. The sole ordeal is the discussion in the House of Commons. The members of the House are elected for five years, and feel little sense of responsibility to their constituents. An astute Premier, by granting favors here and there to provinces, cliques, and individuals, can always secure a majority. If he is above these methods, he falls—as Mr. Mackenzie fell, and as Gladstone has fallen—when the popular movement which carried him into office has spent its force.

The Canadian Premier and his colleagues are censured for their lavish outlay, made in securing the support of their majority. Their defence is, that the system makes this method indispensable. They are unquestionably able, clear-headed, and patriotic men. Undoubtedly they would much prefer that their Government should be economical and impartial. But what can they do? They have half-a-dozen importunate interests to pacify. The opposition of the French party alone would overthrow them in a week; and when its demands are satisfied, other interests must receive their proportionate shares of the plunder. The situation is hopeless.

Mr. Goldwin Smith is struck with the evil and the danger. He would escape them by abolishing parties. This is like a proposal to purify the atmosphere by abolishing winds. Party is the safeguard of free government. The trouble is not in party spirit, but in institutions so perversely contrived as to direct it into the worst possible channels. It is as though an architect, erecting a building on a windy site, were to so design his structure that the wind should be collected under the roof and blow it off.

But, it may be asked, if the system works so badly in Canada, why should it not work as ill in England? The answer is, that it does work badly there, both for economy and for stability. Look, for a single example, at the preposterous expenditure in the Sudan affair, undertaken solely to save the Government from being upset by a gust of popular passion. But the real merit of the English system is to be sought in another direction. Parliamentary government has been the engine by which the English people have wrenched their liberties first from the crown, and later from the aristocracy. The struggle with the latter is still going on, and for this struggle no better machinery than the English system could be devised. When the same system was first introduced into Canada, after the Rebellion and the Durham inquiry, its office was the same—to rescue popular rights from the grasp of the old Family Compact and the Colonial Office autocracy. For this purpose it was admirably adapted. But at the time when the Confederation was established, this object had been fully accomplished. The instrument which has served its purpose is retained when it has become not merely useless, but a nuisance. The lamps which last night dispelled the darkness in our house are kept burning, to waste our means and poison our atmosphere in the daytime.

M. N.

TORONTO, July 27, 1885.

POLITICAL ECONOMY IN CLEVELAND.

TO THE EDITOR OF THE NATION:

SIR: Among the institutions that are educating the wage-workers of this country in the first principles of political economy, the Cleveland Rolling-Mill Company deserves a high rank, and the instruction it has given has been none the less thorough because unintentional.

Three years ago the wage-workers of northern Ohio had a profound belief that our so-called protective tariff really did protect the American workman against the ruinous competition of the "pauper labor of Europe." Then came the strike of 1882, and these workmen saw the company, which was able to make a large profit by virtue of the protective tariff, quietly lock them out and fill their places with this very "pauper labor of Europe," freshly imported for the occasion. It is not strange, therefore, that the representative from this district, elected shortly after that lesson, should have introduced a bill which afterward became a law, viz., the law prohibiting the importation of foreign laborers under contract; and that the workmen should have come to believe that the protective tariff was expressly designed to give the capitalist one more advantage over the wage-worker.

The subsequent course of the company with these Polish, Hungarian, and Bohemian workmen with whom they had replaced their former employees, is also very instructive. The new men were unorganized, and it was currently believed that "a Polak would work for any wages, and could be put upon to any extent," and so the company felt that it ran no risk in cutting down their wages whenever it became convenient to do so. Their wages were accordingly cut down, by means of successive reductions, 37½ per cent. below what they were paid in '82—cut down to a point where men were trying to support families on two cents per meal per person, while the city infirmary could not feed its paupers for less than five cents per meal per person; cut down to where the city had to doctor them when they became sick, and bury them when they died. Notice was given of a still further reduction, and though the men were wholly unorganized they struck at once, and proceeded in a body to forcibly shut up every manufactory in which the company was supposed to have an interest. The men claim that they were induced to come to Cleveland on the pledge of steady work at good wages for five years. The company, however, deny having authorized any such agreement. Whether they authorized it or not, the men so understood it, and are smarting under a sense of wrong.

So far as I have yet heard, there is but one opinion on the part of the citizens, viz.: the severest condemnation of the company, and a growing feeling against the importation of foreign laborers in the way and for the purpose for which these were imported. "The company," they say, "has no right to bring thousands of families of foreigners among us, ignorant of our language and customs, and settling in communities by themselves; use them to displace our own citizens and so long as it can make money out of them, and then turn them over upon the taxpayers, compelling the public to feed them and to

bear the additional expense of restraining the violence which is but the natural result of their ignorance, added to a just sense of wrong."

It is just this sort of experience that has produced in certain communities such a dread of foreign immigration; and it would seem that the feeling is a pardonable one, as a man might be pardoned for having a fairly strong prejudice against quail on toast if he had been forced to attempt to swallow the quail whole.—Very respectfully, L. B. TUCKERMAN.

CLEVELAND, O., July 24, 1885.

Notes.

BESIDES Mr. F. B. Sanborn's 'Life and Letters of John Brown,' Roberts Bros. have in hand for the coming season a translation of the scandalizing 'Memoirs of Karoline Bauer'; a new translation of 'Père Goriot,' with more to come of Balzac's novels; Hamerton's 'Paris in Old and Present Times,' which readers of the *Portfolio* have already enjoyed; and 'The Sermon on the Mount,' made into a gift-book with the aid of designs by well-known American artists, particularly those of Mr. Harry Fenn, who lately visited the Holy Land. The Rev. E. E. Hale furnishes an historical introduction. Mr. Hale has also in preparation a work, 'Franklin in France,' based upon the Franklin papers purchased by the United States Government. In press is a 'Short History of the City of Philadelphia,' by Susan Coolidge.

Macmillan & Co. have in press, and will shortly publish in London and New York, 'The Light of Asia and the Light of the World,' by Prof. S. H. Kellogg, D.D., of the Western Theological Seminary, Allegheny, Pa., formerly for many years missionary to India. The work is a careful comparison of the legend, the doctrines and the ethics of Buddhism with the Gospel history and the doctrine and the ethics of Christ.

Frederic Tredwell, 78 Nassau St., will publish early in the fall 'A Sketch of the Life of Apollonius of Tyana,' by Daniel M. Tredwell. It will be handsomely manufactured.

'Outlines of Mediæval and Modern History,' by that competent scholar, P. V. N. Myers, is in the press of Ginn & Co., Boston.

By arrangement with the widow of the late F. J. Fargus (Hugh Conway), Henry Holt & Co. will publish his novel, 'A Family Affair,' which has been running in the *English Illustrated Magazine*.

'Hittell's Hand-Book of Pacific Coast Travel,' published a few days ago by A. L. Bancroft & Co., of San Francisco, is a revised reissue, with changed title, of a book published by the same firm in 1882, and then called 'Bancroft's Pacific Coast Guide Book, by John S. Hittell.'

When, in cases like the foregoing, the publisher changes as well as the title, we may charitably allow that he has been deceived. Such an inference seems strong when we meet with the publication of a third translation, within a year, of the last work of the well-known *Gartenlaube* novelist, "E. Werner." The original ('Gebannt und Erlöst') was published two years since, and was soon translated in this country (by Mrs. Wister) as 'Banned and Blessed,' and in England as 'Raymond's Atonement'; this last being reprinted in the Seaside Library, Pocket Edition. We now have a third version, published by T. R. Knox & Co., without the author's name, but "from the German by Dr. Raphæl," under the title 'Enthralled and Released.'

The making an historical monument of the Old South Church, Boston, has led to its being used not only as an antiquarian museum and for a summer juvenile lecture course in American history, but as a centre of impulse to historical research and composition. In 1881 "Old South Prizes" began to be offered for essays written by graduates of the Boston High and Latin Schools of the current and the two previous years, and one of the two subjects then proposed was the policy of the early colonists toward the Quakers. Mr. Henry L. Southwick was awarded the first prize, and his essay has now been printed (Boston: The Old South Meeting-house). Its successors, or some of them, may also be thus honored. Several young ladies have taken first and second prizes. Mr. Southwick's essay is a creditable beginning.

The series of Military Monographs undertaken by the Military Service Institution opens with one on "Our Sea-Coast Defences," by Lieut. Eugene Griffin, U. S. A. (G. P. Putnam's Sons).

Prof. Austin Scott's address, last November, at the 200th anniversary of the establishment of the American Board of Proprietors of East Jersey, forms No. 8 of the Third Series of the Johns Hopkins University Studies. Non-Jerseymen will, we think, be disposed to wish the orator of the day had separated his philosophy from his facts.

The fifth number of *Mind in Nature* is the first that we have seen. It bears date July, 1885, and is published by the Cosmic Publishing Company, Chicago, in behalf of psychical, medical, and scientific information. We will borrow a few lines from the editorial announcement of the organization of the Western Society for Psychical Research: "The conditions of life, climate, and modes of thought are so essentially different in all these localities—in Europe, Boston, and Chicago—as to produce psychical phenomena differing, if not in kind, yet in degree, and calling for new and local investigators. . . . The Western mind is less shackled by conventionalism and traditions than is that of Boston or London, of Vienna or Paris. Men brought up within sight of the White Mountain can never quite escape the influence of its mighty shadows. . . ."

The newest issues of the larger 'Brockhaus' Conversations-Lexikon' (New York: L. W. Schmidt) reach Merovingians in part 159-160. They contain an unusually small number of long or striking articles. A fine colored map of Mecklenburg and Pomerania accompanies the article upon the former province. The smaller Brockhaus reaches Cypselus in its 15th part. A pretty map of France, by departments, is noticeable here, as well as an ethnographical map of Europe.

On a large map of Central Asia, in No. 117 of the Journal of the Berlin Geographical Society, Franz Max Schmidt lays down the route of a very early traveller, Wilhelm Rubruk. The journey began at Constantinople in 1253, and extended as far as a point some 300 miles south of Lake Baikal, whence, returning, the route diverged southerly so as almost to touch Lake Issik-kul, and ended in a descent of the Volga, a skirting of the west shore of the Caspian, and a traversing of Armenia, Asia Minor, and Syria, as far as Acre, in 1255. Rubruk was a Franciscan sent on a mission to the Tartars by Saint Louis. In the Proceedings are reported remarks of Mr. A. F. Bandelier, at a session of the Society, on our Mexican border-lands. Interesting, too, is a map of Cumberland Sound and Davis Strait, by Dr. Franz Boas, showing the wide discrepancies between the coast lines as newly ascertained and as defined on the English Admiralty charts.

Mr. Bandelier's 'Archæological Tour of Mexico,' reviewed at length in our columns not long since, went suddenly out of print almost before publication. By the courtesy of the Archæological Society, who loan Messrs. Cupples, Upham & Co., Boston, negatives of the really fine illustrations belonging to the book, that firm has been enabled to make a small edition, numbering 200 copies, printed from type.

Mr. F. Gutekunst, Philadelphia, sends us a panel photographic portrait of General Grant, presumably taken in the early part of 1866. The facsimile of an autograph letter from the sitter which accompanies this print and praises its excellence as a likeness—"there has been no better"—bears date of March 10, 1866. General Grant's testimony is, of course, not more valuable than any man's is apt to be as to his own likeness. Nevertheless, it is clear that this portrait will take a high rank from its intrinsic quality, as well as from the circumstance that it represents General Grant in the very prime of life, and in the happy middle term between the crushing cares of the conduct of the war and the hardly less wearing responsibilities of the civil Administration. He stands erect, his right hand in his pocket, his left hand thrust into his bosom, but not wholly hid. His face has a sober, almost stern expression, in which strength of will and of endurance is most manifest. The figure is three-quarters in length. We have here the original from which Gugler made the meritorious engraving which we noticed last week.

Prof. Erich Schmidt, of the University of Vienna, has resigned his professorship in order to accept the position of Director of the Goethe Archives in Weimar (of whose opening we give an account elsewhere), under an appointment from the Grand Duchess of Weimar. He is the author of an admirable work upon Goethe's relation to French and English literature, called 'Richardson, Rousseau, und Goethe.'

Johannes Scherr has become a confirmed bookmaker, depending for success not upon originality of material or thought, but upon the choice of blood-and-thunder themes, and a style which often is nothing better than rant. His last book, 'Die Nihilisten' (Leipzig: O. Wigand), is of a piece with his account of the Commune and his eleven volumes of essays—easily read, but differing from respectable commonplace only by exaggeration of language and personal spleen. He seems to have depended entirely upon "Stepniak" and other equally accessible sources of information, never citing an untranslated authority.

M. Lanciani points out, in the *Bullettino Comunale di Roma*, some resemblances between the Roman and the English patricians in their method of uniting the conveniences of a city life, made necessary by their attendance on the Senate and on Parliament, with the healthy exercises of country life. The paper is occasioned by the discovery of an old city below Tusculum.

In a letter to the London *Times* of June 3d, Sir Frederick W. Burton denied a statement made in the *Athenæum* on the previous Saturday, that the Ansidei Raphael, recently purchased for the sum of £70,000, had, since its arrival in London, suffered severely from the "desiccated atmosphere" of the National Gallery, and that the planks composing the panel on which it is painted had more or less parted. Although the Director's letter is calculated to allay any anxiety about the present condition of the picture, it is satisfactory to know that he has in his possession positive proof that it has suffered no change since it came into his keeping, and that the minute cracks which are perceptible on close inspection upon its surface (cracks perhaps a century old), certainly existed thirteen years ago. The proof is as follows: In 1871, when the picture was taken down from the wall at Blenheim to have a glass door fitted to the frame, Mr. George Scharf, Director of the National Portrait Gallery, one of the most accurate draughtsmen in England, made a drawing of it in which the cracks appear exactly as at present. This is also the case with two photographs, one taken last spring at Blenheim just before the picture was packed to be sent to London, and the other immediately after

it reached its destination before it was hung in the Gallery.

The interest in seismology continues unabated, and the frequency of earthquake tremors of late is such as to lead in the direction of the accumulation of observational data of great importance. Cashmere was a favored locality in the early part of the past month, shocks continuing to be felt at intervals of two or three days; and in Calcutta a severe earthquake lasted for some time, being felt with varying intensity over the whole province, and some of the shocks being very serious. At the Meudon Observatory, Paris, an apparatus for registering electrically the propagation of earthquakes in underground strata has been set up by M. Fouqué, with the assistance of the director, M. Janssen; and a series of experiments are now under way, the effect of the fall of weights of 600 to 900 kilogrammes from heights of 7 to 9 metres being satisfactorily registered by the new apparatus.

—There is perhaps no other form of literature in which the supply, numerically considered, is so largely in excess of the demand as it is in the case of guide-books. But it is also true that no other reference-books, on the average, are so ill-prepared. When one seeks for other information than that concerning picture galleries and battles, he rarely finds anything but loose general statements which are of no good, or figures and directions arranged to correspond to the advertising pages at the end of the volume. It gives us unusual pleasure, therefore, to be able to recommend a neatly printed and bound volume of 117 pages, called 'Berlin as a Medical Centre,' published by the New England Publishing Company at Sandy Hook, Conn. The author is Dr. Horatio R. Bigelow, formerly of Boston and later surgeon in the navy, but now pursuing an advanced course of study at Berlin. While we have no doubt that the two chapters (out of five) which are given to the special interests of medical students will prove very serviceable to them, it is as a general guide to Americans in Berlin that the volume has interested us, and that we recommend it to all intending to go thither. For it not only gives a great variety of information, but precisely the kind which is most useful and the hardest to get. There are, for instance, not only the addresses of hotels and boarding-houses, but full details as to neighborhood, prices, and so on, with careful instructions as to the need of attention to contracts for lodgings, and the like. Scales of total expenses, adapted to persons of different incomes, are given both for single men and for man and wife.

—Another dwarf book has been discovered, smaller than any hitherto known. The Dante published by the Salmin at Padua in 1878 was vaunted as the smallest booklet ever made, but now it appears that, two centuries and a half earlier (Oct. 15, 1519), the Giunti published at Venice an office of the Virgin only thirty millimetres broad by forty-eight high. Such a little book was easily lost, and this Tom Thumb has only just come out of his hiding-place. The Salmin will cry, "Pereant qui ante nos nostros libellulos fecerunt." This pursuit of littleness must be drawing to an end. The progress of horse training has reduced the time needed to "cover" a mile from the 2:40 of the last generation to the 2:08¾ of Maud S., but there is a physical limit to the possibility of breaking the record. Type cannot be made end cannot be handled beyond a certain degree of smallness. The type-setting and proof-reading of the Salmin Dantino was said to have ruined some workmen's eyes by its microscopic type. A book may be made of course very small by having one short word on a page; we have seen such a one which was not more than half as large as the 'Officiolo della B. M. V.' lately discovered; but such a production of the press does not deserve the name of book; and nothing that has real reading matter can be much more minute than the Giunti volume.

—In a work entitled 'Les Roumains au Moyen-âge—Une énigme historique' (Paris, 1885), Professor Xenopol, of the University of Jassy, has come out in defence of the Daco-Roman origin of his nation against what, in East European ethnology, is designated as the "Rösler theory." Some decades ago it was still universally taught in histories and geographies that the Rumans, or Wallachs, who form the bulk of the population of Moldavia, Wallachia, Transylvania, and some neighboring districts, were descendants of the colonists whom the Emperor Trajan, after the subjugation of the Dacians, in the beginning of the second century, carried into those countries from all parts of the Roman world, and of the natives of Dacia Romanized by the legions, the Imperial officials, and the Latin-speaking settlers. The Latin character of the Ruman, or Wallach, language, in spite of the very heavy admixture of Slavic, Magyar, Turkish, Tartar, Greek, and other elements, is as unquestionable as that of Italian or Portuguese. There were, however, facts which more or less strongly militated against this notion of the origin of the people. The Roman legions and the Roman inhabitants in general, as the historians of the later Empire tell us, were withdrawn from Dacia by the Emperor Aurelian, some one hundred and seventy years after the conquest, and transferred into Mœsia, before the invading Goths. The names Ruman and Wallach nowhere occur in connection with the Dacian territories more than a thousand years after Trajan, during which Goths and Gepidæ, Huns and Avars, Slavs and Petchenegs, Cumans and Magyars, obliterated there the last vestiges of Roman reign and influence. During the same period Wallachs repeatedly appear in the history of the Rumelian—that is, Roman or Ruman—territories south of the Balkans. The idiom of the Wallachs now living in Macedonia and the neighboring regions is almost wholly identical with the language of Rumania and of the Transylvanian Rumans. All this, and much more, actually induced some critics, especially Hungarian, to modify the popular theory, but could not shake it, until the appearance, in 1871, of 'Romänische Studien,' by Professor Rösler, of the University of Gratz, who, by a vast array of learning, endeavored to prove the very late immigration of the Wallachs, from the Latinized East-Roman lands south of the Danube, into Wallachia, Moldavia, and Transylvania. This theory has found both strong supporters and assailants—among the former Prof. Paul Hunfalvy, of Buda-Pesth, and among the latter Professor Jung, of Innspruck. The difficulties on either side are immense, and Professor Xenopol is right in calling the vexed question an enigma. That his patriotic solution will not generally be accepted as final—except by his compatriots—may safely be predicted.

GENERAL GORDON AT KHARTUM.

The Journals of Maj.-Gen. C. G. Gordon, C.B., at Kartoum. Introduction and Notes by A. Egmont Hake. Boston: Houghton, Mifflin & Co.; London: Kegan Paul, Trench & Co. 1885.

THESE journals begin on the 10th of September, 1884, a few hours after Colonel Stewart, accompanied by Mr. Power and the French Consul, M. Herbin, had left Khartum on their ill-fated attempt to reach Dongola. It is characteristic of the singularly self-centred character of General Gordon that these journals, though frank to an extreme regarding the thoughts and feelings of the writer, do not contain a single word of regret for the loss of the society of his two English comrades. The last entry is dated December 14, and concludes with these ominous and affecting words: "NOW MARK THIS: if the Expeditionary Force, and I ask for no more than two hundred men, does not come in ten days, *the town may fall;* and I have done my best for the honor of our country. Good-bye." It is impossible not to admire the equanimity with which the lone British officer watches, day after day, the toils being drawn closer and closer around; the quiet humor with which he comments upon the defects of the fighting material at his disposal; the cheerful and undaunted spirit that he maintains to the last. But it is, in our judgment, no less impossible not to feel that his defence of Khartum was a mistake from the beginning—a fatally false reading of the situation, resulting not in his death alone, but in that of many thousands of men, women, and children.

From the date of the despatch of British ironclads to Alexandria down to the present time, English intervention in Egypt has been an unrelieved series of blunders. This has been occasioned by the fact that, rich in ability as the Liberal Cabinet was, it never, in regard to Egypt, had a clear and definite policy of its own. It oscillated hither and thither, trying at one moment to soothe the minds of its Radical supporters by a movement in retreat, and then to quiet the clamors of its Jingo opponents by a movement in advance. The result has been to reduce Egypt to a state of chaos. Yet so enamored were they with this policy of facing both ways, that, undeterred by their Egyptian experiences, they imported it into the Sudan also, and the result has been precisely the same. The Sudan, like Egypt, has been reduced to a state of chaos. The (so-called) Mahdi was already a formidable power in Central Africa when the Liberal Cabinet entered upon its campaign against Arabi Pasha, and it was warned, again and again, that when it had crushed the Nationalist party in Egypt it would have to undertake the much more difficult task of either settling with or crushing the Sudan Mahdi. But it was the policy of the Cabinet at this time to minimize, as much as possible, the character of its intervention in Egypt. Kordofan was a very long way off, and Mr. Gladstone and his colleagues persuaded themselves that they might get rid of the Mahdi by the simple expedient of resolutely ignoring his existence. Besides, was not the Khedive an independent sovereign? The Liberal Cabinet, as his allies and well-wishers, had intervened to enforce "the municipal law of Egypt" (such was Mr. Gladstone's delicious phrase) against an unscrupulous "military adventurer"; but it possessed neither the right nor the desire to dictate to the mighty Tewfik the policy to be pursued in the Sudan. The policy of Tewfik and his pashas was to seize upon Arabi's disbanded soldiers, load them with chains, and send them off to the Sudan. There they were formed into what was called an army under the command of General Hicks, assisted by about a dozen European officers of different nationalities, and directed to march to Obeid and "smash the Mahdi." A more hopeless policy than this it is impossible to imagine. The separation of Egypt from the Sudan, and the independence of the latter country, were prominent portions of the political programme of the Nationalists. The relations between the Mahdi and Arabi had been of a friendly character, and it was certain that Arabi's disbanded soldiers would not fight against men with whom they had no quarrel for a Khedive whom they detested. What became of General Hicks's army will never be known. The officers were certainly killed, and the bulk of the soldiers most probably entered the service of the Mahdi. As an Egyptian army, at any rate, it disappeared. And then, for

the first time, the Liberal Cabinet awoke to a recognition of the fact that they could not get rid of the Sudan by merely pretending that there was no such place.

Their first determination was unquestionably a wise one. It was to cut the Sudan adrift, and withdraw the frontier of Egypt to the northern edge of the Korosko Desert. But this policy, precisely because it would greatly facilitate the evacuation of Egypt by the British troops, was profoundly distasteful to the Khedive and his pashas, and to the miscellaneous horde of cosmopolitan usurers, place-holders, and office-seekers who fattened and flourished under the grateful protection of British bayonets. These tender-hearted people became deeply afflicted at the thought of the fate impending over the Egyptian garrisons in Central Africa if abandoned to the tender mercies of the Mahdi and his followers. The Conservative Opposition in Parliament, never loth to add to the difficulties of a Liberal Government, took up the cause of the Egyptian garrisons with the utmost zeal. The honor of the nation, so they said, demanded that they should be extricated, no matter at what cost. Now, whenever a political party invokes "the honor of the nation" as demanding a particular line of action, we may be certain that it is one which no wise or reasonable statesman would follow. But it is at the same time an appeal impossible to meet with argument, because "the honor of the nation" is a matter of feeling and not of reason, and appeals, therefore, with extraordinary force to sentimentalists, philanthropists, humanitarians, Chauvinists—in a word, the unreasonable people of all kinds who form the vast majority in every nation. Against "the honor of the nation" no considerations of expediency, humanity, or even impracticability are allowed to have the slightest value, and those who are rash enough to propound them are instantly denounced as base and sordid utilitarians. The Liberal Cabinet had not sufficient vim in its constitution to remain true to its wiser mind when "the honor of the nation" was hurled against it, and in an evil hour for Egypt, for the Sudan, for England and itself, it sent General Gordon to Africa to try his hand at the impossible task of withdrawing the Egyptian garrisons.

Six years before, General Gordon had described Egyptian rule in the Sudan and Central Africa as "the worst form of brigandage." He predicted that a general insurrection against it must occur in a few years. The bribe that he was now to offer the Mahdi in exchange for the release of the Egyptian garrisons was the liberation of Central Africa from the detested oppression of the Turk and the Circassian; and it is just possible that if Gordon had remained true to this policy, his mission might have been successful. But his deviations from it seemed to increase in proportion to the distance which divided him from London, and when at last he reached Khartum he may be said to have discarded it altogether. His first intention was to go to Suakim, and from thence proceed straight to the residence of the Mahdi, under the protection of an Arab chief—a personal friend of his own. He would then have come to the Mahdi upon a mission of peace as an envoy of the British Government, and free from the taint of any connection with the detested Egyptian rule. This plan bore upon it the impress of the simple and daring genius of the man; but in an unlucky hour he allowed himself to be diverted to Cairo, and there he not only abandoned the plan, but consented to go to Khartum as the Governor of the Sudan—the nominee and agent of "that worst form of brigandage" which the Sudanese were determined to expel from among them. This sealed the fate of the Egyptian garrisons, of Khartum, and of Gordon himself. From that moment it became all but impossible for the Sudanese to recognize Gordon as a bringer of peace and emancipation. But the inconsistency of his action was not limited to this initial mistake. If one thing more than another was clear in the whole of this rash business, it was that Gordon was not sent to the Sudan in order to make war on the Mahdi. But he had hardly reached Khartum when he entered upon this policy of making war—converting that place into a base for military operations against the very man to whom he had been sent to negotiate its surrender. The consequences of this indefensible change of policy have been, upon Gordon's own showing, terribly disastrous. He calculates, in these journals, that at least 80,000 men, women, and children have perished from war, disease, and hunger. The garrisons, as all the world knows, have not been relieved, but Khartum has itself fallen, and Gordon is no more.

We have always stigmatized as absurd the notion that Egypt proper was in any danger from the uprising in Central Africa. Insurrections in Moslem countries are forced, by the peculiar character of the Moslem religion, to assume a religious character. They always have a Mahdi, an Imam, or some other personage of religious pretensions at their head, because every Mohammedan state is a theocracy, and to levy war against the head is just such an impious and heretical proceeding as was an attack upon the Pope in the days of Hildebrand. It is only a zeal for the purity of the faith which can justify such a war. But at bottom these insurrections are occasioned, as in Europe, by oppressions and cruelties. Thus the rising in Central Africa was a movement against the atrocities of Turkish and Circassian pashas, and might safely be counted on to subside as soon as the producing cause had been eradicated. What has occurred since the capture of Khartum has proved the correctness of this view. The strength of the Mahdi dwindled down to nothing as soon as the immediate end was achieved which held his followers together. So far from the protracted defence of Khartum having kept the insurrection a way from Egypt, it is most probable that only the presence of Gordon there drew the Mahdi from his capital at Obeid.

These last journals of General Gordon show that, in holding on to Khartum, there was no ulterior policy which he had thought out for himself. He repeats again and again that it would be "mean" to abandon the garrisons in the interior, but he does not attempt to explain in what way the situation of those garrisons would be improved by the ruthless manner in which he was carrying on the war round Khartum. His deliberate destruction of the irrigation wheels along the course of the Nile, in order to produce a famine, was in particular a proceeding very difficult to harmonize with that profound affection for the Sudanese with which Gordon professed to be animated. The fact is, that Gordon was, before all things, a soldier—as a soldier, he had, in China and in the Sudan, achieved signal successes with very imperfect means. This had given him a supreme confidence in himself, and in what Napoleon would have called "his star." He exaggerated his own strength and resources as much as he underrated the material forces and the moral feelings arrayed against them; and thus he was deluded into the belief that the straightest and speediest way of carrying out his "mission of peace" was by "smashing the Mahdi."

But while Gordon is mainly responsible for the useless carnage that has been going on in the Sudan since he arrived at Khartum, no inconsiderable portion of it rests also upon Mr. Gladstone and his colleagues. They sent Gordon from London as a representative of Great Britain engaged on a mission of peace. In allowing him to become, at Cairo, the agent and nominee of the hateful Egyptian Government, they not only completely transformed both the character of the envoy and that of his mission, but they placed his future conduct beyond their control. The weakness and want of foresight which caused this acquiescence has involved Great Britain in a costly and futile campaign. Never were gallant lives more uselessly sacrificed than in Lord Wolseley's disastrous attempt to reach Khartum, and the even more disastrous operations of General Graham about Suakim. Party feeling has elevated Gordon into a popular hero, and a national monument is about to be erected to his memory. Actually, however, he was engaged, when at Khartum, in trying to enforce "the worst form of brigandage" upon a people whom intolerable wrong had driven into revolt. It is hard to see in what way this was a service either to his country or to humanity in general.

SUPERSTITIONS.

The Gentleman's Magazine Library. Edited by George Laurence Gomme, F.S.A. [Vol. III.] Popular Superstitions. Boston: Houghton, Mifflin & Co.

As yet this Library, made up from three half-centuries of the English *Gentleman's Magazine*, does not, like an Australian river, after a long, broad, deep course, dry up, somehow (one cannot tell how), and come to an end. Its current has not, perhaps, been very broad or deep; but it goes on, promising much the same as ever; and there is a good deal of it.

We must say, gently, of the editorship, that it might well use a little more care, if not more intelligence: there are still needless repetitions, and there is still a want of method, so that things which belong together are sometimes not brought together. With a good index, *first*, for the compiler, and then with a good eye, knowing what it ought to seek, there might easily be no blunders, of any consequence, in making this collection from old printed books. Let us, at the same time, say that the mistakes of printers or proof-readers are far fewer, and the bulks of matter nearly worthless to readers at all practised or thoughtful, much less than in former volumes.

"Superstitions" are things that our race never tires of bringing out in its life and trying over again, and so, of course, never tires of hearing and reading about; they are all only special instances or illustrations of the superstition that is in us. The wide reach of this quality in our race we are constantly getting glimpses of, and showing, in others and ourselves. Thus, when the last chilly little February that ever was was just taking its (happily small) place among the months, the greater number of us—thoughtful and reasoning people, a good many of us—watched, in half-faith, the interview of its second day with the conscious sun. After what we then saw, the greater number of us believed, beforehand, that just as surely as the fox, American, English, German, or our own old undying fox of Æsop and La Fontaine, beheld his shadow on that day, and, beholding it, shrank back to his hole, so surely would all foxes, and the rest of us, see two winters in this one year.

And look how strange all that is, in us thoughtful, reasoning people. Out of the special force of calendar-days that do duty in that cold month, we had such faith in the peculiar ability and intelligence, and the steadfast character and influential connections, of February 2d, that we expected, beforehand, just what we have since had. Yet what a poor dependence ours was! "Historic doubts" hit that day harder than Arch

bishop Whately's ever hit that all too solid monster Napoleon First. Thus, in the first place, February 2d lives but a day of sunlight, like Aristotle's "beasts" at the river Hypanis, or, counting his dark times, twice as long; how are we to trust him for an arrangement which is to govern some fifty or more days, brighter and better, in most ways, than himself? Then, again, February 2d is not February 2d, but altogether another day wearing his name and badge; for, more than one hundred and thirty years ago, the whole force of calendar-days was moved forward, so that September 3d was called September 14th; and all others after had place and name changed, in like manner, through all the three hundred and sixty-five. Now, which day he really is, we may leave to those who have settled whether eighteen hundred is himself or his successor; but February 2d, at any rate, is not February 2d, and yet we take it that for wearing the name and badge, he will show the same character as the real original, and have the same understanding with the "head centre" of our solar system. Moreover (and this in the next and last place), Time, which for us, is made up of days, has been said (and a poet has put this into words which are nearly the same as a demonstration, to most readers) to have no existence whatever:

"Tempus, item, per se, non est, sed, rebus ab ipsis,
Consequitur sensus transactum quid sit in ævo."

If so, days, as days—the best and the worst of them—have no existence, and that which does not exist cannot well do anything in the way of making arrangements with the sun, or any other thing, so far as we can see with the sight that we now have—"quaternions," or the "fourth dimension," being of no help to us.

It is fair to say, however, that a hundred and thirty-odd years ago "the Glastonbury Thorn" (bush), and another bush or two in England, who could not say a word for themselves, seem to have fastened their faith, such as it was, just as surely on a calendar-day as we wise people, who could give fifty reasons to anybody or anything, if we had them. The faith of those thorn-bushes seems to have been more intelligent than ours—in one point, at least—that they went behind the rating of the calendar, and did not take the new 25th of December for their Christmas Day. They waited over all the days of bell-ringing, and carol-singing, and feasting, and friendliness, and fooling, to bloom, as they are said to have bloomed, most resolutely and vigorously, on "old Christmas Day," which, for one hundred and thirty-three years, has been to most of us mortal Christian men the eve of the Epiphany. Whence those particular thorn-trees get their information, unless through effective tap-roots from something like the old "mundane soul" of the Ionic and other old philosophies, is as hard to guess as whence the faith in Candlemas and his bargain with the sun has come to us; but since the thorns and we, being apparently equally wise and equally in earnest, keep contradictory reckonings, which ought to give in? or are we all wrong?

One thing more, but not more strange, though strange enough, about these English thorns and the Englishmen, their neighbors, is that a way of common understanding was lately open—perhaps is still open—between man and tree in that part of England, so that while the thorn-trees stood in their lot, and would not, for Parliament or priest, come down from their stand, but would wait till the 25th of December, old style, before they would don their Christmas dress, the country folk, taking their meaning from them, and taking it for true, made too strong a siding with the faithful thorns for the rector or vicar. The parson yielded for the time—kept two Christmases, for his own part, that year—and the thorns and their allies carried it, over the almanac and an act of Parliament, that Christmas should be celebrated once more, at least, at its old time. Does a case like this throw any sort of side-light upon the importance of our old classical training? A man of mere science would never undertake to make anything of it; but will not the scholar, with plenty of precedents from Ovid and Virgil, be ready to take it kindly into his store of bleeding cornel-shoots, and arms and hands stretched out pleading and quivering, as the bark of laurel or lotus crept on and hardened over them? And what amount of strengthening does the English case take from kindred examples like those in Greek and Roman mythology?

In the volume before us are "superstitions" and old customs, sorted by the day of the month and by the shire and town; and there is witchcraft—a good deal of it. Readers of a moderately scientific turn may amuse themselves here with tracing in a new field the influence of what they may find to be "heredity." Here is an overwhelming array of instances which, if read by wise eyes, may show that there has struck over from the human race into its dependent races, four-legged and other—such as chairs, tables, and the like—the principle of hereditary transmission of habits; so that the active demonstrations, in later years, of these pieces of household furniture—the rearing, the walking, the vaulting—are only in the direction of their forefathers' habits, some hundreds of years ago. Doubtless intelligent readers can find here, also, if they look for it, Darwin's great law of the survival of the fittest prevailing just as surely among these dependent, inanimate races—tables, chairs, bedsteads, sideboards, sofas, and whatever of them have legs and feet to their bodies.

It is odd to find here mention of the figure of a horse-shoe fastened to the threshold of Stanningfield Church to keep out the fairies; and it is funny to find that race of tiny folk passing, with English rustics, under the travestied name of "Pharisees," as it was always funny to find the warring Saxons figuring as "Saracens," and Paynim hounds, in the old romances. In the matter of the fairies' title, we think the philological scent of Sylvanus Urban Esquire's correspondent may have been dull, and that "Pharisees" ought perhaps to have been written "Fairies-es," a double plural, as we have heard "wristës-es" for "wristës" (wrists).

Among the fairies, in the popular reckoning, figure a harmless and friendly tribe called in Wales "Knockers," who are beforehand with the miners in discovery and pounding and drilling and blasting until men strike the vein of ore, and then leave off their work. For the assistance of these kindly little toilers even men of standing argue; one of whom, one Lewis Morris, Esq., of Cardiganshire, writes that "they have stood his very good friends." Believing in them, therefore, from personal experience, he brings reason and philosophy to back his experience:

"The word 'supernatural' used among us is nonsense; there is nothing supernatural; for the degrees of all beings, from the vegetative life to the archangel, are natural, real, absolute creatures, made by God's own hand; and all their actions, motions, and qualities are natural. Doth not the fire burn a stick into ashes as natural as the air or water dissolves salt? And yet fire, when out of action, is invisible and impalpable; but where is the home or country of fire? Where, also, is the home or country of Knockers?"

If any one find the former question hard to answer, we think that he will find the latter harder: "credat, autem, [in]experto"; we have not tried either of them. In a country like ours, "of boundless mineral wealth,"and of vastly greater than boundless speculation in minerals, the possession of one or two, if no more, such "very good friends" would be convenient, and perhaps the recipe given here as "An excellent way to get a fayrie," which is as simple and safe as that given a little after "for to get a stomache," may do some one a good turn, if he will believe it.

For "manners and customs" what strange things these become—these abiding ways of behaving themselves, and of living and dealing with others—among a strong-building, staying folk of the English stock! If an American, sitting under his country's evening sky and counting stars, were to hear and see a man come and stop a little way off, and blow a blast or two or a snatch of notes upon a horn, and then go and do the same at another spot, all the time without a word said, he might take it all for a whim or freak, or a harmless gush of good spirits, with no more explanation needed than for a bird's flittings and bursts of song. In England he might witness such a thing, as in Ripon, done at 9 o'clock night after night at the market-cross and the mayor's door, and, if wise, might think it a survival of curfew; but if wise enough to find out, would learn that, as curfew, which was done away with 800 years ago, is still recalled by nightly bell among the people of English stock in the commonwealth of Massachusetts, so this custom overlives from the old way of watch-setting in Ripon; the watch is no longer set, but the little flourish of trumpet (and a little office and fee, too) lives on.

It strikes us strangely that when one-fourth part of this volume is given to the subject of Witchcraft, and when our own Salem in Massachusetts has so great a name and fame in that department of jurisprudence—fully, perhaps, one-quarter part of all on record—the only instance given from America is assigned to "Burlington in Pennsylvania." We must grant, however, and with much satisfaction, that the Burlingtonians managed the business of witchcraft in a much more satisfactory way than the Massachusetts Bay folk of a generation and a half earlier. The accused were weighed, one by one, against a large Bible, and every one outweighed it greatly; and when it came to the water trial, without which a poor, old, crippled woman cannot satisfactorily or rightfully be shown to be a witch or acquitted, a good-natured crowd tumbled the accusers with the accused into the pond, where happily all floated. After an indiscriminate ducking, accused and accusers stood upon the same ground, moral and physical.

The strangest experience in witchcraft recorded here is that of King James Sixth and First, who was converted to a belief in that black art and afterward made into a law-giver against it in England by having "declared unto him by Agnis Thompson the very words which passed between the King's Majesty and his Queen at Upslo in Norway the first night of their marriage, and their answer each to other." On hearing this the wise King wondered greatly, and swore dreadfully, "that all the devils in hell could not have discovered the same; acknowledging the words to be most true." "The King's Majesty took great delight to be present at their examinations." By well-aimed questions he found out that "a christened cat," "with the chiefest parts of a dead man bound to each part of that cat,and the whole carried into the sea by all these witches sailing in their riddles or cieves, was the cause that the King's Majesty's ship had a contrary wind to the rest of the ships then being in his company," and "that his Majesty had never come safely from the sea if his faith had not prevailed."

The more than brutal cruelty of the trials of Doctor Fian (or whatever his name was) and others, their folly and their uncleanness, we leave in the book.

THE RELIGION OF THE EARLY SIKHS.

Sikhism in its Relation to Muhammadanism. By Frederic Pincott, M.R.A.S. London: W. H. Allen & Co. 1885.

SIKHISM, the prevailing creed of the inhabitants of the Panjâb, is one of those numerous religions which have had an illiterate origin, and which, naturally, have been accepted by but very few persons of any pretensions to lettered culture. Its author, Guru Nânak, a Hindu of the second, or martial caste, who was born in 1469, in the neighborhood of Lahore, could neither write nor read; and the same seems to have been the case with his three immediate primatial successors. The four divided between them the Guruship of the new superstition during seventy-seven years, from 1504 till 1581. It was under the last of these, Râmdâs, who restored the noble tank known as Amritsar, and founded the city of the same name which adjoins it, that Sikhism began to take on a different character from that by which it had previously been distinguished. Râmdâs, unlike his quietistic predecessors, was far from insensible to the charms and the advantages of dignity and wealth, which he both aspired to and acquired. His son, Arjun, was still more secular in his proclivities, and, by reason of his ambition and aggressiveness, which speedily became marked traits of his co-religionists, met with an untimely end, either by execution or by suicide. To him is due the older collection of Sikh Scriptures, the 'Âdigranth,' or 'First Book,' containing the improvisations and other compositions of Nânak and divers other personages reputed for sanctity, among whom are two women. After Arjun came his son Hargovind; and the pontificate of Sikhism devolved similarly, each Guru designating his spiritual heir, until the tenth of them, Govind, refused to follow the precedent set by his forerunners, declaring that, after his death, the 'Adigranth' was to be obeyed by the Sikhs, as their sole guide. To the compilation of Arjun he added a supplement, however; and this supplement is now held in paramount veneration by a sect—the largest of all the seven Sikh sects—the members of which take from him their more current denomination. From the time of Govind's death, in 1708, the community has lived on without a hierarch, or, at least, without a hierarch akin to those which it had then had for two hundred and four years.

The religion of the Sikhs, at least in its incipiency, closely resembled that of the Indian reformer, Kabîr. More avowedly, however, it was an experiment at devising a temper between Hinduism and Muhammadanism. It inculcated chariness of destroying animal life, held to metempsychosis, and retained other indications of its Neo-Brahmanical origin; but it also rejected caste and the worship of idols. Nânak, observing that many of the followers of the Arabian prophet were Sûfîs, accentuated their radical harmony of belief with that of Hindus; both systems being, at bottom, monistic. Yet it is very doubtful whether, on more than one fundamental point, any Hindu convert to the Sikhism of Nânak ever symbolized with any Muhammadan convert to it. By the former, for example, the Supreme continued to be accounted as unconscious; whereas he must have been regarded, all along, by the latter, as conscious. The fact that his consciousness gradually came to be recognized is attributable, unquestionably, to the influence of Islâm. In this important change of dogma we have one evidence, out of many, that Sikhism has not been, from first to last, by any means homogeneous. Its steady progress in unspirituality, exclusiveness, and bigotry is very noteworthy. And the Sikhs have not only altered in the matters of doctrine and practical principles: beginning as a brotherhood wholly religious, they became transformed, in no long time, into a powerful nation.

Future blessedness is termed, by the Sikhs, *nirvâna*, a circumstance which led the late Dr. Ernest Trumpp, the translator of the 'Âdigranth,' to refer, in connection with it, to Buddhism. Mr. Pincott, going further, sees in it, by a somewhat bold historic leap, actual Buddhistic derivation. To this one cannot but demur; and the repetition of a few commonplaces, not unneeded in these days of crass and crazy theosophism, will evince that one is warranted in doing so. *Nirvâna*, besides being, as with the Buddhists so with their atheistic congeners, the Jainas, the favorite vocable by which to denote ultimate bliss, is freely used by the Hindus likewise as a name for the condition of the emancipated. The Buddhists understand by it both an exalted state of sanctification, or Arhatship, and that in which this state is supposed to culminate eventually—not complete apathy and atraraxy, but utter annihilation. The latter acceptation of the word is that of the Jainas also. On the other hand, *nirvâna* signifies, to the Hindu, absorption into the universal spirit, so called. This universal spirit is, it is true, represented as impersonal and incognitive, but yet as being something, an entity, though not one that is explicable comprehensibly. Into this the pious Hindu hopes to be at last merged; while the Buddhist, imitated by the Jaina, looks forward to final resolution into nothingness, to sheer extinction, as his happy portion, when he shall have been adequately purified from mundane soil. Eternal theocracy is thus the goal in the one case; in the other, absolute release from the weary weight and misery of existence. The notion of the future destiny of the righteous which is held by the Sikhs, if it is not that of their Hindu compatriots—and its being so is a position hardly contestable—may have been taken from the Jainas, a body of religionists with whom they have always been in contact, but they are most certainly not indebted for it, at any rate at first hand, to the Buddhists. But, to begin with, it behooves to ascertain what precisely that notion is. As likely as not, it seems, no Sikh as yet has defined it with sufficient clearness to authorize any perfectly positive conclusion with respect to its distinctive character. Moreover, the Sikhs are not, and never have been, atheists; and what theist would desire to be cut off for everlasting from his Supreme, be that Supreme the sleeping Brahma or what he may?

It is an interesting monograph that Mr. Pincott has produced; and he has worked out his thesis, one which had been undeservedly slighted, with success. Most of the accounts of Sikhism hitherto published have been based on insufficient data, and betray superficial research. To these the account which he has drawn up stands, as far as it goes, in advantageous contrast. Among Panjâbî scholars, of whom there is but a meagre group, he is one of the very few who have had recourse to the fountain-head for materials towards delineating the religion of Nânak. That he has scrutinized with critical care the documents bearing on his subject is at once obvious. In the text itself of the 'Âdigranth' he has, for instance, indisputably restored in one place the genuine reading, to the displacement of the accredited lection, apparently no word at all, with which Dr. Trumpp was too easily contented.

A Naturalist's Wanderings in the Eastern Archipelago: a Narrative of Travel and Exploration from 1878 to 1883. By Henry O. Forbes. xx, 536 pp., 8vo. Maps and illustrations. Harpers. 1885.

THIS volume, the author states in his preface, is essentially a transcript of what he thinks the more interesting of his field notes, for which he disavows any attempt at literary elegance, and which, in so far as they relate to common ground, he would have regarded in the light of an addendum to Wallace's 'Malay Archipelago.' Part of his track was over new fields, and here, as especially in Timor, he trusts new and interesting matter has been gathered for the reader. We think that, for his own sake, Mr. Forbes would have wisely sought a better finish for his story of adventure, or at least eliminated the occasional outcroppings of British slang; and it is to be regretted that the illustrations are of the cheapest character, often so smudgy as to be nearly unintelligible. Having eased our conscience on these two points, we can take a greater satisfaction in calling attention to some of the more interesting revelations of life in the tropics contained in his modest and straightforward narrative.

After his arrival at Batavia, Mr. Forbes's first excursion was to the Keeling Atoll, a coral island, which lies in the open sea about six hundred miles southwest from Sunda Strait and the famous Krakatoa Volcano. It is a ring of reef and dry land about eight miles in diameter, nearly circular, with one or two off-lying islets. This was settled by a Captain Ross, of the British navy, in 1827, and, after many vicissitudes, his descendants still hold paternal sway. The chapters relating to the past and present history of the group are extremely interesting, and offer as good an argument as could be furnished to the advocates of a benevolent despotism as a form of government. Perhaps most of us at times have indulged in dreams of life on some fair coral island in the warm bosom of the tropic seas. The ideal peace of such seclusion is grateful to the mind worn by the cares and anxieties of civic activity. Mr. Forbes reveals the peace and beauty, but also shows us the reverse of the tapestry. Early difficulties were due to the desperate character of the Java coolies employed as laborers, necessitating a military watch and ward by the Europeans night and day for years. Leaving this source of care, now remedied, out of question, in 1862 a cyclone in a few hours wrecked the homes and property of the islanders. Replacing the chain-gang men with a better class, the owner of the island instituted other reforms, and introduced a steam-mill, lathes, and machinery. "Every Cocos man has had, beside performing his ordinary duties of gathering nuts and preparing oil, to learn to work in brass, iron, and wood. Every Cocos girl has had her term of apprenticeship to spend in Mrs. Ross's house, in learning, under her direction, sewing, cooking, and every housewifely duty as practised in European homes" (p. 18).

In January, 1876, another terrible cyclone broke upon the island. Every house or building was destroyed, every green leaf stripped away, the groves half ruined, and huge blocks of coral-conglomerate cast in a great wall yards inland all along the shore. The inhabitants saved themselves only by lying in hollows of the ground. About thirty-six hours later, a black stream of water, smelling of sulphuretted hydrogen, welled up from the bottom of the sea, and continued for nearly two weeks, at the end of which time, over half the area of the atoll, every fish, coral, and marine animal was killed. Three weeks of hard work were spent burying the dead fish cast on the beach, to avoid a pestilence. In six months, however, the trees and shrubs remaining were green again, and at the time of Mr. Forbes's visit the little community were recovering from this disaster, and seemed the ideal of a peaceful and happy colony. Cordial relations exist between the proprietors and their servitors. A younger brother, well qualified, teaches the children. All join in the funeral ceremonies on the

occasion of a death. That perfection should exist in all their relations is not to be expected, but, according to Mr. Forbes, a finer and more upright community, a simpler and more guileless people, can hardly be conceived of.

Darwin visited these islands in 1836, and the comparison between their flora and fauna as then described by him and as now existing is very interesting. Among other facts, the growth of coral would seem to be much more rapid than naturalists generally suppose. Heads twelve inches in diameter and more than six inches high were known to have grown in less than nine months. A giant clamp-shell (Tridacna) had grown to twelve inches long and thirteen broad in three years. The mammals of the group are all introduced. On several occasions flying foxes (Pteropus) have arrived at the group, but too worn out to live. The fact that they should be able to reach it at all, from the land not less than four hundred miles distant, seems extraordinary. The Norway rat has become the chief pest; pigs, deer, and sheep seem to do well, and the atoll is perfectly salubrious.

A succeeding portion of the book is devoted to Java. A curious plant is described, the natural corky hollows of whose tuberous root afford a home for colonies of stinging ants. Formerly it was thought that the tuber was a sort of gall due to the injury caused by the ants, and that the latter were in some way necessary to the plant; but Mr. Forbes has proved this to be an error. He also contributes some valuable testimony which goes to show that self-fertilization is not so exceptional among orchids as has been supposed—a fact of real importance in botany.

A third part is devoted to Sumatra, where the author had varied and interesting experiences. His ethnological notes seem particularly valuable and clear, though not profound. He notes and roughly figures some singular prehistoric carved stone images found in the forest, strongly resembling the Cara gigantesca of Yucatan, and, though of unknown origin, regarded with awe by the natives. He had a remarkable experience in a forest camp. Everything seemed phosphorescent. "The stem of every tree blinked with a pale greenish-white light, which undulated also across the surface of the ground like moonlight coming and going behind clouds—from a minute thread-like fungus, invisible in the daytime to the unassisted eye. Thick, dumpy mushrooms displayed a clear, sharp dome of light, whose intensity never varied. . . . Long phosphorescent caterpillars and centipedes crawled out of every corner, leaving a trail of light behind them," while fireflies darted about like shooting stars. A singular spider was collected here, and also in Java, with a habit of spinning a patch of web on a leaf which, together with the creature itself, almost exactly simulates in form and color the droppings of a bird. Certain butterflies which have the habit of alighting on such excreta are thus enticed to their ruin. Of his return voyage of a month, on a bamboo raft, the author speaks with great enthusiasm.

In Java Mr. Forbes was joined by his wife, who became the companion of his explorations. These afterward extended to Timor-Laut, Buru, and Timor proper. Of the fatigues, cruel fevers, alarms of war, losses of hard-won collections by fire, and tribulations of various sorts, there is more than enough. The spirit of adventure and scientific devotion overbore to the travellers, at least in reminiscence, all their trials, and the harvest reaped by them was rich. From most readers, a hearty thanksgiving for the blessings of the temperate zone will involuntarily arise. Not the least surprising to those whose experience of the tropics has been limited, will be the account of the hardships, and especially the not infrequent famine, to which dwellers in these spicy islands are, it appears, subjected. Rich as are the developments of animated nature in these regions, "where every prospect pleases," the plutonic forces beneath one's feet, the scourge of fever, insects and reptiles, and the ever-possible typhoon, form an *ensemble* which does not contrast too favorably with the quiet meadows of the temperate or even the mossy lowlands of the arctic zone.

George Eliot's Poetry, and Other Studies. By Rose Elizabeth Cleveland. Funk & Wagnalls. 1885.

THIS volume derives an adventitious interest from the position of its authoress as mistress of the White House; but, although it may win only the ephemeral renown which flickers out in the dilettante's catalogue of "Books by Royal and Noble Authors," it has a kind of worth that sets it apart from the books whose only excuse for being is their parentage—books which begin and end with a title-page. It is preferable to regard these essays and studies as the careful work, to parody a phrase, of a plain woman of the people; her careful, best mental work, but not originally intended for a larger audience than her circle of neighborhood friends. Too much prominence is given to them, they are set in too strong a light, when put forward as more than this—for example, as being a national book. Yet when, in accordance with this view, we do disregard the adventitious interest of the authorship, the work refuses to lose its representative and illustrative characteristics; it remains an extraordinary book for an ordinary woman to have written—a woman who is not a genius, nor even gifted with high talents, but distinguished among her sex merely by those qualities which in the case of a man earn for him the title of "the plain man of the people." A "plain man of the people" is by no means an average man; and this is not the book of an average woman. In the qualities of mind, in the practical ethics and ideal of womanly and manly character it displays, one sees, as at the domestic hearth of the republic, the faith, hope, and love in the habit and practice of which the children are being nursed in thousands of enlightened humble homes; and in the literary style, in the intellectual interests and attainments exhibited, one sees sign and proof of the good of "female education" among us, for, as has been indicated, the authoress is not a "born writer"—her style and substance are the product of schools.

Such are some of the representative and illustrative characteristics which the curious and reflective American might discover in these essays. Examined as to their intrinsic worth, they would vary in value according as they are assayed for silver or gold. The influence of Emerson is paramount in style throughout, and in the matter of the moral essays the turn of his hand is wonderfully caught: there are sentences he might have written. This is not out of any base or conscious imitation, but because the authoress's mind is permeated and charged with Emerson's influence. The pith is sometimes less exquisite, has a more acrid and country raciness than he would have approved, and the rhetoric is often too tinsel-like and artificial; but sense and clarity of mind and word are conspicuous. There is no critical power, let us be ready to confess; and in the historical studies which make up the latter half of the book there is nothing not in common standard works, so far as fact is concerned; neither is there any fine glow or illuminating imagination in the setting forth of the fact. The real power, the line of strength in all these essays, is in their moral apprehension, their intuitive certainty in the region of character, duty, and human association, and in particular in their sense of the simplicity of the elements of virtue. We may dissent from the positions—we may be too exquisite to agree here, too fond of scholarly exactness to be content there—but from the spirit we never dissent. It is the spirit in which the best of our stock has been bred.

Applied Mechanics: An Elementary General Introduction to the Theory of Structures and Machines. With Diagrams, Illustrations, and Examples. By J. H. Cottrell, F.R.S. Macmillan & Co.

THIS handsomely printed octavo volume of nearly 600 pages consists of a series of lectures on mechanics delivered by the author in the Royal Naval College at Greenwich. The lectures, however, have not been given to the press until the experience of several years has made them assume a tolerably permanent form. They have, moreover, been carefully edited, and are now presented in the shape of a systematic treatise on Applied Mechanics, from which the form of the lecture has disappeared. The general subject is divided into five principal parts: I, The Statics of Structures; II, The Kinematics of Machines; III, The Dynamics of Machines; IV, The Stiffness and Strength of Materials; and V, The Transmission and Conversion of Energy by Fluids. About equal space is given to each of these subjects, excepting the part on the Strength of Materials, which is one-half larger than any other division of the volume.

The book has evidently been prepared with much care, and treats of the subjects considered in a manner more simple and more easily understood by a man of only ordinary education than books of this class usually do. It, however, bears evidence throughout of being exactly what it is—a text-book for a particular class, to be used by that class in studying the subjects which are lectured on by the instructor who wrote the book. Like many other similar books, it has obviously been written by one whose experience has been in the study rather than on public works, and while it covers nearly every subject on which the engineer requires theoretical learning, it shows only a moderate familiarity with the particular cases which occur most frequently in practice. It is not sufficiently condensed for a mathematical treatise on the subjects which it covers, nor sufficiently full of practical examples to be useful as a handbook. The examples, in fact, are not the modern ones which an engineer in the actual practice of his profession will frequently have occasion to refer to, but rather a collection of well-known examples, many of them virtually out of use, which would serve in a lecture to illustrate to a class the practical application of the subject which has been considered theoretically, and to awaken the interest of the hearer by suggestions which may perhaps be largely amplified in the oral portions of the instruction.

As a text-book under circumstances similar to those for which it has been prepared, it may prove very valuable, but the chances are that if a case of this kind is found, the instructor who might use it would be likely to prefer to prepare a text-book of his own. As a manual or reference book, there are others which are more convenient.

BOOKS OF THE WEEK.

Riverside Parallel Bible.

Containing the Authorized Version and the Revized Version in parallel columns. Carefully printed from bourgeois type, two sizes larger than that used in the Oxford and Cambridge Parallel Bibles. Admirably adapted for Pulpit use, for Clergymen, Sunday-school Superintendents and Teachers, and Families. Cloth, $6; Persian leather, $12; Morocco, $18.

**** For sale by all booksellers. Sent by mail, postpaid, on receipt of price by the Publishers,*

Houghton, Mifflin & Co.,
BOSTON;
11 East 17th Street, New York.

FOR SUMMER READING.

JUST PUBLISHED.

Nimrod in the North;

OR, HUNTING AND FISHING ADVENTURES IN THE ARCTIC REGIONS.

By Lieut. FREDERICK SCHWATKA. 1 vol., large quarto, very fully illustrated. Price, $2.50.

"The author has confined himself almost exclusively to such scenes and adventures as came within his personal knowledge a few years since, in the region north of Hudson's Bay, and more recently in the interior of Alaska. He describes in a general way the life of the sportsman in the frozen north, his camps, his sledges, and the native hunter and his weapons, and the animals that furnish the sport."

The Bar Sinister.

A SOCIAL STUDY.

1 vol., 12mo, 360 pages, extra cloth. Price, $1.25.

'The Bar Sinister' is a novel which will attract more than ordinary attention. The name of the author is not given, but it is known to be written by one in possession of the facts and who speaks by authority. There is no sermonizing in the book. The text is Mormonism, the bar sinister on the escutcheon of this great republic. The characters introduced are every-day people. The hero, a New York business man, who goes to Salt Lake City with his wife and baby, and who falls a victim to the enticements of the "saints."

Sweet Mace.

A SUSSEX LEGEND.

By G. MANVILLE FENN. 1 vol., 12mo, cloth, new style. Price, $1.00.

"We believe that not many who read the first chapter of 'Sweet Mace' will lay it aside until they have read the last."—*Spectator.*

The Old Factory.

A LANCASHIRE STORY.

By WILLIAM WESTALL, Author of 'Red Ryvington,' etc., etc. 1 vol., 12mo, cloth, new style. Price, $1.00.

In 'The Old Factory' Mr. Westall gives rein to his gift for depicting both the pathetic and the humorous. The story is of a factory town and of a young man who was better educated than his father. There is a very pretty love story and many strong bits of character drawing.

A Diary of Two Parliaments.

By HENY W. LUCY. Vol. 1—THE DISRAELI PARLIAMENT, 1874–1880. 1 vol., octavo, with portrait of Disraeli, extra cloth. Price, $4.00.

"This volume is literally what it professes to be, a diary of events passing under the eye of the observer; not only is it a diary of events, but it is a gallery of portraits sketched from the life with quick, vigorous strokes during the Premiership of DISRAELI."

CHARMING NOVELS.

AT LOVE'S EXTREMES.

By MAURICE THOMPSON, author of 'A Tallahassee Girl,' etc., etc. 1 vol., 12mo, cloth. Price, $1.00.

POVERTY CORNER.

("A LITTLE WORLD.")

By G. MANVILLE FENN, author of 'My Patients,' etc., etc. 1 vol., 12mo, cloth, new style. Price, $1.00.

RED RYVINGTON.

By WILLIAM WESTALL, author of 'Larry Lohengrin,' etc., etc. 1 vol., 12mo, cloth, new style. Price, $1.00.

"Among the new novels of the season, Mr. Henry F. Keenan's

TRAJAN

must be promptly accorded the first place."—*New York Herald.*

CASSELL & COMPANY, Limited,
739 AND 741 BROADWAY, NEW YORK.

23 WALL ST., NEW YORK, JULY 25, 1885.

TO THE FIRST-MORTGAGE BONDHOLDERS OF THE

New York, West Shore and Buffalo Railway Company:

Being convinced that the interests of the New York Central and Hudson River Railroad Company and of the bondholders of the New York, West Shore and Buffalo Railway Company would be best promoted by the former company securing a lease of the railroad of the latter company and working such railroad in harmony with its own system, we opened negotiations to secure this result.

These negotiations have reached a point at which we are prepared to lay the following proposal before the bondholders of the West Shore Company in order that each one of them who may now so elect shall have equal opportunity to share with us the benefit of our contract hereinafter mentioned, and with the view also of promoting unanimity and a speedy termination of pending difficulties.

The New York Central and Hudson River Railroad Company has executed a contract with us agreeing upon a reorganization of the New York, West Shore and Buffalo Railway Company, to take possession of the property of the reorganized company, under a lease, and to guarantee the principal and interest of the bonds hereinafter mentioned, which are to be secured by mortgage upon that property.

The conditions of the contract are as follows:

FIRST—That the securities to be issued by the reorganized company shall be limited to.....$50,000,000
Four per cent. Mortgage Bonds, and..... 10,000,000
Capital Stock, the bonds to be dated Jan. 1, 1886, and to mature at the expiration of the lease, say in 475 years, or upon default in payment of interest for two consecutive years.

SECOND—That of the Mortgage Bonds.....$25,000,000 shall be offered in exchange for the ..... 50,000,000 First Mortgage Bonds of the present company, with past due coupons attached—that is to say, $1,000 of the new guaranteed bonds for $2,000 of the old.

THIRD—That the remaining $25,000,000, except such amount as may be necessary for reorganization, shall not be issued except at the request of the New York Central and Hudson River Railroad Company, to provide for prior liens, necessary terminals, and such other property and for such other purposes as the Directors of the New York Central and Hudson River Railroad Company may from time to time think necessary for the security, development, and operation of the property leased.

FOURTH—That the capital stock of the reorganized company shall be surrendered to the New York Central and Hudson River Railroad Company as a consideration for its lease and guarantee.

FIFTH—That the leased property shall be delivered prior to Jan. 1, 1886.

We therefore offer to the first mortgage bondholders of the West Shore Company the opportunity to avail themselves of our agreement with the New York Central and Hudson River Railroad Company, upon the following conditions:

FIRST—That their bonds shall be deposited with us, with the agreement hereto attached duly executed by the depositors.

SECOND—That at least a majority of the whole issue shall be deposited.

Pending the deposit of such majority, temporary receipts will be given for the bonds. After a majority shall have been secured, temporary receipts will be exchanged for engraved receipts, negotiable in form, countersigned by the Union Trust Company, in whose custody the bonds will remain until required by us for purposes of reorganization.

In case a majority shall not be secured and a reorganization perfected within the time required under the contract with the New York Central and Hudson River Railroad Company, the bonds will be returned free of expense upon surrender of the receipts duly assigned.

It is right that we should add that a very large proportion of the bonds required have already assented to the proposed plan. Upon receiving the assent of a majority in amount of the present West Shore Bonds, immediate steps will be taken which, we are advised, will secure prompt reorganization and prevent further depreciation and waste of the property.

The right is reserved to terminate at any time the privilege of accepting the offer hereby made.

DREXEL, MORGAN & CO.

Scribner & Welford's LIST OF BOOKS,

Suitable for use in High-Class Schools, Colleges, and Ladies' Schools.

An Elementary History of Art.

Architecture, Sculpture, Painting, Music. By N. D'Anvers. With a Preface by Professor Roger Smith. New edition, with over 200 wood engravings, illustrating the most prominent examples of these arts, portraits of eminent composers, and musical instruments of many nations. One large crown 8vo volume (800 pages), handsomely bound, cloth, gilt top, $4.50.

For students who desire thus to train their own minds, for those who wish to prepare themselves for Continental travel, and, above all, for pupils in schools of a high class, no handbook of Art History could well be more suitable than the little volume now published.

Biographies of the Great Artists.

Forming a series of Illustrated Handbooks of the History of Art. Specially prepared for Schools, Amateurs, and Students of Art. Each volume contains about 16 illustrations, including a portrait of the master, and is strongly bound in decorated cloth. Price per volume, $1.25, unless marked otherwise.

*** The above invaluable aids to the student now extend to 32 volumes, covering the entire ground of English, Italian, Spanish, Teutonic, and French Painting. Complete detailed lists supplied.

Biographies of the Great Musicians.

Specially prepared for Schools, Amateurs, and Students of Music. Each volume strongly bound in decorated cloth. Price per volume, $1.00. Including

HAYDN,	SCHUBERT,	BACH.	WAGNER,
HANDEL,	SCHUMANN,	WEBER.	ROSSINI,
MOZART,	PURCELL,	MENDELSSOHN,	

ENGLISH CHURCH COMPOSERS.

MOLIERE'S DRAMATIC WORKS. A new Translation in English Prose, by C. H. Wall. With a short Life and a Portrait. 3 vols. $4.20.

NOW READY.

CHARLES SCRIBNER'S SONS have now ready three interesting new books for Yachtsmen, Tennis Players, and Wheelmen.

The large class of readers who are eagerly awaiting the coming contests between the American and English yachts in September, will find Capt. Roland F. Coffin's breezy history of THE AMERICA'S CUP; HOW IT WAS WON BY THE YACHT AMERICA IN 1851, AND HOW IT HAS SINCE BEEN DEFENDED, of special interest and value. "The author is perhaps the only man in this country," says the *Journal of Commerce*, "qualified to write an account so authentic and interesting. He is a master of the nautical technique, and he has a fresh, breezy style wonderfully suited to narratives of the sea. His book bears evidence of thorough accuracy on every page, and may be accepted as 'official,' since his facts have all been verified by the original documents in possession of the New York Yacht Club, which has taken charge of these races." 1 vol., 12mo, with illustrations. Paper, 50 cents ; cloth, $1.

A book which a legion of lawn-tennis players have long been looking for is LAWN TENNIS AS A GAME OF SKILL, by Lieut. S. C. F. Peile, edited by R. D. Sears, the champion of America. "Mr. Peile's remarks," says the Brooklyn *Union*, "are very apt and very practical, and we can only hope that this book may meet the reception it deserves." 1 vol., 16mo, cloth, 75 cents.

"A quaint and entertaining little book," is the verdict of the same journal upon Mr. and Mrs. Pennell's description of their merry tricycle spin, 'A CANTERBURY PILGRIMAGE.' "It was a pleasant, easy-going ride," continues the reviewer, "and the road passes through one of the most charming parts of rural England." For wheelmen the book has a special interest and value. 1 vol., square 8vo, paper, 50 cents.

*** *Sent anywhere upon receipt of price, or may be had at all bookstores.*

HARPER & BROTHERS, Publishers, New York.

To the person receiving this as a Specimen Copy :

The Nation

Completed its twentieth year (40th volume) with the number for June 25, 1885. In its special field of political and literary criticism, combined with a summary of general news, the *Nation* is unlike any other journal, American or foreign. In politics it remains independent, its editorial management having been unchanged since its foundation.

In literary matters no effort is spared to make the *Nation* a prime authority. During the past year about one hundred writers have contributed to it on literary subjects alone.

Its Departments are :

The Week. Brief comments on the most important current events, domestic and foreign, together with a summary of the week's news in six columns of brief paragraphs.
Editorial and Miscellaneous Articles. Careful and moderate discussion of leading political and social questions.
Special Correspondence. From all quarters of the globe, by intelligent and trustworthy observers.
Occasional Correspondence. Letters to the editor on every subject germane to the scope of the paper.
Notes. Short paragraphs, chiefly on literary, scientific, musical, and dramatic topics.
Reviews of Books. By able writers and scholars (mainly specialists) of both hemispheres.
Fine Arts. Competent criticism of art exhibitions and works of art, the drama, etc.

The form and style of the paper are chosen with a view to the most suitable shape for binding; and a set of the *Nation* preserved, bound, and indexed makes one of the most complete and readable records of current events of importance in the political and literary world available. Below are printed the names of its leading contributors. Two volumes are completed annually. The index and title-page accompany the last issue of each volume.

Your examination of this specimen copy is requested, and if, as a literary, professional, or business man, you deem the paper likely to be of value to you, you are invited to add your name to its list of subscribers. Other sample copies will be sent if a more extended acquaintance with the paper is desired.

Terms, $3 per annum, postpaid. Address THE NATION, 210 Broadway, New York.

Recent Press Comments on "The Nation."

"It has hewn out a new pathway in the policy and conduct of political journalism, and as it was the pioneer, so it remains the leader, easily first in the long line of those organs that have followed in its footsteps."—*Hagerstown News.*

"With the publication of No. 1043, our New York contemporary, the *Nation*, completes the twentieth year of its existence. Many changes have occurred since the *Nation* first appeared as an independent political and literary journal, not the least important being the improvement effected by its precept and example in political and literary criticism across the Atlantic. We trust that many years of life and usefulness are still in store for our esteemed contemporary."—*London Athenæum.*

"We have often had occasion to differ widely with the *Nation*; but its intelligence, its courage, and the great service it has rendered to purity and independence in public life, have always received our heartiest recognition. The *Nation* has appealed especially to thinkers and students, and although its constituency of readers has been comparatively small, its influence has been out of all proportion to its circulation. Its success has been almost contemporaneous with the rise of a new school of thinkers on public questions in this country."—*Christian Union.*

"The New York *Nation* has just completed its twentieth year of usefulness, and righteously rejoices thereat. It has won a place for itself by its great ability; however much we may differ from it in politics, we must accord it the palm for a fine presentation of its case. As a critical authority in matters of art and literature, it is unapproached and unapproachable. No journal exists that is its superior—few, indeed, are they that equal it—in these departments or in the world-wide correspondence it publishes upon all matters of interest to the best thinkers."—*Hartford Evening Post.*

"It is not too much to say of the *Nation* that no single agency has done so much to advance and dignify the calling of journalism in America. Including in its scope politics as well as literature and art, it has often aroused bitter political antagonism and suffered from partisan excitement and prejudice; but we believe no one—at least, no one whose judgments are valued by thinking men—has ever soberly questioned its sincerity and disinterestedness, or the remarkable force and candor with which its views have been presented. In literary criticism its methods and achievements have been such that this has almost become a new art under its leadership. In all departments the *Nation* has been singularly able and impartial, and its success is a cause of gratification, in which American scholars generally will share."—*Chicago Dial.*

"In celebrating its twentieth anniversary, the New York *Nation* takes a natural pride in showing how often it has been right when many of its readers thought it was wrong. Doubtless the readers of the *Nation* have always been the most intelligent and upright members of the Republican party—the pick and choice of the whole 'party of moral ideas.' The depth to which that party had, as a mass, fallen in 1876 may then be guessed from the fact that the *Nation* says that in that year its opposition to the fraud by which Hayes was seated cost it three thousand of its subscribers. The *Nation's* subscription list was never large, and, as we have said, it was always made up of the very best class of Republicans, three thousand of whom dropped the paper because it exposed and opposed a known crime against the Republic. Truly this is a party of moral ideas."—*Kinderhook Rough Notes.*

"The *Nation* announces in its number of June 25 that it has completed the twentieth year of its existence, and it indulges itself in a two-page retrospect of its very useful work. Started just at the close of the war, it aimed to discuss political and social questions in more moderate fashion and with fairer spirit than was then common to the daily press. It was very frequently in advance of the Republican party in this course, and lost scores and hundreds of subscribers at times by its independent course, particularly in 1876, when it denounced the methods by which Mr. Hayes was declared President. The *Nation* has fairly fulfilled its promise, however, to be independent of party, and is respected accordingly by thinking people. Its art and literary criticisms have always been of a high order, and have helped to give it a national reputation as a weekly paper of the first class."—*Philadelphia Public Ledger.*

"The *Herald* welcomes the *Nation* to its table, as one of the ablest and most fearless exponents of the leading economic and political questions of the time. The splendid success of this journal, now starting upon its forty-first volume, is the clearest evidence that absolutely independent journalism has a large and steadily growing field in this country. And while the *Nation* has often been opposed and bitterly criticised on the alleged ground that its positions were the independence of a dictatorial spirit, it has yet more frequently had the satisfaction of seeing its short-sighted critics ultimately wheel into line with its advanced ideas on some of the most important questions that have arisen during its career. The astonishing progress which has recently been made in the way of viewing political questions is largely due to the *Nation's* influence; and its projectors are entitled to the credit of 'having, through its columns, done something to hasten the coming of the better time, the reign of sweeter manners and purer laws.'"—*Council Bluffs Daily Herald.*

"During seventeen of the twenty years of the *Nation's* publication we have been among its constant readers and have found it unequalled among American periodicals for pungency of style, candor and accuracy of statement, and force and originality in the discussion of political events and social conditions. In the course of its long history the *Nation* has often taken the unpopular side in the treatment of current topics, but it has been its happy fortune to see its opinions in most cases confirmed by the sober second thought of the people. It was the first Northern journal of Republican leanings that denounced the carpet-bag governments which, supported by Federal bayonets, so long preyed upon the industries of the South, and inflamed and protracted the disunion sentiments of its people. It had the courage, amid much obloquy, to question the impeachment of Andrew Johnson, and it was ten years in advance of popular opinion in unmasking that scheming demagogue Benjamin F. Butler. . . . Justly regarding James G. Blaine as a corrupter of political morality, as a schemer, and as a charlatan, it refused to give him its support in the late Presidential contest, and it has since found abundant reason for approving, in the main, the practical wisdom and honest purposes of the present Administration. In commending to our readers this able and independent journal, we feel that we are doing a service to the cause of public intelligence and morality."—*Portland (Oregon) Daily Standard.*

"Twenty years old" on July 1, and the *Nation* hugs itself with rightful self-respect as it announces the fact and reviews its past. We count ourselves happy in owning a nearly perfect set of the *Nation*—happy because from the close of the war till now it makes the best continuous record of contemporaneous history which our country has produced. One of the works on a young man's bookshelves should be the carefully-kept volumes of the best weekly newspaper he can afford. The growing series is his current cyclopædia, his public diary—*his* because it chronicles the yesterdays in which he lives. And heartily we name the *Nation* as, on the whole, our roundest, ablest, most trustworthy newspaper diary of the world's life and the nation's life and the world's and the nation's literature. It has been a great teacher; never popular, but very influential as a paper for editors, and lawyers, and politicians. Probably many a bright journal through the country has regularly watched the *Nation* as a compass. A strong, bold defender of the policies that have made for noble peace these twenty reshaping years, it has had the faults of its good qualities; comically omniscient almost always; holding its head high; seldom gracing itself with a confession of mistake; sometimes savage in its stamp on a poor sinner of a book; not heartless, but certainly polar in its manner; afraid of sentiment, and forgetful that cynicism is sentimentalism of rather a young man's, or an old man's, sort—it does not belong to the strongest years. But spite of all this, our clear-headed, outspoken, little-fearing, best newspaper. Twenty years of thanks to it, and twenty more of hopes."—*Chicago Unity.*

"The New York *Nation* celebrated the completion of its twentieth year last week with a brief but frank and characteristic review of its career, in which it recalled the promises it made to its readers in its first issue, the questions which it had discussed in its earliest days, and the changes it had seen. It recounted how it had opposed the soundness of the proposed plan for reconstructing the seceded States; how it had questioned the necessity or value of the impeachment proceedings, and how it had made a close investigation of the methods and a vigorous exposure of the abuses of the carpet-bag governments. It pointed to its unsparing opposition to the electoral fraud of 1876, its consistent advocacy of a sound financial policy, its early recognition of the value of a real civil-service reform, as set forth in Thomas A. Jenckes's report, and its consistent course in criticising literature and art on their merits, regardless of personal, local, or national prejudices, or of preconceived opinions.

"The editors of the *Nation* have good reason to congratulate themselves on all these grounds and on many others which they have neglected to present or have only hinted at. To the ordinary observer that paper was born out of due time. It was a conservative influence, yet strong, bold, and vigorous, thrust into a period when the most exacting radicalism ruled in politics, law, literature, and general discussion. It was an independent influence in the midst of the blindest, the most bitter, and the most unreasoning partisanship this country has yet seen. If a newspaper ever represented Matthew Arnold's 'remnant,' the *Nation* certainly did from 1865 to 1875, when its ideas began to make themselves felt on the country. Its circulation was never large—perhaps 12,000 copies, with less than 100,000 readers, marked its highest point. But it was read by those who in turn transmitted its influence, in widening circles, and everything was said so well, and so uniformly at the right time that finally its enemies and its opponents were compelled to recognize its vigor and its honesty, whatever they might think of its opinions or say of its editor.

"During the second ten years of the *Nation's* existence it has been an easy thing for a newspaper to be independent. Since 1872 it has indeed been no difficult task to find journals which had cut loose from the trammels of party, and since 1875 it has almost been impossible for the old-time organ to exist in any great city. But in 1865 there was no such thing as a newspaper really independent, without being coarse, or Philistine, or Bohemian. The conditions of our politics, the intensity of the struggle through which we had just passed, made any other than the partisan newspaper an impossibility. The *Nation* thus appealed to a small constituency, but it made its appeal so sharp, so clear, and so persistent that its circle gradually extended until it created for itself a distinctive place. That it was the forerunner and the first successful example of the independent journalism as it exists to-day may be asserted without fear of successful contradiction. And in spite of this widespread application of its own ideas, the *Nation* and its ancient ally, the *Evening Post*, must be reckoned to-day as among the most worthy representatives of the new departure in newspaper methods."—*Philadelphia Times.*

WESLEYAN ACADEMY, WILBRAHAM, MASS.

One of the half-dozen best Academic and Preparatory Schools in New England. It is open to both sexes, and furnishes rare advantages, not only for fitting students for all the colleges of the country, but also for academic and industrial-science studies, and for commercial branches, music, and art. The situation is entirely rural, in a quiet village, with no places of demoralizing resort. The grounds are ample, and tastefully laid out. The buildings are capacious, neat, and every way convenient. The facilities, both for the enjoyment and the improvement of the students, are seldom equalled. Send for Catalogue to

G. M. STEELE, Principal.

Northwestern University,

EVANSTON, ILL.

Rev. JOSEPH CUMMINGS, D.D., LL.D., President.

SIXTY-THREE PROFESSORS AND INSTRUCTORS AND OVER NINE HUNDRED STUDENTS.

The University furnishes, in its Academic Department in the College of Liberal Arts, with its four courses of study and corresponding degrees, in its College of Theology, Medicine, and Law, and also in its departments of Oratory, Art, and Music, the highest educational advantages, and at a moderate cost. Young women have the same privileges as young men in its Preparatory Department and College of Liberal Arts. In beauty and healthfulness of situation and moral influences, the University is unsurpassed. The sale of intoxicating drinks is prohibited by its charter within four miles of the University.

For catalogue, address the President, or Prof. H. F. FISK, the Principal of the Preparatory Department.

HARVARD UNIVERSITY.

The QUINQUENNIAL CATALOGUE of 1885 and the ANNUAL CATALOGUE of 1884-85 are for sale by Charles W. Sever, University Bookstore, Cambridge, Mass. Prices, postage prepaid: Quinquennial, $1.10; Annual, 60 cents.

MACMILLAN & CO. invite the attention of Teachers to the new edition of their Educational Catalogue, containing, besides their own, complete lists of the well-known "Clarendon Press Series" and "Pitt Press Series" of Educational Works, issued by the Universities of Oxford and Cambridge Copies sent free by mail on application.

"A list of equal excellence and authority it would be hard to find in the English language."—THE NATION.

MACMILLAN & CO., 112 Fourth Avenue, New York.

The Nation.

NEW YORK, THURSDAY, AUGUST 13, 1885.

The Week.

THE period since Grant's death has thoroughly tested the sentiment of the whole people regarding the maintenance of the old sectional hostility. The question was whether the country had outgrown the animosities of the war so that the South could recognize the services to the nation of the dead soldier, and the North could welcome Mrs. Grant's suggestion to the President that he should name ex-Confederate soldiers among her husband's pall-bearers—a suggestion in undoubted accordance with the General's attitude toward the men against whom he fought. It is gratifying to find how well both sections have responded to the occasion. We have observed only two Northern newspapers which dissented from the idea of having "rebels" represented at the funeral, and they were both of them third-rate sheets, one of which is edited by a Republican Bourbon in Bangor, Me., whom it has long been charitable to consider crazy. The discordant notes in the tribute of the South are equally rare and unimportant. The most offensive utterance came from a little paper, with only 500 circulation, published in Meridian, Miss., whose business manager was recently appointed postmaster, and he promptly came out in a card announcing his "unqualified disapproval" of the article, saying it "does not express my opinion, as is notorious in this community, nor does it reflect the opinion of the Southern people." That opinion found its most striking expression on Friday, when a large crowd assembled at Appomattox and draped the house in which Grant accepted Lee's surrender. The Bourbon editors in Maine and Mississippi serve the good purpose of making still clearer the cordiality of feeling which pervades the masses of both sections.

Mr. Frederick Law Olmsted's advice about the location of the Grant monument on the Riverside Drive is excellent. He thinks that the monument and tomb should not be brought into too close association with the gayety of the promenade at the culminating point of the drive from which the superb view of the Hudson is commanded. "The body of Grant," he says, "should lie in a place specially adapted to its permanent and undisturbed repose," and adds:

"It should be within a ground obviously set apart, if not consecrated, to this special purpose. The ground should be separated in a distinct way from all adjoining ground. It should not be an incident of a festive promenade. It should have a distinctly solemn aspect. It is not impossible that the two purposes—the festive and the funereal purpose — may both be successfully carried out on Claremont, but the problem is one that calls for something more than native intelligence and horse sense. To determine the extent of the monument ground, to so arrange its boundaries as to secure the necessary amplitude without over much curtailing the space required for the adjoining promenade, to devise its distinctive treatment, is now a matter of primary importance. The position of the tomb and to some extent the dimensions and outlines of the monument should be secondary to it. It should, therefore, have immediate but deliberate and mature study."

We trust that not only the exact site, but the plan of the monument also, will be made the subject of "deliberate, mature study." There is no occasion for hurry about either one, and while we should like to see subscriptions for the monument coming in faster than they are, there is this consoling thought about their slowness, that so long as the funds are not in hand there will be less danger of a mistake in design being committed. As Mr. Olmsted says, there ought to be no "horse sense" in a matter of this kind. We want to erect a monument which will not only be worthy the hero who rests beneath it, but will also rank in artistic merit with the great monuments of the world. The dreadful "soldiers' monuments" which disfigure nearly every city in the land ought to be a warning of the awful possibilities of haste.

Secretary Whitney's notification to John Roach that his contracts for the new cruisers are forfeited, and that the Government will complete the work upon them, was not unexpected. It was the only course open to the Secretary. Under the contracts the cruisers were to have been finished six months ago. They are not only far from completion, but Mr. Roach's failure has stopped all work upon them. It is understood to be Mr. Whitney's intention to finish the work in Mr. Roach's yard, employing his men, and having a final accounting with him on business principles when the work is completed. This will give Mr. Roach's men employment, and will destroy the campaign usefulness of the noble "issue" that Mr. Roach's American ship-carpenters have been thrown out of employment by the harsh methods of a Democratic free-trade Administration.

The Secretary of War is apt to be little more than a figure-head, but Judge Endicott has already distinguished his occupancy of this place in the Cabinet by introducing a most important reform. For a long while political favoritism and social influence have combined to sustain a most unjust system, by which the "soft places" at Washington and other desirable points were given to the men who could bring the strongest "pressure" to bear upon the Secretary, and they have been permitted to retain these choice positions for many years. Secretary Endicott has carefully considered this matter, and, as the most effectual way of putting an end to the abuse, he has exercised his power to amend the army regulations by introducing a rule that no officer shall remain detached from his company, regiment, or corps longer than four years, unless assigned to special duty by the War Department. This change will be hard on sundry ornaments of Washington ball-rooms, but it will be heartily welcomed by the far larger number of officers who have been denied an equal chance at the pleasant places in the service. The President is sustaining the Secretary in this policy of fair play for the army by steadfastly adhering to his purpose to appoint officers only from those who have a military training, although the pressure for appointments from among civilians is extremely strong. The army seems to have stood in almost as great need of the application of business principles as any branch of the public service, and even Republican papers are forced to admit that the last President of their party left it in a sadly demoralized condition.

Aquilla Jones, the Indianapolis Postmaster, has escaped on a verdict of not proven, but has promised not to do it again. That is, he is scared, and now knows that the Civil-Service Act is a law like other laws and must be obeyed. The inquiry into his conduct was secret; only one witness being examined at a time, in the presence of the Commissioners and their stenographer only, and without any opportunity for cross-examination by the prosecutors. In his dismissals Jones was technically within his right. The law does not interfere with his power of removal. He found considerable difficulty, however, in showing that two at least of the removals had any proper cause except a desire to make vacancies. The Commissioners found that Jones did in conversation "declare a purpose to make removals and appointments according to a theory of political discrimination quite repugnant to the spirit and the letter of the rules." For this he excused himself by saying that "he did not at the time he made these declarations fully understand the effect of the rules with regard to political discriminations," and that as a matter of fact he did not carry the declarations into effect. He declares, moreover, that he now understands the rules thoroughly and means to obey them. This means of course that Jones is scared, and retires from the position which he seemed inclined to assume, of the champion of the spoilsmen against the Civil-Service Act, and which they were quite anxious to have him hold, and thought that by means of the Vice-President's protection he would be able to hold. The Commissioners find that the examinations to fill the vacancies were, as far as can be discovered from the papers, fairly conducted—that is, there was no injustice done in the marking. But this is not an answer to the charge of the civil-service reformers, that the examination was conducted in such a manner that favored persons might have received help in writing their answers.

The vast amount of ignorant comment upon the number of appointments as postmasters by the present Administration indicates that but few people are familiar with the law of change in this branch of the public service under Republican rule. Under the four-years' term, the whole class of offices where appointments are made by the President and confirmed by the Senate must come under review in the space of four years. The number of such offices is about 2,850, and consequently, merely by the expiration of the terms of incumbents, the President would be called upon to appoint an

average of nearly 600 a year, to say nothing of nominations to fill vacancies caused by death, resignation, or removal for cause. It has been officially announced that from March 4 to August 7 the President made 467 appointments to such offices, which is at the rate of about 1,100 a year; that is to say, Mr. Cleveland has fallen considerably short of making twice as many changes as every Republican President made in the same period. The post-offices filled by the Postmaster-General number a few above 49,000. These offices have no fixed term, but the last report of Postmaster-General Hatton showed that changes were made in these offices at a rate which would replace all the incumbents in about four years, the number of appointments reaching 12,000 during 1883 and nearly as many in 1884. It is announced that there have thus far been appointed 5,246 postmasters of the fourth class, which is at the rate of about one thousand a month. While Mr. Hay was First Assistant Postmaster-General, the number fell below the average under a Republican Administration, owing to his ill health and long absence. Mr. Stevenson has raised the figures to about 500 a week. This would make about 26,000 a year, and would replace the incumbents with new men within two years, instead of four, as when Republicans made the appointments. The selection of a new man attracted so much less attention when he belonged to the same party as his predecessor that most people will be surprised to learn that the number of appointments under Republican Presidents was large enough to man all the post-offices anew about every four years.

The beneficent effect of the Civil-Service Law has never been so conspicuously demonstrated as in the recent change of political control at the New York Custom-house. Under the old spoils rule, Collector Hedden would have immediately made a "clean sweep" of all the incumbents, and he would have done nothing else for weeks than balance the "claims" of "workers" to places, and the relative "pressure" of the "influence" which they could command. What has really happened, as told by the Collector to a reporter of the Brooklyn Democratic organ, is this: During the first two weeks he was in office the Custom-house was besieged with office-seekers; he received them all "and supplied each one with a blank examination paper." The result is that "the rush has been reduced." The interviewer having suggested that there was dissatisfaction among the Democrats because removals were not made, Mr. Hedden pointed out that, if he were to make a clean sweep, "it would not benefit the Democratic party as such at all," since the vacancies would have to be filled upon the basis of merit as shown in competitive examinations open to everybody. Moreover, he sees, as a good business man might be expected to see, that, "most assuredly, such a policy would bring the business of the office to a stand-still." A strict maintenance of the Civil-Service Law is thus shown to be all that is necessary to insure the management of the Custom-house upon business principles, and Mr. Hedden plainly announces his purpose to live up to the statute.

We printed last week a long letter from a well-informed correspondent on the working of the Civil-Service Law in the departments at Washington. One of his remarks, touching the failure of the present Administration to apply the rules to the heads of division, must not, however, be accepted without important modifications. The present Administration in attempting any reform at all has to contend with the idea carefully implanted during the last twenty-five years in the minds of all Government employees, that they are the servants not of the Government, but of the party to which they belong, and owe to the latter their first and highest allegiance. This is a feeling which cannot be got rid of in a day, and its result was to lead large numbers of the employees at Washington to regard the incoming Administration as an enemy or invader, to be submitted to as a matter of necessity, but not loyally served. The natural consequence of this was of course to breed distrust on the part of the new Cabinet officers—that is, to cause a fear that they might not be faithfully supported in attempts to make the Administration a success, and cause a desire to fill the higher places with men on whom they knew they could rely, and whose statements about the inner workings of the administrative machine they knew they could believe. This may of course be carried too far, and may cause mistakes and injustice, but nobody can fairly blame it in a Democrat, suddenly called on to take charge of an office filled with furious partisans, taught to regard all Democrats as "traitors and rebels."

The Democratic Mayor of Boston is having just the same kind of a fight with the party machine on a small scale that the Democratic President of the United States is having on a large scale. The Mayor is using the enlarged powers of his office in the public interest, and the disappointed spoils-hunters are doing their best to thwart him. He removed the Superintendent of Streets the other day for extravagance and mismanagement, and the Board of Aldermen promptly "vindicated" the derelict official by electing him to fill a vacancy as Clerk of Committees, a place for which he has no fitness, instead of promoting a deserving subordinate. The Democratic Aldermen evidently thought that this action would be a powerful "rebuke" to the Mayor, but he does not seem to care anything at all for their exhibition of spite. Meanwhile public sentiment is rallying to the Mayor's support, and even the Boston *Journal* sees that he is going to come out ahead. But Mayor O'Brien is not a whit more sure to win in his fight for good government in the city than President Cleveland in his contest along the same lines in the conduct of the national Government.

Great anxiety is manifested by the "regular" politicians and newspapers of both political parties in this State concerning the course of the Mugwumps in the election of November. The *Tribune* stands entirely alone, we believe, in the position that no effort ought to be made to win Independent support for the Republican ticket. All the leading politicians of its party agree that Independent support is very desirable, and that a ticket ought to be nominated which will bring back a portion, at least, of the Republican voters who left the party last year. Just how these voters are to be enticed back, nobody seems to be able to say. The great difficulty is going to be to induce them to vote for any candidate who stands on a platform denouncing the work of the Cleveland Administration; and the Administration must be denounced, or the party will have no "issue." Many of the Democratic "regulars" are counting upon this loyalty of the Mugwumps to Cleveland as sufficient to secure a solid Independent support to any kind of a Democratic ticket which stands upon a platform approving the Administration, but in this they are mistaken. Between two equally good men the Mugwumps will naturally choose the one whose election will be regarded as an approval of the President's course, but they will not vote for a "Jeffersonian Democrat" nor for a "Rockribbed Democrat," no matter what kind of a platform he stands upon.

Twenty mill owners at Bay City, Michigan, at a recent meeting submitted tabulated statements of the highest, lowest, and average daily wages paid by them before the recent strike. In the highest wages column the highest figure was $5 and the lowest $3. In the lowest wages column only one firm reported as little as $1 12½, and none more than $1 50. The lowest average for all operatives in any one establishment was $1 61½ and the highest $2. These statements were made in answer to the complaint that men could not live on the wages. The highest wages column does not include superintendents, bookkeepers, or office workers. The Detroit *News* furnishes some figures which have an important bearing upon this strike. The manufacturers of lumber are not, as such, making the great profits that a superficial study of the case might lead their hands to suppose. It is true that while the cost of cutting and transporting the logs to the mills ($3 50 per 1,000 feet) is about the same as in old times when higher wages were paid, the expense of sawing ($2 50 per 1,000 feet) is about 75 cents less than it used to be, and the cost of delivering at the main points of distribution is very much less. Thirty years ago it cost $7 per 1,000 feet to transport lumber from the Michigan mills to New York State, and $5 to Ohio; last year $2 carried it to New York, $1 50 to Ohio. Furthermore, the price of the better grades has risen greatly in the meantime, and that of the common qualities is higher; "uppers" bring from $40 to $50 per thousand feet at all the principal points of distribution, Albany reaching $53. Here, then, we have much cheaper transportation, a considerable reduction (almost 25 per cent.) in cost of manufacture, and a great increase in the price of the product. Why cannot the manufacturer pay as high wages as formerly? Simply because his raw material, the standing timber, costs him on the average $5 per thousand in place of *seven cents* as thirty years ago, and in the meantime the average quality has run down so that, in spite of increased prices for both better and common qualities, there is little if any margin on a formidable percentage of

the total product. Those who have made the great profits are the owners of the standing timber who, thirty years ago, bought the 6,000,000 feet for which last year they received $30,000,000, at $1 25 per acre, or $240,000, from the United States Government.

Amherst College was the first to make a thorough trial of the idea that physical culture under the direction of the authorities should be as necessary a part of the college system as the mental or moral discipline. Twenty-four years ago it established a department of physical education and hygiene, which instructs the students in the laws of health, and requires of each regular physical exercise, combined, so far as possible, with recreation and enjoyment. The good results of this system can be mathematically demonstrated. There is the testimony of the College President in a report to the trustees in 1859, before the new régime: "By the time Junior year is reached many students have broken down their health, and every year some lives are sacrificed." Dyspepsia, nervousness, and exhaustion were frequent causes of disease. But during the last twenty-four years only two cases of dyspepsia have been reported, and there has not been a single case of disease ascribed to nervousness or exhaustion. The records show a steady improvement in the condition of students during the four years' course. A man is entered on the sick list whenever he loses more than two consecutive days from all college work. The average amount of time thus lost has been but 2.65 days a year to each man, as against an average of about 14 days a year to each person in Massachusetts, according to statistics for the whole State. The percentage of each class entered on the sick list has been 29 per cent. for Freshmen, 28 per cent. for Sophomores, 23 per cent. for Juniors, and only 19 per cent. for Seniors—a steady diminution which becomes more pronounced the longer the student is subjected to the system, and which makes sickness but little more than half as common among Seniors as among Freshmen. The importance of the gymnasium as a class-room could not be more conclusively shown.

One of the most marked differences between English and Americans in matters of diet is in their relative use of coffee and tea. In Great Britain tea has long been the favorite, while in the United States coffee is preferred. The difference becomes constantly more striking. For some years past the consumption of coffee per capita has remained stationary or has fallen off in the United Kingdom, while that of tea has been steadily increasing. In the United States, on the other hand, the consumption of tea has of late fallen off rapidly, sinking from 1.54 pounds per capita five years ago to only 1.16 last year, while the consumption of coffee has increased only less rapidly, until it now reaches about nine and a half pounds a year per capita. The English now drink five times as much tea as coffee, while the Americans drink eight times as much coffee as tea. The *American Grocer* is of opinion that the reduction in the consumption of tea in this country of late years is largely due to a falling off in the quality of the leaf, while the coffee trade has distributed the bean in a roasted rather than a green state more generally than formerly, which has enabled consumers to secure a more agreeable drink than when the beans were roasted at home in skillets or frying-pans, as used to be the almost universal rule in the South. These influences have doubtless had some weight, but it is obvious enough from an examination of the statistics that people in this country are more and more coming to prefer coffee to tea on general principles.

The memorial of the English sugar refiners who called upon Lord Salisbury to urge "retaliatory measures" as an offset to the bounty paid by the Government of the United States to American refiners (enabling them, as the memorialists believe, to export sugar at a lower rate than it can be produced in England), comes as a surprise to people on this side of the water. We had never heard of any such bounty, and we do not believe that it exists. The duty on raw sugar testing 100 by the polariscope is 2.40 cents per pound. The drawback allowed on the exportation of refined sugar is 2.75 cents net. The difference of 0.35 on refined sugar is intended simply to reimburse the refiner for the duty paid on the waste parts of the raw sugar. When the polariscope test was established by the tariff law of 1883 the Treasury appointed a commission to fix an equitable drawback on refined sugar, which was fixed at the rate mentioned. There have been no less than five such commissions appointed first and last. If there is any advantage gained by the American exporter it must be exceedingly small, and not sufficient to be called a bounty.

Mr. Samuel Smith, member of Parliament, has written a letter to the Manchester *Guardian* proposing a new international conference for the monetization of silver, repeating the well-worn arguments in favor of bi-metallism. He says:

"It must be a league or convention like the Latin League, upon a larger scale. It ought to be widely known that it is only the opposition of this country which stands in the way of such a league. We, who of all nations suffer most from this monetary dislocation, are the people who stupidly oppose an arrangement that would render such a dislocation impossible. The American delegates came to the last Conference in Paris charged with a scheme of international bi-metallism. France and Germany were ready to accept it, but our refusal caused the abandonment of a scheme fraught with advantage to the whole human race. Every year that passes makes it more difficult to reopen the question, and it now seems doubtful whether anything except intense suffering will change the obstinate prejudice of our capitalist class in favor of a single gold standard."

It is certainly an over-statement to say that Germany was ready to accept bi-metallism at the last conference. What Germany agreed to do was to suspend her sales of silver for a definite period, during which the mints of the United States and the Latin Union countries should be kept open for the free coinage of gold and silver at an agreed ratio. She would also call in her small Treasury notes, so that there might be a wider field for the circulation of silver. But she never agreed to adopt bi-metallism for herself, either with or without the concurrence of other Powers. England at the same conference agreed to keep one-fourth of the metallic reserves of the Bank in silver on the same conditions as those prescribed by Germany for discontinuing her sales of silver. In other words, those two Powers agreed to absorb a certain amount of the world's stock of silver, to keep it off the market and give it an artificial value for the time being, provided the countries that desired bi-metallism would practise what they preached.

Since the adjournment of the Conference of 1881 the bi-metallists of Europe, with one or two exceptions, have been urging the United States to discontinue the coinage of standard dollars in order to bring a pressure upon the Old World through a decline in the market price of silver. This idea appears to be present in the mind of Mr. Samuel Smith, who says that "it seems doubtful whether anything except intense suffering will change the obstinate prejudice of our capitalist class in favor of a single gold standard." That the suspension of coinage in this country would bring the Old World "up standing," is the general opinion of the school to which Mr. Smith and M. Cernuschi belong. The other school, represented by the London *Economist*, say that they are quite unconcerned whether the United States stop coining silver dollars or not. The problem is one which can be solved only by experiment, and the present time is quite favorable for making it. If the silver men in the United States want another International Conference—and it seems that some of them do—there is no objection to having it. But it is clear that some new line of policy must be adopted to bring the "gold bugs" of Great Britain and Germany to terms. It would be idle to go to Paris a third time, saying to those obstinate countries, "We should like to have you join us in remonetizing silver, but if you do not we shall go on coining it just the same. We are all suffering together, but we will protect you to the extent of $2,000,000 per month, whether you join us or not." Obviously the preliminary step to a new conference should be the stoppage of our own coinage. Then, if there is any virtue in the proposed "pressure," we shall get the full advantage of it at once.

Many extraordinary things have appeared in the *Pall Mall Gazette* since it began its filthy crusade against London vice, but probably the most extraordinary is the following passage in one of the articles of its "Chief Director of the Secret Commission." It shows the condition into which their pursuits are apt to bring the brain of moralists of this class:

"Whatever may be done ultimately, I strongly deprecate a sudden raising of the age of protection at one bound from thirteen to eighteen. An advance to sixteen would be quite as long a step as can safely be taken at present; and considering the number of young girls who have already been launched upon an immoral life between the years of thirteen and sixteen, the proposal to destroy their present means of livelihood is quite as forcible an interference with vested interests as can safely be contemplated. These children have lost their character, and with it their means of earning an honest livelihood. The extension of the period of close time will destroy their present means of subsistence, and as they are only women no one proposes to compensate them for the legislative confiscation of their income."

We can recall nothing quite equal to this for effrontery in modern literature.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, August 5, to TUESDAY, August 11, 1885, inclusive.]

DOMESTIC.

THE body of General Grant lay in state at the Capitol in Albany until 10:30 o'clock on Wednesday morning, and was viewed by 77,200 persons. A procession of military then escorted it to the funeral train of heavily draped cars which was in waiting. The train was constituted and occupied as follows: First, locomotive; second, baggage car; third, the sons of the General, with Dr. Newman and Dr. Douglas; fourth, General Hancock and staff; fifth, Governor Hill and staff, and Committees of House and Senate, twenty-five in number; sixth and seventh, the New York Committee of One Hundred; eighth, the car of public information; ninth and tenth, the regulars, under command of Colonel Beck, and Major Brown. Silently, without whistle or ringing of bell, this train moved along the Hudson from Albany to New York. It left the former city at 12:31 P. M., and arrived in New York at 5 P. M. Crowds of orderly and respectful people were assembled at all the stations to view the train as it passed. The body was escorted by a fine procession of regulars and New York militia to the City Hall. There it lay in state throughout Wednesday evening and until 1 A. M. of Saturday, the doors only being closed from 1 to 6 A. M. of each day. Unceasing and respectful crowds passed in an orderly manner by the coffin throughout all that time at the rate of 6,000 an hour.

The scene in the vestibule of the City Hall, where the body rested under a canopy of black, was very impressive. The immense pillars and winding stairs of the vestibule were completely shrouded in black. Magnificent floral designs were massed in a room behind the coffin. A guard of Grand Army men, soldiers, and police stood continually around the dead General. It is estimated that 250,000 people viewed the body while lying in state in this city.

The final ceremonies attending the removal of the body of General Grant from the City Hall, where it has been lying in state, to its temporary resting place in Riverside Park, began with military promptitude; General Hancock taking his place at the head of the great column assembled to do honor to the dead commander of the Union armies precisely at 9 o'clock on Saturday. The scene at the moment was most impressive. The city and streets were filled with people as they had never been before. The long route, extending over eight miles, was lined with dense masses of spectators. The army and navy of the United States, the New York militia and that of other States, the Grand Army of the Republic, comprising hundreds of veteran organizations, and many civil organizations, formed an imposing and magnificent display, representing at least 40,000 men. Behind the catafalque rode members of the dead General's family, the President of the United States and his Cabinet, General Grant's old staff, members of the Supreme Court, Senate and House, ex-Presidents Arthur and Hayes, and many Governors of States and their staffs. The funeral car left the City Hall about 9:40 A. M and arrived at the tomb about 4:30 P. M. There the military ceremonies assigned to the Grand Army of the Republic were under the direction of Commander-in-Chief Burdette, of Post Meade, of Philadelphia. This part of the services required about fifteen minutes. At the close of them there was singing by the Sangerbund, and then followed the simple burial ritual of the Methodist Church; Bishop Harris and the Rev. Dr. Newman conducting it. Representative clergymen from all denominations were present. The ceremonies were then closed by the regular troops with "tattoo" sounded after the benediction was pronounced, and a volley of musketry. The President's salute of twenty-one guns ended all.

A great naval display was made by the North Atlantic Squadron and other vessels in the North River opposite the Riverside Park. Salutes were fired by the squadron.

The President on Wednesday appointed as Government Directors of the Union Pacific Railroad Frederic R. Coudert of this city, vice Francis Kernan, declined, and Marcus W. Hanna, of Cleveland, O., vice L. B. Harrison, declined.

President Cleveland on Friday amended rule seven of the Civil-Service Act, defining the class of officers excepted from examination, so as to make it read that medical examiners are *not* to be classed as professional persons excepted from examination.

The President has issued a proclamation ordering "that any and every unlawful enclosure of the public lands maintained by any person, association, or corporation be immediately removed." This is aimed at the fences on cattle lands not owned by the persons erecting them.

The President, after the funeral of General Grant, started for the Adirondacks on his vacation. He will be absent from Washington for five or six weeks. Two members of the Cabinet will remain there during his absence.

The Civil-Service Commission on Wednesday made a report to the President on the alleged violation of the Civil-Service Law by Aquilla Jones, Postmaster at Indianapolis. Among other things, the report said: "It does not appear that the Postmaster has made any appointment or removal in violation of any provision of the Civil-Service Act or rules. The evidence shows that the Postmaster in conversation declared a purpose to make removals and appointments according to a theory of political discrimination quite repugnant to the spirit and the letter of the rules. Such declarations very naturally awaken distrust and a suspicion that his action had been in accordance with his words. The Commission thinks the Postmaster had not, and that he has not now, any intention of resisting the rules, but he now more clearly than before understands that any political discrimination in making selections from among those examined will be a violation both of the spirit and of the letter of the rules."

The Indianapolis Independents will appeal to President Cleveland in regard to Postmaster Jones. Mr. Swift, the Chairman, says: "We shall urge two things upon the President—first, that it is his duty to remove Mr. Jones, so that the spirit and effectiveness of the Civil-Service Law may be sustained in spite of the report of the Commission; and, second, that Mr. Jones has been guilty of offensive partisanship in removing competent employees for none other than political reasons."

The following official note was on Friday appended to the book containing the list of postmasters appointed at Presidential offices since the adjournment of the Senate: "The suspensions in the foregoing cases were with two exceptions made for partisanship. The two were made upon reports of inspectors showing bad management of the offices by the incumbents. The President has not considered all the cases of Presidential postmasters which have been made ready and presented to his attention. He has made 467 appointments, of which 274 were to vacancies caused by expiration of terms or resignation and 193 in place of suspended officers. Every case of suspension has been carefully considered upon evidence, in pursuance of the same principles by which he was guided in the beginning, and a large number of solicited removals have been refused, including some, at his last consideration of cases yesterday, because the proofs were not such in his judgment as to warrant the action. Arrangements have been made so that commissions will be issued, notwithstanding the President's absence, when bonds are filed and approved."

Attorney-General Garland decides that whiskey under bond for exportation must pay the domestic tax if it is not exported within the time—seven months—allowed by a Treasury regulation for the completion of the exportation.

Secretary Whitney has written to the assignees of John Roach a letter in which he says the contracts with that gentleman for the construction of the new cruisers (the *Boston*, the *Atlanta*, and the *Chicago*) have been forfeited, and that the Government will complete the work at his own yards.

The Department of State is in receipt of a despatch from Mr. Lee, Secretary of the American Legation at Vienna, saying that the Austrian Government has positively declined to receive Mr. Keiley as United States Minister. Mr. Keiley is now in Paris, where he has been for some weeks. Mr. Lee has been designated to act as Chargé-d'Affaires for the present.

The report of the Committee, consisting of Messrs. Thom, Garrison, and Huntington, upon their investigation of the Coast Survey has been submitted to the Secretary of the Treasury. It states that they took possession of the Bureau July 24, and conducted an investigation, leaving no ground for doubt that the actual condition of the Survey was one of demoralization and its workings inefficient, unjust, and to some extent disreputable. The regulations are partly to blame, but the superintendent is chargeable with a willingness to avail himself of opportunities for a continuance of abuses, with weakness and procrastination, favoritism and arrogance, disregard of regulations, and notorious use of intoxicants. Professor Hilgard, Superintendent of the Coast Survey, resigned on Friday and his resignation was accepted.

The returns of the Department of Agriculture make a slight improvement in the condition of cotton on the 1st of August, the general average being 96½, a point only once exceeded in the August returns of ten years, in 1880.

The National Civil-Service Reform League met in Newport, R. I., on Wednesday. The President, George William Curtis, delivered the annual address. Among the resolutions adopted were the following: "Resolved, That by the general course of his Executive action, in regard to appointments and removals, and notwithstanding certain actions of the Administration which, measured by the principles of reform, we disapprove, President Cleveland has proved, amid immense perplexities and difficulties, his fidelity to the patriotic principles asserted in his letter of the 25th of December, 1884, to the Executive Committee of this League, and his firmness and courage in enforcing his convictions; that the National Civil-Service Reform League offers its resolutions in regard to the repeal of the laws known as the 'Four Years Laws,' and urges every local association, and pledges itself, to unremitting efforts to secure the result so essential for the complete reform of the abuses of Executive patronage; that the reformed system of appointments in the civil service, established by the act of January 16, 1883, should be extended to all the offices and employments under the Government to which it is applicable, as fast and as far as practicable, with due regard to the conditions of an efficient administration."

The New York Democratic State Committee will meet in Saratoga on the 18th day of August to determine the time and place for the State Convention.

Chairman Warren has called a meeting of the New York Republican State Committee for Tuesday, August 25, at 1 o'clock P. M., at Saratoga Springs.

FOREIGN.

In the House of Commons on Wednesday, in reply to questions by leading Radicals, Sir Michael Hicks-Beach, Chancellor of the Exchequer, said that the Government had sent Sir Henry Drummond Wolff as Special Envoy to the Sultan. The last five years had greatly increased England's obligations toward Egypt. While the

Government must refuse to state at present what instructions Sir Henry Drummond Wolff carried with him, or what the object of his mission was, the speaker could state in general terms that "the Government's policy is to put Egypt on a solid footing with regard to external defence, finance, and internal administration. Our policy is to gradually give security and freedom to Egypt's independent action in the future." The Chancellor also said that he could at present make no statement regarding the question of evacuating Egypt. But concerning the defences of the country and the position of affairs at Suakim, he could say both were in a most unsatisfactory condition. So far as the Egyptian loan was concerned, Sir Michael Hicks-Beach declared that the Gladstone Government had suggested to Germany that the whole loan of $45,000,000 should be offered for tenders in Germany, but that Germany had objected to the proposal because such a method of placing national loans was unknown in Germany.

The Marquis of Salisbury on Wednesday gave his answer to the deputation of sugar manufacturers who recently called upon him to urge retaliatory measures upon the United States Government for the bounty (?) afforded by means of its customs laws to American manufacturers of sugar. Lord Salisbury said the difficulty encountered by the Government consisted in its inability to impose countervailing duties. The country was committed to a policy which forbade this. The Government could not give the desired help unless the country changed its free-trade policy. As for himself, the Premier said, he could see no remedy. It would be useless to complain to a foreign country unless England was positively in a position to retaliate. If as a negotiator for a change in foreign tariff laws which discriminated against British trade the English Government were empowered to threaten reprisals, evils like the one complained of could soon be cured. He hoped, however, that foreign countries would ultimately see their way to abolish duties altogether, and the British Foreign Office would do all in its power to induce them to do so.

Lord Randolph Churchill, Secretary of State for India, introduced the Indian budget in the House of Commons on Thursday evening. He announced a deficit of £1,029,000, which, he said, had resulted from an outlay of £461,000 greater than the estimates, while revenue had decreased £568,000. The difference, he declared, would have been saved if the late Government had not abandoned the Quetta Railway. He thought it unfair and unjust to make a financial statement under such depressing circumstances. The late Government, not Lord Salisbury or Lord Dufferin, was to blame for this state of affairs. He condemned the Marquis of Ripon, the late Viceroy of India, for not looking ahead. The extra permanent military charge, he said, would probably reach £2,000,000 yearly. He declared that economy was the only way of meeting the deficit. The Marquis of Hartington justified the Indian policy of the late Government. The House formally agreed to the budget.

Lord Randolph Churchill was censured by the London *Standard* and all the Liberal papers on Friday morning for discussing a purely financial question in a polemical manner.

The Criminal Amendment Bill passed its third reading in the House of Commons on Friday night.

Robert Bourke, Under Secretary for Foreign Affairs, stated in the House of Commons on Monday afternoon that the advices in possession of the Government did not confirm the reports of alleged German annexations in Zanzibar. Mr. Bourke's statement conceals the real gravity of the situation. The British Consul-General at Zanzibar telegraphs that the Sultan has appealed to the English fleet for protection. The admiral commanding the German squadron presented an ultimatum on Saturday, threatening that his squadron would begin active operations unless the Sultan withdrew his forces. It is reported that Lord Salisbury, in a communication to Prince Bismarck, asked that Germany's demand be held in abeyance until England had had time to consider the Sultan's appeal.

The British Government are still uncertain as to when Parliament will be prorogued, although August 14 is mentioned as the probable date. They still intend to push the Land Purchase Bill and the Housing of the Poor Bill. The latter passed its second reading in the House of Commons on Monday night. Sir Charles Dilke spoke, and was loudly cheered. The House of Lords has passed the Criminal Amendment Bill as adopted by the Commons.

A member of the House of Commons, sent to the London *Times* on Saturday letters from the Marquis of Salisbury, Lord Randolph Churchill, Mr. Winn, of the House of Commons, and Mr. Parnell, denying the assertion made by Herbert Gladstone, son of the ex-Premier, that an alliance is arranging between the Conservatives and the Parnellites. Mr. Parnell says that he has not had communication with any member of the Government on public affairs, directly or indirectly, except in debate in the House of Commons.

There was great rejoicing in Limerick on Thursday over Lord Carnarvon's withdrawal of the proclamation against Limerick because of the city's refusal to pay the extra tax levy assessed against it, on account of the extra police put on duty during the political excitement under Earl Spencer's Government. The whole dispute will probably be amicably settled.

A committee of investigation has reported to the House of Commons in regard to alleged frauds in the Admiralty Department, exonerating Lord George Hamilton, First Lord of the Admiralty in the Gladstone Ministry, from all imputations except that of carelessness. It accounts for the deficiency in his Admiralty estimates by saying that his calculations were too sanguine, and induced him to ask for smaller credits than a more rigorous inquiry would have shown were necessary. The report urgently recommends a more rigid financial supervision of the accounts of the entire Admiralty Department.

Mr. Chamberlain, of the late Liberal Cabinet, addressed a meeting at Hull, Eng., on Wednesday and Thursday evenings. He said he would not rest until life at sea was more secure from the negligence and cupidity of the shipping interest. He had no wish to lead a revolution, but he was satisfied that the extremes of wealth and poverty side by side were a source of danger. The local government could do much to improve the position of the poor. He advocated national education, graduated taxation, and free trade in land.

The Council of the Manchester (Eng.) Chamber of Commerce has decided to ask for a Government inquiry into the monetary question. This is a victory for the bi-metallists. The London Chamber of Commerce is also in favor of an inquiry. It is expected that the Government will appoint a commission.

The divorce suit of Crawford versus Crawford and Dilke appeared on the law list in London on Saturday, thus reviving the scandal affecting Sir Charles Dilke, the eminent Radical. Sir Charles has written to his constituents denying the truth of the accusation brought against him, and asking their forbearance until the trial of the divorce case.

The English Admirals Hewitt, Hoskins, and Hopkins declared at a dinner given by the Empire Club in London on Wednesday night that the British navy, despite its failings, was equal to those of any other two nations combined.

Mr. John Ruskin is seriously ill. His post as Slade Professor of Fine Arts at Oxford has been filled by the election of Mr. Hubert Herkomer.

Lord Halifax is dead. The Right Hon. Sir Charles Wood was born December 20, 1800, and was graduated as a Double First at Oriel College, Oxford, in 1821. He succeeded his father as third baronet December 31, 1846, and was raised to the peerage as Viscount Halifax on February 21, 1866.

Thomas Leverton Donaldson, a distinguished British architect and ex-President of the Royal Institute of British Architects, is dead at the age of ninety.

Lord Houghton (Richard Monckton Milnes), the British poet and critic, died on Tuesday at the age of seventy-six.

The London *Morning Post*, the Government organ, had on Saturday the following editorial paragraph: "The latest despatches from M. de Giers are of a most conciliatory character, and open up the prospect of a possible immediate settlement of the Afghan frontier difficulty, which has of late given rise to so much anxiety."

Despatches sent from Meshed, in Persia, near the Afghan frontier, say that the British officers in Herat are well treated by the inhabitants, and that their health is excellent despite the torrid weather prevailing there. The work of fortifying Herat against a possible Russian advance is making rapid progress. The Amir is preparing another large force of Afghan troops for the protection of Herat. The Amir's son will be placed in nominal command of these troops. A despatch received in London on Friday from the Afghan frontier said a collision between bodies of Afghan and Russian troops would not be surprising.

The London *Times* published on Tuesday a letter from Meshed, Persia, in which it is stated that the Afghans are acting in such a way as to give the Russians no possible excuse for making any attack. The writer says the Amir's troops do not pass the frontier which Russia admits is Afghan; that they refrain from moving their troops toward the Russian positions, and even from strengthening their own outposts.

Advices from Abyssinia say that Rasalula, with 5,000 troops, and Rasmarcol, with 3,500, will attack the besiegers of Kassala at two points in October, and at the same time 1,200 Indians and 800 Anglo-Egyptians will attack them at a third point.

The Paris *République Française* states that an alliance has been concluded between Great Britain and China for mutual action in the event of war between England and Russia. This is denied by the British Government.

General de Courcy telegraphed from Hué on Monday as follows: "The leaders of the Black Flags have vanished, and their bands have dispersed. There are several cases of cholera in the Haiphong hospital. The Bishop of Quinhon reports that five missionaries and many Christians have been massacred in the provinces of Biendinh and Phu-yen, and that 8,000 Christians have sought refuge in Quinhon, which is occupied by the French."

Cholera has appeared at Toulon and is spreading in Marseilles. In Spain on Sunday 1,511 deaths were reported.

The decree ordering the general elections in France was issued on Friday. It designates the 4th of October as the day.

Extensive preparations are making for the meeting of the Czar and the Emperor of Austria, which will soon take place at Kremsier, a town of Moravia.

The Emperor and Empress of Austria arrived at Gastein on Thursday night, and were cordially received by the German Emperor and Empress.

The International Telegraph Conference was opened in Berlin on Monday. It is believed that the vote in the Conference on Prince Bismarck's proposition to establish a uniform tariff of four or five cents a word for all Europe on messages passing from country to country, will be very close.

DEMOCRATIC SUPPORT OF CLEVELAND.

THE attitude of the Democratic party toward the President is the most interesting and important feature of current politics. Mr. Cleveland was elected to office upon the strength of certain pledges as to the way in which he would administer the Government. The body of independent voters who decided the contest in his favor believed that he would redeem those pledges. The politicians of both parties supposed that his promises regarding reform were of the conventional sort, designed only to "fool" voters during the campaign. The Republican managers who had so long conducted the Government upon a spoils basis, did not believe that Mr. Cleveland could introduce the rule of business principles if he would; the Democratic wire-pullers and pipe-layers, who wanted to maintain the old system unchanged except as to the name of the political firm in charge, did not believe that he would reform things if he could. Five months have elapsed since the new Administration came into power, and its character is now fully established. The Democrats have undoubtedly found that Cleveland is more of a reformer than they expected him to be. How are they affected by the discovery?

The Republican organs and stump speakers last fall with one accord insisted that, as the "Solid South" would elect Cleveland if he should be elected, its influence would be potential with his Administration. How does the "Solid South" stand on the issue of supporting a civil-service reformer in the White House? Take the solidest Democratic State in that whole section, Texas, with its more than 130,000 majority for Cleveland last November. The Galveston *News* is the most prominent, widely circulated, and influential Democratic newspaper in that great commonwealth, and must be presumed to know the temper of its people. When Auditor Chenoweth came into collision with the Civil-Service Law over the case of Kellar a few weeks ago, somebody in Washington started an absurd story that he would resign and run for Governor of Texas on the platform, "To the victors belong the spoils." This is the way in which the Galveston *News* commented upon the report:

"The people of Texas are not hungering for office to any alarming extent, but instead ardently desire that the Democratic Administration shall be signally successful in its efforts to reform the Government, not only in having the public affairs economically administered, but also in establishing clean and efficient civil service. There were doubtless from three to six aspirants for every position in the Federal service in Texas. The disappointed of these will naturally be unfavorably disposed toward the Administration and naturally inclined to take an active part in rigging up the old machine and throwing cold water on the President's reform efforts. The great body of the people of Texas, however, it is safe to say, are in hearty accord with the President in his programme of reform. . . . If the people of Texas are aching to make Mr. Chenoweth Governor, it can neither be seen nor felt in these parts. In fact, the suspicion is strong that Mr. Chenoweth will hesitate a long time before breaking with the Administration, for if he comes to Texas with the hope of doing better, he will stand an excellent chance of running foul of a huge disappointment. There are not more than one to every thousand men in Texas eager to serve their country and themselves in an official capacity, and it can be said that an overwhelming majority of the 1,000 is in favor of good, honest, clean government, and ready to support Cleveland's Administration in that behalf."

This is only a sample of the tone consistently maintained by the chief Democratic newspaper of Texas in discussing this question, to which it frequently recurs. "No supporter of the President," it remarked in a recent editorial, "has to blush at the charge that he has not kept faith. Every Democrat who complains of Cleveland's fidelity to civil-service reform shows that he was not sincere himself and did not believe that Cleveland was. The Democratic platform called for civil-service reform, and if the Democrats did not want it, they should not have demanded it. This is the case in a nutshell, and every Democrat who refuses to sustain Cleveland's civil-service policy is placing himself in the attitude of a trickster and a fraud." The latest issue of the *News* that has come to hand contains an article which preaches the gospel of civil-service reform in the most earnest and vigorous terms, as witness this extract from a spirited reply to a caviller:

"What are the 'just rights' of Democrats with respect to places in the civil service? What more right have citizens calling themselves Democrats to hold these non-political offices than citizens calling themselves Republicans, or claiming no party appellation? The civil service is not the property of any party to be divided among its followers. If the Republicans in 1861 turned the Democrats out of the civil service and replaced them with Republicans, it is no reason why the Democrats should follow their example in 1885. The world progresses, and two wrongs can never make a right. It is neither justice, wisdom, nor statesmanship to eject faithful and efficient incumbents of non-political offices and fill their places with Democrats, merely because the latter are of the party of the President and the former are not. It is easy to see why the President should have his political friends in the great political offices, but an arbitrary and wholesale change in the small administrative and clerical offices, to reduce them to one partisan complexion, is certainly not in line with what is required for business-like efficiency and single-minded fidelity in the public service."

A newspaper like the Galveston *News* does not talk in this way unless it feels sure of its ground. Nor is there anything exceptional about the attitude of the Texan journal. Nearly all the influential organs of public opinion in the South are hearty supporters of the President. The Jacksonville *Times-Union*, the leading paper of Florida, commenting upon the charge that Cleveland would be "rebuked" if the New York State election this fall should go against the Democrats, because disappointed Democratic place-hunters will help the Republicans, says:

"Gentlemen, it cannot be done. You may possibly be able to form coalitions and buy up votes enough to elect a Republican Governor, but that will not 'rebuke' the President—it will only mark you as a set of political knaves who think public plunder is the be-all and the end-all of party strife. This Administration stands on its own merits; it is intrenched already in the hearts of the people, without regard to party; it can only be 'rebuked' by the vote of 1888, which will set the seal of approval or disapproval on it. The best thing the spoils-hunters can do is to seek 'a change of heart,' become patriots instead of spoilsmen, and join in the acclaim with which all right-minded people hail the effort to purify the national Government and make it what it should be."

The same paper shows an accurate comprehension of the situation when it says, that "the permanence of civil-service reform as a political principle which neither party will dare to antagonize is rendered secure by the fact that the great newspapers, Democratic as well as Republican, South as well as North, are decided and outspoken in its support, which most assuredly would not be the case unless it was endorsed by the people, whose opinions and sentiments no one is in so good a position as an editor to ascertain."

The Charleston *News and Courier*, the most prominent journal in South Carolina, not long ago referred to the growling in the party, and said: "There is growling here and there, of course. Democrats can be found who have precisely the use for the Democratic party that the mule has for the corn-crib. Noisy as they are, they form but a small corner of the Democratic party." More recently, in alluding to the report that Mr. Hendricks intended to make war upon the Administration, which it discredited, it said: "If it should prove to be true, however, that he and any number of politicans, in office or out of office, propose to make a fight against the President upon the question of civil-service reform, they cannot make it too soon. The result is by no means doubtful, and the more promptly the spoilsmen are sent to the rear the better it will be for the country."

The Mobile *Register*, the leading Democratic paper in Alabama, the other day mentioned the report that a Democratic Congressman from Ohio proposed to lead a movement in the House against the Civil-Service Law, and contemptuously dismissed the suggestion with the comment: "Congressman Hill must be anxious to get a licking in 1888." The Savannah *News*, a Democratic paper whose influence is as great as that of any journal in Georgia, remarked a few days ago:

"The President may not be a shrewd politician, but he is politician enough to know that the people approve his course with respect to the civil service. The few Democratic journals that have been unable to control the patronage they desired would like, perhaps, to see the Vice-President lead a revolt against the Administration because of its adherence to the Civil-Service Law, but their satisfaction would be short-lived. Even the politicians (and it is believed that they are opposed to civil-service reform) would not dare to follow Mr. Hendricks if he were to make an issue of that kind."

There is no need to multiply illustrations of the significant fact that the South sustains the President in his reform policy. But the case of Louisiana should be mentioned, to show how futile is the opposition of the spoils-seekers. In that State the President has turned his back upon the odious ring which has so long disgraced the Democratic party, until the New Orleans *Picayune* can truthfully say that "the power of the Ring is thoroughly broken now, and its chiefs confess the fact." Yet so admirable have been the appointments and so hopeless is criticism that the New Orleans *Times-Democrat*, the organ of the disappointed faction, is forced to say of the new officials:

"They have all, at one time or another, filled important commercial or political positions, and have filled them with credit. . . . The entire community must feel that under such gentlemen, business-like and thorough in their methods, and always to be trusted, there will be a marked improvement in the administration of the Custom-house, Post-office, and other Federal offices over which they will preside. . . . We shall accord the officers assigned to these trusts a sincere and cordial support in every effort they may make to improve the public service."

In the North there are a few Democratic papers of prominence, like the Cincinnati *Enquirer* and the St. Louis *Republican*, which do not conceal their disgust with the President, but they are sheets either notorious for unscrupu

lousness and lack of public spirit, like the *Enquirer*, or conducted under the influence of antediluvian ideas by old fogies, like the *Republican*. Even in Missouri we observe that the editors of the progressive Democratic papers, like the St. Joseph *Gazette*, take issue with the Bourbon policy of the *Republican*. Wherever a Democratic paper is found which sneers at the President, some discreditable personal motive for its hostility is almost always obvious, while every month sees a larger proportion of the party organs coming to Cleveland's support. Only editors who have some private reason for opposition, or who are hopelessly blind to public opinion, longer stand out against the drift of the tide.

THE POWER OF APPOINTMENT AND REMOVAL.

A CORRESPONDENT asks the following question in regard to the power of appointment to and removal from Federal offices:

"What was the condition of things before Andrew Johnson's Administration? How was it modified by the Tenure of Office Act of 1867, and later by the Civil-Service Law? What is the present status—what the President's powers in the recess of the Senate, and what the Senate's control when reassembled over removals and appointments made in the interval?"

By the Constitution the appointing power is vested in the President and the Senate as coördinate departments. The President appoints to the higher offices "by and with the advice and consent of the Senate." Congress, however, was empowered by this same clause of the Constitution to vest the appointment to such inferior offices as it might think proper "in the President alone, in the courts of law, and in the heads of departments." Congress has exercised this power, and there are now, therefore, four sources of appointment to Federal offices—namely, the President and Senate, the President alone, the courts of law, and the heads of departments. Two of these, "the President alone" and "the courts of law," may be at once eliminated from this discussion. They do not come within the province of the Civil-Service Law or of Senatorial control, and there is here no question in regard to them.

It is to those offices the appointments to which are under the control of the secretaries and heads of departments, that the Civil-Service Law applies; but not to all of these. For under various acts passed since 1852, it was directed that the clerks in the Treasury, War, Navy, Interior, Post-office, and State Departments should be arranged in four classes, covering clerkships of the value of from $900 to $1,800 per annum; and by the Civil-Service Act itself, the Secretary of the Treasury and the Postmaster-General were directed to classify as far as practicable, in accordance with this arrangement, certain persons employed in each customs district and post-office where the whole number of clerks and persons employed amounts to fifty. The persons coming within the scope of these regulations constitute the "Classified Civil Service." And it is these subordinate clerkships and offices, the appointments to which are made by secretaries and heads of departments, that the Civil-Service Act affects, by enabling them to be reached by the straight and broad avenue of competitive examination, instead of by the dark and tortuous path of political influence. So much for the sphere of the Civil-Service Act. It does not "modify" or affect in any way the power of appointment to or removal from those other offices which is vested in the President and Senate.

In order to gain a clear idea of the history and present status of the latter power, it is necessary to bear in mind the important distinction between the power to make a vacancy and the power to fill it when made. The Constitution has provided two separate and distinct ways of filling vacant offices. One is by nomination by the President and confirmation by the Senate, and the other is by the President commissioning an officer during the recess of the Senate. By the act of 1867, amended in 1869, however, the Senate provided for the exercise of its coördinate authority over the appointment to those vacancies which might have been filled by the President during the recess, by providing that "the President shall, within thirty days after the commencement of each session of the Senate, except for any office which in his opinion ought not to be filled, nominate persons to fill all vacancies in office which existed at the meeting of the Senate, *whether temporarily filled or not.*" This is the law of appointment as it now stands. All the vacancies in those offices which are to be filled "by and with the advice and consent of the Senate," and to which temporary appointments have been made by President Cleveland alone, must be again filled, within thirty days after the Senate meets, by the President and Senate jointly. This limit of thirty days does not apply to a case where the President makes an appointment which the Senate refuses to confirm. In that case the President "shall nominate another person as soon as practicable to the same session of the Senate for the office."

In regard to the power of removal, there has been much discussion and difference of opinion. In the great debate of 1789 upon the question of the tenure of office and power of removal there were three different opinions advanced—namely, that the Constitution had lodged the power of removal in the President alone, that it had lodged it in the President and Senate, and that it had left it to be regulated by Congress. The first of these three views—that the power of removal was in the President alone, and uncontrolled by the Senate—prevailed, and was acted upon and gradually strengthened by precedent until the passage of the Tenure of Office Act, in 1867. The passage of this act, which was prompted by a desire on the part of the Republicans to curb Andrew Johnson, established as law the second of the opinions held in 1789—namely, that the power of removal was vested in the President and Senate jointly. By this interesting change of ground the present status of the matter has been reached. The Tenure of Office Act, as amended in 1869, provides that, "Every person holding any civil office to which he has been, or hereafter may be, appointed by and with the advice and consent of the Senate, and who shall have become duly qualified to act therein, shall be entitled to hold such office during the time for which he was appointed, unless sooner removed by and with the advice and consent of the Senate, or by appointment, with the like advice and consent, of a successor in his place, except as herein otherwise provided." A Republican Senate now control a Democratic President's power of removal. Will they agree to his definition of "offensive partisanship" as a ground of removal from office? This is a question of much interest, and one which has doubtless engaged the serious attention of the Republican leaders. It will be decided upon grounds of political expediency rather than upon legal technicalities. It is hardly probable that the Republican party will establish any new rule or custom which might embarrass them if the conditions were reversed—that is, if there were a Republican President and a Democratic Senate.

MEXICO'S DEBTS.

THE recent financial operations of the Mexican Government, which have precipitated such bitter discussions and resulted in the imprisonment of half a score of students and editors on the charge of sedition, can be understood only in the light of the fiscal history of the republic since the independence. It might seem an easy task to arrive at the sum of the liabilities of a nation scarcely more than sixty years old; for, of course, with the cessation of Spanish control in 1821 the slate was sponged clean. Yet the various estimates of the Mexican national debt range all the way from $40,000,000 to $300,000,000. Fully two-thirds of this latter estimate, however, are to be placed to the account of the ruinous loans negotiated by Maximilian, and ought not to be considered. Certainly Mexico is neither legally nor morally responsible for their payment. The nation can and will, with perfect justice, stand by the declaration of Juarez, in 1868: "Not one cent in payment of the debts of the intervention."

Leaving, therefore, the unfortunate holders of the bonds of the Empire out of the question, there remain, in addition to national bonds owned by Mexicans, the Spanish debt, fixed by convention at $6,000,000, without interest, a debt of $200,000 to French subjects, bonds to the amount of about $500,000, held by citizens of the United States, and the English debt. The last is the element of uncertainty and dispute. Its history is as follows. As soon as independence was firmly established, the young nation, as if to prove its right to the exercise of that unmistakable prerogative of nationality, borrowing money, set about securing a foreign loan. Recourse was had to the world's money-lender, and in 1824 two loans were negotiated in London of $16,000,000 each, one bearing interest at 5 and the other at 6 per cent. Almost from the first the interest failed to be paid. The infinity of revolutions and changes of Government into which Mexico plunged and remained for thirty years, made the value of the national bonds more and more problematical, until at last they became almost worthless. It is believed that the majority of the present holders of the English debt obtained their securities for the most trifling consideration. These bonds were again and again the subject of diplomatic representation on the part of the English Minister in Mex-

ico, and from time to time new agreements were entered into with the London creditors. It is the multitude of these provisional and, in turn, violated arrangements, made during a period of twenty-five years, which renders it so difficult to say precisely what the debt should be estimated to be. However, we get a new point of departure in 1851, when, by an arrangement effected by Señor Payno, Mexican Minister to England, the debt was fixed at $51,000,000 and funded in a new issue of bonds to that amount, with interest at 3 per cent. But the new bonds soon proved to be as poor an investment as the old. The interest was met with the greatest irregularity, and before long lapsed altogether. During the struggle of Conservatives and Liberals in the civil war of 1857–60, and again in the upheaval of the French intervention, nothing was paid, nothing, apparently, could be paid. After the fall of the Empire, when the feeling was general and strong that it would be well to repudiate all past debts and start afresh, Juarez, with an enlightened regard to the nation's credit and good faith greatly to his honor, declared, referring to the English debt: "The debt is legitimate in its origin; it must be paid, but after mutual concessions." Accordingly, negotiations were speedily entered upon, and, in 1868, a contract was signed with the representative of the bondholders, by the terms of which the latter agreed to accept a reduction of one-half of their claims, on the ground that England had been partly responsible for the loss caused to Mexico by the intervention, and thus the debt was placed at $25,000,000, at 6 per cent. This was really a reduction of two-thirds, counting the unpaid accumulating interest, for, as was shown by Señor Romero when Secretary of the Treasury, in 1870, the total debt at that date would have been $76,000,000. But new difficulties arose. A part of the contract alluded to bound the bondholders to build and operate a railroad from the City of Mexico to the Pacific. This stipulation they failed to meet, and Mexico receded from the agreement. Diplomatic relations were broken off, and the question of the debt has been a cause of chafing and contention between the two countries ever since.

For several years there has been an expectation that some new agreement would be reached. The constantly renewed rumor that negotiations were pending found justification last November, when the Gonzalez Administration, in its dying hours, submitted to Congress the so-called Noetzlin-Sheridan convention. According to this a new issue of bonds in the sum of $86,000,000 was to be made for the liquidation of the English debt and for the payment of the modest bill of expense incurred by commissioners, agents, bankers, etc., of some $13,000,000. The ratification of this convention was furiously opposed in Congress, as being barefaced robbery, and was finally defeated, although the Executive in his desperation resorted to every expedient to force the measure through, even going so far as to order out the troops to overawe the Opposition. It was understood at the time that President-elect Diaz was opposed to the convention; yet scarcely six months of his Administration have passed before he has brought forward a plan for the funding of the debt which is giving as much offence as the one rejected last November. This is the measure known as the law of June 22. On its face, it appears to be a statesmanlike project, so far as its end is concerned, which is to consolidate into one national debt various outstanding obligations. The law starts out by dividing the nation's debts into two classes— those contracted prior to July, 1882, and those subsequent to that date. The latter, being principally obligations on the score of subventions and loans from the National Bank, are to be funded in an issue of bonds to the amount of $25,000,000, with interest at 6 per cent. from date. This is the part of the measure which affects American capital. The first class of debts is to be consolidated into an issue of bonds to be entitled "Consolidated Debt of the United States of Mexico." These bonds are to bear an interest of 3 per cent. beginning January 1, 1890. In 1886 the rate is to be 1 per cent.; in 1887, 1½ per cent.; in 1888, 2, and in 1889, 2½. A careful and detailed description is given of all the foreign and domestic debts which are to be funded in the new bonds. The English debt is admitted on the basis of the arrangement of 1851—that is, $51,000,000, together with some additions of indeterminate amount which will probably bring the total up to about $65,000,000. No figures are given in the law itself for this estimate, nor is it intimated to what sum the entire issue of bonds will rise. It is generally supposed, however, that if the plan goes through, the issue will amount to $100,000,000.

While thus praiseworthy in its aim, in its method the new financial measure is oppressive, and, in spirit at least, unconstitutional. It is not an arrangement between creditor and debtor; it is an arbitrary determination by the debtor alone. In so far as it makes no provision for the payment of accrued interest and lowers the rate of interest, it is a repudiating act. Then, it is a law not made by the law-making power. True, under the loose and demoralizing system of things now prevalent in Mexico, the President has the technical right to promulgate this law, since a Congressional resolution of 1883 clothed the Executive with ample power not only to propose but actually to enact and declare a law in relation to the public debt. Yet not even Gonzalez was bold enough to legalize the Noetzlin-Sheridan convention without submitting it to Congress. But Diaz gives the first intimation to the public of his financial schemes by enacting them as the supreme law of the land, allowing Congress no voice in the matter. Yes, he does reserve to Congress one right. Article 14 of the law reads: "An itemized account of the expenses incurred in the conversion of the debt shall be presented by the Treasurer to the House of Representatives for revision." This is the only reference to the constitutional money-appropriating power made in a measure which will affect the finances of Mexico more than any law in its entire history.

The reproach of political inconsistency is one which it is so easy to bring against any Mexican statesman that it ordinarily carries little weight; yet it must be somewhat mortifying to President Diaz to be reminded now, as he is incessantly by the Opposition press, of one of the "whereases" of the "Plan of Tuxtepec," the revolutionary programme which he put forth when, in 1876, he drove Lerdo from the Presidency. One of the reasons which he then alleged as his motive in taking up arms against the legally elected President was this: "Whereas, the President and his favorites have agreed to recognize the enormous English debt, . . . and whereas we do not merit the name of Mexican citizens, nor even that of men, if we consent that they should be at the head of the Administration who are thus robbing us of our future and selling us to a foreign Power."

Putting the entire national debt of Mexico, then, at $125,000,000, with an annual interest charge of $4,500,000, it certainly would not seem to be a burden too heavy to be carried by a nation having a population of 10,000,000. A debt of $12 50 per capita does not appear onerous in comparison with the rate of Spain, $153, of France, $117, of Great Britain $109, or even of the United States, $40. But when we remember that the entire foreign commerce of Mexico amounts to only a little over $6 per capita, as against England's $100, for instance, it will be easy to believe that the next generation of Mexicans, if well read in Macaulay, will not be grateful to their fathers for having bequeathed to them the blessing of a large and permanent public debt.

THE MANAGEMENT OF OUR PUBLIC WORKS.

Now that we have a President and Cabinet, for the first time in very many years, entirely in accord on the subjects of economy and reform, it is desirable to bring to public notice one great opportunity for a reorganization which combines economy and reform with simplicity of detail and effectiveness in results, and should therefore commend itself as worthy of investigation by the President, the Congress of the nation, and the great mass of the reading and thinking public. The opportunity we refer to is in the administration of the public works of the country, now without form or system, carried on under several of the general departments, and, in place of being one harmonious whole, composed of sections whose territories and duties seem to overlap, thus importing jealousy and hostility, contrary to the public good.

France has long been celebrated for the perfection of its administration of public works, and its reputation in that direction is due to its perfectly organized and highly distinguished Civil Corps of Ingénieurs des Ponts et Chaussées, to which we have in this great country (where our public works are almost one hundred to their one) nothing in the slightest degree similar. The system of public works in France is deemed of such importance to the nation as to justify the creation of a Cabinet officer, called the Minister of Public Works. We have a military school and a naval school which compare favorably with those of any other nation. Why should we not have, like France, a school for civil engineers, to fit its scholars for the superintendence and construction of all our public works? It could have a higher and less elementary course of studies than either of our national schools, for its students would be taken from young men who had chosen the profession of civil engineering, and would, therefore, be more advanced in that branch than the graduates of West Point and Annapolis. The standard of admission

might be in matters of civil and mechanical engineering quite up to the standard of graduation at those places, and yet find a full three years' course of study necessary to bring the students up to the requirements of their future duties to the Government. Such a school, properly organized, would give to the country a body of men as high in tone in morals, honesty, and conscientiousness in the discharge of duty as issue from either of the present national schools.

The officers of engineers of the army and the graduates of the Naval Academy have their own professional duties, and should not be taken from them and made to wander off into duties not cognate to their profession. The duties of the French corps (which is formed from the graduates of their École des Ponts et Chaussées) include the making of roads, bridges, canals, railroads, the improvements of harbors and rivers and the regulation of the currents, reservoirs, aqueducts, civil architecture, mechanics in all its various branches, irrigation (which of itself is becoming of the greatest importance in some of our Western States and Territories, and which could be effectively employed even in States which ordinarily have "the former and the latter rain"), geology, mineralogy, duties of administration, and political economy, the subject of foundations generally, and the setting up of machinery and heavy masonry work. From June to October in each year the students of the school are sent to learn their profession practically, on the various works under the officials of the corps who are in charge. The graduates of this school have a position for life, and the Government has the benefit of the aid of a class of highly cultivated and clever men. Could civil-service reform ask for more in that one direction?

We have in this country the Coast and Geodetic Survey, the Geological Survey, the survey of rivers and harbors and their improvements, projects for national canals, the survey of the public lands, the building of custom-houses, court-houses, post-offices, marine hospitals, and aqueducts, the inspection of certain railroads, and last, but not least in importance, the erection of lighthouses. And all of these duties are under almost as many bureaus. A due regard to economy and efficiency would place these duties in the charge of one corps and under one department. The Light-house Board, for instance, is made up of officers of the corps of engineers and navy officers, and a sop was given to the public by adding two civilians of distinction—a very elastic term, as the constitution of the present Board will show. All of these, save the engineers and naval secretaries, have other duties and private business, with no interest whatever in the administration of the light-house service except general interest in doing the duty assigned to them. The work and responsibility, therefore, fall upon the secretaries, who serve a short term, and by the time they have acquired a knowledge of their duties and got acquainted with the workings of the system they are relieved from duty, and their places supplied by men who are utterly unacquainted with the condition and needs of the light-house service. There is wanting in every member (from the constitution of the Board) the stimulus of professional interest which would be given to men who were permanently in and of the Administration. It is a most respectable body of men, unexceptionable in every social way, who go to their meetings twice a month and yawn over the reports of the secretaries—who never initiate anything, and do progressively only that which Congress, enlightened by other means as to the necessities of commerce, sets for them to do. Between the various bureaus of surveys under the Treasury, War, and Interior Departments there is jealousy and frequent duplication of work, where under one head there would be harmony.

Taking these statements as giving correctly the present condition of our public works, it would seem as though the President might do a great thing, the benefit of which would reach down to the latest page of our history, if he should call the attention of Congress to the chaotic and unorganized condition of the administration of public works, and ask for legislation which should put them all under one head, and for the establishment of a national school for furnishing men of ability, acquirements, and integrity to carry on and maintain the public works of the United States. We have a highly intelligent body of civil engineers in our country from whom a selection for a nucleus for such a corps could be made, and they in their turn by examination could find and recommend men enough to supply the wants of the Government till the school should begin to furnish its annual contribution. The graduates of such a national school would be fresh from the people—brought up in civil life, with all their interests and feelings allied to the business interests of the country; and a corps of such men should have more proper influence over legislation in Congress for works intended or assumed to be for public benefit than all the bureaus put together which now control public works. No appropriation would be made by Congress for such works unless it had the recommendation of such a corps if *properly* constituted; and not only should it have an influence to prevent the waste of public money on useless works, but the knowledge its members would have of the country, its commerce and necessities, would naturally make them take the initiative and present to Congress in their annual report projects and estimates for works of certain public utility. Congress now gropes blindly, legislation is of a log-rolling character, and "push-pole navigation" is on a par with the maintenance of our great harbors and rivers.

There is one other point of importance, and that is the care of works which are completed. A breakwater or jetty is finished and at once deserted by the Government and left to itself, until some citizen or citizens interested in its preservation can go to Congress with influence to get an appropriation for repairs, always more expensive by far than a continual supervision and care of the work. A river or harbor is improved, and the Government leaves no one to see that the selfish, vicious, or careless do not by their acts shortly make it worse than it was in its original condition. The preservation of all such public works is demanded of the Government by every consideration of economy and public good, and it is not too much to say that the want of laws to protect improvements, the want of supervision over completed works and improvements, and the want of small annual expenditures for maintenance has already cost the Government more than a national school of civil engineers, or corps of "engineers of public works," and all the cost of preservation of all works which have been and are to-day of real public benefit. We trust that this subject is one of such interest as to awake the civil engineers of the country to an exhaustive discussion of the present condition of the case and the remedy therefor.

THE NATIONAL EDUCATIONAL ASSOCIATION.

The twenty-fifth annual meeting of this body, which occupied an entire week in July, at Saratoga, and at which every section of the country was represented, was unusually suggestive in many ways. The hold of all educational matters upon public interest is so rapidly deepening that these meetings have attracted more public attention than the meetings of any previous year, and the merits and defects of the Association have probably never been so deeply felt both within and without its membership. The Council, which is limited to sixty members, is in a sense the nucleus of the Association, and in another sense a kind of educational upper house; and if better men could be put in place of a dozen or more of its members, and its work a little better planned, it would be an almost ideal institution. The retiring President, Mr. E. E. White, of Ohio, did much during the two years of his administration to improve its quality, and we shall look with great anxiety for the plan of work (of such central importance) to be presented by the new President. If he shall also have the virility to keep discussion from rambling into tedious irrelevance, to prick a very few windbags and strangle a very few bores, and bring out the best work the organization is capable of, he will be a public benefactor indeed. Though entirely unpaid, this position is, or should be made, the most dignified educational position in the land. Gradual improvements in the work and constitution of the Council should be the special care of all interested in it.

The Association itself was originally organized with the highest objects and ideals, and at a time of general educational awakening throughout the country. During the last few years it has grown far more rapidly in numbers and in influence than at any other period of its history. Not a few papers among its proceedings will rank with those of corresponding bodies in any land, and its action upon public sentiment in several important directions of national moment has been marked and beneficent. The best change that it is now undergoing is the gradual development, all along the line of its many interests and topics, of issues between liberal and conservative, progressive and orderly, new and old, as the two divergent tendencies are variously called. This is the world-old and only natural basis for discussion and parties, without which everything stagnates, and nowhere more so or more quickly than in education. Every one by birth and by nurture belongs on one side of this line. Each side has its philosophy, its ideals, one might almost say, its religion. The worst that can befall either is that it become supreme. Until lately the conservatives had it all their own way; but now teachers are rapidly finding their affinities on both sides, or adjusting the claims between the old and new on the healthful basis of their individual instincts and affinities. The fair development and even balance of these tendencies within the Association is the most general expression for all the many improvements that have been witnessed for the last half-dozen years. This has given vitality, is slowly reforming remaining abuses, of which there is no particular lack, and, unless we are mistaken, has only very lately given the organization a future.

The meeting this year was the largest ever held with the single exception of last year. The presidential address was a fair presentation of the claims of old and new—more individual, if less comprehensive, than the very readable address of last year. Although a few intolerable papers found their way into the programme—papers that are the particular bane of almost every educational meeting—on the whole there was an encouraging improvement in quality over last year. The simple device of a committee to approve all papers solicited or presented would relieve these meetings no less than they have long relieved the meetings of scientific bodies. To present a paper worthy the attention of such an audience and to have it printed in the volume of

proceedings, is too great an honor to be unprotected from abuse or accident. There are enough men of ability engaged in educational work who could, and, if there were more selectness about it, would, come forward to enrich the programmes of these meetings.

From the presidential address down to the section meetings, there was everywhere evidence of a growing conviction that the mental, moral, and physical characters of children are the only prime interest for teachers. The educational values of studies and of methods; the sense that, after all, life itself, from protoplasm up to college, is only the product of the education of the physical, mental, and moral environment; that to moralize is greater than to mentalize, and the only object of mentalizing, the young—these ideas inspired many papers with many titles. The few great occasions of the week, when, had the prearranged programme for the session not unhappily prevented, the deeper interests which had been stirred would have found expression, were all occasions when these topics were strongly touched. It is directly out of this deepening spirit, represented by no individual or by no small group of individuals, that there sprang into existence at this meeting, by a spontaneous movement, a very informal association which expressly refrained from a regular organization or even officers, consisting of about twenty-five men from all parts of the country, about half of whom were at Saratoga, where a number of meetings were held. Though no more secret than any committee meeting, its members agreed that for a few years their work could best be done without great publicity. Its members agree in feeling, first, that there should be no trading between educational journals or book concerns in the offices of the association or any of its departments, as was notoriously the case in one or two sections this year; for the selection of men not the best to direct the work here, where more professional work should be done than in the general Association, degrades the entire organization. Secondly, they agree in feeling that not only educational "managers" and lobby-men within or without the organization, but that purely material and personal interests, are among the most detrimental of all bad educational interests; and that corruption of every form must be driven out from every matter, business or professional, pertaining to school-life and work. So long as superintendents in the highest stations, who are most of all competent to do so, are obliged to refuse to express any opinions about the merits of rival text-books or other supplies, lest influences be set at work against them, or false charges systematically "fastened" upon them; so long as some of our best literature is inaccessible to children in school unless the Reader of the house owning the copyright is introduced; so long as, in some sections of our land, teachers still have to go about and solicit and perhaps "treat" ward officers on the lowest round of the political ladder; so long as large amounts of capital are invested by some houses in the plates of old and antiquated text-books, and surplus funds are devoted to additional agents to force the sale of old books rather than to improve their quality or make new ones; so long as even in the Association some of the questions most vital to education cannot be discussed because men are not free and it is not safe—there is not only plenty of work for an educational-service reform association, but the fundamental conditions of making our schools at bottom morally effective in their influence on the pupils are lacking. Thirdly, these men desire to see some improvement in the general tone and intelligence of educational periodicals. With a few noteworthy and in large measure recent exceptions, even the most widely read of them are local and provincial in character, give no aid in selecting the best among the hundreds of educational books published annually, know and say practically nothing of "abroad," of college work, or of private schools, but occupy only the monotonous field of uniform public instruction. A single journal like the English *Journal of Education* would do more than almost any other agency to raise the tone of the whole craft. These three convictions, we understand, are to be put in definite form on the completion of the organization referred to in the winter, and we hope it will do much good. Its members expect a long, hard struggle, but they are mostly young and have enlisted for the war.

A most noteworthy improvement in the meeting this year is the great diminution in the number of popular lectures, magic-lantern shows, and general picnics and excursions. These have their place, but surely not in the programme of a great national convention, where they are in strange contrast with the common cry for giving a more professional character to the teachers' work. We hope the picnic spirit will not determine the place of holding the next meeting. A gathering of excursionists is one thing, and that of educators near the great educational centres of the country is quite another, in constitution and in spirit.

Finally, we commend this Association to the attention of all young men interested in the work of instruction in the higher grades. If they do not find it all they would like, they can aid in improving it. In the sections they can be heard at once, can represent their several specialties at a centre where so many educational fashions are set for better or for worse, will pick up hints for greater effectiveness as teachers or professors, and gather a good deal of forensic and (we had almost said) political experience.

LOCAL COLOR IN MUNICH.

MUNICH, July 4.

WITH the exception of Venice, there is, perhaps, no European city that is more *sui generis* than Munich. The hastiest tourist cannot fail to be impressed with some of its most conspicuous features—its art-treasures and fine architecture; its romantic king; its excellent theatres and devotion to Wagner's music; its Bohemianism, and, above all, its Beer-worship (with a capital B). The city is advantageously situated, and therefore, unlike some other European capitals, is fast growing in extent and population. Some of the mediæval structures have been removed and others modernized as far as practicable, so that at present the lover of mediæval quaintness will find more to gratify his peculiar taste in the neighboring city of Nürnberg than at Munich. Its art galleries, although they owe their splendors to former kings, and have not received many important accessions for some decades, still remain among the best in Germany; and Rubens, for one, cannot be so well studied in any other city as here. One of the best-known private galleries, however, hardly deserves its fame, which it is said to owe to the gratitude of the local artists, who have succeeded in selling to its owner all their pictures that could not find a market elsewhere.

Some who have resided in Munich would perhaps object to my statement that it is advantageously situated. There is a high range of mountains in the neighborhood, the effect of which is to produce sudden changes in temperature, so that even in midsummer the nights are often very cool, and these not aware of this, and therefore not provided with light overcoats, are liable to catch cold. This, combined with the fact that formerly the water drunk in the city was not of the best, has given it a somewhat dubious reputation as a health resort. Perhaps for people with weak lungs it is not the best place in the world; but the world was not made exclusively for weak-chested folks. Moreover, since Dr. Jäger, the great apostle of wool, has shown that people who wear wool and nothing but wool, summer and winter, cannot catch cold, a remedy has been provided that will make Munich accessible to all; and as for those who, clad in wool, still find the climate here too trying—they might as well be "eliminated" by natural selection. The class of foreigners who are especially apt to be drawn to Munich—art-students and musical amateurs—are less apt to have weak lungs than overworked and morbidly sensitive nerves; and for such the mountain air of Munich is a positive tonic, the cool nights enabling them to get more refreshing sleep than in any other German city.

Besides the air, there is another soporific which never fails to subdue the most rebellious nerves. Bavarian beer is a specific against nervous excitement. It is so pure as to be perfectly harmless, even in pretty large quantities; and if it could be reproduced in America exactly as it is here, and substituted for our "mixed drinks," it would do more to cure American nervousness than anything else in the world. The vile quality of most New York beer does not appear to be entirely the fault of incompetent or adulterating brewers, for in Berlin and most North German cities the beer is quite as bad, although everybody drinks it; and it seems incredible that competition should have made experts of all the brewers in Munich, and of none in Berlin. The quality of Munich water is perhaps responsible to a large extent for the excellence of the beer; and if this is so, I should think non-Bavarian brewers would find more advantage in applying their chemical skill to a reproduction of Munich water than to making their beer unpalatable and unwholesome.

The best beer brewed in Munich is at the Hofbräuhaus, which is one of the sights of the city, doomed, however, to be altered and modernized in the near future. The fact that extremes meet is illustrated by the Hofbräuhaus beer. When ordinary beer has no foam, it is a sign that it is stale, flat, and unprofitable; but this beer is brewed after a different recipe, and has no foam naturally, it being a local maxim that good beer should have none. Commonly it is drunk out of stone mugs, which makes it taste better than if drunk from glass, for reasons which may possibly be traced to the imagination. In restaurants and cafés beer may be had in half-litre glasses or mugs; but if any one should ask for half a litre at the Hofbräuhaus, he would probably be regarded with as much astonishment as if he should ask at a first-class American restaurant for five cents' worth of terrapin or canvas-back duck—for a different reason, however, since the beer at this place (a court institution) is extremely cheap. It is sold almost at cost price—six cents a litre (about a quart)—whereas at restaurants and cafés the same quantity costs ten cents. Nor are the other refreshments sold at the Hofbräuhaus very dear: two eggs, *e. g.*, with salt and pepper, plate and spoon, cost 14 pfennigs=3½ cents! Indeed, low prices are customary at all the Munich restaurants. Those of the first class are as good as in any European city, while those of the third and second class are better than in Paris, and much better than in London or New York.

But I have not finished with the Hofbräuhaus. Those who wish may sit down and wait for the waiter-girl to bring them a mug of the "Stoff." But the orthodox fashion is to get your own mug in a trough, rinse it at the water-pipe, mark its number, and, while it is being filled, pay for it. When it comes back filled you carry it trium-

phantly to a seat—if you can find one, for the place is always crowded with the most curious mixture of persons of all ranks. Large quantities are carried away in mugs and glass pitchers; men and women carrying beer in the street being one of the most characteristic sights in Munich. There are some good wine-houses in the city, but they are not extensively patronized, as the Bavarian of all ages and both sexes prefers beer three times a day—at the second breakfast, at dinner, and at supper. Sometimes the whole city is perfumed with the odor of the fresh beer brewing in the large houses. This is not at all a disagreeable odor, and is certainly a thousand times more acceptable than the atrocious petroleum odors with which the good-natured New Yorkers allow a few oil-refiners to vitiate their whole atmosphere for days at a time. It must be admitted, however, that the atmosphere in Munich beer-houses is often quite as oppressive, owing to the fact that everybody smokes cheap cigars in which tobacco is rarely an ingredient. After being smoked for an hour in one of these places one feels sufficiently disinfected to become quarantine inspector or proprietor of a small-pox hospital.

Munich has almost as many cafés as Vienna, relatively to its size. At these beer is commonly drunk in the evening, but their busy time is in the afternoon from 12 to 3. For in Munich, as at Stuttgart, banks, libraries, and other public places are closed at noon for two hours, which are devoted—by the men only—to drinking coffee and reading the newspapers at the cafés. The waiting is always done by girls, who are satisfied with a very trifling fee, are always attentive, and sometimes pretty, though not so pretty as the corresponding class in London. The average Bavarian woman has a clear complexion, brown eyes, black hair, often a snub nose, a tall and well-developed figure; and among the lower classes it would be difficult to distinguish a woman's arm from a man's, so strong is its muscular development.

Newspapers in all languages are to be found in abundance at all the cafés. Among these, the local papers are not conspicuous for merit. For although Munich is the largest city in south Germany (with over 200,000 inhabitants), it had not, until within a few years, a single newspaper which possessed the slightest interest for any one not conversant with local affairs. It was customary to print the papers in the evening, bearing date of the following morning; but to neutralize this "previousness" on the part of the date, the news was correspondingly delayed. On revisiting Munich, however, after an interval of nine years, I find a great improvement in every respect in the local papers; and it is well known that, a few years ago, the Augsburg *Allgemeine Zeitung*, one of the leading German newspapers, was transferred to Munich. The local papers cost only a cent-and-a-quarter (five pfennigs) a copy; but the *Allgemeine* costs more, in accordance with its superior contents. Several times a week it issues a valuable literary supplement. But of course the periodical for which Munich is famous the world over is the *Fliegende Blätter*, the leading German comic paper, which is to be found in *every* café throughout Germany, and has a very large circulation. The jokes are often flat enough, but the illustrations are invariably well drawn, full of humor, and admirably printed; for many of the famous artists residing in Munich vie with each other in producing these pictorial *jeux d'esprit*. Some of the series of pictures without (or with) words are subsequently reprinted as "Bilderbogen"; and these *Münchener Bilderbogen* are among the most characteristic products of Munich talent. Some are comic, some serious, some plain, some colored. They are bound in volumes; and for children who have got beyond the tear-everything period, no better holiday present could be imagined, even if they do not understand the German text. I may add that there are no newsboys in Munich. Some of the papers are sold at round little houses or stands in the street, others are carried about the cafés and restaurants in baskets by old men and women.

Amusements are plentifully supplied in the Bavarian capital. There are only three large theatres, but each is excellent in its way. The Royal Opera is second only to that at Vienna of all German opera-houses. Here it was that Wagner's later operas ("Tristan," "Meistersinger," "Rheingold," and "Walküre") were first performed, in the days when Bülow was Capellmeister, and Wagner the constant companion of the King. Those who assert that the Wagnerian "craze" is a mere fashion of the day, destined to pass away soon, will do well to remember that in Munich this "craze" began twenty years ago, and is to-day crazier than ever. One of the organs of the Ultramontane party, which in days gone by displayed its jealousy of Wagner's influence with the King by fomenting religious and political cabals, and finally getting him exiled from Munich, had a long article the other day in which it lamented its former blindness and prejudices. "Had it not been for our folly," it frankly exclaimed, "the national Wagner theatre at Bayreuth would now be situated in Munich, and we should have the benefit of the presence of all the annual Bayreuth pilgrims." Yet even if Munich does not include Bayreuth, it is well worth a visit; and those American tourists who are on their way to Switzerland will be amply repaid by making a slight détour and visiting the Munich galleries, drinking Hofbräuhaus beer, and listening to a Wagner opera, before proceeding to inhale the Alpine breezes and to gaze upon the snowy Jungfrau. H. T. F.

Correspondence.

SOME BURLINGTON APPOINTMENTS.

To the Editor of The Nation:

Sir: Will you kindly allow me a few lines in which to call the attention of some of your readers to certain Federal appointments recently made in this city? The *Nation*, if I read it rightly, while acting in a measure as a supporter of the present Administration, does not desire to condone its faults, and is ready, when occasion requires it, not only to praise, but also to censure. Representing, therefore, as you do, the position of the "Independents," with whom I am in cordial sympathy, I may hope, by your favor, to bring to the notice of many like-minded persons the unfortunate application of the "spoils" system to which the Government has lent itself here.

The Burlington Custom-house is an important office, and could hardly fail of being eagerly sought after by the hungry Democrat. It has for many years been admirably managed by General William Wells, a gentleman universally respected in this community. There has been no "working" of the office, and the Collector may truthfully be said to have recognized that "the quiet and unobtrusive exercise of individual political rights was the proper measure of his party service." Mr. B. B. Smalley, however, is now made Collector, and he, however agreeable a gentleman he may be, distinctly belongs to that large portion of the Democratic party which has no "civil-service reform nonsense" about it, and which regards the offices as the "property" of the party in power. Indeed, if report be true, Mr. Smalley has preferred no charges against General Wells, but has wished for the office simply on the ground that it should by right "belong" to a Democrat. Either the President has been grossly deceived or else he has found the "pressure" too great for him. The "spoils" system could hardly have been better applied.

The Burlington Post-office has in all respects been as well managed an office as the Custom-house, and it is now a question whether the excellent Postmaster is to have like treatment with the Collector.

But to take another case: Not long since a faithful Republican officer and a very "inoffensive partisan" was removed from a short mail-route in this vicinity. His place was filled by a Democrat who has since been indicted for complicity in a prize-fight. The facts speak for themselves. This may be "practical politics," but we have a right to look for better things from the Administration.—Yours truly,

Independent.

Burlington, Vt., Aug. 3, 1885.

[We print the above, as we have printed other similar complaints, rather to encourage public vigilance in the matter of appointments than because we assume that the dissatisfaction is well grounded. It gives us, too, an opportunity to report a typical case, of which we have cognizance. A private letter, full of indignation at the removal of an official whose retention, it was alleged, was desired by citizens of both parties, was forwarded, for what it was worth, to the Postmaster-General. His reply follows.—Ed. Nation.]

Post-Office Department,
Office of the Postmaster-General,
Washington, D. C., August 6, 1885.

Dear Sir: Yours of the 5th is received. It will illustrate to you, perhaps, the nature of representations which are made under the pretext of allegiance to the spirit of civil-service reform and pressed in great volumes upon this Department by numerous people, when I tell you that the Postmaster at ———, in respect to whom your correspondent from ——— writes, was removed after investigation upon the report of an Inspector, because he has violated persistently the postal laws and regulations against selling liquor at retail in the same room where the post-office is kept. I will add, that although charges of that kind were presented and apparently sustained by affidavits, the precaution was taken of sending an Inspector to personally inquire into the matter.—Yours truly,

Wm. F. Vilas, Postmaster-General.

AN OBJECTIONABLE CANDIDATE.

To the Editor of The Nation:

Sir: In a recent number you mention the candidacy of the colored man, Shaw, for the post of Collector of Customs at Memphis, and the opposition of a certain "Bourbon" element to his appointment.

I believe there are few Democrats in Tennessee who would object to the bestowal of this office on any decent colored man. But Shaw is one of the worst samples of the "offensive partisan" to be found anywhere. His selection would delight the "workers" and "bosses," and would grieve every friend of good government. His supporters are loud in derision of civil-service reform and in support of the old spoils system. His appointment, if made, is certain to be generally condemned, and to have a corrupting effect in the politics of the State. B.

Spring Hill, Tenn., Aug. 3, 1885.

DOUBLE PLURALS.

To the Editor of The Nation:

Sir: The curious double plurals such as wristës-es mentioned in your review of 'Popular Superstitions' in your issue of August 6, have their analogues in this region in such expressions as "the boys-es clothes," "the girls-es room," and Johnsestown for Johnstown. An additional s or es seems indispensable in proper names of one syllable, thus Line becomes Lines; Sayre, Sayres; and Will, Wills. Is this for emphasis or euphony?—Yours, C.

South Pennsylvania, Aug. 8, 1885.

PROF. SOPHOCLES'S MODERN GREEK LEXICON.

To the Editor of The Nation:

Sir: In June, 1875, the late Prof. E. A. Sophocles wrote me:

"I have prepared a Modern Greek and English [Lexicon], but it cannot be published in this country—its sale must necessarily be limited. It contains not far from 50,000 words. It comprises the whole Modern Greek period—from A. D. 1100 to the present day."

I should be very glad indeed to know what has become of the MS. of this lexicon. Its publication would doubtless supply what is greatly needed — a really good Modern Greek-English lexicon.

In this connection permit me to express the hope that some competent person will favor the scholarly public with an adequate memoir of the life and writings of Prof. Sophocles. It would certainly be alike interesting and instructive.

Thos. M. Johnson.

Osceola, Mo., Aug. 7, 1885.

PREPARATORY GREEK AND LATIN.

To the Editor of The Nation:

Sir: It occurs to me, while the college-commencement season has brought up again the subject of college studies, to remark that the advocates of the compulsory study of Greek may turn considerable criticism by turning the mode of teaching. The mode of teaching generally in vogue aims at fitting the pupil to read certain prescribed selections from Greek authors, amounting, say, to a little more than a hundred pages, previous to entering college. Instead of ability to read Greek prose in general, one is required to read specially conned bits of Xenophon and of Herodotus. The glaring vice of such a requirement, as all are aware who have an inside knowledge of schools, is in the habit of dishonesty to which it exposes the pupil through the use of translations or "ponies." With fifteen or thirty lines set him to dig out by dictionary and grammar for the day's lesson, many a boy betakes himself to the short cut which a translation offers, and soon falls into a dependence on the illicit help from which it is next to impossible ever to become free. When it comes to examination, then ensues a spasm of cramming from the "pony," and the memory drops its burden as soon as the emergency is past. The habit contracted in school survives through college, with the result of nothing to show, in the case of from one-half to two-thirds of our college graduates, at the end of, say, four or five years' study of Greek, except a memory of weariness and disgust. Besides this negatively bad result, there is the positively bad effect upon the mental and moral fibre of indulgence in a device of laziness for escape from steady intellectual discipline. Indeed, to talk of any excellence, as a means of discipline, in the study of Greek, as Greek is actually studied by most boys in our schools and colleges, sounds like a dreary joke or dull cant.

But the mode of teaching which leads to a result thus barren or pernicious, could very easily be exchanged for the teaching of *Greek*, as such, rather than a few specimens of Greek. The difference is like the difference between teaching botany, as such, and teaching the contents of a small herbarium. Or, if we may refer to what is frequently noticed in our common schools, it is like teaching a child to read his vernacular at sight instead of a parrot-like repetition of a few pages of the school *Reader*. To teach Greek, as such, is to teach how to read it at sight, like a modern language. It is in this that the real intellectual value of it is found. Of course, in the acquisition of any language, the memory has to hold an amount of material, but only for the service of the combining intellect. And the two years' study commonly given to Greek in preparation for college examinations is amply sufficient, under a competent teacher, for acquiring ability to read ordinary Greek prose at sight, and even Homer. As Greek is commonly taught, this ability is much more slowly, if ever, acquired; but there is no reason why Greek should not be taught otherwise. If it were so, and only so, it would be easy to read Greek in college as literature instead of as a dry basis for a grammatical "grind."

It is not easy, however, for a teacher, though competent and independent, to change the traditional practice of a preparatory school, unless the initiative be taken by the colleges to which he sends up his classes. The wisest thing which the colleges could do, even had there been no outcry against the poor and vicious results of the present method, would be to take the initiative in the necessary reform. Instead of giving out that a test which can be met by cramming will be exacted in the reading of prescribed *specimens* of Greek, let the test be one which cramming will not answer for, in the ability to read at sight any Greek prose of no more than ordinary difficulty. Such a demand can be met by a changed *mode* of teaching without increase of the teaching *time*. A new departure like this, on the part of our colleges, will alone abate the present scandal of a perfunctory study, which is, for most of those who are held to it, both a waste of time and a positive deterioration of mental and moral tone.

What has been said about the Greek I would say also, point by point, about the Latin. Three or four years are now consumed in getting pupils ready on the specimens of Latin authors by which the colleges test their candidates for admission. Two years are sufficient, with a well-adapted mode of teaching, to fit an ordinarily bright pupil to read ordinary Latin, whether Cicero or Vergil, at sight.

The positive affirmations I have made as to the time necessary for learning to read Greek and Latin at sight may seem to some not quite credible. Their positiveness is from conviction based on experiment. How such an experiment should be conducted ought now to be indicated, premising that *for the best results* a class should be divided into sections when it exceeds fifteen, and that the daily recitation should not be allotted less than forty-five minutes.

In acquiring mastery of either Greek or Latin four things are requisite. The inflectional forms must come first, and be practised on till a vernacular familiarity is obtained. Then, on parallel lines of advance, the pupil must pick up a vocabulary, the rules of syntax, and the idioms. As for Latin, six weeks will suffice to give tolerable facility in the forms, though much longer practice must be kept up upon them. Five words committed to memory each day will amount to a thousand words in a school year of forty weeks. The rules of syntax in ordinary use occupy, in condensed form, but two pages of print. The idioms are to be learned by committing to memory a set of idiomatic sentences, one or two a day, such as may be culled from any book of Latin prose composition, until some sixty or more are made familiar. From four to eight weeks' practice on exercises is enough for competent introduction to a classic author. This being accomplished, study goes on upon the four fundamentals above specified. Considerable work must be done by the teacher in the way of practical directions for the order of construction and arrangement in Latin sentences, and in the selection of vocabularies and idioms to be learned. The turning of a few short English sentences into Latin must also be a daily exercise, using for that the material of the day's reading.

By such a method, pupils new to Latin, and pursuing other studies meanwhile, have been conducted, between September and June, reciting daily, with four weeks of vacation, through four books of Cæsar's 'Gallic War,' the outlines of prosody, and some seven hundred lines of Ovid's 'Metamorphoses,' besides reviewing the whole. They acquired, meanwhile, considerable facility in making Latin sentences, a pretty large vocabulary, and a stock of the more common idioms.

In the second year, study should go on upon the same general lines. Upon the basis of the acquisitions thus far made, special exercises in translation at sight should now come in, the simplest prose, as that of the Latin Reader, serving to begin with. Where "marks" are given, special merit should be attached to proficiency here. Short passages of intrinsic value, coming up in the daily lesson, should also be committed to memory. The exercise in sight-reading should form an increasing part of the regular drill, as time goes on, the additions thereby made to vocabulary and idioms being always required in recitation from the next day's memory.

It is not contended that a two-years' course of this kind—which would be substantially the same for the Greek as for the Latin—would free a pupil from all dependence on dictionary and grammar; rather that it would enable him to use dictionary and grammar more economically. It would, however, free him from the need and the temptation of illicit and demoralizing helps. It would certainly enable him to read more pages in an hour than he can by the usual method, and with more freedom to recognize and appropriate the literary, æsthetic, and historical, as distinct from the grammatical, features of his lessons.

On this line his future study will naturally go on with growing facility and increasing advantage. To encourage study on this line is so obviously desirable that the colleges should encourage it as much as possible. This, however, can hardly be, so long as the main stress of the entrance examination is laid on the power of memory to read what one has been drilled on. Rather, as I think, should the stress be laid on the pupil's intellectual ability of analysis and synthesis to read what he has not read. For at least every passage set him that he has "been over," another should be set from the same author that he has not been over, and a pass in the former should not be good without a creditable performance in the latter.

It is on the basis of personal experiment that I affirm the feasibility of what I have recommended, while I must not hide my conviction that enthusiasm and skill in the teacher will count largely for the result. We are somewhat in bondage to an inferior method of no very ancient claims. Especially are teachers in bondage to text-books of a cumbrous kind, which waste much time, and often inspire beginners with a long disgust. Improvement must be initiated by new requisitions at the colleges. Let those which have already put the requirement of reading at sight (to the extent, I believe, of some eight or ten lines only) *among* the qualifications in Greek and Latin, now make it the most significant qualifi-

cation, or, at any rate, and for the present, sufficiently important to set a premium on it, and we should presently see the improved teaching appear in response to the requirement.

Not the least among the advantages of this improvement would be in its profitable economizing of time for some things quite as important in their way as the Greek and Latin, things which it is frequently complained that boys preparing for college grievously neglect—such as English grammar, composition, and literature. We should also probably find, at least in the case of bright pupils, that there was a margin left in the preparatory course for some attention to music and art, which many at present find themselves against their will obliged to give up.

On a subject which bristles with points, I have purposely spoken only to one point. The study of Greek and Latin, one of which furnishes a large part of the terminology of science, and the other supplies four-tenths of the vocabulary of English literature, has been called in question, largely, as I think, in retribution of a vicious method of study. A reform of this method is imperative, both to abate so much of prejudice as has reasonable foundation in existing abuses, and to secure for the challenged studies a fair judgment in the controversy as to what place they shall have, if any, in the college curriculum.

JAMES M. WHITON.

Notes.

WE have already mentioned the 'Directory of the Antiquarian Booksellers and Dealers in Second-hand Books of the United States,' compiled by one of their number (Milwaukee : C. N. Caspar). The work has now come to hand. It is printed on sized paper, a single impression to the leaf, with broad margins, and so is well adapted for additions and memoranda by the owner. It is introduced by helpful instructions how to proceed in procuring any desired work, whether new or old. This is followed by an alphabetical list of dealers, with their specialties ; the same list in geographical order ; a classified list of the specialties, among which we remark the absence of Slavery. Lists of the leading jobbing-houses in miscellaneous new books, and of news companies, complete the Directory, which every book collector will desire to own. The form is nearly square, and the binding in good taste.

Mr. Joseph Pennell's quick eye for the picturesque in nature, and his wife's cleverness with her pen, combine to make a light but pleasant half-hour brochure, 'A Canterbury Pilgrimage' (Charles Scribner's Sons). This journey our genial and congenial pair made on a tandem tricycle, which is a comparative novelty even in England, and is therefore apt to be the butt of clownish wit along the road. The narrative is well calculated to induce other men and their wives to attempt this pleasant and safe mode of locomotion ; and Mr. Pennell's pen-and-ink sketches will keep the book from being destroyed as soon as read.

Good summer reading, also, is to be found in Mr. W. H. Bishop's 'Fish and Men in the Maine Islands' (Harpers), a reprint of illustrated articles from the publishers' magazine.

We receive from the Messrs. Appleton the annual edition of their 'Dictionary of New York,' at a time when the city is thronged as it has seldom been with strangers drawn hither by the obsequies of General Grant. There is nothing which competes with this useful little guide.

The publishers (Ivison, Blakeman & Co.) of the 'Standard Classic Atlas' lay stress on its being "an American publication." At least one of the maps, however, was engraved in London, and presumably most of them. There is much inequality in the execution of the series, and the best is not fine work. We do not think the atlas will "command the respect of scholars everywhere," partly for the reason just given, and partly because of manifest carelessness in the editing. Thus, Memphis is placed on the right bank of the Nile in the map of the Persian Empire, and (correctly) on the left in the map of Egypt. In the latter map "Thebes" is retained among the generally classical forms of names, as are "Tyre" and "Jerusalem" in the map of Palestine, and "Antioch" in that of Asia Minor. A sad mixture of classical and modern names occurs in the map of Paul's journeys, where "Rome," "Athens," "Syracuse," "Thrace," and "Crete" hobnob with "Puteoli," "Illyricum," "Byzantium," "Pergamos," etc.; "Propontis" with the "Adriatic Sea" and "Ionium or Sea of Adria"! The colored boundaries are much too definite and pronounced, and are very crudely done. There are no good plans of cities.

Dr. George W. Knight's 'History and Management of Land Grants for Education in the Northwest Territory' (G. P. Putnam's Sons) was prepared as an academic "thesis for the degree of Doctor of Philosophy" while the writer was at the University of Michigan. It contains a carefully stated and apparently accurate account of the national and State transactions touching land grants for educational purposes in the region which has become the States of Ohio, Indiana, Michigan, and Wisconsin. That part of the narrative which deals with the early national legislation is the most interesting portion of this thick and handsomely printed pamphlet. It appears as No. 3 of the first volume of the Papers of the American Historical Association. Doctor Knight's paper is worth preserving. A more skilful writer might perhaps have increased the interest of this instructive bit of history.

Under the title, 'Mushrooms of America, Edible and Poisonous,' edited by Julius A. Palmer. jr., Prang & Co., Boston, publish two wall-chart sheets containing excellent colored figures, underneath each of which are descriptions to match, and directions how to cook the edible ones. The sheets are arranged to be cut up into quarto pages and used book-fashion when so required. These are altogether so good and so much needed that we hope Mr. Palmer will be induced to go on and issue another set of plates in addition to these twelve, in fulfilment of his conditional promise.

Cassell & Co. have in press 'As It Was Written,' a novel of the Jewish race, by Sydney Luska.

The pamphlet Proceedings of the Bostonian Society at its annual meeting in January, 1885, is intrinsically precious as an historical document. Its lists of accessions, by gift and purchase, and of loans, are so minute and so well annotated that they become a convenient source of curious information, which in the annual report takes a very readable shape. The illustrations consist of a fine heliotype view of the Old State House, from the east end, the home of the Society; and a copy of its well-devised seal, in the heraldic coloring. The experiment of a cheap pamphlet giving a summary historical sketch of the Old State House has been successful, and another similar publication is contemplated. We would suggest the desirability of an attempt, however gradual, to preserve by metal or other engraving the photographs of vanished Boston, selecting the most notable. And might not the Society engrave deliberately the best of its original and unpublished portrait collection? Here the aim might be artistic, whereas in the former case a mechanical fidelity would be preferable.

The closing portion of vol. 16 of the Essex Institute Historical Collections (Oct.-Dec., 1884) contains some very interesting material for a history of the Rantoul family, of which the most distinguished member was Robert Rantoul, the temporary successor of Webster in the United States Senate. It is singular that, as is pointed out, Lowell should have used this name in verse with the accent on the first syllable, while Whittier accents it on the last, rhyming it with cool and school; the last-century pronunciation in Essex County being Rentall, and the accent penultimate (as we judge). In Scotland, Rin'tool and Rin'towl obtain. An attractive portrait of the father of Rantoul accompanies this paper.

Nos. 319-320 of the *Quarterly Review* (London: Murray; Boston: Houghton, Mifflin & Co.), forthcoming in October, will contain a General Index to the last twenty volumes.

Especial excellence marks the July number of *Appalachia*. Mr. F. H. Chapin's account of the ascent of the Zinal Rothhorn ; Mr. R. B. Lawrence's, of his crossing from Lake Connecticut to the Rangeley Lakes in Maine ; and Mr. S. H. Scudder's, of his last-winter's excursion to Tuckerman's Ravine, all are interesting in their way. Notable, also, is Mr. E. G. Chamberlain's article on "Altitudes in Massachusetts." A capital plate showing the summit of the Zinal Rothhorn, and, by a different photo-engraving process, one giving the view northward from Humphrey's Ledge, near North Conway, adorn the present number.

The *North American Review* publishes, for the benefit of the pedestal fund, a stout pamphlet, full of pictures, on 'The Statue of Liberty Enlightening the World.' It is well printed, and contains all necessary information in regard to the colossus.

The Johns Hopkins University Circular for June gives the programme of that institution for 1885-86 in Semitic languages (the third year of the establishment of the course). Thirteen series of lectures for advanced students are announced, namely, three in Hebrew, one in Biblical Aramean, Syriac, and Ethiopic, two in Arabic, two in Assyrian, one in Babylonian, Akkadian, and Sumerian. Lectures for beginners are also announced. Prof. Paul Haupt, the head of this department, has a wide reputation as an Assyriologist.

The latest issue of the "Anecdota Oxoniensia," Mediæval and Modern Series, is the 'Battle of Ventry' (Cath Finntrága), edited by Kuno Meyer (Oxford: Clarendon Press). Meyer's text is that of the Bodleian MS. Rawl. B. 487, but important variants have been given from other versions. Accompanying the text is a literal English translation, an Index Verborum, copious notes, and other aids to study. The editor's work has been carefully done and is highly satisfactory. 'Cath Finntrága' is not one of the most valuable monuments of Irish literature; it represents a rather late phase of Celtic legend. Yet it is well worth the editing. We might take some exception to Meyer's view of Old-Irish metre and his critique of Zimmer's recent theory. But we have not space for discussing the question thoroughly. We must content ourselves with remarking in general that mere syllable-counting can never be a test of metre. We believe that the Irish borrowed their earliest (preserved) verse-forms from Latin hymnody, and made the verse-flow depend upon the alternation of accented and unaccented syllables. In this we differ from both Zimmer and Meyer.

—The sketches of Italian travel by Mr. Howells, now current in the *Century*, are quite novel in plan, and exceptionally admirable even in comparison with his own previous work in this field. The freshness of spirit by which he long ago caught the romance of Venice, has not faded away; and though in fineness and fulness of perception he has not in later writings upon Italy

equalled that first delightful volume, and does not now surpass it, these last studies have a manifold and wonderfully blended interest, which makes them as welcome as was the 'Venetian Days.' Any instructed and observant traveller finds an Italian city so intricate an object, so constituted of confused and scarcely separable elements, that he will be very grateful for a guide who not only bears him through the labyrinth of history, art, landscape, and "all that," but also indicates the mood and temper of approach to them, and at the same time reconciles the scene with the actual deformity, discomfort, and repulsiveness in which the impish powers of disillusion lurk. We would not insinuate that Mr. Howells is writing a guide-book, of however high an order; but a better guide than he it would be impossible to find. The sentimental traveller and the transatlantic humorist are found united in him, and in dealing with Italy the combination is most desirable, for in the charmed circle of humor disillusion loses all its grossness. The present first paper on Siena, in the August number, is the best of the series thus far—truly a triumphal entrance into the gray city whose only conqueror now is the tourist; and it is joyfully made over flowers of rhetoric so bright that the yet un-Italianated author apologizes for their glow and color. It does not strike us, however, that the illustrations are characteristically Sienese. The middle article of the number is a three-fold paper on Garrison, the last two parts of which are presumably advance sheets of the Life of him soon to appear, and hence need no notice at present. There is a timely sketch of "The Indian Country," and a notably dull collection of paragraphs on Hotel-Keeping, which, however accurate and useful, illustrate the vicious extreme to which writing after the French style in short, disconnected chapters is being carried. Even Mr. Howells, with all his literary sensibility, submits his work to this granulating foolishness.

—The war papers in the August number of the *Century* embrace the description of the battle of Malvern Hill by General F. J. Porter, a continuation of the "Recollections of a Private," and Mrs. Burton Harrison's "Experiences of a Virginia Girl in the First Year of the War." The last is a graceful picture of the grave and gay points of family life within the Confederacy—gay only at the beginning, and already verging toward the deeply sorrowful before the year was over by which the writer limits her well-told narrative. Our sympathy is strongly stirred by the story of the hopes and fears, the joys and griefs, of an old Virginia family; and as similar emotions were all-pervading in family life on both sides of the lines, the community of feeling which will be aroused in the hosts of the *Century's* readers will help revive the sense of real kinship between the lately hostile sections. As helping, also, to give true local color to the history of the time, Mrs. Harrison's paper has great value. The "Private" wanders into general history of the seven days' battles, his personal knowledge of them being interrupted by his capture. General Porter's account of the Malvern Hill battle is full and clear, throwing strong light, both directly and by implication, upon the unfortunate ending of the peninsular campaign. A good topographical map and an unusual abundance of views drawn from photographs make an almost ideal illustration of a military narrative. Aided by the editor's clear notes upon the woodcuts, every intelligent reader can follow the story of the engagement, with a satisfactory feeling of full comprehension of the scene and of the meaning of each movement upon the bloody field.

—Vol. xix of the 'Encyclopædia Britannica,' ninth edition (New York: Charles Scribner's Sons; Boston: Little, Brown & Co., 1885), contains fewer extensive articles than any of its predecessors, we believe. It is evident that the limits set for the extent of the whole work forbid now the exhaustiveness of treatment and discursive freedom which were allowed to the contributors to the earlier parts. What those limits are we are not yet informed; but considering the unavoidable bulkiness of the letters S and W in English cyclopædias, we can hardly expect the end of Z in less than four additional volumes, which, at the rate the work advances, will require two more years—the twelfth and thirteenth of the publication. The largest treatises in the volume before us are "Physiology"—in three divisions, by three authors—and Doctor Ingram's "Political Economy." "Pottery and Porcelain," by Middleton, is probably the most richly illustrated contribution to the 'Britannica' hitherto made. Among the other principal treatises are "Plague" (by Doctor Payne), "Planarians" (Prof. L. von Graff), "Polyzoa" and "Protozoa" (Professor Lankester), "Poor Laws," "Post-office," "Prison Discipline," and "Probability." "Poetry," by Theodore Watts, is a very ambitious didactic essay with marginal headings like these: "Poetry as an energy and an art"; "Absolute poetry defined"; "It is concrete in method"; "All poetry an outcome of absolute vision or of relative vision." Of the descriptive pieces we may mention "Polar Regions" (by Markham), "Polynesia," and "Pompeii"; of the Biblical and literary, Prof. W. R. Smith's "Priest" and "Prophet," Professor Davidson's "Proverbs," and Prof. Paul Meyer's "Provençal Language and Literature"; and of the biographical, the lives of Pitt (by Macaulay, reprinted), Pius IX., Pope, and Pushkin (improperly "Poushkin"). American biography is represented by notices of Poe, Prescott, Polk, and Pierce, almost all brief. The most important historical articles are those on Poland and Portugal, Popedom and Presbyterianism. The first-named (by Morfill) is exceedingly meagre in its latter parts—embracing the periods of risings for independence; too learnedly Polish in its names (Kazimierz for Casimir, etc.), and poorly revised in its literary division (see, for instance, "Podróży," "Piesn," "Wedrówki," etc., on page 305), considering that it laudably aims at a perfect reproduction of Polish words and characters. Some slips in rendering Semitic words disfigure the first notice in the volume, "Phylactery" ("zîzîth," "mezûza," "kmf'é"). As usual in the 'Britannica,' such and similar slips are rare. Of inconsistency, however, in transliterating Russian names, this volume presents numerous instances. On the whole, it strikes us as one of the best that have yet appeared.

—There is much geological evidence that the east coast, if not all Australia, is rising in relation to the mean level of the sea. During the past thirteen years, Mr. H. C. Russell, President of the Royal Society of New South Wales, has been collecting observations with a self-registering tide-gauge, in order to determine the rate of rise. Sufficient precautions have been taken to insure accuracy in the tide measurements, and in each year the mean of all the tides is taken as the mean sea-level of that year; and when the results for this series of years are placed side by side, the greatest departure from the mean of all is found to be only one inch—variations which were traced to the relative positions of sun, moon, and earth, and perhaps to some extent, also, to the effect of heavy gales. Taken as a whole, the results appear to afford conclusive proof that no change whatever has taken place in the relation of land and sea during the past twelve years. Of course the question is not to be regarded as settled, as a secular change might be entirely hidden in these results. Then, too, there is evidence in other parts of the subsidence of this coast; and, putting all together, Mr. Russell considers the evidence for elevation and for subsidence of the land about equal, and that the chief question relates to the direction in which the change is going on now.

—Within a few months, Mr. Russell has also established a self-recording gauge on the fresh-water Lake George, 2,200 feet above the sea level, with a view of keeping a continuous record of the evaporation and other changes of level constantly going on. The instrument was completely set up on the afternoon of February 18, and the pencil was put down on the paper to begin its curious record at 7 P. M. on that day. At the time, the lake seemed calm as a mill-pond; and, looking at its smooth surface, no one would have dreamed that such changes were going on as began to reveal themselves so soon as the pencil touched the paper: in two hours a rise and fall of about two inches had been recorded—not a motion like the ordinary wind-waves which pass in two or three seconds, but a slow and gradual rise, occupying an hour, followed by a corresponding fall in about the same time. To make this, a current must first have set from north to south for an hour, and then reversed; and if we consider the force necessary to put in such motion a body of water eighteen miles long, five miles wide, and fifteen to twenty feet deep, we may get some idea of the magnitude of the forces at work. Within twenty-four hours it became obvious that these periodic motions in the level of the water were about two hours in duration; and on the afternoon of the second day the passage of a heavy thunder-storm over the south end of the lake threw light on the cause of the pulsations. The recording-gauge showed that the violent squall of wind from the south had blown the water away and reduced the level of the south end of the lake three inches. In ten minutes, the wind having subsided, the water began to recover its level, the current setting toward the south end of the lake, and running past the jetty at the rate of about two miles per hour. But it did not stop when the old level was reached: the momentum carried it beyond that point, and raised the water up at the south end of the lake. Then it turned and ran back again, repeating this process time after time at intervals of about two hours, the alternate rise and fall getting gradually less until in about eight hours the water was almost still. Other and more marked changes soon followed, and similar impulses have kept the lake in almost constant motion ever since; and when once under way, they go on throughout a gale of wind with just as much regularity as in a calm. Ordinarily such a set of motions lasts ten or twelve hours, gradually decreasing as if stopped by the friction of the water; but on one occasion, April 14, a very remarkable impulse was given, starting a series of pulsations that lasted five days. There are other instances in which the impulse is of a totally different character, in which the conditions of vibration are very puzzling, and with the investigation of the causes of which Mr. Russell is now proceeding. As for the rate of evaporation, it was found that the lake's level had fallen seven inches in sixty-eight days.

—Stöcker, the Court-chaplain, who made himself so notorious as Jew-baiter and apostle of what he called "Christian" Socialism, was lately convicted of libel, and the trial has attracted much attention, not merely from the prominence of the defendant and the alleged political animus of the prosecutors, but from the interesting nature of the questions involved in the trial. For the jurors had to decide not only whether the particular utterance named was libellous, but also, it would appear, had to satisfy themselves as to

the larger question, as to what constitutes a lie—the prosecution being permitted to introduce an unlimited amount of evidence to show that the clerical defendant was an habitual liar, and part of his defence being in substance (not, of course, in terms), that because he was this, his utterances could not afford ground for action—could not, that is, damage the character of the party assailed. There appeared to be literally no end to the false statements he had made, but, he argued, they were not lies, for they either were such errors as the most honest of men occasionally make, or else were so notoriously and easily proved false that formulating them could hurt nobody.

—The *Preussische Jahrbücher* belongs to the same party as Stöcker, and therefore discusses (in the July number) his case more in sorrow than in anger. It abstains altogether from judging him, contenting itself with the remark that, however conscious of innocence he may be, he ought, by resigning, to relieve the Church of the necessity of defending him. But as between him and his assailants, it thinks his record as regards truth is good, though he was proved guilty not merely of libel, but of perjury; and it proceeds to show up the Liberals and to ask what sort of men *they* are to "go for" poor Stöcker. What is a lie? it asks. It is not a mere untruth, for that, as Stöcker showed, may be made innocently. The natural definition would be "a statement made with intent to deceive," but in this case the Liberals, it claims, are the greatest liars extant. In support of this statement it offers several instances which certainly are ingenious examples of how not to tell the truth. Thus, when Bismarck was trying to pass his tobacco-monopoly bill, based on the guarantee that the price should not be materially raised, the Government being content with the profits of the existing "jobbers," the Liberals circulated broadsides giving the price of tobacco in France, and thus, without telling an untruth, everywhere produced the impression that the same increase would follow in Germany. Again, a few years ago, the Progressist Richter fell into the error of thinking Bismarck's cup of iniquity was full, and that his time to go had come, so he made a speech at a public meeting whose burden was, Away with Bismarck! But it unfortunately turned out that the Chancellor's time was not come, so that the speech recoiled on its maker, and was used with great effect by the Conservatives. Since then an official publication of the Liberals, 'Neues Sündenregister der Conservativen,' boldly, in effect, denies the speech, saying none such was ever made *in Parliament*, but not, it is needless to say, italicizing the last words.

—The Basque language and people have proved an inexplicable mystery to modern scholarship, and each new solution seems to bring us but little closer to the real truth. Still, the study of the phenomena of the language is always of importance, and will in time assist us in determining its proper place in the families of speech. Thus far it is only a 'Prolegomena zur Baskischen oder Kantabrischen Sprache' (Leipzig: Weigel, 1884) that Karl Hannemann has prepared, to serve as an introduction to an elaborate grammar and dictionary of the same language. With the theories that Basque is a corrupt Arabic or poor Hebrew, the author has no patience. He starts with Wilhelm von Humboldt's assumption that it was the speech of the aborigines of large parts of Spain, France, and Italy. Most of the etymologies of proper names in Spain are delightfully uncertain, and even this latest writer usually gives you a choice of three. From a comparative table of numerals, the author decides that Basque is not connected with Hebrew, Persian, Arabic, Turkish, Chinese, Hindustani, Keltic, Irish, Greek, or Hungarian. But he finds remnants of Phœnician words, and he says it can be proved (though he fails satisfactorily so to do) that "pre-Egyptian" Phœnician was the mother of Basque. Comparisons are drawn between the religion, trade, habits, and customs of the two peoples. Where modern philology demands an agreement—in the structure of the language—our author is lamentably weak. It may be that he has reserved for his other works a fuller comparative morphological treatment of the Basque language. At all events, his grammar and dictionary will be awaited with interest.

SCHOULER'S HISTORY OF THE UNITED STATES.

History of the United States of America under the Constitution. By James Schouler. Vol. III.—1817-1831. Washington: William H. Morrison. 1885.

It is some five years since Mr. Schouler began the publication of the work whose third volume is before us, and its general character is now sufficiently fixed to enable its readers to pass judgment on it. Its two defects, already noticed, are still open to fair criticism. The most noticeable of these, a harshness of style which is at times positively unaccountable, is largely corrected in this volume, though it is still always perceptible and sometimes passes beyond the unpleasant into the disagreeable. There are sentences which require a second or third reading to make sense of them; and even a reader who is willing to take that trouble, under the promise of substantial results, is provoked by reaching no other conclusion than that the author has shifted the pains-taking from his own shoulders to those of his readers. The other defect is one of execution. In his notes, Mr. Schouler is too much in the habit of making general references to works cited. We have, for example, the proceedings of a convention, its purposes and results, supported only by the note "See Sargent's 'Public Men and Events'"—a reference which is of no value whatever, and is only to be paralleled by the Joe Miller citation of a work, "pages first and last inclusive." This fault is less annoying in this volume than in the first and second; but if Mr. Schouler desires to be of use and authority, he must discard the practice entirely, and give us chapter and verse, page and volume.

In spite of these defects, which could and should be remedied, the substantial merits of the work are as apparent as in its two predecessors, and there seems to be no reason for modifying the opinion already expressed,* that the work is one "which, though very far from perfection, is in many respects the most real history of the United States yet produced for the period which it covers." It is marked by a constant and complete recourse to original sources, a competence for accurate judgment and a willingness for fair judgment, a judicious observance of proportion, and a very sound historical sense to unite and vivify the whole. It would not be possible to name a work better calculated to give the student an impulse on the road to a comprehensive study of American history, and it is for this very reason that the inexact nature of many of the citations appears so serious a blemish.

This volume, beginning with the inauguration of Monroe, carries the narrative through his Administrations and that of John Quincy Adams, and the first two years of "the reign of Andrew Jackson." It thus covers such leading events as the Florida annexation, the Missouri Compromise, the announcement of the Monroe Doctrine, the intrigues against the Adams Administration, the rise and success of the new Democracy in 1825-29, and the mutterings of the various tempests of the Jackson régime—the first collisions with the office-holders, with the Bank, and with the nullificationists, the Eaton scandal, and the downfall of Calhoun from leadership in a national party to supremacy in a section. In many respects the volume is dull, and that of necessity, for it deals with what might very truly be called the slack-water period of American history. At the beginning it misses the stirring period of the war of 1812-15; it covers mainly a series of small-souled political intrigues; and it ends just before the introduction of the locomotive and the enormous development of which that was the starting point. But it is only the material which is disappointing; the work itself is just, ample, and satisfactory, and its execution is full of promise for the fourth and fifth volumes, which we are informed in the preface are in course of preparation.

Mr. Schouler has had access, hitherto denied to historians, to the Monroe MSS. at Washington, and has made full use of them. Perhaps this fact has given him an unconscious leaning in Monroe's favor, for his portraiture of that President is radically different from that given by any other preceding historian of authority. Those contemporaries who were not professed panegyrists represent Monroe as a man of mediocre ability, of which his countenance and appearance were fully representative; and his enemies paint him as slovenly, dull-eyed, and stupid. On the contrary, Mr. Schouler represents him as a person of remarkable bearing, with "an honest eye, which looked straight at those addressing him," and a countenance "graven by age into lines of serenity and kindness." All this may be far nearer the mark than the common notion of Monroe; but Mr. Schouler certainly gauges Monroe's ability, as shown in his Administration, too high. He claims for him far too much credit for what was accomplished under his Administrations, for the successful settlement of the first difficulties in regard to the extension of slavery, and for the formulation of the Monroe Doctrine, though he gives, in the latter case, unusual prominence to Jefferson's share in it through his letters of advice to the President in 1823. But the whole early part of the volume recurs at intervals to an ingeniously strained parallel between Monroe and Washington, covering every available point, from their similarity in dress to Washington's neutrality proclamation of 1793 and the Monroe Doctrine of 1823. Monroe is, in brief, the prodigal son, returning, after his wanderings among the swine and husks of Jacobinism, to find his father dead and only his virtues left to imitate. Every bit of this seems to have been worked out from the ambidextrous title of "the Washington-Monroe policy," by which the Federalists of 1819-21 endeavored to gloss over their absorption by the conquering hordes of Democracy.

It is not yet easy to see whether Mr. Schouler is to treat the economic history of the United States from the standpoint of the Protectionist or of the Free Trader. He meets this issue for the first time in this volume, in the case of the Tariff of 1828, which, by its advance on the rates of 1824 in face of a surplus of revenue, and by the specific features of its taxation, should be considered the first really Protective Tariff in our history. In this case, he states the circumstances under which it was passed, with unusual force and clearness, and shows, though he does not say, that Protection came to us under the more seductive garb of "Fair Trade." The "home market" argument is still the strongest angle offered by Protection. One may try to imagine its strength in a day when our trade to Great Britain was subject to heavy restrictions, our exports were totally excluded from the British West Indies,

* The *Nation*, vol. xxxiv, pp. 41, 409.

and a great percentage of our imports was British; when our agricultural districts were annoyed by corn-laws in one country or total exclusion from another, while our manufactures were assailed by an organized auction system for which "British gold" was the only visible means of support. The excuses which the Free Traders of 1828 might have offered for their first great defeat have seldom been more fairly stated.

The case is not so clear with the lines on which the author proposes to study nullification in the next volume. He repels the idea that Jefferson, any more than Madison, was responsible for anything more than the mere word. He excuses both Jefferson and Madison on the ground that their work was but temporary, intended only to defeat the alien and sedition laws, and then thrown aside.

"From State rights to nullification is a long stride; from nullification to secession is a stride still longer. To work out the whole scheme and impress it upon a State or community requires long and persistent effort, and in such a work Jefferson never engaged. He threw his invention aside; Calhoun picked it up and applied it anew."

All this seems to be but a poor starting-point for the study of a subject so important. It may be a long stride from one of the positions named to another, but it is a natural development; "he who says A must say B also." In the case of Madison, it is difficult to doubt that his "interposition," of which Von Holst makes so much, meant only an interposition of the States assembled in a second Federal Convention such as framed the Constitution. In the case of Jefferson, Mr. Schouler must lay a more substantial foundation for acquittal than that he made the dynamite and Calhoun threw it. Such material is contraband of war in politics, and he who made it is bound to explain how he came to give aid and comfort to the enemy.

The mechanical work is all that could be asked. It should also be noted that, in addition to a voluminous table of contents, each volume of the work has been provided with its own index. It would be well to combine these into a general index at the end of the last volume.

SOME EDUCATIONAL WORKS.

Pestalozzi's Leonard and Gertrude. Translated and abridged by Eva Channing. Boston: Ginn & Heath. 1885. Pp. 181.

On Teaching: its End and Means. By Henry Calderwood. 3d ed. Macmillan & Co. 1885. Pp. 126.

The Education of Man. By Friedrich Froebel. Translated by Josephine Jarvis. Lovell & Co. 1885. Pp. 273.

Home Studies: a Book of Language Lessons for Children of All Ages. Andover, Mass. 1885. Pp. 44.

Die Gewöhnung. Von Paul Radestock. Berlin. 1884. Pp. 95.

Psychologie des Verbrechens. Von A. Krauss. Tübingen. 1884. Pp. 421.

A Handbook of Pronunciation, Giving Principles and Illustrations. By Lewis Sherman, M. D. Milwaukee, Wis. 1885.

How Should I Pronounce? or, The Art of Correct Pronunciation. By Wm. Henry P. Phyfe. G. P. Putnam's Sons. 1885.

The Study of Political Economy. Hints to Students and Teachers. By J. Laurence Laughlin, Ph.D., Assistant Professor of Political Economy in Harvard University. D. Appleton & Co. 1885.

A Course of Practical Instruction in Botany. By F. O. Bower and Sydney H. Vines. With a Preface by W. T. Thiselton Dyer, Assistant Director of the Royal Gardens, Kew. Macmillan & Co. Pp. 226.

Chapters on Plant Life. By Sophie Bledsoe Herrick. New York: Harper & Brothers. Pp. 206.

Talks Afield about Plants and the Science of Plants. By L. H. Bailey, jr. Boston: Houghton, Mifflin & Co. Pp. 173.

If we except Rousseau's 'Émile' only, no more important educational book has appeared for a century and a half than Pestalozzi's 'Leonard and Gertrude.' Its effect, not only in Germany but throughout Europe, was great and immediate. Herbart, and Fichte, and many others lit their torches at the fire it kindled. It represented not only the culmination of the author's influence, but the first broadening in modern times of educational problems into those of universal government. It is a homely tale of a dismal and besotted Swiss hamlet called Bonal, with one good woman in it, who, by teaching her own and then the children of others maxims, hymns, home industries, cleanliness, and order, gradually reformed the whole village, so that it at length became the study of scholars and then of the royal Cabinet, who concluded that this slow method of education was the most radical way of reforming a realm. Thus, Bonal is the world; a drunken bailiff is intemperance and intrigue; Gertrude is the good teacher by whom alone the world is to be saved, if it is saved at all. This tale, told with the most elaborated details and with an almost painful realism in five volumes of the eclectic edition of the author's works by Seyffarth, has been condensed and retold with great and discriminating labor by Miss Channing. It is easy to criticise this kind of work, and no two persons would agree in their distribution of praise and blame of the translator for curtailing here the story and here the philosophy. On the whole, we think her work very well done, and that every teacher will be stimulated and instructed by reading this quaint and thrilling educational romance, quite apart from its great historical importance.

Professor Calderwood, to turn to the second book on our list, is Chairman of the First Edinburgh School Board, and addresses in the main young teachers. Only one—and that, perhaps, the poorest—of his seven chapters on Teaching is given to instruction, the rest being taken up with discourses on what might be called moral training. The first requisite of a good teacher is, we are told, the power of self-control or poise, for that inspires self-government in the pupil. In discipline the power of the eye and voice, quietness of manner, and reducing corporal punishment to a minimum, are insisted on with illustrations. The best chapter is on the formation of character. There are certain elements in every child which must be repressed. This is best done indirectly by encouraging the good elements. Fundamental, however, to all work of this kind is the power and love of "individualizing," or making each child a special problem in practical ethics, and acting upon it in full view of all the personal peculiarities of disposition and environment. This is, in fact, the chief idea in the book, viz.: to do the highest or moral work of education, the teacher must study and know the pupils individually, including their intellectual and their ethical difficulties.

Many digests of the opinions of Froebel, the founder of the Kindergarten system, have been given in English; but the original papers of this great educational genius have had to be studied for the most part in very hard and obscure German. We have here at length, in the translation of Miss Jarvis, probably the most important third of all his writings made into fairly good, though often too painfully literal English. In Froebel's theories is found a strange, and often strikingly incongruous, mixture of poetic mysticism and of careful observation of children. In the warmest advocates of his views the former element has been too prominent, and has often quite obscured the latter. What we need, in order that the ideals of child-culture which he saw so vaguely may be realized in this country, is considerable addition to his studies of childhood, and in a somewhat more objective spirit. Nowhere in his writings is this more apparent than in the first three sections of this work. His ideal of basing every item of educational method on the real nature of children is essentially correct, yet at the same time is very imperfectly carried out. Nothing has hindered his institution from still more general acceptance in this country, both by parents and by school boards, but the air of finality and perfection which its advocates have given it. The foundations are solid, but the whole roof must come off and the upper stories must be entirely reconstructed and rebuilt before it can ever take its just place as the lowest round of the educational ladder for all. The book under consideration is one which all kindergartners who love their work will, and all philosophically inclined teachers of higher grades should, read.

The fourth book on our list is an educational novelty of a very radical type. The mind, and especially the child's mind, the author premises, works at its clearest and best, in a perfectly unsystematic way, along certain lines of spontaneous interest different for each child. The best way, therefore, to teach reading is to let children copy, and then write spontaneously without copy, any letters; then, any words; then, any phrases, sentences, etc., they like, combining them or not combining them as they like, and saving and later revising their work. For higher grades, in books to follow later, the author's method, we infer, is to encourage pupils to (in a sense) make their own Readers by extracts of favorite passages from favorite authors. This cultivates natural interests and develops mental individuality, and expressly encourages skipping on the assumption that in literary as in artistic life broken work and unfinished sketches, such as are never tolerated in our schools, which require that subjects be finished in order, are the surest basis of the best culture. Pupils are not expected to do the same work in the same time. The theories which underlie this little book are stated to be the results of five years' study and teaching of children, and seem to be in the main sound, radically as they would revolutionize most of our approved systems of school reading, but to be yet far from having attained satisfactory practical forms for school-room work.

Doctor Radestock is a young and ardent disciple of the new psychology as represented by Wundt, and in a larger and earlier volume on sleep and dreams has already done a valuable piece of work. This book is mainly addressed to teachers, and consists largely of quotations and digests of the best recent literature of all kinds bearing on habit, which includes so large a part of the mental constitution that teachers deal with that the book might not inaptly have been entitled pedagogical psychology. It is so condensed and in every way admirable that we are glad to learn that it is being translated and will soon appear in English. It is one of the very best books we know for teachers to read, and would make an admirable text-book in psychology for normal schools.

The next book on our list makes no claim to be an educational book in any sense. But the empirical psychology of crime in its various forms, including a study of its causes, its beginnings in childhood, with analysis of its genetic

elements, so many of which are specifically educational, its prevention and cure, takes us into a realm which should be familiar to every one who studies the broad subject of moral education, and which is rich in suggestiveness to all teachers. The author describes his book as the sum total of what he has gathered and inwardly digested during nearly fifty years of official familiarity with crime. The common characteristic of crime is described as abnormality, somewhat as Benedict described the criminal brain as essentially atypic. A somewhat unique prominence is assigned to anomalous states of sleep among the remoter causes of the criminal disposition. In his vivid delineations of the motives and forms of crime, the author draws upon a rich casuistic material from his own observation. It is a fresh and original book with the fault—so rare in systematic German books—of too little reference to, and sometimes of apparently too little knowledge of, the literature of the subject.

We give above the titles of the two latest manuals that have been produced upon the subject of pronunciation, which, with our present orthography, will always continue to be one of equal interest and perplexity. They are both the fruit of far more intelligent study than has usually been given to the composition of works of this kind. Dr. Sherman's is devoted mainly to the discussion of the proper pronunciation of particular words, while Mr. Phyfe's, though not neglecting details of this sort, is largely given up to the consideration of the sounds of English speech, and the various methods by which they have been represented or rather misrepresented. We are inclined to say that Dr. Sherman lays altogether too much stress upon analogy, and that both writers attach too much weight to the authorities they quote in the settlement of controverted questions of pronunciation, and underrate the difficulty and perhaps the impossibility of ascertaining in many cases what is really the best usage. Indeed, in all manuals of this character it is important for the reader to bear in mind that while he will probably be right in following the pronunciation recommended, it will not always be safe for him to censure the pronunciation condemned. Both works, with this restriction, will be found decidedly useful. With some of the statements in Mr. Phyfe's treatise we should not be disposed to agree ; but his manual shows a knowledge of general principles about language and pronunciation which is, unfortunately, as rare as it is essential to the proper discussion of his subject. There still exists in the popular mind a confusion about pronunciation which most writers of this sort of books seem to strive to make worse confounded.

The first requisite for a teacher of any branch of knowledge is to believe in it himself. It is not merely the difference of happiness to a man who has been fortunate enough to choose a profession in which his interest is constantly increasing, but it tends to make him, like *Falstaff*, not only witty himself, but the cause of wit in other men. Mr. Laughlin possesses this element of success, as he evidently believes that life would be happier and better if all mankind were well grounded in political economy. His first chapter shows, what is no doubt true, that the problems which, since the civil war, have thrust themselves upon the Government of this country, are mainly of an economic kind. The next topic is the character of Political Economy as a study. The difference between this and other sciences, such as chemistry, mechanics, and the like, is that, in the latter, theory and practice go together, while in economics the student of theory rarely has to deal with the practical problems which long business training can alone handle successfully. A great change has, however, come over public opinion as to the value of education even for business purposes, and the proportion of college-bred men among successful merchants is undoubtedly increasing. Mr. Laughlin points out, on the whole very judiciously, the relation of his science to the law, the ministry, and journalism, and winds up with a discussion of the methods of teaching it, which, while very instructive, seems to us about as applicable to any science.

We note, however, throughout the book a confusion of ideas, which has been very prevalent in this country, and is only beginning to work itself clear, between political economy and political science. The failure of such men as Colbert and Turgot, and the success of Sir Robert Peel and Gladstone, were much less owing to the state of economic knowledge than to the political condition of their respective countries. The most desperate efforts are being made in this country to enlighten the people as to the abuses of the tariff, when the real question is how to overcome the power of the interests which work upon Congress through the lobby; and the two things are by no means identical. What this country needs even more than sound political economy is a critical examination of the working of our governments, both general and local; and to regard the one study as covering the other is not only inadequate but dangerous.

The botanical 'Course of Instruction,' of Messrs. Bower and Vines, is a particularly good book, clear, terse, exactly to the purpose, utterly free of superfluous matter and of superfluous words. It was initiated by Mr. Dyer, who, indeed, planned and for a time carried on the model course of instruction at South Kensington, alongside of that by Huxley for the animal side of morphology. When he was diverted to administrative duties of an absorbing kind, the place was taken by Mr. Bower, one of the youngest and best of phyto-histological investigators of Great Britain, and lately, we believe, called to the chair of Botany in Glasgow University. Dr. Vines, who has been carrying on with distinguished success the same kind of solid work at the University of Cambridge, is also associated in the authorship; and the result is a manual for elementary botanical laboratory-work, of the microscopic sort, which is much to be commended. It has, moreover, a certain crowning merit. When, in an assembly of highly decorated diplomats, an envoy appeared in plain clothes, Talleyrand remarked that he was *très-distingué*. This volume is similarly distinguished by the total absence of woodcuts or other illustrations, and, its nature and special purpose considered, is none the worse for the unusual omission.

'Chapters on Plant Life' is a bright little book well adapted to fix the attention of young people, and generally to reward it, but occasionally to puzzle or mislead. The topics and the treatment are sensational, according to the fashion of the day. And this feature is heightened by some of the chapter-headings. For example: "A Flowerless Flour Garden," which treats of the yeast plant and its action upon dough; "Plants Caught Napping," which deals with the movements of leaves and what Linnæus called the sleep of plants; "Flowers in Fancy Dress," namely, orchids; "Some Queer Traps," namely sundew, dionæa, and the pitcher plants. In the chapter on "The Thirsty Flowers," ingenuous youth are taught that "the quantity of water that plants breathe off is so great that it makes an entire change in the climate when forests are cut down"; that "unless the air is kept damp by the sea or some large body of water, it depends very much upon trees for its moisture." This is, indeed, refreshing. The figures of microscopic views are mainly such as young people will never see until they come to have first-class instruments, and some they will not see then; for instance, the lichen magnified on p. 60—an imaginary illustration of the Schwendener hypothesis. Will not the gray hairs of our veteran lichenologist stand erect when he finds that the much-controverted algo-fungal hypothesis, which he disdains, is here settled off-hand, and taught to children!

The title of Mr. Bailey's 'Talks Afield' is descriptive. Yet never was less talk put into a preface than in this, which we copy entire: "The author has written this little volume for those who desire a concise and popular account of some of the leading external features of common plants." This account is given neatly and intelligently, in a gossipy way, allowing of great freedom in the selection and treatment of topics, and the introduction of bits of curious lore and of information quite out of the common run for little books of this kind. It is evident, moreover, that the author understands what he is talking about, for he has chosen his subjects judiciously and treated them correctly, so far as we have noticed, except now and then a little overdoing. The illustrative figures are numerous; but those which are actually or seemingly original are not very good.

RECENT NOVELS.

At the Red Glove. Harper & Brothers.

On the Fo'k'sle Head. By W. Clark Russell. Harper's Franklin Square Library.

Captain Brand of the Centipede. By Harry Gringo (H. A. Wise, U. S. N.). Harper's Franklin Square Library.

Within the Capes. By Howard Pyle. Charles Scribner's Sons.

After London. By Richard Jefferies. Cassell & Company.

In 1870 a short story, entitled 'The Widow Mérand,' was published in *Temple Bar*. The scene was laid in St. Roque, Normandy, where the widow, young, handsome, well-to-do, gave herself much trouble and several other people great pain by her intrigues to accomplish her marriage with an attractive but penniless young man. In the end she was justly outwitted, and for her deep mortification and wrath nobody has a particle of compassion. This simple story was invested with considerable pathos and humor and was written in a crisp and pleasant style. In 1884, through the pages of *Harper's Magazine*, under the title of 'At the Red Glove,' the Widow Mérand again made her bow to the public. In the intervening years she had become the Widow Carouge, and the scene of her exploits had been transferred to Berne. The plot had suffered wofully from expansion; the characters of the widow, of her able assistant in mild wickedness, Bobineau, and of their victims, had become enfeebled; the pathos had been diluted to sentimentality; the humor had been quite forgotten. The similarity of the short story and the novel has been already so fully established that even confirmation seems superfluous. The presumption that they are by one and the same author is strong, and perhaps the only one compatible with a belief that all sane human beings are endowed with some foresight and caution, putting common honesty aside. But, on the other hand, there is the disturbing suggestion, that the author of 'The Widow Mérand' could hardly deteriorate mentally to the degree implied by the production of 'At the Red Glove.'

'On the Fo'k'sle Head' is a collection of incidents, character sketches, and reflections on sailors' habits of life, thought, and language. It is made up of remnants and fag-ends, seemingly selected at random from notes and scrap-books. To discover any interesting fact or striking

fancy, the search must be careful, and, at best, the trouble will be poorly repaid. The chapter on "Sea Terms Ashore" is suggestive, but in the effort to prove the landsman's debt to the sailor in the shape of telling phrases, the author is more imaginative than accurate. His selections from the daily paper's column of shipping intelligence support his assertion that, though the black flag is no longer seen upon the high seas, the romance of the deep is far from exhausted. But of this no further evidence than many of Mr. Russell's own stories is needed.

The recent reprint of Harry Gringo's 'Captain Brand of the *Centipede*' may, however, indicate a craving for more picturesque nautical fiction than Mr. Russell has ever attempted. It positively glows with high-pressure sentiment and vivid color. The boldness and badness of the pirate crew leave nothing to be desired, while greater luxury than that of the pirate's den, combined with greater natural inaccessibility actually provocative of unnatural deviltry, the mind of man has never conceived. Many paragraphs might be chosen to illustrate the modifications which taste has undergone between Mr. Wise's literary day and Mr. Russell's, but none more striking than the description of Madame Rosalie as she appeared on the deck of the *Martha Blunt*. We are told that she wore a "loose white morning gown folded in plaits about her swelling bosom, her slender waist clasped by a flowing blue sash, the dark brown satin bands of her hair confined by a large gold filagree pin, and half concealed by a jaunty little French cap with the ribbons floating about her pear-shaped ears." Should the captain of an ocean steamer be heard addressing so radiant a vision as "Lady-Bird," with appropriate theatrical gesture, the consternation created by her appearance would certainly increase to panic. But these are prosaic days. The Buccaneers are dead. Ideal standards for gallantry in men and clothed loveliness in women are only food for the scoffer, and perhaps there will not be found one reader of 'Captain Brand' so young or so fresh as to take it seriously. We fear it may be safely recommended to excite more mirth than any avowedly humorous publication.

The best chapters of 'Within the Capes' recall the kind of sea stories which we describe as "old-time"—a vague phrase, perhaps, but always eulogistic by implication. All that relates to the daily life of the castaways, Tom Granger and his mate, is interesting, and we share the excitement of their discovery of treasure in the Spanish ship, long buried in the shifting sands of their island home. In the first part of the story no expectation of such time-honored incidents is roused; on the contrary, we are on the lookout for difficulties between the privateersman, *Nancy Hazlewood*, and the English cruisers—difficulties in which the mysterious Captain Knight shall count for much. The author has either wilfully misled the reader, or has lost sight of his original purpose. It is probable that he has not the skill to sustain consecutive and coherent narrative, for the third part is irrelevant to the second, and not in harmony with the general drift. If Tom Granger had to be dragged through an ignominious imprisonment on the charge of murder, he should have been acquitted by some more reasonable method than that of proving guilty a man whose motives for the crime were absurdly inadequate. The style of this story deserves a word of comment, for it is a mixture of bygone phraseology and circumlocutions, supposed to fall naturally from the lips of a garrulous old sailor. The experiment results in a tiresome prolixity which has neither grace nor consistency.

Mr. Jefferies's 'After London, or Wild England,' is a dull and labored attempt to describe England relapsed into barbarism and in the dawn of a new civilization. The romance is unreadable, and only saved from being unintelligible by constant mental references to 'Hereward' and other romances of the Saxon period. The author, whose descriptions of woods and meadows are so delicate and graceful, who can find a beauty and meaning in the lowliest wild thing that springs but for a day in the forest, is, in the delineation of men and women, shallow, artificial, and lifeless. It is a pity, therefore, that he should not have left the history of the 'House of Aquila' unwritten, and confined his prophetic vision to the appearance of the country after the "sea silted up the entrance to the ports," and modern London ended.

Raphael Morghen's Engraved Works. By Frederic Robert Halsey. G. P. Putnam's Sons. 1885. 4to, pp. 184.

THIS is a "descriptive catalogue of all the engravings of this master, the inscriptions given at full length, and the variations of the states precisely set forth, accompanied by biographical and other notes, with a life of the engraver." As the author states, it is somewhat singular that no work covering the same ground should have appeared earlier to supplant or at least to supplement the inadequate essay by Palmerini, which has hitherto been the only guide for students of Raphael Morghen's engravings. The reason suggested by Mr. Halsey—that the matter to be treated is probably not the fashion of the day, that people care for etchings and not for line engravings—may account for the non-appearance of any attempt during the last fifteen or twenty years; but Morghen's fame was at its height long before etchings were of general interest—the "Last Supper" was engraved in 1800, and Morghen died in 1833—over fifty years ago.

That no one should have come forward at a time more nearly contemporaneous with his work, to give a systematic account of it, certainly seems strange. The reason probably lies in the fact that Palmerini occupied the field, and, however partial and insufficient his work might be, it answered all immediate wants. Even to-day Mr. Halsey finds Palmerini his main reliance for the brief sketch of the engraver's life, as well as the basis of his list of the engraved works. His biography consists almost entirely of liberal translations from Palmerini, the amount of new material added being insignificant. This could hardly be otherwise from the nature of the case. The long life of the engraver—over seventy years—was absolutely without event, and offers no salient points of interest. His works, however, speak for him, and had he played a more active part in the doings of the world around him, we should not have had the long succession of brilliant engravings, the importance of which makes it worth while to chronicle at this late day the most minute particulars in regard to them. It is not of the engraver that one cares especially to know, but of his engravings; and with this object in view Mr. Halsey has undertaken to perform his task in a most thorough manner.

All collectors of Morghen's works, or of engravings in general, will be grateful to him for the systematic and faithful way in which he has carried out his purpose. The book will be a valuable and indeed indispensable one to them. The scheme is intelligent. Every known work of the engraver is mentioned in the alphabetical order of its title, each with its individual number. The alphabetical arrangement, it seems to us, is by far the best for easy reference which can be adopted. This is supplemented by complete lists of the chronological execution, of the names of the artists from whose works the engravings were made, and of alternative subject names, so that it is impossible not to find easily any single work required. The adoption of the plan devised by Mr. Thies in the Gray Catalogue, of designating the portraits by a **P**, was a good idea, and it might have been well to add another list at the end of the book, which should group all such prints. Besides enumerating everything contained in Palmerini's list, often with fuller numbering, Mr. Halsey has added nearly a score of prints, some of which were executed in the nine years that elapsed between the appearance of Palmerini's last edition in 1824 and Morghen's death, and some of which Palmerini evidently omitted.

The author has boldly adopted the plan of ignoring the time-honored custom of describing the early conditions of the engraving as "artist's proof," "proof before letters," "after-letter proofs," "lettres grises," etc., etc., and confines his states entirely to those of the finished plate. In the main this is a good idea, for nothing is more bewildering to the collector than the lack of uniformity which has been practised by writers and dealers in this respect. But it seems to us that some subordinate system of designation should have been used, by which the many differing impressions taken from the plate before its completion should be individualized. For instance, ten trial proofs (three of them remark proofs) of the Tofanelli "Transfiguration," are mentioned and described, before the two final states of the plate, all without numbers. If Greek letters or some form of numeral had been given to these, each would have been isolated and fixed individually without interfering with the main states. We disapprove, also, of the practice of counting a known false impression as an early state, because its lettering happens to look like that of the real, thus depressing the genuine impressions to a lower position than that to which they actually belong. This is the case in the "Noli me tangere," No. 38, where by this treatment the first and succeeding states are made to appear as second, etc. It would further have been advisable to give the Palmerini numbers to enable collectors easily to connect their prints with Mr. Halsey's catalogue—which doubtless will henceforward be the only one used—and thus form a bridge from the old to the new. It seems to us unfortunate to have adopted the English system of inches in the measurements of the plates, to the exclusion of the metric system, which was used by Palmerini, and to the general adoption of which all signs point. Another improvement would have been in fuller reference to public and well-known collections of prints, in signalling important states, rather than to the possessions of dealers, which in their nature are ephemeral. For instance, there are half-a-dozen impressions of a certain importance in the Gray collection in Boston which might have been referred to with profit, as these prints will always be accessible to students, whereas this can hardly be said of the collections of the dealers, Clément, Grandi, and Keppel.

In the main, the conception and execution of the work are admirable, but much greater care should have been exercised in the details. The author says that his "chief aim has been to point out the changes in the successive impressions from every plate, and to transcribe with great care and accuracy the inscriptions and the discriminative marks on each—*i.e.*, to indicate clearly the various states." An examination of about half of the 184 prints described has revealed over 120 inaccuracies. Nearly all of them are of slight importance, to be sure, but where absolute accuracy has been attempted and is often necessary for the identification of a state, even a comma becomes important. In the description of the viii. state of the "Madonna della Seggiola," where the incorrect spelling of the "ECCLL ZA" identifies the state, an error occurs, in which the mis spelling is carried still further, by leaving out

one of the L's, thus adding to the confusion. This same error is repeated in several places, an example of carelessness which seems unjustifiable.

One line which might have been followed with interest has been quite neglected, viz. : that of quoting the prices which famous impressions of Morghen's prints have brought, as they changed hands.

The literary quality of the book leaves much to be desired in regard to clearness and directness of statement. Many paragraphs of the original matter fail to become fully intelligible even after repeated readings. With the exception of the painfully brilliant scarlet covers in which the book is bound, its form is exceedingly attractive. The typography is excellent, the paper thick and handsome, with wide margins convenient for notes; and the whole preceded by a portrait engraving of Morghen, showing his fine head and face in three-quarters view. In conclusion let us say that it is only because we have been impressed with the general excellence of Mr. Halsey's work, and have felt the great value of the contribution he has made to the literature of engraving, that we have been impelled to point out so minutely the shortcomings which have occurred to us. Doubtless many of these may be corrected in another edition, which we trust will be called for.

How We Are Governed. An Explanation of the Constitution and Government of the United States. A Book for Young People. By Anna Laurens Dawes. Boston: D. Lothrop & Co.

THIS manual of our Government is certainly entitled to the authority which comes from extensive knowledge and experience. The voice is Jacob's voice, but the hand is the hand of Esau—a fact which, indeed, Miss Dawes, in the dedication to her father, as well as in her preface, makes no attempt to conceal. The style is simple, clear, and well adapted to the comprehension of young students who are learning the great lesson. And it is worth the trouble. We never go back to the history without a fresh thrill of admiration and wonder, though to get the highest effect we must regard it not in the full light of the closing nineteenth century, but from the standpoint of the condition of the world as it was a hundred years ago. If one is inclined to be despondent over any features of our politics and society, he will find a good tonic in reading the history of the Confederation before the Constitution was adopted, or again of the fourth and fifth decades of this century, when the cloud of the slavery conflict was spreading over the land.

Yet in reading this book we are struck by a tone which belongs to a past generation, and which is seldom heard now—the feeling that all our Government arrangements have something of the sacredness of holy writ, and that criticism is irreverent. The consciousness will break out, in spite of the struggle to suppress it, that some parts of the machinery do not work quite perfectly. Thus we read on page 50: "It is sometimes called a government by checks, and this remarkable plan has worked most admirably to preserve the interests of the people by preventing the undue authority of any one branch of the Government"; and on page 72: "A Congress might be restricted and overborne by the other parts of the Government, or Congress itself might gradually gather into its own hands more and more power. In fact, the latter has proved the more probable danger, though men are not wanting who think our system is in peril from quite the opposite cause." And the climax comes on page 192: "Thus everywhere Congress is gradually becoming itself the controlling power, making other departments its officers." This testimony, while it speaks well for his candor, is the more remarkable as coming from one whose whole career has been identified with the legislative branch.

There is another tradition which few who were not brought up in it would venture to state quite so unhesitatingly. Throughout the book it is constantly assumed that the people manage and control everything, and that if anything goes wrong the people are to blame. If the laws are bad or not good, the people ought to see to it that better are made. If the representatives are weak or wicked, it rests with the people to choose better. Against this fallacy we most earnestly protest. If the shortcomings of the governments of the nation, the States, and the cities are owing to the deliberate will of the people, the future of this country is dark indeed. But they are nothing of the kind; the fact being that under our system the people have very little voice in the matter. In the first place, the laws, instead of being debated in public and upon grounds which the people can understand, are manipulated in secret by little groups of men entirely shielded from public responsibility. Let us hear Miss Dawes's idea of publicity, the italics being ours:

"A journal or account of what is done is written every day by the clerk, and read and approved the next morning at the opening of the session, *so that no secret business may be transacted.* Besides this, an official newspaper is published daily, containing every word that was uttered the day before in both the House and the Senate, *so that all actions of Congress are as public as possible.*"

What exquisite simplicity! And then she adds: "The 'previous question' of the House of Representatives is perfectly just, because it is first agreed to by that body on each occasion." In other words, it is perfectly just for the majority to gag the minority. "The debates of Congress upon the measures before it are sometimes very interesting." This may be so for those who hear them, but for the country at large they are perfectly uninteresting, because it knows that they have little or no influence upon legislation. "As wrong methods are sometimes used, the terms 'lobbying' and 'lobbyist' are considered quite disreputable; but this is obviously not just, the most of such business being necessary and quite proper." This is so far true that it is the only way of influencing legislation—even the Cabinet officers being obliged to resort to it; but none the less it is a secret process, wholly covered from the public eye, and, rightly or wrongly, has tainted the reputation of all the Government procedure.

If the people are thus kept in ignorance of measures, they are just as much so with regard to men. The representative, on going to Washington, disappears as completely as a cannon-ball in a sand bank. His constituents know nothing of his action except his vote, and know so little of measures that they can hardly tell whether he votes right or wrong. And this is true not only of both houses of Congress, but of the executive branch as well. On p. 187 we read:

"By this division of affairs neither the President nor Congress has too much power. Being chosen in different ways and partly at different times, the one having no concern what laws are made, while the other can do nothing to carry them out, neither the one nor the other can ever grasp the whole power and change the form of our Government."

The fact is that the checks are so perfect that the machine will not go at all. Administration is defective because the laws are so, and the laws are defective because they are made without any kind of reference to administration. Thus it happens, that while the President is chosen by a tremendous effort of the whole people, he and his chosen advisers subside at once into mere clerks or mechanical agents, with no policy or voice in directing one. Now that the power of appointment to office is taken away, the President sinks into insignificance as far as the public are concerned, for neither he nor his Cabinet ever comes before it or is in any way known to it, except through the gossip of the newspapers; and as every man reads his own party paper, one side sees white and the other side black. As there is nothing, therefore, either in measures or men to move popular action from the top, it has to be pushed up from below As the people are not led from the front, they have to be prodded from behind, and hence the mighty fabric of the caucus. We had occasion lately, in answering the inquiries of an English friend, to study up the system of nominations from the ward meeting of the city to the Presidential Convention, and were ourselves astonished on beholding the vast structure which has grown up, like a coral reef, as it were, from the unseen labors of certain insects.

It seems strange, nowadays, to hear any one say: "The caucuses or primaries are very free and open public meetings, and the simple process by which candidates are selected is one likely to bring about good results"; and again, "If men let the control of the city or the country fall into the hands of such persons, they are themselves in fault." We had supposed it was understood by this time that the mass of quiet citizens will not attend the caucuses, and it is of no use to ask them, because they are mere tools in the hands of skilled workers. The only check upon the caucuses, though it is a considerable one, is that they must make decently respectable nominations if they expect to command votes. Before we can justly charge the people with the faults of the Government, there will need to be some very different methods for the formation and expression of the popular will.

We are tempted to quote one or two more instances of this injustice to the people. On page 243, after saying that $8,000 a year is too small a salary for the Secretaries, the writer adds: "Poor men cannot take these places, because the people will not give salaries large enough to support a man who has no other money to spend." Now, considering that members of Congress vote themselves $5,000 for spending on an average four months of the year in Washington, while the Secretaries have to work the year round, and that the consequent expenditure of two millions for both houses is borne by the country without a murmur, it strikes us that this charge is rather hard upon the people. It is Congress, and not the people, which is liberal to itself and stingy to the Executive. Again, on page 245: "But the people are very jealous of the President, and very much afraid he will get any power entirely in his own hands." "It looks sometimes as if the people wanted to control everything, even the very things they have committed to their officers." We believe these assertions to be utterly untrue, though if the word "Congress" were substituted for "people," they would describe the situation exactly.

We are warned that we must quit the field, in which we have only broken ground, but we desire to add that our strictures are not meant for Miss Dawes's personal work, since every page bears too clearly the stamp of that much-abused term, a lady, to admit of intentional disrespect. But we are more than ever impressed by this book with the fact that the age of adulation is passed, and that of criticism is begun. The more profound are our respect and admiration for the great founders of the Government, the more unsparingly we should search out the imperfections which have been developed in a century of practice, with a view to such repairs as are necessary for the safety of the future.

Forty Years in Phrenology, embracing recollections of history, anecdote, and experience. By Nelson Sizer. New York: Fowler & Wells.

MR. SIZER'S book is one which the believer in phrenology will find interesting, the disbeliever entertaining. It is a history of his "life-work" by a professional examiner of bumps and reader of character, and is full of proofs sufficient to satisfy all but the sceptical not merely of the fundamental truths of phrenology, but of another, even more deeply interesting science, called by the author "phreno-magnetism." This branch of knowledge relates to the obscure laws which connect the phenomena of magnetic slumber, or perhaps we should say hypnotism, with applied phrenology. A knowledge of it is truly power, as the reader will admit when he learns that the phreno-magnetist can hypnotize a patient, and then, by manipulation of the proper bumps, excite at will the characteristic traits connected with them—alimentiveness, philoprogenitiveness, combativeness, reverence, or any other quality. Mr. Sizer gives some curious instances, the most striking being those in which opposite qualities are alternately excited. Thus, the bump of benevolence being touched, the magnetized subject sees as in a vision a suffering family, and puts his hand into his pocket, or, at any rate, loudly calls upon all the company present to relieve their distress. The faculty of acquisitiveness being next excited, his altruistic feelings are suddenly transformed into selfish ones, and he protests in the strongest way against a cent being given them. At a touch he softens again, tears course down his cheeks, and he insists that they shall want for nothing. There can be no doubt that Mr. Sizer, who is a professional examiner of bumps, has found phrenology a profitable study, nor that those who practise it acquire within a certain range an extraordinary facility for reading character.

Apart from all questions of science, we have read Mr. Sizer's book with much pleasure. As a literary work it has its defects, but it has also its marked merits. It has a strong national flavor; in fact it positively reeks of the soil, and any one at all familiar with Huckleberry Center and "Cohoshe Deestrick," and the attitude of a large part of our rural population toward science, will find an immense amount of amusement in it. Without for a moment comparing the two in other respects, we may say that the fascination of the book as a social study is not inferior to that of P. T. Barnum's autobiography.

Town Geology. The Lesson of the Philadelphia Rocks. Studies of Nature along the Highways and among the Byways of a Metropolitan Town. By Angelo Heilprin, Professor of Invertebrate Palæontology at the Academy of Natural Sciences of Philadelphia. Philadelphia: Published by the Author. Pp. 134, vii plates. 1885.

TREATISES on local geology are very hard to write; it is harder still to put them in a shape to suit the needs of those who, with little general knowledge of the many-sided earth science, are willing to learn something of the ground about them, provided they may do so without much labor. The writer of such a book finds himself compelled to select a few salient points and to picture them in strong colors. He must make the necessary assertions of fact without the limitations which he would put on the statements in a scientific treatise. From the shreds and patches of the geological record which any limited field affords, he must strive to show the whole history of the earth; otherwise his story will lack coherence.

Professor Heilprin has evidently felt these limitations, and it may be said that he has dealt with his subject as well as the most of those who have essayed such work. We miss the literary quality of Kingsley's 'Town Geology,' or the compass of John Phillips's admirable 'Geology of Oxford and the Valley of the Thames,' but we have a valuable body of simple observable facts plainly set forth in a clear way.

It is only in the almost necessarily vague references to general geological phenomena that the critic finds much room for his work. When on page 47 the author speaks of the crumpling and folding of the Philadelphia gneisses being due to the "settling of the earth's crust," we fear that he conveys no very clear idea to the beginner in geology. Nor is the matter made clearer by the explanation that "the contraction of the earth's crust resulting in the upheaval of the entire mass . . . brought about that crumpling and folding." For these vague and unprofitable explanations we must, perhaps, blame the nature of the task rather than the author. In chapter iv. the author terms the so-called Laurentian rocks about Philadelphia "our oldest patch of land." The evidence that this region was indeed a level surface in the Cambrian period is not clear. The statement would need much qualification before it was well adjusted to the evidence. This is but one of many cases in which the use of unqualified assertions, such as are necessary in a popular book, has laid the author's statements open to criticism. Despite these almost unavoidable objections, the author has made a book which will certainly prove of service to those who are beginning to study geology in the region which he describes. It is without an index, and the table of contents is very meagre; and yet, of all books, one designed as a guide is the most in need of these keys.

Second Edition of

A VERY VALUABLE BOOK.

The Theories of Darwin

AND THEIR RELATION TO

PHILOSOPHY, RELIGION, AND MORALITY.

From the German of Prof. Rudolf Schmid, translated by Dr. G. A. Zimmermann, with an Introduction by the Duke of Argyll. Price, $2.00.

"I regard the scientific portion of this book as the best reasoned and the most philosophic work which we have on organic development, and on Darwinism."—*President McCosh.*

"Learning, fairness, love of truth, and vital earnestness are everywhere manifest in this work."—*The Christian Union.*

"Earnestly thoughtful readers will find the book instructive, eminently assuring, wise, and helpful."—*The Congregationalist.*

"The book contains the fullest exposition we have seen of the rise and history of the abstract Darwinian theories."—*The Observer.*

"This is a work of remarkable learning and ability."—*The Examiner.*

ALSO NEW EDITIONS OF

ARNOLD'S LIFE OF LINCOLN, - $2.50

Universally acknowledged by the press as the best and most authoritative as well as the most attractive and interesting life of Mr. Lincoln ever published.

BALDWIN'S THE BOOK-LOVER, - $1.25

A book about books, intended as a guide for students of literature and general readers, but most of all for book-lovers—those who regard good books as "more precious than all riches."

Sold by all Booksellers, or mailed postpaid on receipt of price by the publishers,

JANSEN, McCLURG & CO.,

Cor. Wabash Ave. and Madison St., Chicago.

Valuable School and College

TEXT-BOOKS:

FIRST LESSONS IN NATURAL PHILOSOPHY. By Mrs. Mary A. Swift. Part First, 50 cents; Part Second, 56 cents.

ALCESTIS OF EURIPIDES. With Notes. By President Woolsey, of Yale College. $1.25.

ANTIGONE OF SOPHOCLES. By President Woolsey, of Yale College. $1.25.

ELECTRO OF SOPHOCLES. By President Woolsey, of Yale College. $1.25.

GORGIAS OF PLATO. By President Woolsey, of Yale College. $1.75.

PROMETHEUS OF ÆSCHYLUS. By President Woolsey, of Yale College. $1.25.

PUBLISHED BY

BROWN & GROSS,

Hartford, Conn.

Maury's Geographies,

By Lieut. M. F. Maury, are now enjoying a remarkable success and popularity. Specimens mailed: Elementary, 54 cents; Revised Manual, $1.28; Revised Physical, $1.20; Maps, $10 a set.

UNIVERSITY PUBLISHING CO.,

19 Murray St., New York.

THE ATTENTION OF MASTERS OF Schools is invited to the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed, on other pages.

There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Rate per year for 3 lines, $23.40; 4 lines, $31.20; 5 lines, $39.00, etc. Any term less than one year at same rates—15 cents per line per week.

The *Nation* is sent free while advertisement continues. Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 210 Broadway, New York.

LATE ISSUES

FOR PROGRESSIVE SCHOOLS:

☞*APPLETONS' INSTRUCTIVE READING BOOKS.—Natural History Series.* By Professor James Johonnot. No. 1.—BOOK OF CATS AND DOGS, and Other Friends. For Little Folks. No. 2.—FRIENDS IN FEATHERS AND FUR, and Other Neighbors. For Young Folks. No. 3.—NEIGHBORS WITH WINGS AND FINS, and Some Others. For Boys and Girls. No. 4.—NEIGHBORS WITH CLAWS AND HOOFS, and Their Kin. For Young People. No. 5.—GLIMPSES OF THE ANIMATE WORLD: Science and Literature of Natural History. For School or Home. A graded course of supplementary reading, of charming interest and useful instruction.

☞*APPLETONS' CHART PRIMER.* By Rebecca D. Rickoff. The most attractive primary school-book ever published.

☞*APPLETONS' INTRODUCTORY FOURTH READER.* By Wm. T. Harris, LL.D., and A. J. Rickoff, A.M. The latest volume of this matchless series is welcomed everywhere.

☞*THE SENTENCE AND WORD BOOK.* By James Johonnot. A full reservoir of thought for the shaping and refining of language. A new plan, but replete with suggestive material for valuable work.

☞*HOW WE LIVE;* or, The Human Body and How to Take Care of It. By James Johonnot and Eugene Bouton, Ph.D. An attractive elementary physiology, presenting the subject on a thoroughly educational basis, with the most approved views concerning the effects of alcohol and narcotics.

☞*DESCRIPTIVE BOTANY.* By Eliza A. Youmans. A new volume of Appletons' series of "Science Text-Books."

☞*ELEMENTS OF GEOMETRY.* By Eli T. Tappan. A clear and logical development of the subject.

☞*BOOKKEEPING SIMPLIFIED.* By R. H. Manning. Containing in a brief compass all the essentials of the art.

☞*DRAWING TABLETS.* By Hermann Krüsi, A.M. A blank practice-book for elementary exercises.

☞*THE ORIGINAL DRAWING BOOK.* By Edward L. Chichester. Designed to supplement Krüsi's Drawing Course.

☞*OUTLINES OF PSYCHOLOGY,* with Special Reference to the Theory of Education. By James Sully, M.A., Examiner of the Moral Sciences Tripos in the University of Cambridge; Examiner in Philosophy in the Victoria University; late Examiner in Mental and Moral Sciences in the University of London; author of 'Sensation and Intuition,' etc. Should be read by every teacher and educator.

☞*THE GERMAN VERB DRILL.* By Adolphe Dreyspring. A valuable supplementary work to the successful 'Cumulative Method,' by same author.

☞*THREE MONTHS' PREPARATION FOR READING XENOPHON.* By J. M. Whiton, Ph.D., and M. B. Whiton, A.B. A concise and practical new introductory Greek book.

☞*FIRST GREEK BOOK.* Revised Edition. By Albert Harkness, Ph.D., LL.D. A standard work, brought thoroughly up to date.

*** *Price Lists, Descriptive Educational Catalogue, "Educational Notes," etc., sent free on application.*

PUBLISHED BY

J. H. BUTLER,

925 Chestnut St., Philadelphia.

Anatomy, Physiology and Hygiene,

For Schools, Colleges, and General Readers. 12mo, 420 pages.

By JEROME WALKER, M.D.,

Lecturer on Anatomy, Physiology, and Hygiene in the Central School, Brooklyn; Senior Physician to the Seaside Home for Children, Coney Island, etc.

This is *par excellence* the book for High Schools, Academies, and Colleges. The New York *Nation*, October 30, 1884, says:

"Dr. Jerome Walker's 'Anatomy, Physiology, and Hygiene' appears an almost faultless treatise for colleges, schools, and general readers. Careful study has not revealed a serious blemish; its tone is good, its style is pleasant, and its statements are unimpeachable. We cordially commend it as a trustworthy book to all seeking information about the body and how to preserve its integrity."

Wholesale price, $1.20; Introduction price, $1; price by mail for examination, $1.

A. LOVELL & CO., Publishers, 16 Astor Place, New York.

F. W. CHRISTERN,

37 West Twenty-third Street, New York,

Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogue of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

AMERICAN HISTORY.

AMERICAN LITERATURE.

AMERICAN STATESMANSHIP.

"Logically compact in structure and development, scholarly and readable in thought and style, and withal pervaded by a lofty ethical spirit, they mark a most decided advance in modern English prose, and bid fair to settle many a literary question that has hitherto defied the wisdom of the wisest."—*The Independent.*

American Commonwealths.

A Series of volumes narrating the history of those States of the Union which have a striking Political, Social, or Economical History.

EDITED BY HORACE E. SCUDDER.

VIRGINIA. By JOHN ESTEN COOKE.
OREGON. By WILLIAM BARROWS.
MARYLAND. By WM. HAND BROWNE.
KENTUCKY. By Prof. N. S. SHALER.

Each volume 16mo, gilt top, with map, $1.25.

"It is clear that this series will occupy an entirely new place in our historical literature. Written by competent and aptly chosen authors, from fresh materials, in convenient form, and with a due regard to proportion and proper emphasis, they promise to supply most satisfactorily a positive want."—*Boston Journal.*

American Men of Letters.

A Series of Biographies of Distinguished American Authors.

EDITED BY CHARLES DUDLEY WARNER.

WASHINGTON IRVING. By CHARLES DUDLEY WARNER.
NOAH WEBSTER. By HORACE E. SCUDDER.
HENRY D. THOREAU. By FRANK B. SANBORN.
GEORGE RIPLEY. By OCTAVIUS BROOKS FROTHINGHAM.
JAMES FENIMORE COOPER. By Prof. T. R. LOUNSBURY.
MARGARET FULLER OSSOLI. By T. W. HIGGINSON.
RALPH WALDO EMERSON. By OLIVER WENDELL HOLMES.
EDGAR ALLAN POE. By GEORGE E. WOODBERRY.
NATHANIEL P. WILLIS. By Prof. HENRY A. BEERS.

Each volume 16mo, gilt top, with portrait, $1.25.

American Statesmen.

A Series of Biographies of Men Conspicuous in the Political History of the United States.

EDITED BY JOHN T. MORSE, JR.

JOHN QUINCY ADAMS. By JOHN T. MORSE, JR.
ALEXANDER HAMILTON. By HENRY CABOT LODGE.
JOHN C. CALHOUN. By DR. H. VON HOLST.
ANDREW JACKSON. By PROF. WM. G. SUMNER.
JOHN RANDOLPH. By HENRY ADAMS.
JAMES MONROE. By PRES. D. C. GILMAN.
THOMAS JEFFERSON. By JOHN T. MORSE, JR.
DANIEL WEBSTER. By HENRY CABOT LODGE.
ALBERT GALLATIN. By JOHN AUSTIN STEVENS.
JAMES MADISON. By SIDNEY HOWARD GAY.
JOHN ADAMS. By JOHN T. MORSE, JR.
JOHN MARSHALL. By A. B. MAGRUDER.
SAMUEL ADAMS. By JAMES K. HOSMER.

Each volume 16mo, gilt top, $1.25.

"Mr. Morse and Mr. Warner, through the enterprise of their Boston publishers, are doing in their two biographical series, a service to the public, the full extent of which, while well rewarded in a commercial sense, is doubtless not generally and rightfully appreciated. Honest and truly important work it is that they and their colleagues are doing."—*New York Times.*

OTHER VOLUMES IN PREPARATION FOR EACH SERIES.

*** For sale by all booksellers. Sent by mail, postpaid, on receipt of price by the Publishers,*

Houghton, Mifflin & Co.,

Teachers and Students
SHOULD EXAMINE:

I. A MANUAL OF EXERCISES for Translating into German. By A. Lodeman, Professor of German in the Normal College at Ypsilanti, Mich. Arranged to accompany Brandt's 'German Grammar.' 50 cents.

II. A GRAMMAR OF THE GERMAN Language. For High Schools and Colleges. Designed for beginners and advanced students. By H. C. G. Brandt, Professor of German and French in Hamilton College, formerly of Johns Hopkins University. 12mo, cloth, $1.50.

"As a Scientific Grammar it ranks among the best works yet written. Giving as it does compactly and methodically the more recent results of research in German philology and phonology, it cannot fail to prove a valuable aid in the higher departments of study."—*H. M. Kennedy, Professor of German, Polytechnic Institute, Brooklyn.*

"Although one would think that there could be nothing new in the shape of a grammar, still there is a surprising amount of new and valuable matter in this one."—*Ellen L. Chynoweth, Instructor of German, University of Wisconsin.*

III. A HIGH SCHOOL AND College Reader of German Literature. By W. H. Rosentengel, Professor of German in the University of Wisconsin. 12mo, cloth, $1.50

"Comes to fill a want I have long felt. I shall use it with my higher class to illustrate my lectures on German literature, covering as it does the whole ground, with biographical sketches and illustrative passages."—*W. H. Appleton, Professor of Greek and German, Swarthmore College, Pa.*

"It is an excellent and much-needed work, which I shall be glad to recommend and make use of in my classes."—*Chas. F. Reeves, Professor of Modern Languages, Penna. State College.*

IV. MATERIALS FOR GERMAN Prose Composition; or, Selections from Modern English Writers. With grammatical notes, idiomatic renderings, a general introduction, and a grammatical index. By C. A. Buchheim, Professor of the German Language and Literature in Kings College, London. 16mo, cloth, $1.25.

V. GERMAN CLASSICS FOR American Students. A Series of Texts of the Masterpieces of German Literature, accompanied by an Introduction, a running Commentary, Critical Notes, and (where the text renders it desirable) Glossary. The series is printed in neat 16mo volumes, bound in extra cloth, and will include, by James Morgan Hart, LL.D., Prof. of Modern Languages in the University of Cincinnati.

The following volumes are now ready:

I. GOETHE'S HERMANN AND DOROTHEA.
II. SCHILLER'S PICCOLOMINI (with Map).
III. SELECTIONS FROM GOETHE'S PROSE.
IV. GOETHE'S FAUST. PART I.

Per volume, cloth, $1.00; paper, 60 cts.

This series, issued in neat 16mo volumes, carefully printed and handsomely bound, will form not only a set of standard text-books for the student of German, but an attractive collection for the Library of the masterpieces of German Literature. Each volume contains an Introduction, a running Commentary, and Critical and Philological Notes; while, to those requiring it, a Glossary of Special Terms is added.

"The series should have the widest sale possible."—*Prof. Franklin Carter, of Yale College.*

"The only properly edited German Texts yet issued for the use of students."—*Prof. Willard Fiske, of Cornell University.*

"The notes are exactly such as the American student needs. As a text-book, it surpasses anything I have seen in my experience as instructor, on this subject."—*Prof. Karge, of Princeton College.*

"In every respect it deserves full commendation. The type and mechanical execution are excellent, and the introduction and commentary highly judicious and appropriate."—*Dr. Chas. Henkel, of Vassar College.*

VI. TABLEAUX DE LA REVO- lution Française. Selections from French Literature relating to the Revolution of 1789. Edited, with notes, by Profs. T. F. Crane and S. J. Brun, of Cornell University, with introduction by Prest. A. D. White. Planned for the use of students in French. 16mo. $1.50.

"I am highly pleased with the book. Besides its historical value, it is a most excellent book for young people to become acquainted with the French language as written and spoken in times of great excitement, thus avoiding the monotony of old classics.- I shall certainly use it for my oldest pupils."—*Prof. Elie Charlier, Charlier Institute.*

"I have examined the work with great pleasure. I like the plan and its execution, and propose to adopt the work as a text-book."—*Prof. W. L. Montague, Amherst College.*

*** Special terms for examination and introduction.
*** Full Educational List sent on application.

Scribner & Welford's

LIST OF BOOKS,

Suitable for use in High-Class Schools, Colleges, and Ladies' Schools.

An Elementary History of Art.

Architecture, Sculpture, Painting, Music. By N. D'Anvers.' With a Preface by Professor Roger Smith. New edition, with over 200 wood engravings, illustrating the most prominent examples of these arts, portraits of eminent composers, and musical instruments of many nations. One large crown 8vo volume (800 pages), handsomely bound, cloth, gilt top, $4.50.

For students who desire thus to train their own minds, for those who wish to prepare themselves for Continental travel, and, above all, for pupils in schools of a high class, no handbook of Art History could well be more suitable than the little volume now published.

Biographies of the Great Artists.

Forming a series of Illustrated Handbooks of the History of Art. Specially prepared for Schools, Amateurs, and Students of Art. Each volume contains about 16 illustrations, including a portrait of the master, and is strongly bound in decorated cloth. Price per volume, $1.25, unless marked otherwise.

*** The above invaluable aids to the student now extend to 32 volumes, covering the entire ground of English, Italian, Spanish, Teutonic, and French Painting. Complete detailed lists supplied.

Biographies of the Great Musicians.

Specially prepared for Schools, Amateurs, and Students of Music. Each volume strongly bound in decorated cloth. Price per volume, $1.00. Including

HAYDN, SCHUBERT, BACH, WAGNER,
HANDEL, SCHUMANN, WEBER ROSSINI,
MOZART, PURCELL, MENDELSSOHN,
ENGLISH CHURCH COMPOSERS.

The Nation.

NEW YORK, THURSDAY, AUGUST 20, 1885.

The Week.

THE views of Mr. Andrew D. White upon the work of the Cleveland Administration are chiefly interesting as an exhibition of the lengths to which a professed friend of civil-service reform is forced to go now, in order to justify his conduct in voting for Mr. Blaine. Mr. White's position in the campaign of last year was a very peculiar and embarrassing one. He was a professed friend of civil-service reform, and was on record as a friend and admirer of Governor Cleveland. If we remember rightly, he was not a particular admirer of Mr Blaine. Yet his loyalty to party was so great that he decided to obey its orders. His views at present show that he is still trying very hard to think he was wise last fall, but we must protest against his assumption that he in any sense represents the feelings of the Independents who voted for Cleveland. Not one of them, so far as our observation goes, agrees with Mr. White that it was a "bad mistake" to assume last fall that further progress with civil-service reform could be made best in charge of the Democratic party. All of them agree in thinking that the course of the Administration has completely vindicated the wisdom of their course. What does Mr. White mean by saying: "Unless the President proves to be stronger than the Democratic party believed him, it is equally clear to me that the work of reform has been retarded by the ascendency of that party to power"? Does he mean to say that if Blaine had been elected, more would have been accomplished for civil-service reform than has been secured already at Washington? What has been the result of the five months' fight between the President and the office-seekers? If the President has not proved stronger than they, what are they so angry about? If he has not proved stronger than his party, why is it that the party press, with a few insignificant exceptions, stands solidly behind him, and why is it that not a leader can be found to head an opposition to him in Congress?

The representatives of the various "parties" which supported General Butler for the Presidency last year, met at Saratoga last week for the purpose of repeating the annual operation known as "forming a People's Party." There were delegates from the Independent Citizens' Association, the Greenback-Labor Party, and the Anti-Monopoly Party, and the whole Convention numbered something less than one hundred persons. Owing to the extreme heat, however, nothing was done beyond the adoption of a "Declaration of Principles," which we have been unable to read through, but which we feel authorized to state is a merciless and unanswerable arraignment of both political parties, of all prevailing financial systems, and of established economic theories. The birth of the new party was postponed till September 9, when the Convention will reassemble in this city.

We have examined carefully the list of delegates, and find in it all the names of the old Butler disciples except that of the editor of the *Sun*. What is the reason of this significant absence? We trust that it is merely accidental, and that it does not mean permanent defection. The principles of the Butler party appear to be as dear to the *Sun* now as they were last year. The paper stands now where it did then, hand in hand with the Blaine press in opposition to Cleveland and civil-service reform; and yet its treatment of the Saratoga Convention is not friendly. While the *Tribune* is inclined to coddle the assemblage, saying that "it showed vitality enough to render uneasy the slumbers of the Democratic leaders in this State," and that "General Butler's party is not dead," the *Sun* disposes of the meeting in the following brief and contemptuous Saratoga despatch:

"After adopting resolutions denouncing about everything favored by the two leading political parties, the 'People's Party' conference (about forty persons) here this afternoon decided to issue a call for a State Convention, to be held in New York city on September 9."

Perhaps it will all be set right in September. Perhaps the editor of the *Sun* will preside over the deliberations at that time and give us a ringing declaration of "Jeffersonian principles."

A Texan lawyer produced in a court of that State the other day a petition addressed to the County Judge, signed by a large number of the most respectable and intelligent people of the place, asking that a leading and greatly esteemed citizen should be summarily hanged. We need hardly say that not one of the signers knew what he was signing. The petition was got up and produced by way of illustrating the worthlessness of most American testimonials to character and fitness —a phenomenon to which President Cleveland's recent letter is just now calling a good deal of attention. The national good nature, combined with a very feeble sense of responsibility for the goodness of the Government, is at the bottom of the trouble. The number of persons who cannot bear to refuse a man anything except money is very large. The number of those who agree with George III., that "a man is fit for any office he can get," is still larger.

The State Department denies, we learn, that Mr. Keiley is to have any other position, either at home or abroad. This is as it should be. The Government owes him nothing more than it has done for him. It has given him a good deal of notoriety and two or three months of a good salary, and this is all he is entitled to. We believe his original application was for a consulship, but his testimonials were so strongly worded that they made him appear to have the timber of a first-class mission in him. He ought, as we pointed out some time ago, to have himself known, however, that Rome was not the place for him, and, being then a good Catholic, devoted to the papacy, ought to have pointed out to the State Department that he would probably not be welcome at the Italian court. As he has since asserted that he cares nothing about the temporal power, or words to that effect, we have the authority of more than one Catholic organ for saying that he is now a bad Catholic, a position from which we hope he will soon extricate himself. As a private citizen in Richmond he will be able to take any view of the temporal power he pleases, and we should think he would take the one least perilous to his soul.

The recent appointments of foremen in the Brooklyn Navy-yard demonstrate Secretary Whitney's fidelity to civil-service reform. About a month ago he issued an order directing that competitive examinations should be held to fill these positions. One hundred and sixty persons submitted themselves to this test, and the fourteen men who stood highest were appointed. It turns out that the successful men are divided almost evenly between the two parties. This is just what might be expected to happen if a private employer wished to engage fourteen men and subjected them to a practical examination as to their fitness. No private employer would think of such a thing as overhauling an applicant's political record, or inquiring whether some party boss endorsed him, when he wanted a master machinist or shipwright. There is no reason why the United States Government should take such considerations into account. But it always has done so, and the idea that a Secretary of the Navy belonging to one party should allow half of the best places in a navy-yard to go to men of the other party, would have been ridiculed as utterly absurd by Chandler, or Robeson, or any of their Republican predecessors.

The Civil-Service Law of Massachusetts goes a step further than that of New York by including within its scope the city laborers, as well as those holding clerical positions, in Boston. The experiment has been in operation for four months, and the results have been satisfactory. Thirty-eight requisitions have been made from the different departments, under which there have been furnished 228 men whose qualifications had been previously discovered by practical tests. The heads of departments are relieved from the "pressure" for places which used to be unceasingly applied by the party bosses in behalf of their favorites, while a distinctly better class of men is secured than under the old system. Some of the foremen who got their places under the spoils régime are charged with unfairly treating laborers who are placed under them by the new test, but the hearty support of the law by Mayor O'Brien insures an end of such abuses. About 2,500 laborers are usually on the pay-rolls during the summer, and the rescue of this great preserve of patronage from the control of the party machine is a signal triumph.

Mayor O'Brien gave still further proof of his fidelity to the public interests on

Tuesday, by exercising his new prerogative of summary removal in the case of two members of the Water Board who have been discreditably concerned in sundry suspicious, if not "crooked," transactions recently exposed. One of them is Butler's former protégé, W. A. Simmons, who wanted to resign, as he is "disgusted" with politics, but the Mayor refused to let him off in this way and terminated his official career by removing him. The Mayor showed his regard for the taxpayers quite as conspicuously in his appointments of successors, choosing a well-known printer and a merchant of good standing, instead of two professional politicians, and apparently without any particular regard to their politics, one being a Republican and the other a Democrat. The theory of a responsible Mayor is evidently going to work quite as well in practice in Boston as it has for years past in Brooklyn.

Ezra Evans has been Chairman of the Democratic Committee in Chester County, Pa. He was recently appointed Postmaster. On Tuesday week he tendered the Committee his resignation as Chairman on the ground that it was proper that an office-holder should not take a prominent part in politics. Mr. Evans evidently observed that the President, in his famous letter on civil-service reform, declared that "their successors," as well as the offensive partisans whose places they took, "should be taught that the quiet and unobtrusive exercise of individual political rights is the reasonable measure of their party service."

The work of paying the rebel debt and satisfying rebel war claims seems to lag, Comptroller Maynard having refused to allow a Tennessee claim for furniture taken during the war to fit out an hospital, and a Maryland claim for the use and occupation of a farm by McClellan's army. And now Secretary Endicott has actually refused to sympathize with the griefs of a lieutenant in the army who had asked him to reconsider his assignment to duty in a colored regiment. "If," says the Secretary, "every officer assigned to duty in a colored regiment objects to such assignment on account of the fact that the troops are colored, it may be impossible to procure officers for those regiments." And then he adds, what must be regarded by the Boston *Journal* as a most ridiculous stump speech, that "All regiments stand on a perfect equality before the law; they are equally intrusted with the keeping of the flag and with the honor of the country, and it is as important that colored regiments should be well officered and well led on all occasions as other regiments." This makes a trying situation for the Blaine press as well as for the lieutenant, but the latter is not without a remedy, because he can resign his commission.

Alaska is still almost as unknown a country to Americans as when Mr. Seward made it a part of the United States, eighteen years ago. Of late it has been coming somewhat into notice as a summer resort, the trip by steamer along the Pacific Coast to Sitka and back during the hot season being one of the most delightful in the world. People who have tried living there the year round say that it is not such a bad place even in winter. Mr. R. D. Crittenden, who is a native of South Carolina, has resided on Wrangel Island, in the southeastern part of Alaska, for seven years, and he is fairly enthusiastic over the possibilities of the Territory. Mr. Crittenden has been "farming it," and, as the result of his experience, says that while the cereals will not ripen there, the smaller fruits and hardier vegetables flourish in the greatest luxuriance, and the grasses most conducive to the sustenance of cattle grow in such profusion that stock can be raised with the least trouble and the greatest profit, requiring no more attention in the winter than they do in the latitude of Washington, and making their raising, even for purposes of exportation, likely to become an important industry. The fur, fish, and timber trade is already considerable, and the mines promise rich rewards for working. Mr. Crittenden believes that the time will come when, owing to the cheapness of living and the improvements due to proper protection, the islands of the Alaskan Archipelago will support a large population. Mr. Crittenden's desire to be made Collector of Customs at Sitka may lead him to give a too rose-colored tinge to the picture, but other observers agree with him in believing that ultimately we shall more than get our money back on our investment up there.

It is evident that the newspaper despatches from Mexico, so far as they relate to financial matters, will bear watching. The announcement which they gave last month that the charter of the Central Railroad had been declared forfeited, proves to have been a complete invention. It was doubtless suggested by the fact that the Government had just annulled the concessions of two companies whose only existence had been on paper, and there was enough in the suspension of the subvention of the Central, in the strained relations between the company and the Government growing out of this action, and in the fact that a fine had been imposed upon the railroad for some minor violations of its charter agreements, to give some plausibility to the report. It was first heard of by the press of Mexico by way of American newspapers. There seems to be no reason to dispute the opinion of the *Revista Comercial Mexicana* that the rumor had its origin in a "bear" movement against the Central's stock. The same journal says: "Neither in Government circles nor in the columns of the *Diario Oficial*, nor, what is more, in a single Mexican newspaper of any reputation, has such a thing been stated. The relations which exist between the railroad and the Government have been and are entirely cordial, and the company has met all the terms of its concession. We therefore hope that the newspapers of Boston and of other places will give no credit to news which, as in this case, bears the stamp of falsehood."

The *Medical News*, of Philadelphia, publishes a letter from Sir James Paget, a member of the Executive Committee of the International Medical Congress, and the President of the Congress at its London meeting in 1882, on the subject of the regularity of the proceedings of the American Medical Association in reference to the organization of the meeting proposed to be held in Washington in 1887. Sir James says that the custom of each International Congress has been to name the place for the next meeting, and at the same time or soon afterward to designate some persons of high repute in that place to take such steps as they might deem needful to promote a successful meeting. He adds that at the Copenhagen meeting in 1883 this custom was followed, and that it was the understanding of the European delegates that "the American gentlemen then present" would make the arrangements for the Washington meeting in conjunction with such of their professional brethren as they should select. It was not supposed that the Congress would be regulated with any degree of exclusiveness by the members of one medical association, however numerous. It is quite certain, he thinks, that if such a plan had been thought possible, the proposal for holding the meeting in the United States would not have been adopted. He concludes by saying that if the eminent men who have withdrawn from the organization since the original plan prepared by Dr. Billings and his associates was overturned and the Old Code plan substituted for it, persist in their withdrawal, there will be very few members of the profession from England present at the Washington meeting. The London *Lancet* has a more decisive word on the subject. It says that if the present breach is not healed, it will be the duty of the Copenhagen Committee to appoint a new place of meeting for the Congress of 1887, "in which the medical profession will not find it impossible to combine for international purposes."

The closing of the London season and the prorogation of Parliament will probably bring to an end what may be called the scandal mania, by which the public mind in England appears to have been infected ever since the *Pall Mall Gazette* made its "revelations." These were just the kind of thing to lift dirty-minded gossips out of the mud, and throw an air of morality and religion around their narratives. The "Chief Director," too, by his numerous nods and winks, and mysterious hints of what he could tell if he chose about men in high places, naturally raised public curiosity to the highest pitch. The wonder is under these circumstances not that there has been so much scandalous news, but that there has been so little, especially in view of the near approach of the election.

The Royal Commission on the Depression of Business in England is regarded as pointing vaguely to a revival of protectionism in Great Britain. The distress of the landholders in the United Kingdom has been increasingly severe for ten years, arising chiefly from the competition of the United States. This competition has been made possible through the cheapening of the cost of transportation. The Bessemer rail and the modern steamship have brought the wheat fields of Dakota and the grazing lands of Texas nearer to the operatives of Manchester than the farms of Illinois were to the looms of Fall River before the war. The Suez Canal has operated in like manner to turn the wheat of India into Mark Lane in quantities little in-

ferior to those supplied by this country to the same market. The first results were the lowering of farmers' profits. Land rents fixed for a term of years on the basis of high prices of cereals slowly consumed the capital of the agriculturists. As the leases expired the land could not be let at the old rates. Many farmers became bankrupt before the leases expired, and the land was thrown back on the owners' hands. The decline in rental values has been so disastrous to the land-owners that a feeling in favor of the reënactment of the Corn Laws has gained sufficient force to be worth playing with, although the most hardened Tory Minister has not been bold enough to advocate it. The Royal Commission on the Depression of Business is evidently a lure and a make-believe, holding out to the agricultural interest the hope of something which is as impossible of restoration as the age of chivalry. A protecting duty on bread and meat would be to the England of the present day as great a revolution as the revival of the *corvée* in France, or of slavery in the United States.

It is curious to note the feelings with which the supposed revival of protectionism in England is received by the advocates of the system in the United States. For the most part they pass it over in silence, and in all cases where reference is made to it the subject is couched in very general terms, as though protection signified the same thing in both countries. The fact that it would mean in England a tax upon the products of American farms is not clearly brought out in the discussion. A fiscal regulation which should have this end and effect, would produce a commotion and arouse a spirit of inquiry in the rural districts of the United States, in comparison with which the agitation on the subject of the German pork decrees would seem trivial indeed. This possible incident of the spread of protectionism in Great Britain naturally chills the enthusiasm of the high-tariff party in the United States, for it is as certain as fate that when England's tariff goes up ours will come down. But there need be no apprehension upon this score. England has long ago found out that her supremacy as a commercial and manufacturing power depends upon cheapness, upon her ability to offer her goods for a smaller return of other people's goods than her competitors can afford. She has ceased to be troubled about the American tariff, which she perceives serves her purposes exactly by making American goods more costly than her own in all foreign markets. The Commission on the Depression in Business will probably sit a couple of years, and then report that legislation can devise no remedies for the dulness of trade.

Mr. Joseph Chamberlain has been long enough before the British public to enable people at a distance to take his measure and to discover his drift. That he is detested by the upper classes in England with a fervor surpassing even their hatred of Mr. Gladstone, proves at least that he is a man of ability. The land-owners and the "money kings" never allow themselves to be put out of temper by second-rate men. Mr. Chamberlain belongs to the class of positive characters and original minds who find their way to the front naturally, and concentrate upon themselves the attention which is always bestowed upon a man who knows what he wants and shows that he means to have it. But with all of Mr. Chamberlain's positiveness and directness of speech, his restless activity and consummate skill as a managing man in politics, there has been until latterly a certain haze about his real purposes which has puzzled his associates in the Liberal ranks and left even his Radical friends and followers in some doubt as to the place where he would come out. As a member of Mr. Gladstone's Cabinet he was both overshadowed by his chief and restrained by party necessity. Since the break up he has developed a plan of campaign quite independently of his former captain and of everybody else. In a recent speech at Hull Mr. Chamberlain made the broad statement, which he endeavored to substantiate by figures drawn from the studies of Professor Leone Levi and Robert Giffen, that the working classes of Great Britain pay in taxes upon their available income more than double the rate paid by the upper and middle classes. This statement and the method of deduction by which it is supported the *Economist* newspaper treats with a contempt that betokens a serious breach in the party which sustained the Gladstone Government, for the *Economist* was by all odds the ablest supporter of that Government in the London press after Mr. John Morley ceased to control the *Pall Mall Gazette*. The *Economist* characterizes Mr. Chamberlain's speech as "a farrago of nonsense" and "a tissue of wild hypotheses and misstatements," and charges Mr. Chamberlain with endeavoring to "set class against class."

The French elections take place early in October, and the electoral campaign is now well under way. The struggle lies between the Opportunists, under the leadership of M. Ferry, and the Radicals, under M. Clémenceau, while the Reactionists, under which title are included the Monarchists, Imperialists, and their various subdivisions, appear to be holding the balance of power. The question is whether these latter incongruous elements will unite with the Radicals to overthrow the moderate Republicans or Opportunists, with the simple object of unsettling the present condition of things as much as possible. The Opportunist creed is that the present Government is the safest that France can have, that the country is prospering under it, and that any decided changes or innovation in their domestic policy would be fraught with danger to the whole form of Republican Government. M. Clémenceau has announced the Radical platform in a speech at Mâcon, demanding a progressive income tax, separation of Church and State, and the election of all functionaries by universal suffrage. Of course, nothing can be further from the desires of the Imperialists and Monarchists than such a platform as this. They are so blinded by hate of Opportunism, however, which they believe alone makes the republic possible, that they are willing to go to any length to overthrow it. If this extraordinary alliance is consummated at the polls, it bodes no good to the republic.

A curious feature of the campaign has been the small part which the Tonquin affair, which resulted in the overthrow of the Ferry Cabinet, has been playing. M. Ferry has come to the front again, apparently very slightly damaged by the violent denunciation to which he was subjected at the time of his downfall, while the Radicals have practically dropped the Tonquin incident as an issue and are making the fight on questions of domestic policy. This is but another illustration of the fact that Paris is not France, and that the fiery ebullitions of the Boulevards have no more influence upon the opinions of the voters in the provinces than permanence in the minds of the fickle populace of the city. Aside from all other considerations, however, Mr. Ferry can "point with pride" to the fact that he is the only man since Gambetta who has been able to secure anything like a permanent working majority in the French Chamber. The Brisson Cabinet has been but a makeshift—"a Cabinet of caretakers," to use Mr. Chamberlain's phrase. The question which the October election will decide is whether M. Ferry shall come back to power. If the Opportunists are defeated, it is difficult to see what is going to happen.

The fearful ravages which the cholera has been making in Spain, its reappearance in France and other parts of the Continent, and the occurrence of one or two cases in England, are directing attention more strongly than ever to the system of inoculation which Dr. Ferran is pursuing in Spain. It has from the beginning been received with a certain amount of respect in France, but in England the notion that a valuable scientific discovery could be made in Spain has seemed a little too preposterous, and the leading journals have been, after a very slight examination, setting Ferran down as a humbug, particularly since it has been reported by a French doctor, Brouardel, who went to the scene of action, that Dr. Ferran refused to communicate to him the nature of his preparation. But now comes Dr. Charles Cameron, a well-known physician and member of Parliament, and maintains in the *Nineteenth Century* that Ferran's inoculation does all that he claims for it, and does more than Jenner's vaccination for smallpox did when he first introduced it. Taking the figures of the last smallpox epidemic in London, he compares them with those of Ferran's work in Alcira, and produces the following table:

	Smallpox.	Cholera.
Security against attack enjoyed, compared with unprotected population	as 6½ to 1	as 4 to 1
Security against death if attacked	as 5 to 1	as 6 to 1
Security against a fatal attack	as 31⅗ to 1	as 22¼ to 1

He maintains, moreover, that the various medical societies in Spain which have examined Ferran's remedy, acknowledge its efficacy. The probabilities seem to be that between now and the cold weather there will be plenty of opportunity for further experimentation.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, August 8, to TUESDAY, August 18, 1885, inclusive.]

DOMESTIC.

CIVIL-SERVICE reformers are very much elated by additional details of the reasons which prompted President Cleveland to put pension medical examiners under the provisions of the civil-service rules. Commissioner Black, they say, without reference to the wishes of the Secretary of the Interior, was arranging to fill the positions of examiners on a partisan basis, and, upon finding the Civil-Service Commission bent upon thwarting his plans, appealed to the Attorney-General for a decision as to the method of appointment. The Attorney-General decided in effect that medical examiners are a scientific and expert class of employees, and are exempted on that account from competitive examinations. The matter was laid before the President by the Civil-Service Commission. It was shown to him that the Attorney-General's decision aimed to take medical examiners and all professional and scientific employees out of the classified service, and that the welfare of the service urgently demanded that legal and medical examiners and experts should be lawyers and physicians, whether Democratic workers or not, and that in these classes of offices above all other competitive examinations were desirable. The President concurred in the view maintained by the Commission. Without a moment's hesitation he put the pension medical examiners into the service over which the Commission has jurisdiction.

There appears to be a tacit understanding in the departments at Washington that, with the exception of fourth-class postmasters, there are to be no appointments during August and early September, except such as were virtually settled before the departure of the Secretaries.

It is generally conceded at the Treasury Department that the results of the sweeping changes in the force of internal-revenue collectors afford a striking argument against the spoils system in its effects upon the public service. All but nineteen of the entire force of collectors have been displaced, and inexperienced men substituted. The results have been unpleasantly felt in the department work. Serious complications have resulted, circulars of instructions have been issued on matters so trivial that they would seem to be wholly unnecessary if the employers were at all acquainted with their duties. Old tricks to defraud the revenue have been renewed.

The Civil-Service Commission on Monday received a letter from Mr. Hedden, Collector of the Port of New York, declining to make any nominations to fill vacancies on the local Board of Civil-Service Examiners. The Collector states that, owing to the uncertainty as to the number of places to be filled and the pending discussion, he is obliged to decline. Surveyor Beattie refuses to recommend more than one name. Commissioner Thoman says, however, that steps have been taken which will put the Commission in possession of more satisfactory information within forty-eight hours.

Colonel Wright, the Commissioner of the Labor Bureau, on Friday had the appointment of C. P. Judd as Special Agent of the Bureau revoked, because of his recent arrest in Colorado on the charge of horse stealing, and his admitting his guilt, and also that he had served two terms in a penitentiary for the same offence.

Public opinion has finally compelled J. Barbiere, who was appointed chief clerk under Gen. W. H. Davis, the new Pension Agent in Philadelphia, to resign. The complaint against him was that after the war he wrote a book full of disloyal sentiments.

The Commission appointed to visit the Central and South American States has submitted a report to the Department of State of its work in Uruguay and the Argentine Republic. In it they say that the Government of Uruguay is not in such a financial condition as to offer pecuniary aid toward the establishment of a steamship line between its ports and the United States, but very earnestly hopes that something more may be done in this direction, and will agree to afford the steamers special privileges in the matter of harbor dues, etc. The Argentine Government was willing to do as much as the United States in giving financial aid to a steamship company that would sail vessels between the ports of the two countries, and hoped that our Congress would do something at once so as to make the markets of the United States accessible to the Argentine importers.

Surgeon-General Hamilton, of the Marine Hospital, says that there is as yet nothing to alarm the people of the United States in the reports coming by cable of the spread of cholera. Despite all that has been said about the probability of the epidemic reaching our shores this year, he says there is not a single circumstance to render the risk greater than it was last year.

Prominent Cherokees who oppose the leases of Indian lands are taking steps to bring the facts in the case directly to the attention of President Cleveland. Petitions are being quietly circulated setting forth that the majority of the Cherokees are opposed to the leases; that they were made without the knowledge and consent of the tribe generally, and that their continuance is detrimental to the best interests of the Cherokee Nation.

A number of cattle men overtook a marauding band of twenty Piegan Indians with seventy-five stolen horses in Montana Territory recently, and killed the entire party. Further trouble is feared.

The New York Democratic State Convention is called to meet at Saratoga on September 24.

A temporary alliance was effected in Saratoga on Wednesday between representatives of the Independent Citizens' Association of this State, the Greenback-Labor Party and the Anti-Monopolists, and a convention will be held in this city on September 9 to secure united action on a State ticket by all these organizations.

Ex-Senator Thurman, of Ohio, on Monday night telegraphed to Columbus an absolute refusal to be a candidate for Governor.

The Galveston *News* asserts that through the neglect and mismanagement of the Texas Land Board the sum of $1,750,000 has been lost to the school fund of the State, which should have been collected from the cattle men during the past eighteen months.

The assignees of John Roach, the shipbuilder, filed schedules on Saturday showing liabilities $2,262,887 81, nominal assets $5,258,098 87, and actual assets $4,631,478 25.

The outlook in the iron trade at Pittsburgh, Pa., has not been more favorable for a number of years than it is at present. Signs of improvement are coming to the surface every day, and manufacturers are beginning to concede that the mantle of depression is being gradually lifted from the staple industries of Pittsburgh. Orders are increasing rapidly, and many mills are running on double time.

A serious strike of the men employed on the Wabash or Gould's system of railroads is imminent.

At midnight on Sunday, orders were issued from the offices of the General Passenger Agents of the New York Central and West Shore Railroads directing the local ticket agents on those roads to discontinue the sale of the cent-a-mile tickets to all points east of Utica on the Central, and to Oneida Castle on the West Shore Road; also, to advance the local rates to two cents a mile between New York city and those points. This advance restores the local rates to the prices ruling before the cut in rates last October.

A cattle disease alleged to be Spanish or Texan fever has developed at Bloomington, Ill., and is creating considerable excitement among stockmen.

A terrible explosion on the steamboat *S. M. Felton* occurred at Philadelphia on Monday, endangering 500 lives. A panic ensued, but was soon quelled. Seven people were injured. It is believed that dynamite or gunpowder caused the explosion, and that it was the work of malice.

A tornado struck the village of Norwood, in St. Lawrence County, N. Y., on the Ogdensburg and Lake Champlain Railroad, on Wednesday afternoon, and almost destroyed it. Throughout the valley between Norwood and Potsdam great damage was done.

At the meeting of the Board of Park Commissioners in this city on Monday definite plans were adopted for completing the work on the temporary vault in which the body of General Grant lies, and for laying out walks and otherwise improving the part of Riverside Park in the neighborhood of the tomb. A facing of Philadelphia brick will be laid on the arched roof of the vault, which is now covered with a heavy coat of concrete.

E. K. Apgar, Deputy Treasurer of New York State, and a prominent Democratic politician, is dead. He was forty-three years of age.

Charles Wright, of Wethersfield, Conn., seventy-four years old, who was graduated from Yale College in 1835, was found dead in his barn on August 11. Mr. Wright was one of the leading botanists of the country. He was employed by the Government in an expedition to Texas and Arizona, and had also explored Cuba for the Spanish Government.

James W. Marshall, the discoverer of gold in California, died recently at his home in Kelsey, Cal. He was seventy-four years old and died a poverty-stricken, disappointed man.

FOREIGN.

In the House of Lords on Wednesday afternoon, the Marquis of Salisbury, in moving a vote of thanks to the army and navy for their recent services in Egypt, paid a strong tribute to General Lord Wolseley and General Graham and the other officers and soldiers and marines who took part in the Khartum expedition, for the valor, perseverance, and high spirit they displayed in the arduous work of the desert campaigns. The Prime Minister praised in unmeasured terms the valor and devotion of General Gordon and of Generals Earle and Stewart, and the other officers and men who lost their lives during the Sudan war, and fittingly expressed condolence with their relatives and friends. The motion was adopted. It was noteworthy that not a single Liberal leader was present in the House of Lords during these proceedings. These absences were considered as a demonstration against the motion. Sir Michael Hicks-Beach, Chancellor of the Exchequer, made a similar motion in the House of Commons, which was carried.

Parliament was prorogued on Friday until October 31. In the course of Queen Victoria's speech she said: "Although the objects of the Sudan expedition were unattained, I have great reason to be proud of the bravery and endurance displayed by my soldiers and sailors, and of the skill wherewith they have been commanded. The death of El Mahdi will probably enable me to perform with less difficulty the duties toward the ruler and people of Egypt which events have imposed upon me. I shall not relax my efforts to place Government and good order in that country upon a firm foundation. Difficulties, which at one time were of an anxious character, arose between my Government and Russia concerning the limits of the territory of my ally, the Amir of Afghanistan. Negotiations for their adjustment still continue, and will, I trust, lead at an early period to a satisfactory settlement. During the past session your time has been principally occupied by the enlargement of the electorate and the extensive changes which you have in consequence made in the constitution of the House

of Commons. I earnestly trust that these comprehensive measures may increase the efficiency of Parliament and may add contentment among my people. It is my purpose before long to seek their counsel by a dissolution of Parliament. I pray the blessing of God may rest upon their extended liberties, and that the numbers who are called upon to exercise new powers will use them with the sobriety and discernment which have for so long a period marked the history of this nation."

Before the prorogation Lord Randolph Churchill, Secretary of State for India, said the duties of the Afghan Boundary Commission had not yet been completed, and that the Government did not intend to withdraw the Commission. The dispute with Russia about Zulfikar Pass, the Secretary continued, was not trivial, but the Government was not altogether without some hope to arrive ere long at a satisfactory settlement of all the points remaining in dispute between England and Russia

The Marquis of Salisbury's departure for the Continent has been postponed owing to the Zulfikar dispute. Late despatches from St. Petersburg to the Government include a topographic report of Russian engineers on the Zulfikar district, and a note from M. de Giers, proposing a new frontier line through the district. The nature of this proposal promises an early settlement of the dispute.

The Marquis of Salisbury, it was asserted on Monday, will, soon after going to France, have a conference with Signor Depretis, the Italian Prime Minister. The interview will take place at Contrexeville, a watering place in the Vosges. It is reported that Italy desires to send 20,000 troops into the Sudan, to secure the Red Sea coast from Suakim, at present held by the British, to Assab Bay, along which lie most of the Italian possessions on the coast. The Italian scheme contemplates securing control over eastern Sudan, and the use of Khartum as a capital. An Anglo-Turkish agreement has been proposed through Sir Henry Drummond Wolff, by the terms of which English men-of-war will be allowed to pass through the Dardanelles in time of war.

The Duke of Richmond has been appointed Secretary of State for Scotland, with a seat in the Cabinet.

Mr. Stanhope has been appointed to the British Board of Trade, with a seat in the Cabinet.

General Lord Wolseley has been raised to the rank of Viscount.
